yearly in advance, 13 cents per annum in Pennsylv-  
vania, and 26 cents per annum in other States.

ON THE DISUSE OF ALL TYPICAL RITES IN THE  
WORSHIP OF GOD.

BY J. J. GURNEY.

I may now proceed to the consideration of  
those parts of the New Testament which relate  
to the institution called the *Lord's Supper*.

In order to clear our ground respecting the  
nature and character of that ordinance, it is  
desirable, in the first place, to direct our atten-  
tion to the tenth chapter of the first epistle of  
Paul to the Corinthians—a chapter which con-  
tains a remarkable allusion to the Lord's Supper,  
as it was observed by the early Christians. It  
appears that some of the Corinthian converts had  
so far sacrificed their religious consistency, as to  
join the banquets of their heathen neighbors,  
and to feast with them upon meats which had  
been previously offered to the idols. Such was  
the unchristian practice which suggested to the  
apostle Paul the following reproof and exhorta-  
tion: "I speak as to wise men; judge, (or  
I say. The cup of blessing which a *joint par-*  
for which we give thanks,) is communion) of  
*ticipation* (*Eng. Trans.* bread which we break,  
the blood of Christ? *ticipation* (*Eng. Trans.* "the  
is it not a *joint part* the body of Christ? Or  
communion") the one bread, and one body: for  
being many partakers of that one (or that same)  
we are all partakers of the body of Christ. Behold  
Israel after the flesh: do they not eat of the  
meats which eat of the sacrifices (*joint partakers*  
of the altar? What say I then, that the idol is  
any thing, or that which is offered in sacrifice to  
idols is any thing? But I say, that the things  
which the Gentiles sacrifice, they sacrifice to  
devils, and not to God: and I would not that ye  
should be *joint partakers of* (*Eng. Trans.* have  
fellowship with") devils. Ye cannot drink the

cup of the Lord and the cup of devils: ye can-  
not be partakers of the Lord's table and of the  
table of devils. Do we provoke the Lord to  
jealousy? Are we stronger than he?" In re-  
citing this passage, I have ventured upon some  
slight alteration of the common English version.  
The word "communion" is properly defined by  
Johnson, "a participation of something in com-  
mon," and this, no doubt, is the sense in which  
it was here employed by our Translators. I have  
exchanged that word for "*joint participation*,"  
merely for the purpose of showing the manner in  
which the true meaning of the original expres-  
sion, as it is here applied, is fixed by the use, in  
two other parts of the same passage, of the cor-  
responding noun, rendered, *joint partakers*.

On a comparison with certain parts of the fol-  
lowing chapter, (hereafter to be noticed) it must,  
in all fairness, be allowed that the bread and  
wine, which the apostle here declares to be  
a "joint participation in the body and blood of  
Christ," are those which were eaten and drunk,  
in a literal sense, at the supper called by the  
apostle himself, the *Lord's Supper*. It appears,  
then, that those who ate and drank together of  
that bread and wine, were joint partakers of the  
body and blood of Christ, on the same principle,  
and in the same sense, that the Jews, who ate  
together of the sacrifices ordained by the law,  
were joint partakers of the altar; and the Chris-  
tians, who united with idolaters in the eating of  
meats offered to false gods, were joint partakers  
with them, in *devils*. It is plain therefore, that  
the Christian communicants are not here repre-  
sented as *feeding on the body and blood of Christ*;  
any more than the Jews are described as feeding  
on the altar; but only as jointly partaking in  
those things which had respect to the body and  
blood of Christ.

I have entered into this examination of the  
passage before us, not so much for the purpose  
of disproving the Roman Catholic doctrine of  
transubstantiation, as in order to show that the  
apostle's words give no real countenance to the  
notion, so generally entertained among Protest-  
ants, that those who rightly communicate in the  
rite of the Lord's Supper *do thereby feed together,*  
*in a spiritual sense, on the body and blood of*  
*Christ*.

The declarations of this doctrine, unfounded  
as it appears to be on the authority of Scripture,

are in the communion service of the church of England, both frequent and striking. The "sacrament of the Lord's Supper" is there denominated a "*holy mystery*," and a "*banquet of most heavenly food*." Thanksgiving is enjoined unto God, "for that he hath given his Son our Saviour Jesus Christ, not only to die for us, but also to be our spiritual food and sustenance in that holy sacrament." and, on another occasion, this service states that, when "we receive that holy sacrament, then we spiritually eat of the flesh of Jesus Christ and drink his blood; then we dwell in Christ and Christ in us: we are one with Christ and Christ with us."

By such language a mystical importance is attached to the rite, which appears to have no foundation in its original use, as a simple memorial of the death of Jesus. In these days of increasing light and spirituality, as we may justly esteem them, it is necessary to say but very little on this branch of our subject. Although the communicants in the Lord's Supper may sometimes be permitted to "eat the flesh and drink the blood of the Son of man," no arguments need now be advanced to prove that this spiritual eating and drinking has no necessary or even peculiar connexion with any external ceremony; and that, in every time and place, it may be the privilege of the humble Christian, who lives by faith in the Son of God, and whose soul is subjected to the purifying, yet sustaining, influence of his Holy Spirit. Neither will it be any longer disputed that, when persons of such a character meet in companies for the solemn purpose of worshipping the Father, they may, without any use of the outward ordinance, feed together, in a spiritual sense, on the bread and blood of Christ, and experience the truest communion with their Holy Head, and one with another.

Having premised these remarks, the apostle's description of the Lord's Supper, we henceforward consider it in that more simple sense which alone I believe it to be regarded, in the present day, by many of those persons who observe it; namely, as an outward ceremony, constituting part of divine worship, and intended typically to represent, and thus to bring into remembrance, the death and sacrifice of Christ; and we may proceed to examine those passages of the New Testament which have given rise to the opinion, so generally entertained, that such a rite was ordained by our Saviour, and that the practice of it is universally obligatory on believers in Christ. The passages to which I have to refer, under this head, are only two in number. The first is in the Gospel of Luke, who, in describing the last paschal Supper which Jesus ate with his disciples shortly before his crucifixion, writes as follows: "And he (Jesus) took bread and gave thanks, and brake it, and gave unto them, saying, This is my body which is given for you: *this do in remembrance of me*." Likewise, also, the cup after supper, saying, This cup is the

New Testament in my blood, which is shed for you."

The second passage alluded to, contains a declaration of the apostle Paul, which fully confirms the particulars related by Luke. It appears that the Corinthian converts had so greatly abused the practice to which the injunction of Christ had given rise, that, when they met together for the purpose of eating the Lord's Supper in company, there was found among them a total want of order and harmony; and many of them availed themselves of such occasions, for the intemperate indulgence of their carnal appetites; "For, in eating," says the apostle, "every one taketh before other his own supper; and one is hungry and another is drunken." In order to correct habits of so disgraceful a character, Paul sharply reproves these Corinthians, and calls to their recollection the origin and object of the observance. "For I have received of the Lord," says he, "that which also I delivered unto you, that the Lord Jesus, the same night in which he was betrayed, took bread: and when he had given thanks, he brake it, and said, Take, eat; this is my body which is broken for you; *this do in remembrance of me*. After the same manner also he took the cup, when he had supped, saying, This cup is the New Testament in my blood; this do ye, as oft as ye drink it, in remembrance of me. For as often," adds the apostle, "as ye eat this bread, and drink this cup, ye do show the Lord's death till he come. Wherefore, whosoever shall eat this bread and drink this cup of the Lord unworthily, shall be guilty of the body and blood of the Lord. But let a man examine himself, and so let him eat of that bread, and drink of that cup. For he that eateth and drinketh unworthily, eateth and drinketh condemnation to himself, not discerning the Lord's body."

It will be observed that, in this address to the Corinthians, the apostle is not enjoining upon them the practice of observing the Lord's Supper. The passage contains no command of the apostle's that effect: it was intended solely to warn explain their abuse of that practice, and to according to its origin and true purpose. which had given rise to it. The knowledge of these circumstances, appears, he had "remem- founded on the instruction the apostle's statement on the subject, substantially thus given to the narration of Luke. We are, therefore, to consider it as a fact resting on confirmed evidence, that when our Lord, at his last paschal supper, and his disciples to take and eat the bread which he had broken, he added, "*This do in remembrance of me*:" and, further, we learn from the apostle that, after Jesus had handed to them the cup to drink, he repeated a similar command—"This do ye, as oft as ye drink it, in remembrance of me."

Persons who have been long habituated to associate these expressions of our Lord with the rite of the Eucharist, as *they themselves observe it*, are naturally led to explain the former by the latter: and thus, with respect to the passages now quoted, they lose sight of those simple principles of interpretation, which they would, of course, apply to any other part of the sacred volume. I confess, I see no other way of accounting for the sentiment, still so prevalent among Christians, that when our Lord, after partaking with his disciples in their last paschal meal, said to them, "Do this in remembrance of me," he instituted a religious ceremony, which was thenceforward to form an essential part of worship; and which, in that point of view, was to be binding, in all ages, on the believers in Jesus. That the words of Christ, when tried by the test of common rules, and explained by the circumstances under which they were spoken, *do not appear, and cannot be proved, to have been fraught with so extensive a meaning*, will probably be allowed by the candid and considerate critic; and I would suggest that no such meaning can justly be applied to them, for two reasons.

That our Lord's words, in the first place, are not rightly interpreted as relating to a *typical ceremony in connexion with Christian worship*, there arises a strong presumption, on this general ground—that such an interpretation is directly at variance with the acknowledged fact, that the old Jewish system of types was then about to be abrogated by the death of Christ; and with our Saviour's own law, that the Father was now to be worshipped, not according to the shadowy ritual of the Jews and Samaritans, but in spirit and in truth.

Secondly, it is to be observed that the command of Jesus respecting the bread and wine was addressed only to twelve persons, and was of a nature simply *positive*. It is true that all the precepts of Jesus were addressed to those persons who were in his company at the time when they were uttered, and many of them probably to his apostles only; but there is an excellent reason why the bulk of them are to be received as of universal obligation—namely, that they are *moral* in their nature, and belong to that unchangeable law of God which, when revealed, demands the obedience of all men at all times. But a merely positive precept has no connexion with that unchangeable law, and does nothing more than enjoin, for some specific purpose, a practice *in itself* indifferent. Such a precept, therefore, appears to contain no sufficient *internal* evidence of its being binding on any persons, except those to whom it was actually addressed, and others who were placed under the same peculiar circumstances. I would suggest that a universal obligation, on the followers of any *moral* lawgiver, to obey a precept of the nature now described, cannot be rightly admitted, unless it be by such lawgiver expressly declared; and that its not

being expressly declared, affords an indication that no such universality was intended.

The present argument may be fitly illustrated by another example of a similar nature. On the very same affecting occasion, when Jesus directed his apostles to observe the practice now under consideration, he also enjoined them to *wash one another's feet*. We read in the Gospel of John that, after that last paschal supper, Jesus rose from the table, took a towel, girded himself, poured water into a basin, and "began to wash his disciples' feet, and to wipe them with the towel wherewith he was girded." After thus evincing the lowliness of his mind, he said to his disciples, "Know ye what I have done unto you? Ye call me Master and Lord, and ye say well; for so I am. If I, then, your Lord and Master, have washed your feet, *ye ought also to wash one another's feet; for I have given you an example, that ye should do as I have done to you.*" Here was an injunction conveyed to the apostles in words fully as explicit, and with accompaniments equally striking, as was the preceding command respecting the bread and wine. Yet, since that injunction was simply positive, relating to an act of no moral importance in itself, and one which was connected with the peculiar habits of the persons thus addressed—no one supposes that an obedience to such an injunction is necessary for Christians of every age and country. Undoubtedly, that mutual respect and benevolence, of which the washing of one another's feet was thus enjoined on some of his servants as an instance and a sign, is incumbent on all the followers of Jesus. Universally incumbent upon them, also, is that love and allegiance towards their Saviour, and that dependence upon his meritorious death, which the apostles were accustomed to express by their commemorative supper. But, in both cases, according to the view of Friends on the subject, the outward circumstance may be omitted, without any real infraction of the revealed will of God.

In confirmation of these general arguments, the reader's attention may now be called to a very striking fact; namely, that, in the gospel of Matthew, which was written by an eye-witness, and at an earlier date than that of Luke, and which contains a very exact description of our Lord's last supper with his disciples, of the breaking of the bread, of the handing of the cup, and of the comparison made by Jesus of the one with his body and of the other with his blood; the words upon which *alone* could have been founded the institution of this supposed Christian rite—"Do this in remembrance of me,"—*are omitted*. We are not to conclude from this omission that those words were not spoken. That they were spoken, on the contrary, is certain, on the authority of both Luke and Paul. But, since Matthew describes all the circumstances of the occasion, and gives the whole of our Lord's address, with the single exception of these words,

we can hardly suppose him to have understood that the precept of Jesus was of that *very leading* importance which is generally imagined; or, that our Lord then instituted a rite which was, in every age of the church, to form an essential part of Christian worship. Precisely the same observation applies to the Gospel of Mark, which is supposed to have been written under the immediate superintendence of the apostle Peter.

(To be continued.)

#### HOW TO GROW OLD GRACEFULLY.

Who grows old gracefully? Who can display a charm through the dim and sunken eye, the faded cheek, the thin grey hair, the shrinking, weakening frame, on which time strikes the hour more punctually than a minster bell?

Not the worldly-hearted, who grudge each year that cuts off a portion for enjoyment, and shortens the lease of life; who walk in thoughtlessness among seen things, and regard not things unseen and eternal. Not the covetous, whose satisfied to-morrow never arrives, and who have always something more to gain ere the account may close. Not the fashionable beauty, who trembles at decay, and blames the bad taste of modern styles that hint at unbecoming changes. Not the student, who has always schemes of discovery and attainments in view, for which even patriarchal age were insufficient. On these old age sits awkwardly, as if it were a burden suddenly alighted on their shoulders from some unknown region whither they had been accidentally betrayed. No, it is in nothing earthly to patent an invention that can remedy the trace of time, or supply a substitute for joys "that perish with the using."

But it is the high privilege of Christianity to proclaim the heavenly recipe whereby the hoary head may become a crown of glory, and to point to "the path of the just," which is as "the shining light, that shineth brighter and brighter unto the perfect day;" wherein old age glides serenely to the gates of "the celestial city," and "to live is Christ," while "to die is gain."

If temperance, industry, benevolence, benefit the health, and reap a present reward, how much more the tranquillising influence of peace with God, holding the passions in subjection, regulating the mental powers, and spreading the charm of contentment over the placid face, and the smile around the lip where "the law of kindness" dwells! Here is no melancholy caricature of life, aping what is gone, for the merry sport of more youthful folly; but here is the grace that dignifies what is, and commands the respect even of those who know not whence it springs.

The same God who watered the seed ere the blade had sprung to light, and whose care had cherished it to maturity, still gazes with infinite complacency on the shock of corn fully ripe; and while he permits it to linger on the stem, it

is only that more witnesses of its goodness may gather round, ere he reaps it in triumph for the garner of heaven.

He whose life has been an epistle of Christ, and whose ever-presiding motive has been the glory of God, and he alone, grows old gracefully, and hails time as a friend, who just touches only to remind him that "the night is far spent" and "the day is at hand."—*The Object of Life.*

#### WILLIAM WILBERFORCE.

Wilberforce is one of those men whom the world have agreed to respect, and whom Christians fondly love. And very properly; for, though there have existed as pure patriots as he, as finished statesmen as he, as commanding orators as he, few, if any, have combined these qualities in greater measure than himself, and presented so symmetrical and perfect a character. Hence all classes find something in him to admire, and there is attached to the name of Wilberforce a moral dignity and excellence with which few names can compare. The moment it is uttered, there arises before the mind an individual who, by the grace of God, fulfilled, it is admitted, the great end of his being, blessed his generation, and illustrated those virtues which adorn and exalt humanity. The biography of this distinguished man, by his sons, is well executed, and though traced by the hand of affection, bears no marks of fulsome adulation or extravagant eulogy. Of course but a brief sketch of his character can be given in the short space allotted to us.

William Wilberforce, only son of Robert Wilberforce and his wife Elizabeth, was born at Hull, in Yorkshire, of which place his grandfather had been twice mayor, on the 24th of August, 1759. He lost his father when he was quite young, from whom he inherited a large estate, which became still larger from a bequest left him by a paternal uncle. He was of small stature, his figure delicate, and his constitution frail; but these physical disadvantages were overbalanced by an affectionate disposition, and superior intellectual endowments. His first studies were pursued at the grammar school of Hull, from which place he was transferred to a private school at Wimbleton, kept by a Scotchman of the name of Chalmers, who appears to have been distinguished rather for a red unshaven beard, than for any of the qualifications of a teacher. While here, though he learned but little, he was under the influence of a pious aunt, who treated him as a son, and whose good instruction and example made upon him a favorable impression. She was a warm admirer of Whitfield, "heard him gladly," and while endeavoring herself to imbibe the spirit of that holy man, endeavored likewise to infuse it into the breast of her nephew. His stay here, however, was too short to secure any permanent moral results; and his

next location, at Pocklington, while it was somewhat more favorable to the cultivation of his mind, was most unfavorable as regarded his religious impressions. Indeed, no pains was spared by his mother and kindred to obliterate all sentiments of piety from his soul. To this end the theatre, balls, dining parties and card parties were resorted to, and, as is usual when such efforts are diligently made, with too much effect. He, temporarily at least, lost his views of divine things, and ceased to feel their power. He became the companion of those who passed their time in scenes of gaiety and amusement, and his sprightly qualities and rare powers of entertainment—for he was a joker, singer, and mimic—made him quite a favorite with them. In 1774, at the age of seventeen, he was sent to St. John's College, Cambridge, where also he was beset with temptations to idleness and prodigality. He was often told, not only by his fellow students but others, that "it was beneath a young man of his genius and fortune to apply himself to study;" and he too far yielded to their pernicious counsel. His neglect of studiousness at this interesting and important period of his life, was ever afterwards the occasion to him of deep regret. He confessed that he had lost what he could not recover. He excelled, however, in the languages, and during his college course made the acquaintance of Clarendon and Pitt, whose good opinions he secured, and which he continued for years, notwithstanding the vicissitudes of politics, to retain. He graduated with the intention of entering upon public life; and in 1780, through the favor of his family friends in Hull, and an expenditure of between £8,000 and £9,000, was elected member of Parliament. During this parliament he did little in the matter of politics, and yet was more attentive to his duties than under the circumstances might perhaps have been expected. In 1784 he was chosen for the county of York, which triumphant event—for, considering the eminence of his opponent, and the influences arrayed against him, it was a triumph most honorable and gratifying—closed his twenty-fifth year. His address to the populace from the hustings was exceedingly happy and effective, giving token of his future power. Boswell, describing his frail form and eloquence, says, "I saw what seemed a mere shrimp mount upon the table, but as I listened, he grew and grew, until the shrimp became a whale." His speech was received with the loudest acclamations of applause, and spoken of as a very superior effort.

Up to this period we have seen Wilberforce only as a gay, ambitious young man of brilliant talents and ample pecuniary resources, borne on the tide of popular favor into a civil and commanding position. We are now to look at him as the subject of a spiritual, radical change, which revolutionized the person, and gave a new complexion to his whole future career.

Soon after taking his place in the House of Commons as member for the county of York, he proposed to one of his friends, W. Burgh, to take a tour with him upon the continent: and Burgh declining, he extended the invitation to Isaac Milner, late Dean of Carlisle. He accepting it, they set out together, accompanied by his mother, sister, and two female relations, and crossing France to Lyons embarked upon the Rhine. Though Milner was not at that period as spiritually minded and exemplary as he was subsequently, or as a minister preaching Jesus Christ and him crucified should have been, yet he was not one of those, (too many of whom are found in the established church,) who subscribe and teach articles they do not believe, and falsify the professions made at their ordination by the whole tenor of their after behaviour. Milner believed the Bible, cordially espoused the system of truth there revealed, and though not particularly devoted, was so far under the influence of religious principle as gently to reprove Wilberforce whenever he uttered any sentiment hostile to piety. The natural consequence was, that Milner and his lively companion were drawn into frequent discussions touching the reality and claims of genuine religion. These discussions revived those impressions years before made upon his young mind by his pious aunt, which were further deepened by a little volume ("Dodridge's Rise and Progress of Religion") which one of their fellow travellers had with them. The effect was seriousness, an inquiring state of mind, and a resolution to attend to the imperishable interests of his soul. During the remainder of the tour, which he and Milner took alone, they read the New Testament together, fervently sought the illumination of the Holy One, and when they parted, the truth of God had found such lodgment in his heart, as to make him quite a different being from what he was before. He took an early opportunity to converse with the John Newton and John Thornton, Esq., on the subject of his spiritual state, whose advice and prayers were very valuable to him, establishing him in the faith, and fortifying him against those seductions from duty to which, from his former irreligious associates and high station, he was peculiarly exposed. Daily exercising repentance towards God and faith in the Lord Jesus Christ, his mind at length was brought into a calm, tranquil, and happy state. The Bible was precious to him, and the throne of grace, and the Sabbath, and Christian conversation; and the moral energy and excellence of his new principles pervaded all his conduct. Of this epoch we have his own account.

"I began," he says, "to be impressed with a sense of the weighty truths which were more or less the continual subjects of our conversation. I began to think what folly it was, nay, what madness, to continue month after month, nay day after day, in a state in which a sudden call out

of the world, which I was conscious might happen at any moment, would consign me to never-ending misery; while at the same time I was firmly convinced, from assenting to the great truths taught us in the New Testament, that the offers of the Gospel were universal and free; in short, that happiness, eternal happiness, was at my option.

"As soon as I reflected seriously upon these subjects, the deep guilt and black ingratitude of my past life forced itself upon me in the strongest colors. I condemned myself for having wasted my precious time, and opportunities and talents; and for several months I continued to feel the deepest convictions of my own sinfulness, rendered only the more intense by the unspeakable mercies of our God and Saviour declared to us in the offers and promises of the Gospel. These, however, by degrees produced in me something of a settled peace of conscience. I devoted myself, for whatever might be the term of my future life, to the service of my God and Saviour, and with many infirmities and deficiencies, through His help I continue until this day."

His mother learning of this singular change in his views and feelings, to which she was experimentally an utter stranger, was extremely anxious respecting him, and mourned that he should be so carried away by fanaticism. But when she saw him, and saw how gracefully religion sat upon him, how the beauties of holiness were engrafted upon his former virtues, rendering him still more lovely, she was forced to confess the folly of her solicitude, and to wish that she too might possess what appeared so charming and blessed in her son. "If this," said one of her friends, with whom she had conversed about her son previous to seeing him, and who had sympathized with her in her fears—"if this is madness, I hope William may bite us all." Who, we may remark, in this account of Wilberforce's conversion, can fail to see the work of the Almighty's hand! Who but He arranged all these various circumstances, suggested that tour, prompted Burgh to decline an invitation to go and Milner to accept of it, started that debate, put a copy of Doddridge here, and a copy of the Greek Testament there; and then so set home the truth, that a change was wrought so deep and thorough, that this gay young man withdraws from all the clubs of which he is a member, withdraws from all places of dissipation, and seeks the society of those who love God, sedulously endeavors to keep religious thoughts and impressions in his mind, and becomes, from a vain, ambitious worldling, an humble and spiritual follower of the meek and lowly Jesus, and so continues for half a century? Nothing, verily, but the renewing grace of God could do this. No other cause was adequate to the effect.

—"The change of man  
From fool to wise, from earthly to divine,  
Is work for him who made him."

It was with a different temper and sentiments that Wilberforce took his seat in Parliament in the spring of 1786. New emotions kindled in his bosom; he applied himself closely to study; his intellect was girded with renovated strength, and all the affections of his soul burst forth into the beautiful and fertilizing channels of benevolence.

(To be concluded.)

#### THE POWER OF MONOSYLLABLES.

To one whose attention has not been drawn especially to the subject, it will be surprising to call to mind how many of the most sublime and comprehensive passages in the English language consist wholly or chiefly of monosyllables. Of the sixty words comprising the Lord's Prayer, forty-eight are of one syllable. Of the seventeen words comprising the Golden Rule, fifteen are of one syllable. The most impressive idea of the creative power of Jehovah is expressed entirely in monosyllables. "And God said 'Let there be light,' and there was light." One of the most encouraging promises of Scripture is expressed in fifteen words, all but one of which are monosyllables. "I love them that love me, and those that seek me early shall find me."

Of twenty-six words in the following verse, all but two are monosyllables:

My God who makes the sun to know  
His proper hour to rise,  
And to give light to all below,  
Doth send him round the skies.

Few sentences in poetry or prose, whatever their length, contain so much doctrinal instruction, afford so much precious consolation, or inspire so much exulting hope as the following, in which all the words but one are monosyllables:

Jesus, my God, I know his name,  
His name is all my trust;  
Nor will he put my soul to shame,  
Nor let my hope be lost.

*S. S. Journal.*

#### MINGLING WITH CHILDREN.

Persons advanced, or advancing in life, and particularly those whose occupations involve them in the exciting pursuit of power or riches, are apt to look down upon youth as an unprofitable time,—as a mere preliminary to real life, to be despatched with all convenient speed, and then to be forgotten. They are not aware how much they have need to learn from it, and to sympathize with it. It is very good for all to dwell much in the presence of the young. The greatest and best of men have loved to do so. The strange and unanswerable questions which children are continually asking, inadequate utterances of unutterable thoughts, convict the proudest intellect of its ignorance. Their trustful and affectionate confidence in others, rebukes the suspicious caution of experienced manhood. The

unstudied grace of every "breeze-like motion," the gladness of the "self-born carol," their free and full enjoyment of everything beautiful and glorious around them,—these, and such like traits, are angelic rather than human; they speak of innocence, and happiness, and love; they say to anxious hearts, "Take no thought for the morrow,"—"Be not troubled about many things." Nor is boyhood an ineloquent teacher. Its generous ardor, its dauntless activity, its chivalrous sense of honor, its fond attachments, its hopefulness, and truthfulness, its clear bright eye, fair cheek, light and joyous frame,—how strangely unlike is all this to the wrinkled brow and heavy tread, the callousness and deliberate selfishness by which it is too often succeeded. Much, very much is to be learned from the young.

It is to be regretted, that the recollections of childhood and youth in most persons so soon grow dim and perish,—obliterated from the heart by the noisy waves of active life,—that men can so seldom trace their way back to a very early time. In one sense, indeed, childhood is never forgotten. Love or ambition may usurp for a time tyrannic sway over the heart, and seem to blot out all the time before; but, except in the wretched criminal, whose keenest pang of remorse is to compare himself with what he was once, the thought of the home of other days never fails to act like magic on the heart, the faces and haunts familiar to the child remain enshrined in the memory of the man, and command forever an affectionate reverence. Those

—Happy days, that were as long  
As twenty days are now,

with each morrow, as it then seemed, severed from yesterday by a solid barrier, as it were, in the intervening night; those scenes where no thought of change or decay ever intruded, but which, as well as the actors in them, were unconsciously regarded as destined to abide for ever,—how shall their memory be lost except by a violent and unnatural renunciation of the former self?—*Sunday School Journal.*

#### A GARDEN NOVELTY.

The Egyptian pea is an instance of vegetable resurrection, or at least resuscitation. It is a fragment of the old life of Egypt—a true type of the luxuriant fertility of the classic country of the Nile, and unquestionably the most truly historical of any esculent we possess. The circumstances that led to the discovery of this companion of mummies and inhabitants of pyramids, are in themselves as interesting as the plant itself is distinct from every known member of its useful family. During the explorations of Egypt by Sir Gardiner Wilkinson, a vase was found in a mummy pit, the age of which was computed at about three thousand years. This vase, hermetically sealed, was presented to the British Muse-

um; Mr. Pettigrew, the librarian to the late Duke of Sussex, proceeded to open the vase to ascertain its contents, and in so doing unfortunately broke it to pieces. The interior contained a mass of dust, and a few grains of wheat and vetches, and on examining further a few peas were found, entirely shrivelled, of a resin yellow color, and as hard as stone. It was known that mummy wheat had been resuscitated after an interment of five thousand years; and it was determined that the first peas ever found in a mummy vase should be subjected to the experiment of revival. Mr. Pettigrew accordingly distributed amongst his learned friends these desiccated peas, reserving three for himself as mere curiosities. Those who tried to grow the peas failed, and no more was thought about them till the remaining three were given to Mr. Grimstone of Highgate. Mr. Grimstone tried his hand at them, subjected them to heat and moisture, and after thirty days one miserable plant appeared above ground. By patient care and ingenious culture this plant was brought to produce nineteen pods, which were ripened and planted the next year; and this was the foundation of the stock which is just beginning to be known as the Egyptian pea. Botanists were as much delighted as antiquarians at the success of the experiment; for it gave them a new variety of the greatest value and most distinct character. Its blossom is unlike every other pea; it more nearly resembles a bell than the wings of a butterfly, and is veined with green lines on a white ground. The blossoms break at every joint in clusters of two, four, and eight, and are succeeded by pods that protrude crookedly through them, each pod containing from five to ten peas, which, when cooked, are deliciously flavored, and melt in the mouth like marrow; in fact, there is no pea to equal it; so that dusty Egypt has conferred upon us, through these few shrivelled seeds, a palatial benediction.—*National Magazine.*

#### THE BAPTIST AND THE KING.

"Herod feared John, knowing that he was a just man and a holy, and observed him; and when he heard him, he did many things, and heard him gladly."—MARK VI. 20.

We may learn two great lessons from this account of Herod and John the Baptist.

1. We see how a decided consistent Christian will be always respected, even by worldly men. The character of the just, holy, courageous John, had made no small impression even on the ungodly Herod, whose sin he had so boldly reproved. Herod feared, and it would appear almost loved him; for when persuaded to order his death, we are told that he was "exceeding sorry." And so it will be still. A consistent follower of Christ will be respected, even by those who ridicule or persecute him. Some will even love *the man*, though they may hate the doctrine he teaches, and the testimony he bears against their sins.

2. We see how far it is possible to go *towards* the way of life, without really entering it. Herod heard John gladly, and did many things in obedience to his exhortations. But he would not do the one thing—he would not give up his favorite sin, and he died an unpardoned sinner. And it is very possible now to like good people, to like good sermons, to do many right things, and yet sin is loved in the heart, and the soul has never come to Christ for salvation. Let us examine ourselves, and see if *we* are not in this dangerous state.

Oft did I with the assembly join,  
And near thine altar drew :  
A form of godliness was mine ;  
The power I never knew.

To please thee thus, at length I see,  
Vainly I hoped and strove ;  
For what are outward things to thee,  
Unless they spring from love.

## FRIENDS' REVIEW.

PHILADELPHIA, NINTH MONTH 12, 1857.

THE "LORD'S SUPPER."—In making some remarks, a few weeks since, introductory to the insertion of E. Lewis's "Essay on Baptism," we proposed to furnish at a future period, brief statements of the views entertained by our Religious Society respecting the "Lord's Supper" and the Christian Ministry. We, accordingly, commence in this number, some extracts from the observations of J. J. Gurney on the former subject. It is satisfactory to learn that the republication of the Essay on Baptism has been peculiarly acceptable and strengthening in some quarters; and we may hope that a further dissemination of Friends' views on the "disuse of all typical rites in the worship of God," and the necessity of partaking spiritually of the bread and wine of the kingdom, may be useful.

Referring to what is called "administering the sacraments," the author of "Priesthood and Clergy unknown to Christianity," says:—

"The term is wholly unknown in scripture. There are no "sacraments" in the New Testament: it is only from the papal school that we hear of them. The churches of Rome and England talk much of "the sacraments;" and the dissenters, copying those churches, or rather retaining the practices which they received originally from Rome through the church of England, enlarge on the mysterious theme; but the Christian who is guided by the Scriptures need not trouble himself about any theological language which he cannot find in them. As for baptism, which they call one of the sacraments, there is

no scripture proof that it was performed by any "minister," taking the word even in the wide sense of *diakonos*—the baptism of the converts in the house of Cornelius was not performed by any "minister," for as far as we are informed, the only "minister" present was Peter, and "he commanded them to be baptized," (Acts x. 48;) that is, he did not baptize them himself; and though doubtless the traditional school would assure us that "the certain brethren from Joppa" who accompanied Peter, (verse 23,) were clergymen, and "administered the sacrament of baptism" on that occasion, yet no such statement appears in Scripture. Neither is there any evidence that the presence of a minister, or an elder, or a bishop, was considered indispensable in those meetings of the saints when on the first day of the week they assembled to break bread. Paul gives many directions to the Corinthians concerning those meetings; but he never once names or even alludes to any elder, bishop, or ordained minister, as likely to be present on those occasions. If there were elders in the church of Corinth, they would of course break bread with the rest, but so little did Paul know about "ordained ministers administering the sacrament" that he neither names the minister nor the sacrament; and how this omission can be accounted for, if in those days there were either "ordained ministers" or sacraments, we see not.

The ecclesiastical phraseology of "administering the sacrament of the Lord's supper" is in vain sought for in the New Testament: the Lord's Supper is thus described there, "On the first day of the week the disciples met together to break bread." (Acts xx. 7.) And this simple statement, made if possible still more simple by Paul's allusions to the mode of meeting in the Corinthian church, (see 1 Cor. xi. 20-34,) ought to be sufficient to dissipate all our visions about ceremonies and clergymen in the observance of the Lord's Supper. The truth is this: on the first day of the week the brethren met together to break bread; and if in those meetings ministers, that is *diakoni*, were present, or if elders were of the number, they would take the bread and the wine amongst the rest, but the sacrament and the clergymen had not then been invented. In the second century of church-history, they begin to make their appearance."

MARRIED, on the 26th ult., at Bethel, near Dublin, Wayne Co., Ind., DR. ZACCHEUS TEST, of Richmond, Ind., to LIZZIE M., daughter of Enos G. and Elvira Pray, of the former place.

On the 26th of 8th month, at Newhope Meeting of Friends, Greene Co., Tennessee, MAHLON H. LEWIS, son of Henry Lewis, deceased, to RHODA BEALS, daughter of Daniel and Ann Beals, all members of New Hope Monthly Meeting.

At Elm Grove, the 27th of 8th mo., BENJAMIN D. PICKETT, of Howard Co., Ind., to MARTHA LARRANCE, of Spiceland Monthly Meeting, Henry Co., Ind.

DIED, At the residence of his father, near West Elkton, Preble co., Ohio, on the 16th of 7th mo. last, ISAAC C., son of Elisha & Elizabeth Stubbs, in the 21st year of his age, a member of Elk Monthly Meeting of Friends.

His relatives and acquaintance deeply feel the loss of this dear young friend, but they sorrow not as those who have no hope.

—, Near New Vienna, Ohio, on the 6th of 7th mo. last, MICHAEL NORDYKE, in the 87th year of his age, a member of Clear Creek Monthly Meeting.

He bore his affliction, which was of short duration, with Christian resignation, and from a few expressions dropped by him, his bereft relations and friends have the consoling belief that he is gathered as a shock of corn in its season. This dear friend's labors had not been much in a public way, but his exemplary life in the attendance of religious meetings and other Christian duties appears to call forth the language, "May my latter end be like his."

—, On the 23d of 7th mo. last, in Chowan Co., N. C., in his 62d year, FRANCIS WINSLOW, an esteemed member of Piney Woods Monthly Meeting of Friends.

For very nearly nine years previous to his death, he had been wholly unable to walk, in consequence of the contraction and distortion of his limbs from rheumatism. During this long confinement, and the intense and unutterable pain which was frequently his portion, he was preserved in most remarkable patience, often crying out, "Lord, not my will, but thine be done." Although he often prayed that death might be permitted to terminate his sufferings, yet he was never heard to murmur at his affliction, nor to express a regret that his lot was such as it was. Truly the silent yet powerful preaching of such "an example of suffering, affliction and of patience," should not be lost upon his family, his friends and his acquaintance. He was visited by many Friends travelling in the work of the ministry, much to their satisfaction, as well as to his own. Not long previous to his death he was permitted to receive a full assurance that He who had been with him in six troubles, would not forsake him in the seventh; and during the last few days of his earthly existence, he uttered several expressions which indicated the serenity of his mind and his abiding faith in that mercy which was about to permit him to exchange the tribulations of earth for the joyous service and the endless rest of Heaven.

—, On the 26th of 7th mo. last, at Athens, Maine, BENJAMIN MAGOON, aged 68 years and 11 months, an esteemed and worthy member of Sidney Monthly Meeting. Having by conviction become united in religious fellowship with the Society of Friends, he was received a member of that meeting in 1833, since which he has adorned his profession with an exemplary life in conversation and conduct. This dear friend's illness was a protracted one, attended with considerable suffering, which he bore with Christian patience and meekness, giving evidence by sweet expressions which often fell from his lips, that his hope and trust were anchored in Christ his Redeemer.

He was favored to retain his memory and intellect to the end of his life, and his last words relative to the state of his mind and departure were, (as he smilingly turned to a near relative,) "I feel that all my sins are forgiven," then presently added, "Lord Jesus, receive my spirit." Thus he passed quietly away, like one falling into a peaceful slumber, closing his eyes himself, leaving a consoling belief that his purified spirit has entered into eternal rest.

—, On the 8th of 2d mo. last, in the 54th year of his age, WM. NEWBY, a member of Driftwood Monthly Meeting, Indiana. It can be truly said that he endeavored to set his house in order for the solemn change.

DIED, In Greene Co., Tennessee, on the 6th of 7th month last, aged about 66 years, ELIZABETH JOHNSON, widow of William Johnson, a member of New Hope Monthly Meeting of Friends. Her end appeared to be peace.

#### WANTED,

By a Friend, a house and a few acres of land near a Friends' Meeting House and School House, somewhere south of the north line of Pennsylvania. Address

HOPE NEWBOLD,

Care of J. DENNIS, Jr., Washington, D. C.

#### FOSSIL PLANTS.

The oak, the birch, the hazel, the Scotch fir, all lived, I repeat, in what is now Britain, ere the last great depression of the land. The gigantic northern elephant and rhinoceros, extinct for untold ages, forced their way through their tangled branches; and the British tiger and hyæna harbored in their thickets. Cuvier framed an argument for the fixity of species on the fact that the birds and beasts embalmed in the catacombs were identical in every respect with the animals of the same kinds that live now. But what, it has been asked, was a brief period of three thousand years, compared with the geologic ages? or how could any such argument be founded on a basis so little extended? It is, however, to no such narrow basis we can refer in the case of these woods. All human history is comprised in the nearer corner of the immense period which they measure out; and yet, from their first appearance in creation till now they have not altered a single fibre. And such, on this point, is the invariable testimony of Paleontologic science,—testimony so invariable, that no great Paleontologist was ever yet an asserter of the development hypothesis. With the existing trees of our indigenous wood it is probable that even in these early times a considerable portion of the herbs of our recent flora would have been associated, though their remains, less fitted for preservation, have failed to leave distinct trace behind them. We at least know generally, that with each succeeding period there appeared a more extensively useful and various vegetation than that which had gone before. I have already referred to the sombre, unproductive character of the earliest terrestrial flora with which we are acquainted. It was a flora unfitted, apparently, for the support of either graminivorous bird or herbivorous quadruped. The singularly profuse vegetation of the Coal Measures was, with all its wild luxuriance, of a similar cast. So far as appears, neither flock nor herd could have lived on its greenest and richest plains; nor does even the flora of the Oolite seem to have been in the least suited for the purposes of the shepherd or herdsman. Not until we enter on the Tertiary periods do we find floras amid which man might have profitably labored as a dresser of gardens, a tiller of fields, or a keeper of flocks and herds. Nay, there are whole orders and

families of plants of the very first importance to man which do not appear until late in even the Tertiary ages. Some degree of doubt must always attach to merely negative evidence; but Agassiz, a geologist whose statements must be received with respect by every student of the science, finds reason to conclude that the order of the Rosaceæ,—an order more important to the gardener than almost any other, and to which the apple, the pear, the quince, the cherry, the plum, the peach, the apricot, the nectarine, the almond, the raspberry, the strawberry, and the various brambleberries belong, together with all the roses and the potentillas,—was introduced only a short time previous to the appearance of man. And the true grasses,—a still more important order, which, as the corn bearing plants of the agriculturist, feed at the present time at least two-thirds of the human species, and in their humbler varieties form the staple food of the *grazing* animals.—scarcely appear in the fossil state at all. They are peculiarly plants of the human period.

Let me instance one other family of which the fossil botanist has not yet succeeded in finding any trace in even the Tertiary deposits, and which appears to have been especially created for the gratification of human sense. Unlike the Rosaceæ, it exhibits no rich blow of color, or tempting show of luscious fruit:—it does not appeal very directly to either the sense of taste or sight; but it is richly odoriferous; and, though deemed somewhat out of place in the garden for the last century and more, it enters largely into the composition of some of our most fashionable perfumes. I refer to the *Labiata* family,—a family to which the lavenders, the mints, the thymes, and the hyssops belong, with basil, rosemary, and marjorum,—all plants of “gray renown,” as Shenstone happily remarks in his description of the herbal of his “Schoolmistress.”

“Herbs too she knew, and well of each could speak,  
That in her garden sipped the silvery dew,  
Where no vain flower disclosed a gaudy streak,  
But herbs for use and physic not a few,  
Of gray renown within those borders grew.  
The tufted basil, pun-provoking thyme,  
And fragrant balm, and sage of sober hue.

\* \* \* \* \*

“And marjorum sweet in shepherd’s pose found,  
And lavender whose spikes of azure bloom  
Shall be crewlike in arid bundles bound,  
To lurk amid her labors of the loom,  
And crown her kerchiefs clean with meikle rare perfume.

“And here trim rosemary, that whilom crowned  
The daintiest garden of the proudest peer,  
Ere, driven from its envied site, it found  
A sacred shelter for its branches here,  
Where, edged with gold, its glittering skirts appear,  
With horehound gray, and mint of softer green.”

All the plants here enumerated belong to the labiate family; which, though unfashionable even in Shenstone’s days, have still their products favor-

ably received in the very best society. The rosemary, whose banishment from the gardens of the great he specially records, enters largely into the composition of eau de Cologne. Of the lavenders, one species (*Lavendula vera*) yields the well known lavender oil, and another (*L. latifolia*) the spike oil. The peppermint (*Mentha viridis*) furnishes the essence so popular under that name among our confectioners; and one of the most valued perfumes of the East, (next to the famous *Attar*, a product of the Rosaceæ,) is the oil of the *Patchouly* plant, another of the labiates. Let me indulge, ere quitting this part of the subject, in a single remark. There have been classes of religionists, not wholly absent from our own country, and known on the Continent, who have deemed it a merit to deny themselves every pleasure of sense, however innocent and delicate. The excellent but mistaken Pascal refused to look upon a lovely landscape; and the Port Royalist nuns remarked, somewhat simply for their side of the argument, that they seemed as if warring with Providence, seeing that the favors which he was abundantly showering upon them, they, in the stern law of their lives, were continually rejecting. But it is better, surely, to be on the side of Providence against Pascal and the nuns, than on the side of Pascal and the nuns against Providence. The great Creator, who has provided so wisely and abundantly for all his creatures, knows what is best for us infinitely better than we do ourselves; and there is neither sense nor merit, surely, in churlishly refusing to partake of that ample entertainment, sprinkled with delicate perfumes, garnished with roses, and crowned with the most delicious fruit, which we now know was not only specially prepared for us, but also got ready, as nearly as we can judge, for the appointed hour of our appearance at the feast. This we also know, that when the Divine Man came into the world,—unlike the Port Royalist, he did not refuse the temperate use of any of these luxuries, not even of that “ointment of spikenard, very precious,” (a product of the labiate family), with which Mary anointed his feet.—*Testimony of the Rocks.*

#### THE POWER OF PREJUDICE.

A clergyman in the vicinity of Auburn, N. Y., was lately suspected by his clerical brethren of preaching heresy. The Presbytery came together to investigate his case. The suspected brother asked that he might have the privilege of setting forth his views in a sermon, which was granted. The sermon was preached, and thereupon every member of the Presbytery proceeded to pronounce it heretical, and much of it absurd. After a whole day had been spent in condemning him and his sermon, the poor man arose, and remarking that he saw they had come determined to find him guilty, said, “I have a disclosure to make

which will be most painful to you. That sermon which I read to you was *Dr. Chalmers' thirty-second lecture on Romans!*" The Presbytery immediately adjourned *sine die*.—*Springfield Republican*.

*The Mountain Formation of North America—  
The Great Table-Lands—Geographical Features.*

INDEPENDENCE, May 22, 1857.

To the Editor of the New York Daily Times :

I have, in a former note, given you a sketch of one of the cardinal subdivisions of our continent and country, the GREAT PLAINS. I now proceed to sketch what is beyond them, and fills the space out to the Pacific sea. This is the immense MOUNTAIN FORMATION OF NORTH AMERICA.

I approach the attempt to classify and set down this region with a degree of trepidation which I find it difficult to master. During the years of war and exploration which I have passed among them, every hour has kept alive the awe inspired by the immensity of the space they occupy, the grandeur of their bulk and altitude, and the sublime order and symmetry which pervade them as a system and in the details. Moreover, no one, not even Humboldt, has ever attempted to reduce them to a classic system, or assented to what I have done in the Hydrographic map of 1845, which you have seen and studied. These indelibly-graved impressions perpetually recur whenever my memory reverts to that time, and warns me to speak of countries so novel to a public little curious and uninformed, only after condensing their portrait with the maturest meditation and with nicely-guarded caution.

The mountain formation of North America is that distinct subdivision of its area which occupies the whole space from the Great Plains to the Pacific Sea and covers two-sevenths of the continent. In its area, bulk, number and variety of the mountain masses, it equals the aggregated mountains of all the other continents. It has peculiar characteristics which render it more interesting than them all. Travelling transversely across from east to west along the thirty-ninth degree, the breadth is *sixteen* hundred miles; the length, continuous from Tehuantepec to the Arctic Sea, is *four thousand five hundred* miles; the direction is regular from south-southeast to north-north-west. From east to west the traveller enters and crosses five physical divisions, as distinct in order and succession as are the prismatic streaks of the rainbow to the eye. These are: 1st, The Black Hills, or Eastern Piedmont; 2d, The Cordillera of the Sierra Madre (Rocky Mountain); 3d, The Plateau of the Table Lands, with its mountain chains; 4th, The Cordillera of the Snowy Andes, (the Sierra Nevada); 5th, The Maritime Piedmont, of the Pacific Shore. These divisions are parallel to one another like the streaks of the rainbow, and, like them, run

throughout from end to end of the *mountain formation*, in which they are blended together in one embodied mass.

Beyond the central line of the *Great Plains*, the undulations of the surface begin to swell up, until they become elevated into secondary mountains, with timber, and crowned with rocky escarpments. These are the *Black Hills*. They are the outliers of the Sierra Madre, are in the Basin of the Mississippi, and masking the mountain crest, break and graduate its descent. They are three hundred miles in breadth, are perforated across by all the great rivers, and are washed away and tortured into fragments by their channels. They have rocks of porphyritic granite and sandstone, but are for the most part formed of the sulphate of lime, as gypsum or plaster of Paris. Some of them are paved with petrifications, and others, being composed of light mould, form the suspended matter of the rivers which goes down to make the alluvial bottoms and delta of the Mississippi Basin. They have but little snow or rain, a scattered growth of dwarfed timber, and a picturesque and fantastic scenery. They are an important part of the pastoral region, are clothed in perennial grass, and abound in aboriginal cattle. Perpetual sunshine, fertility, perfect health, pure water, ever varying scenery, and abundant animal life, will, in time, attract and fix here the densest population.

Over the Black Hills rises the *Cordillera of the Sierra Madre*. This supreme Cordillera may be defined as the backbone of the world; it is the "*divostia aquarum*" of the American continent. From the snows of its immense crest and flanks descend the rivers that irrigate both faces of the continent out to all the oceans. From it also branch off all the other mountain chains. Where the irrigation from the snows is sufficient, immense forests exist; elsewhere the mountains are naked. The core or basis of the Sierra Madre is red porphyritic granite, from the immense naked masses of which comes the popular sobriquet of "*Rocky Mountains*." This is the gold-producing quartz. The Sierra Madre has precipitous mural flanks which protrude outward as promontories or recede to encase the course of rivers and valleys. It has peaks, conical in shape and culminating by a sharp apex. To those who view it in the horizon from below, this is its general appearance; but to those who ascend its ragged front and surmount its highest crest, this is found to be a *Mesa* or indefinite table land as level as a water surface. This Sierra Madre has its own characteristics, which are all of the grandest order. I am unable to illustrate it by comparison, because it stands supreme and alone, the standard to which all other mountain masses must be submitted. It is of the original mass of the globe, and has neither lava, nor craters, nor active volcanoes, nor traces of the igneous force within. It is *par excellence*

primeval. Scooped out of its main mass are valleys of great size and beauty, which have received from the trappers the name of *Parks*. These occur at regular intervals, alternately upon either flank, and mark the sources of the great rivers. Those which I have seen are the Plain of the South Pass, surrounding the sources of the Rio Verde; the North Park upon the northern Platte or Nebraska River; the Middle Park upon the Rio Grande of the west; the South Park upon the Southern Platte; the Plain of St. Louis upon the Rio del Norte. These remarkable valleys are all secluded within the main dorsal mass of the Cordillera, and are of great size, fertility and beauty. They resemble those reservoirs of the Alpine torrents of Switzerland, Geneva and Constance, out of which issue the rivers Rhone and Rhine, and the Valley of Cashmere, through which the Indus flows, though they contain no lakes. They are the paradise of the aboriginal herds, with which they swarm at all seasons, and are the favorite retreats of the Indians. To define the exact width of the primary Cordillera, and mark the line where it fades into the Black Hills upon the East, and into the plateau of the Table Lands upon the West, is not easy; but it varies from one hundred to two hundred and fifty miles, according as it expands into salient promontories, or recedes to give passage to the rivers.

We next descend on to the third division, which is the *Plateau of the Table Lands*. This expands onward to the Cordillera of the Snowy Andes. I speak again with great diffidence, but of all the departments into which science has arranged the physical geography of the Globe, this appears to me the most interesting, the most crowded with various and attractive features, and the most certainly destined eventually to contain the most enlightened and powerful empire of the world. At present it is no more known or comprehended *as it is* by the American people than was America itself by the poet Homer, and is to them as much a myth as the continent of Atlanta. Nevertheless it is of such great area as to contain within itself three rivers which rank with the Ganges and Danube in size, and five great ranges of primary mountains. You will see it exactly defined upon the Hydrographic map of 1845, as the immense longitudinal region enclosed within the Cordilleras, and extending from Tehuantepec to the Northern Sea. It would exhaust a large volume to recite in detail the interesting features of this region, all worthy to be known.

The *Plateau of the Table Lands* is a succession of *intra-montane* basins, seven in number, and ranging successively from south to north. The solid mass of the Andes debouches out of the Isthmus of Tehuantepec, and forks immediately into the two Cordilleras. Advancing along the Western Cordillera into the State of Jalisco, a mountain chain issues from its inner flank, and

traversing the table lands plunges into the Sierra Madre, in the State of San Luis Potosi. This cuts off to the south the "Basin of the City of Mexico," which is the *first*, the smallest and most southern of the mountain basins. Further north, a second mountain chain crosses from Durango to Coahuila, and cuts off the "Basin of the Balsón di Mapimi." This is the *second* mountain basin. The Cordilleras which flank these two and fence them from the sea, have so great an altitude that the ocean vapors never surmount their crests, nor do any clouds pass outward over them. These basins, therefore, have no outward drainage, nor any rivers running to the sea. Stagnant lakes alternately receive the drainage from their surrounding mountains, and yield it to them again by evaporation. This last chain is known as the "Mountain of the Rio Florida;" the former as the "Mountain of Queretaro."

Pursuing still the Western Cordillera through the State of Sinaloa, a third mountain chain, dividing off, traverses the Table Lands due north and plunges into the Sierra Madre between the plain of St. Louis and the Middle Park. This is an immense and remarkable mountain, is thirteen hundred miles in length, and divides asunder the waters of the Del Norte and Colorado. It is the famous *Sierra Mimbres*. The area thus cut off between it and the Mountain of the Rio Florida is drained by the rivers Del Norte, Pecos and Conchos, which, uniting at the base of the Sierra Madre, perforate it by a *canon*, and escaping into the external maritime region, form the Rio Grande of Texas. This is the only water course which perforates the Sierra Madre between Cape Horn and the Arctic sea. It is here that a profound and distressing error pervades all the existing charts and delineations of our continental geography. These, omitting the great Sierra Madre for six or seven hundred miles of its length, and assigning its name to the Sierra Mimbres, locate the Rio del Norte and its vast basin with the system of Atlantic rivers. Yet the Sierra Mimbres abounds in pedigrals of lava, craters and volcanic phenomena, and the geological altitude, configuration and a thousand palpable characteristic features of the basin of the Del Norte locate them upon the Plateau of the Table Lands. This blunder of transposition is as foolish as to construct a map of Europe and forget the Alps, or to draw for the people a pine tree growing erect in the middle of the ocean, whilst dolphins graze upon a mountain slope! The vast basin of the Del Norte is then the *third* in order of the mountain basins of the Plateau.

(To be continued.)

It is a sad reflection, that many men hardly have any religion at all, and most men have none of their own; for that which is the religion of their education, and not of their judgment, is the religion of another, and not theirs.—*Penn.*

## LADY FRANKLIN'S ARCTIC EXPÉDITION.

This Expedition, consisting of the *Fox*, screw-steamer yacht, sailed from Aberdeen at 7 A. M., on the 1st of July, under the most favorable auspices. She is commanded by Capt. M'Clintock, R. N. His officers are Lieut. Hobson, R. N., a son of the well known Capt. Hobson, R. N., late Governor of New Zealand. Lieut. Hobson is highly experienced in Arctic service, having done duty for seven years in the *Plover* when that ship was in Behring's Straits. Captain Allen Young, late of the steam transport *Adelaide*, in the Black Sea, officiates as Sailing Master. He contributed £500 to the equipment of the *Fox*, and is greatly interested in the success of the Expedition. Dr. David Walker acts as Surgeon and Naturalist,—and Mr. Petersen, who was with the Expeditions of Capt. Penny and Dr. Kane, will perform the important part of Interpreter. Besides these, the *Fox* takes out twenty seamen, for the most part man-of-war's men who have served in former Arctic Expeditions.

The *Fox* will put in at Disco to coal, and procure a number of sledge-dogs, a dog-driver, and another Esquimaux interpreter, by which means additional security will be had that any intelligence gleaned from the Esquimaux will be faithfully rendered to Capt. M'Clintock.

The *Fox* is provisioned for nearly three years. Her stores are of the very best description,—and it is gratifying to record that they include a great number of presents from various mercantile houses. The equipment of the yacht is of the most perfect nature, every advantage having been taken of the large experience gained by former Arctic Expeditions. Besides the large mahogany boat, whose curious adventures have been recorded in the papers, the *Fox* is provided with a life-boat of novel and admirable construction, built by Mr. White, of Cowes, and presented by that gentleman to Lady Franklin.

Capt. M'Clintock—to whom the *Fox* is legally assigned—is peculiarly fortunate; as, besides having the gratification of commanding a ship in every respect adapted for Arctic service, he goes out unshackled by Admiralty instructions, and perfectly free, as far as Lady Franklin is concerned, to take whatever course he thinks best. He requested Lady Franklin to give him instructions, but such is the confidence felt by that lady in the judgment of this gallant and experienced Arctic officer—who, it will be remembered, has served in all the Eastern Arctic Expeditions under Sir James Ross, Capt. Austin, and Sir Edward Belcher—that she at once declared that, as there could be no difference of opinion as to the locality to be searched, he was the best judge how it should be reached. We may state that Capt. M'Clintock's primary object will, of course, be the rescue of a single survivor of the Franklin Expedition, if one should exist, as recent reports brought home by whaling cap-

tains would tend to show may possibly be the case. Secondly, the discovery and restoration of any documents or relics appertaining to the lost Expedition; and, thirdly, the verification of the course taken by the Franklin Expedition, and confirmation of the report brought home by Dr. Rae, to the effect that, in the early spring of 1850, a party from the *Erebus* and *Terror* landed a boat on King William Land,—a fact which in itself establishes the priority of the discovery of a North-West Passage by Sir John Franklin.

Thus it will be seen that everything has been done by Lady Franklin and her friends to make this Expedition successful; but to render the final search complete, it is highly important that a ship should be sent through Behring's Straits, along the coast of North America, with the view of meeting Capt. M'Clintock, whose safety by this measure would be probably secured, while at the same time the chances of attaining all the objects of a final search would be doubled, for it is well known that the opinions of competent authorities are nearly divided respecting the merits of the east and west routes to the Arctic seas and lands around King William Island, at the mouth of the Fish River.

It is due to the Admiralty to say that though in the first instance they declined to give any encouragement to Lady Franklin's Expedition, yet when it was decided upon and placed under the command of so judicious a commander as Capt. M'Clintock, they reconsidered their objections, and materially assisted him by contributing stores. This leads to the hope that Government will yield the *Resolute* for the western search, particularly as that ship requires no outlay to put her in effective order for Arctic service.

Those, and they are not few, who take an interest in this final search, will be glad to hear that the officers and crew of the *Fox* have left our shores in the highest possible spirits, confident that success awaits their efforts. But should they unhappily fail in the main object of the Expedition, we must not overlook the fact that highly important geographical and scientific results may be obtained. The locality to be searched is in the immediate vicinity of the North Magnetic Pole, one of the most interesting spots on the face of our globe, which, however, it will be remembered, is not stationary. With the view of taking advantage of the opportunities thus presented for magnetical investigations, the Council of the Royal Society voted a sum of money from the Donation Fund at their disposal for the purchase of magnetical and meteorological instruments, and a committee, consisting of distinguished physicists, have supplied Capt. M'Clintock with desiderata in magnetism and meteorology, while Sir W. Hooker and Dr. Hooker have furnished instructions respecting botanical collections, and supplied

Ward's cases for the growth of esculent vegetables.

We may mention in conclusion that the Expedition is provided with the best photographic apparatus, which will be used by Dr. Walker, who is skilled in the art of photography. The Fox, which is a very quick sailer, is expected to make the ice in about ten days, and intelligence of her voyage to Greenland will be brought home by Danish ships from Disco.—*Athenæum*.

For Friends' Review.

#### EMANCIPATION CONVENTION IN CLEVELAND.

This Convention was held, as proposed, on the 25th, 26th, and 27th of last month, and appears to have been attended by delegates from most or all of the Free States and from two or three Slave States. We have not seen a full report of the proceedings of the Convention, but the results of its deliberations may be seen in the resolutions below.

1. Resolved, That, in the opinion of this Convention, it is highly desirable that the people of the North should co-operate, in a generous and brotherly spirit, with the people of the South, and share liberally with them in the expense of putting an end to so great a moral and political evil as American slavery.

2. That the American people should make their common Government their agent in this matter, and should call on Congress to pay to each State that shall abolish slavery a sum not exceeding two hundred and fifty dollars for each and every slave emancipated, each State providing for any additional remuneration that it may deem proper.

3. That the American people, when helping the emancipators, should help the emancipated also. No measure of aid in this direction could exceed our wishes. Nevertheless, the small sum of twenty-five dollars to each of these wronged and destitute ones would go far toward supplying them with humble homes upon this Continent, or upon another, should they prefer so wide a removal from the land of their birth.

4. That the temporary derangement which the substitution of free for slave labor would bring upon a State would be more than compensated in the enhanced value of her soil, and in numerous other great advantages which would be certain to ensue. Were Virginia to emancipate her slaves the present year, her wealth in ten years would be far more than double what it is now. Let her emancipate her slaves this year, and her vacant land could be sold the next for several times as much as it can now.

5. That, in proposing the payment of such a vast sum of money to the Southern States, we are actuated by the earnest desire, which we feel in common with millions of our countrymen, that all the slaves in this land shall be lifted from the degradation of their chattelhood and bondage at the earliest possible day that it can be effected

by peaceable means, as the first act in that full redress of their wrongs which the nation owes them.

6. That, in making this offer of co-operation on the part of the Government, Congress would not, in the slightest degree, infringe upon the sovereignty of any State, as it is regarded in the South; as the acceptance of the offer, the apportionment of the money and all the legislative acts necessary to the extinction of slavery within its borders, would be left to the State itself.

7. That this Convention would invite all the friends of compensated emancipation to interest the public mind in its favour through their local newspapers, by public meetings, and by petitions to Congress, earnestly endeavouring to gain the adhesion and active co-operation of persons of all parties and professions, North and South, so that the movement may not assume an apparent connection with any particular political party.

8. That notwithstanding the press of the South condemns as unauthorized and impertinent our taking this subject in hand, we, nevertheless, justify ourselves on the ground—1st, that what vitally concerns one part vitally concerns every other part of the human brotherhood; and 2nd, that the North has as much right to save from, as the South has to hurry to, destruction the ship of State, which carries both the North and the South—the dearest interests of the one as well as the dearest interests of the other.

9. That the declaration that our undertaking involves the recognition of the right of property in man is as groundless as it is astounding; and that this undertaking, so far from precluding those that embark in it from inculcating, as all should do, the unconditional duty of the slaveholder to set the slave immediately free, does but impart to them a special fitness for such inculcation and a special power to make it effectual.

10. That, through petitions to Congress and personal communications with members, the proposition of compensated emancipation be brought before both Houses and discussed the following session; and that all other proper and judicious measures be taken to press the subject upon the attention of the Government and people of this country.

11. That in order to prosecute with vigor and without suspension of effort the movement inaugurated by this Convention, a society be now formed to be called the "National Compensation Emancipation Society."

In accordance with the last resolution, a "National Compensation Emancipation Society" was formed, and a President, Vice President, Secretaries and Treasurer were elected. Elihu Burritt, New Britain, Conn., is the Corresponding Secretary, and Robert Lindley Murray, New York, Treasurer. The Constitution adopted is as follows:

*First:* This Society shall be called the National Compensation Emancipation Society.

*Second*: The object of this Society shall be to promote the extinction of American Slavery by contributing to the compensation of the Slaveholders for their losses in the emancipation of their slaves.

*Third*: The officers of this Society shall be a President, Vice President, Corresponding Secretary, Recording Secretary and Treasurer.

*Fourth*: The office of the Society shall be in the City of New York, and three of the officers shall constitute a quorum for the transaction of the business of the Society.

*Fifth*: The first annual meeting of this Society shall be held in the City of New York, on the second Wednesday of next May; and that meeting shall have full power to alter this Constitution.

#### GROWTH OF NEW ZEALAND.

The Paris correspondent of the *Journal of Commerce* shows the extraordinary progress of this colony of Great Britain. He says:—

“Fifteen years ago the colony of New Zealand was an uncultivated, unexplored group of islands, inhabited by native cannibals. The New Zealand Company undertook it, sent out emigrants, turned to account its abundant agricultural and mineral resources, discovered the superior intelligence and aptitude for civilization of the indigenous race, and with the aid of indefatigable missionaries converted the heathen to Christianity. In a short time the British government erected New Zealand into a separate colony. The population was then not over five thousand; it has increased to nearly 180,000, of whom 50,000 at least, are whites, nearly all emigrants from the mother country. Sir Robert Peel once emphatically called it the Great Britain of the Southern Seas. Its revenue from the customs exceeds £100,000 a year; the exports amount to more than a quarter of a million. It is the see of a bishop of the Established Church. The metropolitan country has granted it a free constitution ‘almost equal to universal suffrage.’ The next clip of wool of the province of Wellington alone, will not be less than a million of pounds, and including the other Southern provinces, may be estimated at three millions. Education is extending among the natives by means of industrial schools, in which their children are provided with everything. The missionary establishments are numerous. A Mr. Smith, of Wellington, ‘come home after a residence of seventeen years in New Zealand,’ communicated much interested information. He deems it probable that the population will be doubled every three years. Within two months two thousand persons left Victoria for New Zealand. It would certainly be among the most prosperous and wealthy of the British possessions. It is mentioned in *Johnston’s Gazetteer* that, in 1840, a hundred American whaling vessels visited New Zealand.”

#### MILITARY AND MORAL HEROISM.

The woman who bears in secret, without complaining, the brutal conduct of her drunken husband; the starving child who sees the loaf unguarded in the baker’s shop, and restrains his hand from theft; the humble artisan, who, after toiling all day in the close factory, spends his evenings and his Sundays in instructing the children of his drunken neighbors; these that go on, day after day, year after year, in the same course of quiet obedience to their Heavenly Father, of active love to their fellow creatures, of courageous endurance when there is no glory to help them on, *these* are forgotten; perhaps driven into the gutter of society, because of their threadbare garments, and haggard faces: whilst the blustering, swaggering youngster, who, after cursing his own mother and sisters at home by his unfeeling life, at last blesses them by taking himself away, gets drunk, has the ribbons fastened on him, is put into red clothes, and walked about to the sound of music; if he is sent off to the Crimea, whether he will or not, and is fortunate enough to “pick off” a number of Russian soldiers, or with good luck an officer; *he* is honored with the reputation of a hero; even his coarse unfeeling jokes are printed in all the papers for the instruction of Christian families at home; and if he be shot in the next battle, his name is enrolled among those who have served their country with their blood; and there are found those who dare to engage for him a safe and immediate passage to the realms of everlasting happiness! Every one knew before the war began, that the *great bulk* of our soldiers are drawn from the drunken and profligate ranks of the community; from those who, at home, would be considered curses and pests of society. If such is the easy way of changing the heart and life, and transforming these self seekers into children of God, the sooner we give up schools, and preaching, and Bible Societies, and other Christian labors, and all turn soldiers, the better. To me it is very horrible, that Christians should praise such things.—*Words on the War, by a Christian Teacher.*

#### THE CROSS AND THE HEART.

A European Correspondent of the *S. C. Advocate* writes from Sorrento:

“One of the greatest curiosities we saw at Sorrento was a piece of poetry, engraved on a slab of marble inserted in the outer wall of the church. The lines began and ended alternately with the words *cross* and *cuore*. The following is, as nearly as possible, with the preservation of the measure and peculiar form of the original, a literal translation:

Cross, most adored! to thee I give my heart.  
Heart I have not, except to love the cross.  
Cross, thou hast won my wayward, alien heart;  
Heart, thou hast owned the triumph of the cross.  
Cross, tree of life! to thee I nail my heart;  
Heart cannot live, that lives without the cross.  
Cross, be thy blood the cleansing of my heart;

Heart, be thy blood an offering to the cross.  
 Cross, thou shalt have the homage of my heart;  
 Heart, thou shalt be the temple of the cross.  
 Cross, blest is he who yields to thee his heart;  
 Heart, rest secure, who cleavest to the cross.  
 Cross, key of Heaven, open every heart.  
 Heart, every heart, receive the holy cross.

## RELIGION—WHAT IS IT?

BY BISHOP HEBER.

Is it to go to church to-day,  
 To look devout and seem to pray;  
 And ere to-morrow's sun goes down  
 Be dealing slander through the town?

Does every sanctimonious face  
 Denote the certain reign of Grace?  
 Does not a phiz that scowls at sin  
 Oft veil hypocrisy within?

Is it to make our daily walk,  
 And of our own good deeds to talk,  
 Yet often practice secret crime,  
 And thus misspend our precious time?

Is it for sect or creed to fight,  
 To call our zeal the rule of right,  
 When what we wish is, at the best,  
 To see our church excel the rest?

Is it to wear the Christian's dress,  
 And love to all mankind profess,  
 Yet treat with scorn the humble poor,  
 And bar against them every door?

O, no, religion means not this;  
 Its fruit more sweet and fairer is;  
 Its precept this: to others do  
 As you would have them do to you.

It grieves to hear an ill report,  
 And scorns with human woes to sport,  
 Of others' deeds it speaks no ill,  
 But tells of good or keeps it still.

And does religion this impart?  
 Then may its influence fill my heart!  
 O! haste that blissful, joyful day,  
 When all the earth may own its sway.

## SUMMARY OF NEWS.

**FOREIGN INTELLIGENCE.**—Dates from Liverpool and London are to the 26th ult. The news is unimportant.

**ENGLAND.**—The Directors of the Atlantic Telegraph Company held a meeting on the 20th. Committees were appointed to investigate the causes of the failure in the late attempt to lay the cable, and the improvements in machinery and arrangements which may be necessary. The officers of the squadron engaged in the effort, were invited to be present and give their opinions. They agreed in the expression of a belief that the cable is well adapted to its purpose, and that no natural impediment to laying it exists, but that the machinery for the purpose is capable of considerable improvement. The conducting power of the cable appeared, from the experiments made, to be improved, rather than impaired, by submersion to the depth of 2000 fathoms. The practicability of joining the ends on board the two vessels in mid ocean was tested in a heavy sea, with entire success.

**FRANCE.**—French ships of war are ordered to render every necessary aid in their power to the English vessels proceeding to India with troops.

**GERMANY.**—The draft of a new constitution for the Danish Duchies, has been laid before the Holstein Estates. The Duchy of Holstein is to have a legislature and administration for its own special affairs.

No law is to be enacted, altered or annulled, without the consent of the States, but the resolutions of the Germanic Diet may be promulgated in the Duchy of Holstein, in virtue of the Federal Constitution.

In Nassau, a Roman Catholic priest has been condemned to an imprisonment of three months, for having preached against the Protestant faith. The Protestants in Tyrol are still not legally authorized to purchase landed property, or to have any trade whatever. This intolerance tends to prevent foreigners from purchasing estates in that region.

**ITALY.**—It is rumored that all the sovereigns of Italy will hold a congress at Bologna, the Pope presiding, to consider the political circumstances of the peninsula, to protest against England's granting asylum to conspirators, and to propose a new system of impost duties, port taxes, railroads and telegraphs.

The attempt to lay down a submarine telegraph from the island of Sardinia to Algiers, was to be commenced on the 12th ult.

A rupture between Naples and Sardinia is apprehended.

**RUSSIA.**—The government is about to despatch a flotilla to the Chinese waters, and Count Panintine, formerly connected with the expedition to Japan, is to represent Russia in China, during the present difficulties.

**TURKEY.**—The Sultan is said to have communicated to those European ambassadors who had suspended relations with the Porte, that he is occupied in forming a new ministry, and that until that is accomplished, diplomatic intercourse cannot be resumed.

**INDIA.**—Delhi had not been taken at the last accounts. Cawnpore had been captured by the rebels, and the Europeans massacred, but the place was subsequently retaken by the English troops.

**AFRICA.**—Recent accounts received in New York from a missionary in Liberia, state that there is great scarcity of food, both among the natives, and in some parts of the republic, owing in part to a failure of the rice crops of the natives some years since, from which they have not been able to recover.

Official confirmation has been received in England of the murder of the African travellers, Dr. Vogel and Corporal Maguire.

**DOMESTIC.**—The Constitutional Convention of Oregon was in session at our latest accounts. There had been much discussion on the subject of slavery in that territory, and it was supposed an effort would be made to introduce a pro-slavery clause into the new constitution.

A convention of Free State men in Kansas was held recently at Grasshopper Falls, to consider the question of voting at the election to be held next month. For delegate to Congress, members of the territorial legislature, and other officers. Between four hundred and five hundred persons were present, including most of the leading men of that party, and resolutions were adopted, it is said unanimously, agreeing to take part in the election, in reliance on Gov. Walker's pledge that they should have a fair vote, but protesting, as heretofore, against the enactments forced upon them by the votes of the people of Missouri. They also resolved to appoint a committee to wait on the territorial authorities, and insist upon a revision and correction of the apportionment lately made, to govern the election, and expressed their determination to adhere to the Topeka Constitution and government, and to direct all their efforts to setting that government in motion in a legitimate manner at an early date.

An expedition is about to be dispatched, under the direction of the War Department, to explore the Colorado River. It is proposed to build a small steamer at the mouth of the river, on the Gulf of California, and to ascend the stream in that way as far as may be found practicable.

ON THE DISUSE OF ALL TYPICAL RITES IN THE WORSHIP OF GOD.

BY J. J. GURNEY.

(Continued from page 4.)

What, then, may be deemed a fair and reasonable interpretation of our Lord's very simple precept? and in what signification would the twelve apostles to whom these words were addressed, naturally understand them? In order to give a satisfactory answer to this inquiry, we may, in the first instance, observe, that those twelve apostles were all Jews or Galileans; that they had long been accustomed to observe the rites of the supper of the Passover, and that among those rites were numbered, (as has been already stated,) the breaking of the bread, and the handing of the cup, with the blessing and giving of thanks. As they had already been habituated to these customs, so was the Lord Jesus well aware that they would still maintain them: for, as it has been already remarked, the apostles continued in the practice of parts of the Jewish ritual, long after the crucifixion of our Lord; and, although that ritual was in fact abolished by his death, the sudden disuse of it does not appear to have been enjoined upon them by their divine Master. Having these facts in our view, we may reasonably interpret the words of Jesus as commanding nothing more than that his apostles should call *him* to their recollection, when they met to celebrate the supper of the Passover. "This cup," said Jesus, "is the New Testament in my blood." Now, it was not every cup of wine which represented the New Testament in the blood of Christ: it was the cup of wine drunk at the supper of the Passover—an institution which they were then celebrating, and which, in some of its circumstances, was expressly typical of the death of the Messiah.

It appears, then, by no means very improbable that it was to the cup of the Passover exclusively that our Saviour's injunction applied—"This do ye, as oft as ye drink it, in remembrance of me;" that is, as often as ye meet together to celebrate the supper of the Passover, and to drink of that cup, which represents the New Testament in my blood, take care that ye forget not the true purport of the ceremony—do it in remembrance of me.

Such appears to be an easy and natural interpretation of our Lord's words. Nevertheless, it cannot be denied that they are capable of a sense somewhat more extensive. Although the breaking of the bread, the handing of the wine, &c., formed a part of the Jewish ceremonial order of the Passover supper, there is reason to believe that a similar method was observed in those more common meals, of which the Jews were accustomed to partake in one another's company. Thus, when Jesus, on a subsequent occasion, "sat at meat" with the two disciples at Emmaus, we again find him blessing, breaking and distributing the bread; and when Paul had induced his companions, on the voyage, to unite with him in taking the needful food, we read that "he took bread, and gave thanks to God in the presence of them all: and when he had broken it, he began to eat." Such being the common practice of the Jews, it is very probable that the apostles might understand our Lord's injunction as not confined to the Passover supper, but as extending to other more familiar occasions, when they might be gathered together to partake of a common meal. On these occasions, as well as at the Passover supper, they might consider it a duty, laid upon them by their beloved Master, to break their bread, and to drink of their cup, not only for the satisfaction of their natural appetites, but in commemoration of the body which was broken, and of the blood which was shed, for their sakes.

That the Lord Jesus was thus understood by some of his hearers, may be collected from the known practice of the church, at the very earliest period of its history. Of those numerous persons who were converted by means of the ministry of Peter, on the day of Pentecost, we read that "they continued steadfastly in the apostles' doctrine and fellowship, and in breaking of bread, and in prayers." Since the "breaking of bread"

is here mentioned among other signs of religious communion, it probably signifies, (according to the general opinion of biblical critics), *that breaking of bread* which was introduced as a memorial of the death of Christ. Nevertheless, that the practice in question was observed as a part of the social meal, is evident from the immediate context. "And all that believed," adds the historian, "were together and had all things common . . . and they, continuing daily with one accord in the temple, and *breaking bread from house to house, did eat their meat with gladness and singleness of heart.*" On another occasion, when we are informed that, "on the first day of the week," the disciples at Troas "came together to break bread;" there is no reason to suppose that they met for the purpose of performing a religious ceremony. It appears, rather, that they came together to partake of a brotherly repast, of which it is probable that *one* particular object was the joint commemoration of the death of their Lord. After Paul had taken the opportunity, afforded him by this meeting, of preaching at length to the disciples, it is obvious that he brake bread with them for the refreshment of his body, and the satisfaction of the demands of nature. "When he, therefore, was come up again," says Luke, "and *had broken bread and eaten, and talked a long while, even till break of day, so he departed.*"

Lastly, the same fact is evident from the description given by Paul of the abuses which had crept in among his Corinthian converts in their method of conducting these common repasts. "When ye come together, therefore, into one place, this is not to eat the Lord's Supper. For, in eating, every one taketh before other his own supper: and one is hungry, and another is drunken. What? have ye not houses to eat and to drink in? or despise ye the church (or assembly) of God, and shame them that have not? What shall I say to you? Shall I praise you in this? I praise you not." After thus reproving them, and after explaining to them, in a passage already cited, the origin and true object of the observance which they had thus abused, the apostle, zealous as he was for the right order of this Christian meal, concludes with the following exhortation; "Wherefore, my brethren, *when ye come together to eat, tarry one for another; and if any man hunger, let him eat at home, that ye come not together unto condemnation.*"

The supper, which the apostle here describes as the Lord's Supper, which the Corinthians had so shamefully misconducted, and during the course of which the bread was broken, and the wine handed about in commemoration of the death of Christ, was probably the same as was otherwise called "love," or the "supper of love." "Their coming together," says Theophylact, on 1 Cor. xi. 20, (or rather Chrysostom, from whom his commentaries were borrowed,) "was intended as a sign of love and fellowship; and he denomi-

*nates this social banquet the Lord's Supper, because it was the imitation of that awful supper which the Lord ate with his disciples.*" These suppers of love, or "love-feasts," are alluded to by Peter, and by Jude; and are described by Pliny, as well as by Tertullian, and other early fathers. It appears that they were frugal public repasts, of which the poor and the rich in the early Christian churches partook together, and which were regarded both as the symbols and the pledges of brotherly love. Such, then, was the "Lord's Supper" of the primitive Christians; such were the occasions on which they were accustomed to break their bread, and to drink their wine, as a memorial of the body and blood of Christ.

To the simple practice which thus prevailed among these primitive Christians, (if preserved within proper bounds,) there appears to be nothing which can fairly be objected. It was a practice which might be classed rather under the head of pious customs than under that of direct religious ceremonies. It was, perhaps, little more than giving to one of the common occasions of life a specific direction of an edifying character; and, under the peculiar circumstances of these early disciples, it might be considered no inconsistent result of that general law, that, whether we eat or drink, or whatsoever we do, all is to be done to the glory of God, and in the *name of the Lord Jesus*. But, appropriate as these feasts of charity might be to the condition of the infant church, when the believers were comparatively few in number, and in a considerable degree possessed all things in common, they would evidently be much less adapted for the use of those vast multitudes of persons, very slightly connected with each other, who profess Christianity in modern times. As the numbers increased in any church, who would, as members of it, possess a right to attend the *love-feasts*, there would necessarily arise a great danger of abuse in such a practice; and that this abuse actually took place in the church of Corinth, to an alarming and disgraceful degree, we have already noticed on the authority of the apostle Paul.

On the one hand, therefore, we may allow that those persons who continue the observance of the Lord's Supper, not as a religious ceremony constituting a necessary part of divine worship, but on the simple system of the primitive Christians, are not without their warrant for the adoption of such a course. On the other hand, it is no less evident that the apparent unsuitableness of the custom to the present condition of the visible church, its known liability to abuse, and, more especially, its close affinity with the abolished ritual of the Jews, appear to afford some strong reasons for its discontinuance.

That there is nothing in the history of the origin of that custom which precludes, under so obvious a change of circumstances, the *liberty for its disuse*, the reader will probably allow, for

reasons already stated. Here, however, it appears necessary to notice an expression of the apostle Paul's, from which many persons have derived an opinion that this practice is binding on believers in Jesus *until the end of the world*. "For as oft as ye eat this bread, and drink this cup," says the apostle, in a passage already cited, "*ye do show the Lord's death till he come.*" The inference deduced from these words respecting the *necessary* permanence of the rite of the Lord's Supper appears to be ill-founded. For, in the first place, they contain no *command* to the Corinthians to continue the practice in question until the Lord's coming: and in the second place, it is evident, from the context, that it was not here the apostle's object to impress upon his friends the *duration* of the custom, but only its *meaning* or *direction*. The stress of his declaration plainly lies upon the words "*Ye do show the Lord's death.*" The words "*till he come,*" appear to be added, as a kind of reservation, for the purpose of conveying the idea that, when the Lord himself should come, such a memorial of his death would be obsolete and unnecessary. It is the belief of Friends that the *principle* on which this reservation is made, substantially agrees with their own sentiment, that the spiritual presence of the Lord Jesus with his disciples, and the direct communion with him, which they are even now permitted to enjoy, virtually abrogate any practice in his service, which is of a merely symbolical character.

(To be concluded.)

WILLIAM WILBERFORCE.

(Concluded from page 6.)

Early in the year 1789, we find him moving for the abolition of the slave trade, and presenting a number of petitions to secure that measure. These petitions he accompanied by a speech, of which Mr. Burke remarks, "the principles were so well laid down, and supported with so much force and ardor, that it equalled anything he had heard in modern times, and was not perhaps to be surpassed in the remains of Grecian eloquence." Bishop Porteus, too, writing on the subject to W. Mason, says, "It is with heartfelt satisfaction I acquaint you that Mr. Wilberforce opened yesterday, in the House of Commons, the important matter of the slave trade, in one of the ablest speeches that was ever heard in that or any other place. It continued upwards of three hours, and made a sensible and powerful impression on the House." Nor were Mr. Pitt and Mr. Fox less loud in their encomiums. But it was not eloquence that could triumph over Guinea merchants. Many years elapsed before he could complete his object—years of opposition and trial, which would have discouraged almost any other man. During the administration of Mr. Pitt, every stratagem was resorted to, to defeat the measure, although Pitt was personally friendly to it; and it was not until after the res-

ignation of Mr. Pitt, and Mr. Fox and his friends were elevated to power, that the result was secured. During the protracted period in which this matter was in agitation, he was busy "in season and out of season;" he struggled with difficulties and disappointments which seemed to those who knew them utterly too formidable to be overcome. But he sought strength from Heaven—knew that he possessed the sympathies and prayers of the good, and when cast down, like the fabled Antæus, but rose the stronger. One of the many notes of encouragement addressed to him was written by John Wesley, and contained probably the last words of that extraordinary man; "Unless, my dear sir, Divine power has raised you up to be as *Athanasius contra mundum*, I see not how you can go through your glorious enterprise, in opposing that execrable villany which is the scandal of religion, of England, and of human nature. Unless God has raised you up for this very thing, you will be worn out by the opposition of men and devils; but if God be for you, who can be against you? Oh! be not weary of well doing. Go on, in the name of God and in the power of his might."

And he did thus go on with simple faith in the Most High, solemnly and constantly imploring Divine aid. His exertions were crowned with splendid success; and when this success came, he acknowledged its source with heartfelt thanksgiving. With unaffected humility he observes, "Oh, what thanks do I owe the Giver of all good for bringing me, in His gracious Providence, to this great cause, which at length, after almost nineteen years labor, is successful."

Nor, while he was doing this stupendous work for humanity, did he neglect the spiritual interests of his own country. Pained at the low standard of piety among the clergy, and the formality and worldliness which prevailed in the church, he formed the design of addressing them on their estimate and practice of religious duty. The result was a work on *Practical Christianity*, which was executed with signal ability, and received with unprecedented popularity. Within a fortnight of its publication not a copy could be purchased, and within six months five editions, or seventy-five hundred copies, were in circulation. Writes Henry Thornton to Mr. Macauley, "The book on religion lately published by Mr. Wilberforce, excites even more attention than you would have supposed, amongst all the graver and better disposed people. The better part of the religious world, and more especially the Church of England, prize it most highly, and consider it as producing an era in the history of the church." Wrote Bishop Porteus, "I am truly thankful to Providence that such a work has made its appearance at this tremendous moment;" while the testimony of Mr. Newton was, "that it was the most valuable and most important publication of the age." "What," he says,

"what a phenomenon has Mr. Wilberforce sent abroad! Such a book, by such a man, and at such a time—a book which must and will be read by persons in the higher circles, who are quite inaccessible to us little folks, who will neither hear what we can say, nor read what we may write. I am filled with wonder and with hope. I accept it as a token for good—yea, as the brightest token I can discern in this dark and perilous day. Yes, I trust that the Lord, by raising up an incontestible witness to the truth and power of the Gospel, has a gracious purpose to honor him as an instrument of reviving and strengthening the sense of real religion where it already is, and of communicating it where it is not." It was indeed one of the most useful publications that ever came from the press. Among those who have owed their conversion to its instrumentality, we may mention Legh Richmond, whose tracts, "The Young Cottager," "Dairyman's Daughter," &c., have been the vehicles of life eternal to many souls. Burke, too, according to Miss Hannah More, on his dying bed acknowledged to Dr. Lawrence, his physician, that he had been greatly profited by it, and committed specially to him his thanks to Mr. Wilberforce, for having sent such a book into the world.

Mr. Wilberforce retired from Parliament in the year 1825, and spent the residue of his days in the bosom of his family. There, encircled by his children and grand-children, and in communion with his Maker through his works and word, he cheerfully and usefully "passed all the days of his appointed time till his change came." The following sketch of his domestic retirement is as truthful as it is beautiful:

"Who that ever joined him in his hour of daily exercise, cannot see him as he walked his garden at Highwood, now in animated and even playful conversation, and then drawing from his copious pockets (to contain 'Dalrymple's State Papers' was their standard measure) some favorite volume or other—a Psalter, a Horace, a Shakespeare, or Cowper, and reading or reciting chosen passages; and then catching at long-stored flower leaves, as the wind blew them from the pages; or standing before a favorite gumbastus to repair the loss. Then he would point out the harmony of the tints, the beauty of the pencilling, the perfection of the coloring; and run up all into those ascriptions of praise to the Almighty which were ever welling forth from his grateful heart. He loved flowers with all the simple delight of childhood. He would hover from bed to bed over his favorites; and when he came in, even from his shortest walk, deposited a few that he had gathered, safely in his room, before he joined the breakfast table. Often would he say, as he enjoyed their fragrance, 'How good is God to us! What should we think of a friend who had furnished us with a magnificent house and all we needed, and then coming in to see

that all had been provided according to his wishes, should be hurt to find that no scents had been placed in the rooms? Yet, so has God dealt with us. Surely flowers are the smiles of His goodness.'"

He departed this life in his seventy-fifth year, after a short illness, not doubting that he was about to enter upon a world of secure peace and joy.

"Thus at the shut of even, the weary bird  
Leaves the wide air, and in some lonely brake  
Cowers down, and dozes till the dawn of day;  
Then claps his well-fledged wings, and bears away."

He was buried in Westminster Abbey; and as his corpse, followed by a long procession of mourners, was laid nigh to the tombs of Pitt, Fox, and Canning, the vaulted roof of that venerable pile gave back the sublime benediction, never more fitly offered—"Blessed are the dead who die in the Lord; yea, saith the Spirit, for they rest from their labors, and their works do follow them."

To this rapid survey of the life of Wilberforce, must be added a brief delineation of his character and accomplishments.

The glance we have taken shows most obviously that one remarkable trait in his character was his consistent, ardent piety. He was a sincere Christian. This, none who read his diary can doubt. He kept a record of the exercises of his soul—his interior life; and this shows the actings of a gracious principle, whose vigor was fed from Heaven. He was a Christian at all times, and in all places—on the Sabbath and during the week, in Parliament and by his own fireside. He walked with God, cultivated a sense of His presence, and of accountability to Him for all his doings, private and public. This was so marked as to be generally observable. He was taken knowledge of as one who had been with Jesus—was a living epistle, known and read of all men, and read for their profit. Many were forced to admit the reality of experimental religion from what they saw in him, and were won by his example to the paths of virtue. Says a person: "When I entered life, I saw a great deal of dishonorable conduct among people who made great professions of religion. In my father's house I met with individuals of this sort. This so disgusted me that, had it not been for the admirable pattern of consistency and disinterestedness which I saw in Mr. Wilberforce, I should have been in danger of a sort of infidelity." And remarks another, a shrewd observer: "That he acted up to the doctrines inculcated in his book as nearly as is consistent with the inevitable weakness of our nature, is a praise so high that it seems like exaggeration: yet in my conscience I believe it, and I knew him well for at least forty years." And he was a happy man; thus giving the lie to the charge so current, that religion is a gloomy, melancholy thing. "The work of righteousness is peace, and the effect of

righteousness quietness and assurance for ever." And Wilberforce found it so even as the prophet had said. He was one of the most cheerful, happy men of his day. Though the sympathies of his heart were often called forth by scenes of injustice and cruelty, he cast his care upon the Lord, who caused him always to triumph in Christ. He rejoiced greatly in the Lord: and while others were depressed and distracted with anxieties and labors, his soul was blest with a serene and tranquil sweetness.

As another of his characteristic features, may be mentioned his honesty and fearlessness in the discharge of what he believed to be his duty. Once satisfied that a given course of policy was right, he steadily pursued it in defiance of ridicule, vituperation, or slander. He was often tried in this respect, but the result was ever the same; he swerved not, he flinched not. Windham might be sarcastic, Burke ironical, and the King "turn a cold shoulder," and his constituents in Yorkshire remonstrate, and menacing epistles be addressed to him from various quarters; but it was enough for him to know that he was in the line of his duty. He went forward as an enlightened, approving conscience dictated. Nor is it surprising that he triumphed. The cause of timid, vacillating action is weakness of conviction. But Wilberforce, satisfied that he was performing the will of God and a noble service for humanity, never faltered, for his faith never wavered. The man who is bent upon doing good, looking unto Jesus and filled with his spirit, is not easily daunted or discouraged. Such a man, meeting with obstacles, however formidable, instead of being stopped by them, takes them up, and bears them onward in his march, as Samson bore off the gates of Gaza! Such was Wilberforce; his moral principle was inflexible, and his moral courage indomitable.

His, too, was a spirit of Christian union. Although Mr. Wilberforce was a member of the established church, he had the wisdom and good temper to *agree to differ* with those who were not. He numbered among his warmest friends those who were not Episcopalians; and in arranging and carrying out his plans of usefulness, co-operated as heartily with Dissenters and Quakers, as with those of his own denomination. His motto was that good old motto, never more precious than in this day of polemical strife and sectarian prejudice: "In essentials, UNITY; in non-essentials, LIBERTY; in all things CHARITY." And with reason: for disputes about the maximum of difference in religious matters end much like the contest between Copelius and Spalanzani for the beautiful waxen statue, as described by Hoffman in his story of the Sandman, where the quarrel closed by tearing the symmetrical figure in pieces, and mauling each other with its fragments. So truth in such cases is often dismembered, and its *disjecta membra* used as weapons of aggression.

As a private man, he was most exemplary and amiable. He loved hospitality, and none crossed the threshold of his home without experiencing his kindness and being charmed with his conversation. Mackintosh remarked of him, "that he was the most amiable man he ever saw, touching life at all points." His flow of spirits was perennial, and he delighted in all innocent ways to unbend himself. He had a vivacity which amused; and this vivacity and wit, which is rarely the case, were joined to a well-balanced mind and a sound judgment. This mind and judgment enabled him to adopt the most feasible means to accomplish a desired result; and this vivacity and wit enabled him to interest others in his undertakings, and prosecute them with energy and effect.

We must close; and we close in the hope that he whose character we have been contemplating will be imitated by those in public life. What a different aspect would be given to our halls of Congress and all our political affairs, were those in places of honor and trust like him of whom we have spoken, living not for their own fame, or their own pleasures, or for any selfish ends, but for the service of mankind and the glory of their Creator! Statesmen formed after this model will be statesmen indeed—Christian statesmen, lifted above the clashing of the arena and the convulsions of party contentions, blessings to their own generation and ornaments to their country. We have a few such, and it is our prayer that they may be multiplied; that many may be seen emulating the bright example of Wilberforce, and binding upon their brows a wreath like his. Other wreaths will fade, but this will hold its greenness in the lapse of ages, and freshen through eternity.—*Parlor Magazine.*

#### THE NEW TESTAMENT IN TURKEY.

A correspondent of the *National Era*, writing at Tocat, in Asiatic Turkey, relates the following interesting incidents.

"When we were reading together, some two years ago, *Lamartine's Sketches of Mohammed's Life and Institutions*, I scarcely thought that I should so soon test by observation the practical working of the latter. In this land, overshadowed by the 'Prophet's' mantle, everything and every custom appears to have remained as nearly stationary as possible, since the day when that benumbing shadow of spiritual despotism first fell on its hills and plains. But the light is pouring in from many points at present; and we may hope that at no very distant date, though probably not without a struggle, the old, stifling garment of Islamism, pierced and tattered, may be flung back to the deserts, whence it was taken. When we think of what this country *once* was—the neighborhood of Eden—and see what it *now* is, a sun-scorched succession of almost barren hills; when we recollect what races of men in old days were

marshalled here—what even the Turks themselves were in their early days, and then turn to what they are now—we cannot resist the conviction that a rich land and a noble race have been sacrificed to an unnatural and soul-stultifying creed.

We were all much interested in a venerable Turkish mountaineer, with a patriarchal beard and turban, who found his way to our court-yard some weeks since. He had come from the cliff of a mountain more than twenty miles away, with the following simple story and request.

It seems that, some years ago, in some of his wanderings, he met, for one night, a travelling missionary. This foreigner, finding that the man could read, gave him a copy of the New Testament. He took the book back to his own wild home; and as he tended his herds on the broad hill-sides, or reclined to smoke his *chibouque* under the shadow of some gray rock, (trees are not abundant on these old mountains,) he opened and read its forbidden pages. The marvellous story of Jesus of Nazareth was all new to him, and more strange than the Arabian tales which had filled his boyhood's ears. Truths, beside which the revered dogmas of the Koran were mere babblings, every where met his eye, as he went on, fascinated, through the pages.

With a child's heart he read, and with a child's heart he believed, as the wise and great of this world too often fail to believe, the story of the world's only Saviour. It made the old, lonely man strangely happy; it seemed to open a new world and a new life before him. With the instinct of a heaven-touched heart, he longed to share this knowledge and happiness with some fellow-being; but knew that the strictest caution was needful in revealing his newly-cherished sentiments. At last, he met a herdsman of nearly his own age, whose dwelling was also on the hills, in whose heart he found a chord of sympathy. To him he carried, by night, his precious book; and together by fire-light they read and talked of its teachings, until the second mountaineer's heart was won to something like the enthusiasm of the first. But, though they met as often as possible, the second soon found himself poor without such a treasure as his friend possessed—the wondrous Book. To procure another they supposed out of the question, as the giver of the one already possessed had long since left the country. Well, they would *copy* it, they resolved! And so they began their task, those two illiterate old men, who in their childhood had been taught, like most Turkish boys, to write a little in the Arabic character, but who had probably been more accustomed to the use of any other implement than of the pen. Painfully and laboriously they proceeded, and had, if I mistake not, finished several of the first chapters, when the welcome news came to their ears of missionaries residing in this city, who had 'books' to sell. The first-mentioned old man at once laid down

his pen, saddled his mule, and, taking in his girdle a sum of money, came to buy a New Testament for his friend.

When it was given him, he wrapped it reverently in his girdle, (the common receptacle of all articles carried about the person,) and raising his eyes, from which tears were starting, he exclaimed, 'Oh! I could not live without this friend!' (the book.) 'I am an old man; my wife and all my boys died long ago, and I am alone in the world; but Jesus speaks to my heart out of this book, and then I am not alone!' Then, glancing at our well-filled library, he added, 'You have many and beautiful books there; but I would not give back *this* for them all!' And so, with the precious volume closely hidden over his heart, he went back, to gladden his old companion in the mountains.

To have uttered such expressions as these in the city market-place would probably have cost him his life at once. For although the 'Hatti-Sherif,' or charter of religious liberty, last year promulgated, cannot by any means be styled a 'dead letter,' still it is at present practically such, so far as its enforcement within cities in the interior of Turkey is concerned. In former days, a recreant from the faith of his fathers would have been strangled by order of the judge; now, it would be done 'without judge or jury;' by an impromptu 'Vigilance Committee' of green turbaned fanatics; and the law might punish—whom it could convict! 'Turkish justice' is a proverb among those who have tried it. At the Capital, public sentiment is slowly progressing toward a practical application of the new charter. Three Mussulmen have dared, not openly, however, to receive baptism from the missionaries, and one is preaching there."

#### SOLOMON'S JUDGMENT.

A correspondent, Jean Hulotte, inquires, whether Solomon had any imitators in his judgment, and who they were? In the sacred books of the Buddhists of Ceylon, there are numerous passages which exhibit a striking resemblance to incidents in the Old Testament. In the Pali commentary on the discourses of Buddha, entitled the *Pansiya-panas-jataka*, or "Book of the Five hundred and fifty Births," the following story occurs: it has been translated by R. Spence Hardy, and will be found quoted at p. 191 of Roberts' *Oriental Illustrations of the Sacred Scriptures*:

"A woman who was going to bathe left her child to play on the banks of a tank, when a female who was passing that way carried it off. They both appeared before Buddha, and each declared the child was her own. The command was therefore given that each claimant was to seize the infant by a leg and an arm, and pull with all her might in opposite directions. No sooner had they commenced, than the child began

to scream ; when the real mother, from pity, left off pulling, and resigned her claim to the other. The judge therefore decided that, as she only had shown true affection, the child must be hers."—*Notes and Queries.*

## FOSSIL INSECTS.

Though it may at first seem a little out of place, let us anticipate here, for the sake of the illustration which it affords, one of the sections of the other great division of our subject,—that which treats of the fossil animals. Let us run briefly over the geologic history of insects, in order that we may mark the peculiar light which it casts on the character of the ancient floras. No insects have yet been detected in the Silurian or Old Red Sandstone Systems. They first appear amid the hard, dry, flowerless vegetation of the Coal Measures, and in genera suited to its character. Among these the scorpions take a prominent place,—carnivorous arachnidæ of ill repute, that live under stones and fallen trunks, and seize fast with their nippers upon the creatures on which they prey, crustaceans usually, such as the wood-louse ; or insects, such as the earth beetles and their grubs. With the scorpions there occur cockroaches of types not at all unlike the existing ones, and that, judging from their appearance, must have been foul feeders, to which scarce anything could have come amiss as food. Books, manuscripts, leather, ink, oil, meat, even the bodies of the dead, are devoured indiscriminately by the recent *Blatta gigantea* of the warmer parts of the globe,—one of the most disagreeable pests of the European settler, or of war vessels on foreign stations. I have among my books an age-browned copy of Ramsay's "Tea Table Miscellany," that had been carried into foreign parts by a musical relation, after it had seen hard service at home, and had become smoke dried and black ; and yet even it, though but little tempting, as might be thought, was not safe from the cockroaches ; for, finding it left open one day, they ate out in half an hour half its table of contents, consisting of several leaves. Assuredly, if the ancient *Blattæ* were as little nice in their eating as the devourers of the "Tea Table Miscellany," they would not have lacked food amid even the unproductive flora and meagre fauna of the Coal Measures. With these ancient cockroaches a few locusts and beetles have been found associated, together with a small *Tinea*,—a creature allied to the common clothes-moth, and a *Phasmia*,—a creature related to the spectre insects. But the group is an inconsiderable one ; for insects seem to have occupied no very conspicuous place in the carboniferous fauna. The beetles appear to have been of the wood and seed devouring kinds, and would probably have found their food among the conifers ; the *Phasmidæ* and grasshoppers would have lived on the tender shoots of the less rigid plants their cotem-

poraries ; the *Tinea*, probably on ligneous or cottony fibre. Not a single insect has the system yet produced of the now numerous kinds that seek their food among flowers. In the Oolitic ages, however, insects become greatly more numerous,—so numerous that they seem to have formed almost exclusively the food of the earliest mammals, and apparently also of some of the flying reptiles of the time. The magnificent dragon-flies, the carnivorous tyrants of their race, were abundant ; and we now know, that while they were, as their name indicates, dragons to the weaker insects, they themselves were devoured by dragons as truly such as were ever yet feigned by romancer of the middle ages. Ants were also common, with crickets, grasshoppers, bugs both of the land and water, beetles, two-winged flies, and, in species distinct from the preceding carboniferous ones, the disgusting cockroaches. And for the first time amid the remains of a flora that seems to have had its few flowers,—though flowers could have formed no conspicuous feature in even an Oolitic landscape,—we detect in a few broken fragments of the wings of butterflies, decided trace of the flower-sucking insects. Not, however, until we enter into the great Tertiary division do these become numerous. The first bee makes its appearance in the amber of the Eocene, locked up hermetically in its gem-like tomb,—an embalmed corpse in a crystal coffin,—along with fragments of flower-bearing herbs and trees. The first of the Bombycidæ too,—insects that may be seen suspended over flowers by the scarce visible vibrations of their wings, sucking the honied juices by means of their long, slender trunks,—also appear in the amber, associated with moths, butterflies, and a few caterpillars. Bees and butterflies are present in increased proportions in the latter Tertiary deposits ; but not until that terminal creation to which we ourselves belong was ushered on the scene did they receive their fullest development. There is exquisite poetry in Wordsworth's reference to "the soft murmur of the vagrant bee,"—

"A slender sound, yet hoary Time  
Doth to the soul exalt it with the chime  
Of all his years ; a company  
Of ages coming, ages gone,  
Nations from before them sweeping."

And yet, mayhap, the naked scientific facts of the history of this busy insect are scarcely less poetic than the pleasing imagination of the poet regarding it. They tell that man's world, with all its griefs and troubles, is more emphatically a world of flowers than any of the creations that preceded it ; and that as one great family—the grasses—were called into existence, in order, apparently, that he might enter in favoring circumstances upon his two earliest avocations, and be in good hope a keeper of herds and a tiller of the ground ; and as another family of plants—the Rosaceæ—was created in order that the gardens which it would be also one of his vocations to

keep and to dress should have their trees "good for food and pleasant to the taste;" so flowers in general were profusely produced just ere he appeared, to minister to that sense of beauty which distinguishes him from all the lower creatures, and to which he owes not a few of his most exquisite enjoyments. The poet accepted the bee as a sign of high significance: the geologist also accepts her as a sign. Her entombed remains testify to the gradual fitting up of our earth as a place of habitation for a creature destined to seek delight for the mind and the eye as certainly as for the grosser senses, and in especial marks the introduction of the stately forest trees, and the arrival of the delicious flowers. And,

"Thus in their stations lifting toward the sky  
The foliated head in cloud-like majesty,  
The shadow-casting race of trees survive:  
Thus in the train of spring arrive  
Sweet flowers: what living eye hath viewed  
Their myriads? endlessly renewed  
Where'er strikes the sun's glad ray,  
Where'er the subtle waters stray,  
Wherever sportive zephyrs bend  
Their course, or genial showers descend."

*Testimony of the Rocks.*

## FRIENDS' REVIEW.

---

PHILADELPHIA, NINTH MONTH 19, 1857.

---

OHIO YEARLY MEETING.—Letters received from several correspondents enable us to give the following interesting and satisfactory account of the proceedings of this meeting:

The Yearly Meeting of Ministers and Elders was held on Seventh day, the 5th inst., and was felt to be a time of sweet counsel and comfort. The two meetings for worship on First day were solemn and favored occasions. The ministry of the Gospel flowed to the comforting of many hearts, and supplications went forth to Him who made heaven and earth, the seas and the fountains of water, yet condescends, in his great mercy, to the low estate of his poor creature man.

On Second day morning the Yearly Meeting for business was opened, after an appropriate season of devotion, in which both prayer and testimony were offered. After the representatives from the four original Quarterly Meetings had been called, the annexation of Alum Creek Quarterly Meeting was taken up by reading the minutes of last year on the subject, and a paragraph in the Epistle from Indiana in relation thereto. Over one hundred members of that Quarterly meeting were present, some having come more than 200 miles; and there was a full

expression of unity and satisfaction with its reception as a branch of Ohio Yearly Meeting.

The certificates and minutes of Friends from other Yearly Meetings were then read, and thankfulness was felt that the feet of the Lord's messengers had been directed thither. Robert and Sarah Lindsey were in attendance from London Yearly Meeting; John Meader and Charles Coffin from New England; John Scott from Baltimore; Huldah Atwater from New York, and Mary Thomas and Sarah Ann Linton from Indiana.

The London General Epistle, and Epistles addressed to Ohio Yearly Meeting from London and Dublin and from all the Yearly Meetings in this country, except North Carolina and Philadelphia, were read, and a Committee was appointed to prepare replies. It was also concluded to have 2,000 copies of the General Epistle from London printed for distribution.

Various subjects, mostly connected with the transfer of Alum Creek Quarterly Meeting, were referred to the Representatives, and the meeting adjourned after sitting five hours.

*Third day.*—Jonathan Binns and James B. Bruff were proposed by the representatives and appointed Clerks. Two documents forwarded with the epistle from London, viz., "A salutation in the love of Christ to all who bear the name of Friends," and "An address to parents and others on the early training and scriptural instruction of Children," were read, and 5,000 copies of the former and 2,500 of the latter directed to be printed for distribution. The reading of the former document brought the meeting under a deep exercise in regard to what course could best be adopted in extending this appeal of our trans-atlantic friends to those who have ceased to walk with us, and a strong desire was felt that all proper means be used to keep an open door for their return.

The reports from the Quarterly Meetings on Schools were read, and a committee was appointed to give such advice and assistance to members in remote situations, respecting the school education of their children, as way may open for. Quarterly Meetings were also directed to appoint committees to join the aforesaid committee in their labors to promote the guarded literary education of our youth.

*Fourth day.*—The State of Society was entered upon by reading and answering the queries.

Much affectionate counsel was given during the exercise of the meeting, which was embodied in a minute to be appended to the summary.

On this day the Epistle from North Carolina, which had come to hand since the last sitting, was read and referred to the Epistle Committee.

Addition was made from Alum Creek Quarterly Meeting to the Committee on Indian affairs, and its former correspondents were received as correspondents of Ohio Yearly Meeting.

A committee was appointed to take into consideration a revision of the Book of Discipline, and report next year.

The meeting then adjourned to 5th day afternoon, in order to allow a public meeting for worship in the morning. This proved to be a favored season, in which several ministers were engaged in proclaiming the riches of Christ and unfolding the way of salvation to fallen man.

The afternoon sitting of the Yearly Meeting was occupied principally with reports from Committees.

*Sixth day.*—Essays of Epistles were presented, read and directed to be forwarded to the other Yearly Meetings, Philadelphia excepted; returning minutes for the beloved brethren and sisters who were present from other Yearly Meetings were adopted, and a joint committee of men and women friends was appointed to visit and assist subordinate Meetings.

The Yearly Meeting was much larger than at former periods since the late secession, owing principally to the annexation of Alum Creek Quarterly Meeting. The deliberations during its several sittings were characterized by great harmony and love, and the close in the afternoon was marked with deep feelings of solemnity, and but one sentiment seemed to animate every heart; "Behold how good and how pleasant it is for brethren to dwell together in unity."

Our dear friend Wm. Green having visited most of the meetings to which his religious concern extended, within the limits of Philadelphia Yearly Meeting, embarked on the 2d inst. at New York for Liverpool, on his return homeward.

DIED, on the 26th of Eighth month, at his residence in Pelham, Westchester County, New York, BENJAMIN S. COLLINS, in the 74th year of his age. This estimable friend was a warm advocate for the education

and the civil and political rights of the colored race; and when a resident in the City of New York, he was an active manager of the "Society for the Reformation of Juvenile Delinquents."

His health had declined for a considerable time previously to his decease, and when he became aware that his end was near, he was favored with great calmness, relying for salvation solely on the mercy of God through the atoning blood of Jesus Christ. We reverently believe his end was peace.

DIED, At Vassalboro', Maine, the 19th of 6th month last, BETHIAH, wife of Benjamin Goddard, in the 47th year of her age, a member of Vassalboro' Monthly Meeting of Friends. This dear friend was called from her family at a time when her children much needed a mother's care. Yet she was favored, through Divine grace, to give all up; commending her husband and beloved family to the keeping of their Heavenly Father. She bore her sickness with much calmness and composure, saying at one time, "The Lord has made all my bed in sickness." Near her close she said to her husband, "I have given thee and the dear children all up. Do not hold me, I want to be released." On the day of her death, after a little rest, she said, "I am so happy, so happy;" "may you all be prepared to meet me in heaven. Come sweet Jesus;" which were the last words she uttered distinctly, and quietly passed, we trust, to a mansion of eternal rest.

—, On the 7th of 8th month, at Springdale, Cedar Co. Iowa, in the 39th year of her age, REBECCA wife of JESSE BOWERSOCK, and daughter of Jane Lynch, widow of the late Joshua Lynch, of Ohio.

This dear friend was one of the earliest settlers of this place, where she had by her kindness and hospitality made herself universally esteemed and beloved.

Through divine assistance she was enabled to discharge with faithfulness her responsible duties, as a consistent Friend, a devoted mother, and an affectionate wife.

At the time of her death, in company with her husband and two daughters, she was returning home from a neighboring town, preparatory to making a visit to her friends in Ohio, when they were all thrown out of the carriage, the wheels of which passing over her chest caused almost immediate death. The daughters were not hurt, but her husband was very seriously injured, and narrowly escaped losing his life also.

Although our dear friend was so unexpectedly taken away from the very midst of usefulness amongst her large family and extensive circle of friends, they are greatly consoled in the belief, that the work of sanctification had been going on in her heart, and that through the merits of her Redeemer, she was in mercy prepared for this momentous change; which speaks loudly unto all, "Be ye also ready."

—, In Granville, 21st of Third month last, after a brief but painful illness, which she bore with great patience, SARAH E. BARKER, widow of the late Caleb Barker, aged 82 years and 9 months.

#### WEST-TOWN SCHOOL.

The Committee to superintend the Boarding School at West-Town will meet in Philadelphia on Sixth day the 9th of next month, at 7 o'clock, P. M.

The Committee on Instruction and the Committee on Admissions meet on the same day—the former at 4 o'clock and the latter at 5 o'clock, P. M.

The visiting Committee meet at West-Town on Second day afternoon, the 5th of Tenth month, to attend the semi-annual examination of the Schools.

For the accommodation of the Visiting Committee, there will be a conveyance at West Chester on Second day the 5th of 10th mo., on the arrival of the after-

noon train which leaves the depot in this city at 4 o'clock.

*Philadelphia, 9th mo. 15, 1857.—21.*

#### REVOLT IN INDIA.

Revolt in India!—30,000 of the native troops in a state of mutiny!—Massacre of the Europeans! Such were the terrible news flashed to our government by extraordinary express from Cagliari a few weeks ago, and the details subsequently received fill up with painful accuracy the fearful outline of a tragedy which has struck many an English home with dismay, and awakened in every thoughtful English mind a concern approximating, in some degree, to the vast interests at stake in the East.

Few events so grave in their import, or so disastrous in their possible consequences, have occurred in the history of our country. Already the accounts received are harrowing in the extreme. No sooner were the restraints of military discipline broken, than the fatal science of murder, to which, with so much skill, and at such vast cost, the native soldiers had been trained by their English conquerors, was turned with ruthless barbarity against their European masters. Regiment after regiment revolted—the result, doubtless, of a wide and organized conspiracy; and the defenceless Europeans, at the mercy of the armed and infuriated rebels, were cut down, shot, and in some cases hacked to pieces—neither sex nor age being spared in the general massacre which prevailed.

Of all crimes war is the most horrible in its incidents; and of all wars insurrection is probably the most cruel and relentless. Humanity shudders at the thought of scenes to which so many of our countrywomen have been exposed during this Indian outbreak, and of the fate to which too many of them have been doomed.

The wife of an officer, writing from Meerut, says:—

“Then came the awful news of the murdered. Poor young McNabb, just joined, Mr. Phillips, our veterinary surgeon, and, alas! our dear friends Mr. and Mrs. Dawson, dead! and Dr. Christie awfully wounded! The 20th Native Infantry had been fiends, and shot five or six of their own officers. One or two of the 11th were also killed. *Several ladies have been cut to pieces.* We saw a poor lady in the verandah, a Mrs. Chambers, (lately arrived), soon afterwards she was found dead, horribly cut, and she on the eve of her confinement.

“We had a terrible alarm the night before last. Six hundred sappers and miners had been called into the station to raise the works; but one day after their arrival they shot the commandant, and fled. Guns and carabineers followed, and fifty of them were killed.”

This was the state of things at Meerut; but the intelligence from Delhi is still more disastrous. The city had been captured by the muti-

neers, and a general massacre of the Europeans had taken place. The loss of life has been very great: of one regiment, it was feared that every officer had perished. The Cawnpore end of the Ganges Canal is reported to be full of the dead bodies of Europeans; from which it is supposed that all, or nearly so, of the *employées* on the canals, Grand Trunk Road and Railway, have been murdered.

When the latest accounts left India the revolt had not extended beyond the Bengal Presidency, though it is needless to say that the next mail is looked forward to with intense anxiety, not to say alarm, in this country. No one attempts to disguise the fact that our authority in India is shaken to the very centre; and that we hold as by a thread our supremacy in our vast, ill-gotten and ill-governed Eastern Empire. Should the native troops of Bombay and Madras follow the terrible example of treachery set by their Bengalese brethren, we may see the boasted conquests of 100 years swept from our grasp in as many days, and, with the loss of India, add another to the countless bitter illustrations which attest the truth of the Divine warning: “They that take the sword shall perish by the sword.”

Most solemn is the lesson taught by this new and fearful tragedy in India! How long will Christian England persist in her insane reliance upon a policy of arms? How long will she permit her reason to be blinded and her conscience seared against the testimony of that gospel which she professes to have received? Every ray of that gospel is a beam from Mercy's source, warning the Christian from those shoals and rocks of crime and cruelty which surround the track of War. Every word of that gospel is a living protest against the passions and principles which unsheath the sword. Every promise of that gospel is a rebuke to the faithlessness of Christian nations, by whom the glorious hills and green valleys of God's earth are reddened with the blood of slaughtered millions, shed for what is called the defence of territory, and the maintenance of national rights.

Deeply as we abhor the cruelty and treachery of these Indian soldiers, who have thus spread the havoc of fire and sword among those into whose service they had entered: we cannot but regard with profound sorrow and alarm that spirit of sanguinary vengeance which seems, to so fearful an extent, to animate our public journalists in this country, in the comments that have appeared, on the present crisis in India. Remembering that we are in a Christian land—that we profess a religion which teaches emphatically the doctrine of forgiveness, the duty of mercy, and the treason of him who takes vengeance into his own hands, we cannot but feel that one of the heaviest calamities and greatest dangers connected with this Indian revolt is the horrible cry for revenge, which is now echoing through the English press.—*London Friend.*

## MANUFACTURE OF COMBS.

It is said that the greatest comb manufactory in the world is in Aberdeen, Scotland. There are thirty-six furnaces for preparing horns and tortoise shell for the combs, and no less than one hundred and twenty iron screw presses are continually going in stamping them. The coarse combs are stamped or cut out—two being cut in one piece at a time. The fine dressing combs, and all small tooth combs, are cut by fine circular saws, some so fine as to cut forty teeth in the space of one inch, and they revolve five thousand times in one minute. There are some two thousand varieties of combs made, and the aggregate number produced, of all these different sorts, is about 9,000,000 annually; a quantity that, if laid together lengthways, would extend about seven hundred miles. The annual consumption of hoofs amounts to 4,000,000; the consumption of tortoise shell and buffalo horn, although not so large, is correspondingly valuable. A hoof undergoes eleven distinct operations before it becomes a finished comb.

## THE BREAK OF THE ATLANTIC TELEGRAPH.

The misfortune to the Atlantic Telegraph occurred just at the only point where there could have been no previous test by actual experiments, i. e. the effect of tightening those brakes upon the wire when it had a rapid descending motion upon two miles of wire. Nor could it be determined what effect a heavy swell of the Atlantic concurring with such a sudden check to a falling body might have. Enough, however, one would have supposed, might have been anticipated from former experiences in the Mediterranean and other deep seas, to have shown the peril of this. One thing is clear, that the strain on a wire so circumstanced by any sudden check, must be very far greater than the simple suspension of six miles of its own weight.

That the cable can be laid under favorable circumstances in a smooth sea, and even in a pretty rough one, has been now demonstrated; and this where the water is upwards of two miles deep. But it would seem that it never can be safe to check the rate at which the wire is let out by using the brakes. The momentum acquired in a deep sea by the cable is too great. Wire of greater strength than that used, so far, may be necessary; but that the telegraphic cable will be laid, though there should be half a dozen failures, there can be no doubt. Much has yet to be learned as to the best specific gravity for the telegraphic cable to possess.

In the wire used this time, it will probably be found that strength was too much sacrificed to flexibility. That coil of fine wire wound so closely as it was, and long enough to go many times round the world, added materially to the weight of the cable, but not one particle to its strength in a strain like the one it encountered.

It is quite likely that two or three efforts may fail before one succeeds; but if it takes a wire so large as to require a navy to lay it, and as heavy as a ship's cable, the international communication will assuredly be made. After it has been once successfully accomplished, easier methods of doing it again will suggest themselves, especially more exact ways of determining the proper *specific gravity* of the cable, which must be the main point. Before many years are over, fleets may want to carry a coil of telegraph wire, and keep up their communications with the shore. In fact, while it is impossible to foresee the end of the wonders that will be accomplished by this movement, some considerations are obvious at once. The telegraph cable that first crosses the Atlantic will be of great value to the world. We have always believed that there is scarcely any other form in which capital can be invested in these days, in which it is producing such immense and important benefits to society, as in these Magnetic Telegraph lines. The capital employed is so small, compared with the good done to society, that it must be profitable to all connected with it beyond any other form of investment eventually.

But a telegraph that will bind America and Europe together, will do the world such service as no intellect of man can at this moment conceive. The imagination of the poet is outstripped by the achievements of the philosopher. Suppose there is a little risk about it just now, yet the spirit that inspired Columbus in pushing out upon the unknown deep in search of a new continent, was not more important to the world, or more fraught with hope and happiness for men than an ocean crossing telegraph.

It follows from this, and especially from the difficulties of a first achievement, that when successfully accomplished, it will have a right to pay a far better dividend than ordinary enterprises of the kind. It ought to be, and no doubt will be the policy of the Company to put down their prices so low that it may be employed night and day all the year round. The cheaper the rates, the greater number of messages. But if the price of messages were ten or twenty times as great as it will be, there would be messages enough that must be sent to make it pay.

Before, however, one cable is fully employed, and at whatever price, there will, we may depend upon it, be rivals enough in the field. We should not be surprised if, in less than ten years, Boston and Liverpool are united by a line direct; if, in fact, the sea is rather preferred to the land, as less expensive and less liable to get out of order from storms. Nor is it impossible that, in the course of that time, New York, Boston and Charleston will have lines touching at different points of the European continent. It will become a necessity alike of commerce and of national policy for us to have more than one string to our bow.—*Public Ledger.*

*The Mountain Formation of North America—  
The Great Table-Lands—Geographical Features.*

(Concluded from page 12.)

The Western Cordillera continues to traverse Sonora, and passing round the Gulf of California, reappears in sight of the ocean in the State of California. Opposite San Bernardo, another mountain chain branches from its eastern flank, traverses the Table Lands by a northern course, dividing the waters of the Colorado and Great Salt Lake, and plunges into the Sierra Madre between the sources of Green River and Snake River. This is the *fourth* great mountain chain of the Table Lands, is one thousand miles in length, and is the *Sierra Wasatch*. Between it and the Sierra Mimbres is included the immense *Mountain Basin of the Colorado*, which is the *fourth* subdivision of the area of the Table Lands. This basin has an immense area, great altitude, great perplexity of mountains, and is redundant in striking and wonderful novelties. The Rio Verde, Rio Grande of the West, the Rio San Juan, collect its upper waters, and, uniting against the inner flank of the Cordillera of the Snowy Andes, gorge it diagonally through and through, and escape into the Gulf of California. This sublime gorge is four hundred miles in length, and is known as the "Canon of the Colorado." It is throughout a narrow mountain chasm, traversing, without interruption, the very bowels of the Andes, having perpendicular mural sides, often many thousand feet in altitude. Other important affluents of the Colorado (the Mohabe, the Little Colorado and the Gila,) force their way into it by a labyrinth of gorges similarly scooped through the bowels of the mountain mass.

These two remarkable basins, then—the Del Norte and Colorado—lie against the Sierra Mimbres, as a back bone. The waters of the first gorge the Sierra Madre to the Gulf of Mexico; those of the second, the Andes to the Gulf of California; but no gorge unites them through the Sierra Mimbres, which is unperforated. These basins are both longitudinal in shape and position; they overlap one another, and thereby multiply the number and complexity of mountain barriers. Among the physical phenomena of the globe, this "Canon of the Colorado" is an isolated fact, unique and sublime in interest. These two basins are, *par excellence*, the metalliferous department of the world, and are *infused* throughout with *mountains* of the precious stones, and precious and base metals—of lava, obsidian and marble—of salt and coal, and with rivers of thermal and medicinal waters.

Let me hasten to other subdivisions of equal interest. Near the forty-second degree of latitude the Western Cordillera throws off the *fifth* mountain chain of the Table Lands. This has a serpentine course, mainly east and west, is

twelve hundred miles long, and forms the divide between the basin of the Salt Lake and the basin of the Columbia. It joins with the Sierra Wasatch, and immediately at the point of junction plunges with it into the Sierra Madre. The great basin, containing in one of its depressions the Salt Lake, is the counterpart, on our continent, of the Caspian of Asia. It is, like the first and second basins, encased all around with an unperforated mountain wall, and neither sends nor receives water from any sea. Nearly opposite to Puget's Sound, a sixth chain of mountains, breaking off from the eastern flank of the Western Cordillera, traverses the Table Lands by a due northern course, and sinks into the Sierra Madre, closely enveloping the sources of the Columbia River. This is called the *Okenogagan Mountains*, and divides the waters of the Columbia from those of *Frazer's* River.

The *Basin of the Columbia* is the *sixth* in order of the basins of the Table Lands. It is the most admirable of them all. A splendid circular configuration and two primary rivers. Its size, position and configuration relatively to the Mississippi Valley and the Pacific Ocean, make it the *élite* of them all. It extends all across the Table Lands from rim to rim, as do both its great rivers, the Snake River and the Columbia, which, uniting, gorge the Andes at the Cascades, penetrating through them to the Pacific in 46° 19'. They run from east to west and connect exactly by convenient and single passes across the Sierra Madre, with the great rivers flowing down to the Atlantic. It partakes of all the cardinal characteristics of the other basins, having, in addition, mighty forests, navigation, a larger share of arable qualities, and a superior economy in its topographical surface and position.

Such are the six primary basins and mountain chains which checker and arrange themselves into the *Grand Plateau of the Table Lands*, as I have seen them and become familiar with them. There is a seventh, the basin of Frazer River, with which I am acquainted only from the reports of others who have reconnoitered it. It has the same general features, though smaller, longitudinal in direction, and narrow.

We may now, then, return to the third elementary division of the mountain formation of North America, namely: *The Plateau of the Table Lands*. We may understand its variety and vastness, yet handle it as a unit. The lowest sedimentary points, at which the waters accumulating form the lakes of Mexico, Mappini, Gusuan and Salt Lake, have an average altitude of 6,000 feet above the seas. The whole Plateau has then the elevation of a primary mountain. It is everywhere fertile, being pastoral for the most part, but arable where irrigation is adopted. Every geological formation exists on a Titanic scale, volcanoes, columnar basalt and pedregals of crystallized lava, porphyritic granite and sandstone, and secondary basins of the sulphate and

carbonate of lime. It is universally a rainless region, and nowhere is arable agriculture possible without artificial irrigation. Pastoral culture is the prominent feature, wherein it rivals the Great Plains. The air is tonic and exhilarating, the atmosphere resplendent with perpetual sunshine by day and with stars by night. The climate is intensely dry, and the temperature variant and delicious. Habitations are not essential in this salubrious and vernal clime; the aborigines dispense with them. During three years that I have passed upon the Plateau, I have rarely slept within a house or beneath any canopy but the sky, infinitely spangled with stars. Upon this Plateau has existed the populous and civilized empire of the Aztecs, and in South America that of the Incas. Timber grows upon the rivers and upon the irrigated mountain flanks. To arrange the arable lands for irrigation is not more costly than our system of fencing, which it supersedes. No portion of the globe can maintain a denser population.

But the *fourth* subdivision of the "Mountain Formation of North America," is the *Snowy Cordillera of the Andes*. Everybody is familiar from childhood with the South American *Andes*. This of ours is the same, unchanged in any characteristic, except an increased and superior grandeur. Let us restore to it its ancient and illustrious name! Let us inquire how it has come temporarily to be lost! The *Andes* traverse the American Continent in one unbroken and uniform mass from Cape Horn to Behring's Strait. Towards the ocean, to whose indented shore they are parallel and from which they are everywhere visible, they present a precipitous front and immense altitude; they everywhere surmount the line of perpetual snow. Upon this front, which receives the perpetual winds from the ocean and is bathed with its vapors, snows and forests accumulate as upon the Alps. But on their summit of perpetual congelation, these vapors condensed to ice are as solid, as perpetual, as the granite rocks. No vapors pass over to the *inner* region, which is naked of snow, timber or irrigation. Hence has come this distinctive Spanish sobriquet of this sublime sea wall—*Cordillera Nevada de los Andes*, (the *snowy* chain of the Andes,)—to define it specifically from the naked masses within! Thus, since this ancient and familiar *Andes* has come to be domesticated in our empire, within the States of California and Oregon, has it been thoughtlessly plundered of its name, defined only by an expletive *snowy*, and incontinently ignored of its supreme, coronated rank in the mountain system of the world.

If then you require from me a description of this *fourth* subdivision of our mountain formation, I bid you peruse again the fascinating pages of *Prescott* and his predecessors; the romantic historians of *Cortez*, *Alvarado* and *Pizarro*; and above all, the oracular inspiration

with which the illustrious *Humboldt* has analyzed the geographical wonders of this Cordillera of the snowy Andes, and tinted them with eloquence!

Finally, I am bewildered how to speak of the *fifth* subdivision, which is the *Maritime Pacific Front*. This brings us out to meet the ocean, to blend together the varieties of sea and land, and where, among the assembled climates and countries of the globe, Cornucopia permanently dwells with her ever redundant and overflowing horn of ripening beauty and plenty. This Maritime Pacific Front is the counterpart of yours outside of the Alleghany and upon the Atlantic. It is the tide-water region. Yours has an area of 271,000 square miles, this of 420,000: this is not much broader from the mountains to the sea, but has a greater longitude. In every detail of climate, vegetation, soil, and physical formation, there is between these two seaboard the completest contrast. On the Pacific are blended, beneath the eye, and swept in at one sight, the sublime, castellated masses of the Andes—their bases are set in the emerald verdure of the plain rising gently above the sea level—their middle flanks are clothed with the arborescent grandeur of pine and cedar forests. Naked above and towering into the upper air, their columnar form of structure resembles an edifice designed to inclose the whole globe itself; but from this foundation, and rearing their snow-covered crests another mile into the firmament, shoot up volcanic peaks at intervals of one hundred miles, incasing the throats of the inner world of fire, and corruscated in perpetual snow, beneath coronets of volcanic smoke and flames.

The sublimest of the oceans, more majestic rivers than the Ganges or Egyptian Nile—the grandest and most elevated of Earth's mountains, superlative forest evergreen, an emerald verdure and exuberant fertility, a mellow and delicious atmosphere imbued with purple tints reflected from the ocean and the mountains, a soft, vernal temperature the year round; whatsoever can be combined of massive and rugged mountains, picturesque landscape and a verdant face to nature, shining under the richest sunlight, a climate soft and serene; whatsoever of all these, blended and enjoyed in combination, will accomplish to give grace, elevation and refinement to the social world, are here united to woo and develop the genius of our country and our people.

In all these natural favors our Western seaboard front is more gifted than the classic shores of the Mediterranean and the Asian seas—for fifty centuries the favorite theme of history, poetry and song. The embellishments which old society and the accumulating contributions of a hundred successive generations add to nature, are not yet there; but these will come, and to us who fan the career of our great country whilst we live, the future which posterity will possess and enjoy is full of the radiance of true glory.

Such is a homespun and laconic detail of a few

essential facts necessary to comprehend the "mountain formation of North America," and to know where and what it is.

Very respectfully, W. GILPIN.

#### DIRECTIONS FOR SUGAR MAKING.

PHILADELPHIA, July 16, 1857.

*Editor of the American Agriculturist:*

DEAR SIR: A reply to your inquiries in relation to the requisite instruction for arranging mills, boilers, tanks, fetters, coolers, &c., &c., and then also, the "modus operandi," after all are ready, will be rather difficult to give in a manner satisfactory even to ourselves, with the light before us. We have spared no pains or time in collecting information to enable us as far as possible to give to others engaged in the pioneering of this new Sugar Cane movement. We shall do the best we can, however, and urge those engaged in it to be thorough in experimenting, try all the modes and means known, and be sure to keep some careful record for future use. In the course of two weeks we expect to be in possession of the results of a test in Florida near Orange Springs, which shall be made public *whatever it is*. Mismanagement has deprived us of the use of the cane we had planted in the hot house for early test. The first that will be worked besides that in Florida, will be at Gov. Hammond's about the 10th or 15th of August. Col. Peters tells us that his 70 acres of "Sorgho," are now about six feet high and will be ready from 1st to 15th September; he has some earlier planted that he will work about the 20th of August. On this he uses a two horse mill just being shipped by us, and a steam power mill for his large crop. He only designs making syrup or molasses, except, perhaps, a small experiment with sugar.

The cane must be allowed to mature fully, not attempting to work it until the seed is fully out of the milk, and as some of the tillers will be rather later than others it will no doubt be better to throw them out for fodder than jeopardize the rest. The leaves should be stripped off before cutting and the top cut off with the seed some two-and-a-half or three feet down, as there is not much saccharine juice in the upper end. Then if your apparatus is ready, cut, and grind as fast as you cut, and boil as fast as you grind, since the less time the stalks or cut cane are exposed the better. The juice, if concentrated by the usual process, will pass through two sieves—first No. 8 and then No. 16, set over a large tin funnel immediately under the mill, (which will be set about three feet from the ground upon three posts firmly bedded in the ground about three feet.) This funnel is contracted to a pipe of two inches diameter, running under ground past the horse's track, and entering a tank either lined with tin or painted thoroughly, and varnished so as to be impervious to the juice and easily washed clean, when left idle for even one hour. The

juice is raised by tin buckets or tin or copper pump from this to a clarifier. This may be of sheet iron No. 8, and about 12 inches deep and large enough to fill your first kettle, and set higher with draw off pipe and stop-cock entering at the bottom. This clarifier is set so that the heat is applied under it after leaving the range of boilers and may be shut off by damper into another side flue, while you discharge this pan. The heat being applied slowly, a thick scum rises and when near boiling you change dampers and draw off until the juice begins to show sediment or scum, then clean the pan and fill again, and so on. Now in this first kettle you add lime well slacked and sifted, until your juice will not change the color of litmus paper (which can be got at any good drug store quite cheaply.) While the juice is acid it will change it to a reddish hue, and if thus boiled will neither granulate nor keep sweet as molasses. With our two horse mill of rollers 17 inches long, we use three boilers holding 60, 40 and 20 gallons, with the latter immediately over the fire and set with flaring walls or jambs, rising above each about 6, 8 and 10 inches, and completely cemented with water-lime. The last or 20 gallon boiler should be higher than the 40 and that above the 60, so that the scum will run through the gap into the next kettle behind successively. The scum should also be thrown back whenever accumulated into the hindmost kettle. If you have no experience in testing the syrup in the "battery," a thermometer made for that purpose can be obtained in most large cities for a dollar or so. It requires to be graduated up to say 250°, as about 240° Fahrenheit is considered the proper point. Should the heat rise above this, you must open your fire doors and throw over the fire an armful of begasse from the mill, and then discharge the syrup as quickly as possible and refill from the next kettle, thus continuing successively.

The coolers into which you discharge may be of good clear white pine without paint inside, and 12 inches deep and large enough to hold 4 charges, and then left to cool and granulate, or if you make molasses only, you will use barrels, staves of oak and heads of pine or cypress, thoroughly made.

In regard to crystallizing the sorgho sugar, we to-day went with Col. Peters to the sugar refinery of Messrs. Eastwick & Brothers, No. 73 Vine-st. of this city, carrying with us some sugar made from the sorgho, by Col. Peters in Georgia, and by Mr. Wray in France. These specimens were subjected to the severest chemical test and examined under a powerful microscope, and both proved to be true crystallizable sugar and not glucose. As the examiners are perhaps not surpassed in this country—not even in Boston—we deem these experiments highly satisfactory. They promise a public report of the examination soon.

Yours, &c.

HEDGES, FREE & Co.

## THE DESK LINING.

One afternoon after school was dismissed, Miss Blair, the teacher, was busy setting copies, and writing at her table in the deserted school room. While thus engaged, little Addy Lane, who lives next door, and whose sunny temper makes her the angel of the school house, put her round curly head in the door, and said, "Teacher, may I come in and sit with you if I will keep very still?" No one could refuse to admit such a loving innocent child, so Addy was soon seated by her teacher, with permission to "fix up" her desk. After all the things were taken out and laid on the table, the newspaper in the bottom was found to be stained with ink, and yellow with age; so Addy went to a basket in the entry, and selected the cleanest and whitest of a pile of papers which had been brought by J6e Lincoln, the postmaster's son, for lighting the fire, and cutting a piece just the size of the old lining, covered the bottom of the desk neatly, and had every thing in exact order when Miss Blair was ready to go home.

A few days after, when sent by Miss Blair to bring her knife from her desk, she found to her surprise that the neat lining she had so carefully put in was gone, and the yellow, stained one in its place. Addy could hardly contain her feelings to wait till recess, and as soon as the bell tinkled she hastened to Miss Blair, and asked her why she made the change, and if she was offended with her, that she should undo what she had tried to do so well. Seeing Addy's grieved, tearful face, Miss Blair hastened to explain the matter.

"The paper you put in, Addy, was clean and white and neatly fitted, but it contained some wicked jokes ridiculing the Bible, and many silly songs and stories, which you did not notice. I tried not to see them at first, but found that each time I opened my desk my eye rested upon them, and that without knowing it I had committed one of the profane jests to memory, so that it was running through my mind as I went about my duties. So, dear Addy, I reluctantly tore out the neat lining you put in, and burned it, because I dared not *become used* to such wicked language, for fear of sinning against God. My old stained paper will do very well till Addy finds one upon which I can rest my eyes with safety." Addy was abundantly satisfied with the explanation, though she had been very much mortified at having her nice arrangements disturbed.

I am afraid all Miss Blair's pupils are not as fearful of *becoming used to sights and sounds of sin* as she was, else little Johnny Beach, whose father and mother are now in heaven, and always taught him to fear God, would not dare to hang about the tavern stoop, listening to profane and wicked stories; and Harry Smith too would be more careful whom he goes nutting with on Sat-

urdays. I don't desire to tell tales out of school, but I must beg some little boys and girls of my acquaintance to learn a lesson from Miss Blair's example. They may think as she did at first, that perhaps they can keep bad language and vile stories from making an impression, but they are wrong. No one can be in the habit, even for a brief time, of listening to profane and wicked language, without danger of becoming used to it, and even of repeating in his mind the things he hears. "Evil communications corrupt good manners." Be careful, children, what books and papers you read, and whom you hear talk from day to day; for when you *become used* to sinful language, and can hear it without a shudder, the *first step in ruin* is taken.—*American Messenger*.

## THE BLESSED DEAD.

Oh, happy childhood! tender buds of spring,  
Touched in the May-time by a wandering frost;  
Ye have escaped the summer's sultry wing;  
No drought hath parched you, and no wind hath  
tossed,  
Shaking the pearls of morning from your breast;  
Ye have been gathered ere your sweets were lost,  
Ere winged passions stole into your rest  
To rob the heart of all its dewy store.  
Now in the endless May-time over head,  
In stary gardens of the azure shore,  
Ye bloom in light, and are for evermore  
The blessed dead.

Ye youths and maidens, dear to Joy and Love,  
But fallen midway between morn and noon,—  
Or bird-like flown, as if some longing dove  
Should seek a better clime while yet 'tis June,  
Leaving our fields forlorn! Oh, happy flight!  
Gone while your hearts are full of summer tune,  
And ignorant of the autumnal blight,—  
Ere yet a leaf hath withered on the bough  
Or innocent rose hath drooped its dying head:  
Gone with the virgin lilies on your brow,  
Ye, singing in immortal youth, are now  
The blessed dead.

And ye, who in the harvest of your years  
Were stricken when the sun was in mid air,  
And left the earth bedewed at noon with tears,—  
Ye have known all of life that is most fair,  
The laugh of April and the summer bloom.  
Ye with the orange blossoms in your hair,  
Who sleep in bridal chambers of the tomb;  
Or ye, who with the sickle in the hand,  
Have bowed amid the sheaves the manly head,  
And left the toil unto a mournful band,—  
Ye all are numbered in yon resting land,  
The blessed dead.

And ye, who like the stately upland oak,  
Breasted the full allotted storms of time,  
And took new strength from every gusty stroke,—  
And ye, who like a vine long taught to climb  
And weigh its native branches with ripe fruit,—  
Much have ye suffered 'neath the frosty rime  
Which autumn brings, and winter's loud dispute!  
But now, transplanted in the fields afar,  
Your age is like a withered foliage shed,—  
And where Youth's fountain sparkles like a star,  
This have ye learned, they only live who are  
The blessed dead.

T. B. READ.

## SUMMARY OF NEWS.

**FOREIGN INTELLIGENCE.**—Liverpool dates are to the 5th inst.

**ENGLAND.**—Parliament was prorogued on the 28th ult. Nothing official had been promulgated relative to the Atlantic Telegraph. It had been suggested that if the attempt should be postponed, the government might purchase the cable, for communication with India, but Lord Palmerston stated in the House of Commons that this could not be done without the sanction of Parliament, which could not be obtained during the present season. It was reported that the Directors had been offered a higher price per mile for the whole remaining cable than the cost of replacing it. On inquiry, they had been assured by the government that vessels, officers and men would be furnished for a renewal of the attempt next summer, and it was generally supposed that it would not be undertaken until that time.

Lord Palmerston stated in Parliament that telegraphic connection with India, via the Euphrates, had not yet been sanctioned by the Turkish government.

**FRANCE.**—The valley of Dappes, between France and Switzerland, the right to which has long been contested between the two governments, has been avowedly incorporated with the former country, although the Congress of Vienna acknowledged the claim of Switzerland.

It is said that a maritime conference of various European powers is about to be held at Paris, to consider the subject of collisions at sea, and to adopt measures for their prevention.

**ITALY.**—Fresh political arrests have been made in Genoa and Turin. Great activity is shown in the construction of railroads in the Papal States. The Pope has purchased and presented to the University of Bologna, the library of the celebrated linguist, Cardinal Mezzofanti, which consists chiefly of works in the ancient and Eastern languages, including dictionaries and grammars for eighty different tongues or dialects. Giuseppe Crocco, the oldest European journalist, recently died at the age of 88, having been for fifty years the editor of the *Gazetta di Genoa*.

**SWEDEN.**—The government recently proposed to establish religious liberty, and allow Lutherans to embrace other doctrines, and as a first step, to abolish the penalty of banishment against the proposers of such changes, but the project was rejected by the legislature, by a majority of five.

**SPAIN.**—The Mexican Envoy had arrived at Cadiz, to embark for Mexico. The new Governor of Cuba, who was to go out during the present month, would take with him the ultimatum of the Spanish government on the Mexican question.

**AUSTRIA.**—The government has issued an order for the reduction of the Austrian army in Italy, to the extent of 20,000 men, to take place this autumn.

**TURKEY.**—Negotiations are said to have been opened by the British minister to obtain the consent of the Porte to the passage of a British army through Egypt, to India. Diplomatic relations with France, Russia, Prussia and Sardinia, have been resumed.

Complaints of ill-treatment are made by Christians in various parts of Turkey. The old Mohammedan fanaticism is said to have revived, and the efforts of the authorities to prevent these abuses are unavailing.

**INDIA.**—A battle took place on the 5th of 7th month, near Agra, between the garrison of that place and the mutineers, who had received large reinforcements, in which the British forces were obliged to retire with a heavy loss. General Barnard, the English commander before Delhi, has died of cholera. Only 2000 men could be mustered for an attack on that place. The rebels still held it on the 14th of 7th month. Discon-

tent is stated to have shown itself around Bombay, but it had been suppressed, and other parts of that Presidency were tranquil. Calcutta had suffered from a scarcity of provisions, but they were beginning to arrive by the rivers. The harvest was in imminent danger of being destroyed, the principal manufactories were abandoned, and the exports amounted to scarcely any thing.

**CHINA.**—Lord Elgin arrived at Hong Kong 7th mo. 2d. He proposed, it is said, to proceed with his fleet to the mouth of the Peiho river near Peking, whence he would transmit a letter to the Emperor, requiring him, within a specified time, either to recognize or repudiate the acts of his officers at Canton. If he decline the latter course, Lord Elgin will declare war, and attempt to occupy Canton.

**AUSTRALIA.**—The shipments of gold from Melbourne, from the first of the year to 6th mo. 25th, were over a million and a quarter of ounces.

The Victoria House of Assembly had resolved to abolish the public grant for the support of religion. An offer for the establishment of a line of steamers between Sidney and Panama, had been accepted by the government of New South Wales.

**DOMESTIC.**—A treaty between the United States and New Granada has been signed, providing for a commission to settle all claims for damages made by our citizens against that government. The other questions in controversy are postponed.

The new Constitution of Iowa has been adopted by a popular vote of 40,311 in its favor, to 36,681 against it; exclusive of four counties which failed to make official returns, and which if counted would reduce the majority to 1,416. A provision allowing colored persons the right of suffrage was submitted to a separate vote, and was lost by a very large majority.

The State Constitution for Minnesota, adopted by the Convention, and to be submitted to the people, prohibits slavery, and guarantees liberty of the press, trial by jury, &c. All Judges and Justices are to be elected by the people. White male citizens of the United States, 21 years of age, residing in the United States one year, and in the State four months next preceding any election, may vote; also white persons of foreign birth, with the same qualifications of age and residence, who shall have legally declared their intention to become citizens; and persons of mixed white and Indian blood, and of Indian blood under certain regulations. St. Paul is to be the seat of government until located elsewhere by the legislature.

The committee appointed by the Grasshopper Falls Convention, in Kansas, has issued an address to the people of the United States, explaining the present state of affairs in the Territory, and their reasons for resolving to vote at the election next month, but expressing little hope of fair dealing or success. They also warn the Missourians to refrain from another invasion, unless they desire a bloody and protracted war. The *St. Louis Democrat* says that the expenses of that State, in the late civil war in Kansas, it is estimated, were \$2,500,000. The Constitutional Convention met on the 7th inst.

**THE NEW COMET.**—The comet recently discovered at the Cambridge Observatory, has been constantly increasing in brightness ever since its discovery, and is now visible to the naked eye in the constellation Bootes. The comet was at its least distance from the earth on the 1st inst., and was then distant from us about fifty millions of miles; it will reach its perihelion on the 29th of this month, and will then be about fifty millions of miles from the sun. Its motion is retrograde. It is said not to be the great comet of 1244, the return of which was looked for between 1856 and 1860, but its elements somewhat resemble those of a comet discovered in 1818.

# FRIENDS' REVIEW.

A RELIGIOUS, LITERARY, AND MISCELLANEOUS JOURNAL.

VOL. XI.

PHILADELPHIA, NINTH MONTH 26, 1857.

No. 3.

PUBLISHED WEEKLY

At No. 50 North Fourth Street,  
PHILADELPHIA.

Price, PAYABLE IN ADVANCE, Two dollars per annum, or six copies for Ten dollars.

Postage on this paper, when paid quarterly or yearly in advance, 13 cents per annum in Pennsylvania, and 26 cents per annum in other States.

ON THE DISUSE OF ALL TYPICAL RITES IN THE  
WORSHIP OF GOD.

BY J. J. GURNEY.

(Concluded from page 19.)

The view now taken of the apostle's doctrine will fitly introduce a concluding remark—that, while Friends consider it to be their duty to abstain from that ritual participation in bread and wine, so usually observed among their fellow-Christians, there are no persons who insist more strongly than they do on that which they deem to be the only needful *supper of the Lord*. That supper, according to their apprehension, is altogether of a spiritual nature. Now, it is a circumstance which strongly confirms this general view, that our Lord availed himself of the very occasion which has given rise among Christians to the rite of the Eucharist, in order to direct the attention of his disciples to the supper now alluded to—a repast of a totally different description, and one which may be enjoyed by the disciples of Christ independently of every outward ordinance. “With desire I have desired,” said Jesus to his apostles, “to eat this passover with you before I suffer; for I say unto you, I will not any more eat thereof, until it be fulfilled in the kingdom of God.” Again, “This is my blood of the New Testament, which is shed for many, for the remission of sins. But I say unto you, I will not drink henceforth of this fruit of the vine, until that day when I drink it new with you in my Father's kingdom.” Again, “Ye are they which have continued with me in my temptations. And I appoint unto you a kingdom, as my Father hath appointed unto me; that ye may eat and drink at my table in my kingdom.”

We may, indeed, believe that these gracious

declarations are accomplished *in all their fullness*, only in the heavenly state of happiness and glory: but it is sufficiently evident, and is allowed by various commentators, that our Lord's expressions, now cited, cannot be considered as relating exclusively to the world to come. When Jesus Christ had died on the cross, a sacrifice for the sins of the whole world, the type of the passover had received its fulfilment in the kingdom of God. When his blood had been shed for many, for the remission of sins, and when he had ascended to the right hand of the Father Almighty, that kingdom or reign, conducted through the mediation of the Messiah, was established in the earth. Then, therefore, did the day arrive, as we may fairly deduce from these impressive passages, when Jesus was again to eat the passover with his disciples, and to drink the new wine in their company: according to his own declaration, on a subsequent occasion, “Behold, I stand at the door and knock: if any man hear my voice, and open the door, I will come in to him, and will sup with him, and he with me.” When the faithful disciples of our glorified Redeemer open the doors of their hearts at the voice of his Holy Spirit; when, more especially, they are engaged in rendering unto him their joint and willing service, and are worshipping God in unison; he is often pleased to come in among them, to sup with them, and to permit them to sup with him. Then does he bring them into a holy fellowship with the Father, with himself, and one with another; breaks for them the bread of life, and gives them to drink of his most precious blood; and thus, while their souls are refreshed, nourished, and comforted, they are brought, in a living and effective manner, to the remembrance of that crucified Lord, who is their strength, their joy, and their salvation.

While Friends believe it best to abstain from that outward ceremony, which their Christian brethren have adopted, may they ever be partakers of the true supper of the Lord! May they ever remember the indispensable necessity of that living and abiding faith in Christ crucified, by which alone they can enjoy the communion of his body and blood! “Verily, verily, I say unto you, except ye eat the flesh of the Son of man, and drink his blood, ye have no life in you. Whoso eateth my flesh and drinketh my blood hath eternal life, and I will raise him up

at the last day. For my flesh is meat indeed, and my blood is drink indeed. He that eateth my flesh, and drinketh my blood, dwelleth in me, and I in him. As the living Father hath sent me, and I live by the Father, so he that eateth me, even he shall live by me. This is that bread which came down from heaven; not as your fathers did eat manna and are dead; he that eateth of this bread shall live for ever."

On a general review, then, of the particular passages of the New Testament which relate to the observance of the Lord's Supper, I may venture to recapitulate my own sentiments, that such a practice has no proper or necessary connexion with a spiritual feeding on the body and blood of Christ—that the history of our Lord's last paschal supper with his disciples affords no reason for believing that he then instituted a religious ceremony, which was thenceforth to form an essential part of the worship of Christians—that the Lord's injunction, on that occasion, may be understood, either as relating solely to the rites of the Passover, or as intended to give a religious direction to the more common social repasts of his disciples—that it was in connexion with such repasts, and particularly with their love-feasts, that the primitive Christians were accustomed to commemorate the death of Christ—that the custom of those love-feasts, however appropriate to the circumstances of the earliest disciples, soon fell into abuse as the numbers of believers increased, and appears to be, in a great degree, inapplicable to the present condition of the Christian world—and, lastly, that under the influence of the spiritual manifestations of our Redeemer, we may, without the bread and wine, participate in that *true* supper of the Lord, which he has himself so clearly upheld to the expectation of his disciples, and which alone is indispensable for the edification, consolation, and salvation, of his people.

Although, for the reasons detailed in the present disquisition, it may fairly be concluded that the practices of water-baptism and the Lord's Supper are by no means needful, it is certain that these practices have been very generally observed by the professors of the Christian name. This fact is easily explained, not only by the known power of example and tradition, but also by that principle in our nature, which leads us so commonly to place our dependence upon outward and visible things. Man is naturally prone to trust in any thing rather than in the invisible Creator, and he is ever ready to make the formal ordinance a part of his religious system, because he can rely upon it with ease to himself, and may often find in it a plausible substitute for the mortification of his own will. Now, I would suggest that the ceremonies which we have been considering, so far from being, like the moral law of God, *universally* salutary, are evidently fraught with no little danger, as occasions by which this deceitful disposition in the human

heart is naturally excited and brought into action. And here our appeal may be made, not only to theory, but to facts; for, it is indisputable that the outward rites of baptism and the supper, as observed among the professors of Christianity, have been the means of leading multitudes into gross superstition. How many thousands of persons are there, as every spiritually-minded Christian will allow, who place upon these outward rites a reliance which is warranted neither by reason nor by Scripture, and which, so far from bringing them nearer to God—so far from reminding them of Christ—operates in the most palpable manner as a *diversion* from a true and living faith in their Creator and Redeemer? How often has the ignorant sinner, even in the hour of death, depended on the "sacrament" of the Lord's Supper as upon a saving ordinance! And how many a learned theologian, both ancient and modern, has been found to insist on the dangerous tenet, that the rite of baptism is *regeneration*!

While the Society of Friends believe that ordinances which are so peculiarly liable to abuse, and which have been the means of exciting, not only the superstitions now alluded to, but endless divisions and contentions, and many cruel persecutions in the church, cannot truly appertain to the law of God; while they are persuaded, on the contrary, that the spirituality of that law is opposed to the continued observance of any typical religious rite; and, while, on these grounds, they consider themselves amply justified in the omission of such practices; they entertain, I trust, no disposition whatever to judge their fellow-Christians, who conscientiously make use of these ceremonies. They are, it may be hoped, too well aware of the importance of obedience to the Lord Jesus, to condemn others, who, from their very desire to obey him, are led to differ from themselves.

For my own part, I am persuaded, that there are many persons who avail themselves of the rites in question, on principles which cannot be deemed superstitious, and who even derive through these *signs and memorials*, a real instruction and edification. Such instances may serve to convince us that God continues to accept the sincere heart, and that he is still pleased to bless a variety of means to a variety of conditions. Nevertheless, I cannot but deem it probable, that there are many Christians, not of our profession, who, as they draw yet nearer in spirit to an omnipresent deity, will be permitted to find in the *disuse of all types* "a more excellent way."

#### Addendum.

I. When the Lord Jesus celebrated his last Passover-supper with his disciples, "he took bread, and when he had given thanks, he brake it, and said, take, eat; this is my body which is broken for you; this do in remembrance of me. After the same manner also he took the cup,

when he had supped, saying, this cup is the New Testament in my blood: this do ye, as oft as ye drink it, in remembrance of me."

II. The words used by our Lord on this solemn occasion, afford no more evidence that the bread which he brake was *itself* his body, than they do that the cup which he held in his hand was *itself* the New Testament in his blood. The bread was distinct and separate from his body, occupying a different part of space, and could not *possibly* be the same with it. But the bread represented his body, which was about to be broken for many; and the wine in the cup was a symbol of his blood which was about to be shed for many, for the remission of sins.

III. It was at an actual meal, intended for bodily refreshment, that our Saviour thus addressed his disciples; and when, in conformity with his command, the earliest Christians partook of "the Lord's Supper," there was no mystery in the observance; much less was any miraculous change wrought upon their food. Convened from time to time, *at their social repasts*, they brake their bread, and handed round their cup of wine, in the sweet fellowship of the gospel of Christ, and in solemn remembrance of his death.

IV. The Scriptures do not appear to afford us any sufficient proof that the command on which this custom was founded was intended for the whole church of Christ in all ages, any more than our Lord's injunction to his disciples to wash one another's feet. There is nothing, however, in the practice itself, as it was thus observed by the primitive believers, inconsistent with the general law, that all mere types and figures in worship are abolished under the gospel. Let Christians when they eat their meat together "with gladness and singleness of heart," still be reminded, *by their very food*, of the Lord who bought them. Let them, more often than the day, gratefully recollect their divine Master, "who bare our sins in *his own body* on the tree," and whose *precious blood* was shed for all mankind.

V. But no sooner was this practice changed from its original simple character, employed as a part of the public worship of God, and converted into a purely ceremonial rite, than the state of the case was entirely altered. The great principle that God is to be worshipped only in spirit and in truth, was infringed; and, as far as relates to this particular, a return took place to the old legal system of *forms* and *shadows*.

VI. It is probably in consequence of this change—the invention and contrivance of man—that an ordinance, of which the sole purpose was the thankful remembrance of the death of Jesus, has been abused to an astonishing extent. Nothing among professing Christians, has been perverted into an occasion of so much superstition; few things have been the means of staining the annals of the church with so much blood.

VII. "It is the Spirit that quickeneth," as our Saviour himself has taught us—"the flesh profiteth nothing;" and Christianity is distinguished by a *spiritual* supper, as well as baptism. To partake of *this* supper is essential to salvation. No man can ever have a claim on the hopes and joys set before us in the Gospel, who does not feed, by a living faith, on the bread which came down from heaven, and giveth life to the world—who does not "eat the flesh and drink the blood of the Son of man." Now they who partake of the celestial food, are fellow-members of one body; they are joined together by a social compact of the dearest and holiest character, because they all commune with the same glorious Head. They are *one in Christ Jesus*; and when they meet in solemn worship—Christ himself being present—they are guests, even here, at the table of their Lord, and drink the wine "new," with him "in his kingdom."

#### PURITY OF THOUGHT.

"TAKE CARE OF YOUR THOUGHTS."

Sin begins in the heart. If you keep your thoughts pure, your life will be blessedness. The indulgence of sinful thoughts and desires, produces sinful actions. When lust hath conceived, it bringeth forth sin. The pleasurable contemplation of a sinful deed is usually followed by its commission. Never allow yourself to pause and consider the pleasures or profit you might derive from this or that sin. Close your mind against the suggestions at once, as you would lock and bolt your doors against a robber. If Eve had not stood parleying with the devil, and admiring the beautiful fruit, the earth might have yet been a paradise. No one becomes a thief, a fornicator, or a murderer, at once. The mind must be corrupted. The wicked suggestion must be indulged and revolved in the thoughts, and the anticipated gain or pleasure comes to outweigh the evils of the transgression.

Your imagination is apt to paint forbidden pleasures in gay and dazzling colors. It is the serpent's charm. Gaze not upon the picture. Suffer not the intruder to get a lodgment. Meet the enemy at the threshold and drive it from your heart. As a rule, the more familiar you become with sin, the less hateful it appears; so that the more completely you preserve your mind from unholy and wicked thoughts the better. Avoid the society where obscenity or blasphemy is heard. Cultivate the society of the virtuous. Read nothing that is unchaste or immoral. Make a covenant with your eyes. Familiarize not your mind with the loathsome details of crime. Never harbor malicious or envious thoughts. Direct your mind towards pure and holy subjects. Contemplate the character of the spotless and perfect Son of God. Keep your spirit untainted, your thoughts uncontaminated, so shall your life be virtuous. As a man thinketh, so he is. Take

care of the thoughts, and the actions will take care of themselves.

GOD—ALL-POWERFUL AND ALL-BENEVOLENT.

Before passing onwards to other and higher classes and orders, as they occurred in creation, permit me to make the formidable armor of the earlier fishes, offensive and defensive, the subject of a single remark. We are told by Goethe, in his autobiography, that he had attained his sixth year when the terrible earthquake at Lisbon took place,—“an event,” he says, “which greatly disturbed” his “peace of mind for the first time.” He could not reconcile a catastrophe so suddenly destructive to thousands, with the ideas which he had already formed for himself of a Providence all-powerful and all-benevolent. But he afterwards learned, he tells us, to recognize in such events the “*God of the Old Testament*.” I know not in what spirit the remark was made; but this I know, that it is the God of the Old Testament whom we see exhibited in all nature and all providence; and that it is at once wisdom and duty in his rational creatures, however darkly they may perceive or imperfectly they may comprehend, to hold in implicit faith that the Adorable Monarch of all the past and of all the future is a King who “can do no wrong.” This early exhibition of tooth, and spine, and sting,—of weapons constructed alike to cut and to pierce,—to unite two of the most indispensable requirements of the modern armorer,—a keen edge to a strong back,—nay, stranger still, the examples furnished in this primeval time, of weapons formed not only to kill, but also to torture,—must be altogether at variance with the preconceived opinions of those who hold that until man appeared in creation, and darkened its sympathetic face with the stain of moral guilt, the reign of violence and outrage did not begin, and that there was no death among the inferior creatures, and no suffering. But preconceived opinion, whether it hold fast, with Lactantius and the old Schoolmen, to the belief that there can be no antipodes, or assert, with Caccini and Bellarmine, that our globe hangs lazily in the midst of the heavens, while the sun moves round it, must yield ultimately to scientific truth. And it is a truth as certain as the existence of a southern hemisphere, or the motion of the earth round both its own axis and the great solar centre, that, untold ages ere man had sinned or suffered, the animal creation exhibited exactly its present state of war,—that the strong, armed with formidable weapons, exquisitely constructed to kill, preyed upon the weak; and that the weak, sheathed, many of them, in defensive armor equally admirable in its mechanism, and ever increasing and multiplying upon the earth far beyond the requirements of the mere maintenance of their races, were enabled to escape, as species, the assaults of the tyrant tribes, and to exist un-

thinned for unreckoned ages. It has been weakly and impiously urged,—as if it were merely with the geologist that men had to settle this matter,—that such an economy of warfare and suffering,—of warring and of being warred upon,—would be, in the words of the infant Goethe, unworthy of an all-powerful and all-benevolent Providence, and in effect a libel on his government and character. But that grave charge we leave the objectors to settle with the great Creator himself. Be it theirs, not ours, according to the poet, to

“Snatch from his hand the balance and the rod,  
Rejudge his justice, be the god of God.”

Be it enough for the geologist rightly to interpret the record of creation,—to declare the truth as he finds it,—to demonstrate, from evidence no clear intellect ever yet resisted, that he, the Creator, from whom even the young lions seek their food, and who giveth to all the beasts, great and small, their meat in due season, ever wrought as he now works in his animal kingdom,—that he gave to the primeval fishes their spines and stings,—to the primeval reptiles their trenchant teeth and their strong armor of bone,—to the primeval mammals their great tusks and their sharp claws,—that he of old divided all his creatures, as now, into animals of prey and the animals preyed upon,—that from the beginning of things he inseparably established among his non-responsible existences the twin laws of generation and of death,—nay, further, passing from the established truths of *Geologic* to one of the best established truths of *Theologic* science,—God’s eternal justice and truth,—let us assert, that in the Divine government the matter of fact always determines the question of right, and that whatever has been done by him who rendereth no account to man of his matters, he had in all ages, and in all places, an unchallengeable right to do.—*Miller’s Testimony of the Rocks*.

JOHN BARCLAY TO J. F. M.

“I believe there may be much show and appearance of excellent dispositions in some, who have not had any call to service in the line which they may have set their feet in, as well as in some that have not abode long enough under the refining hand, which was fitting them for their allotted post. These may talk of the degeneracy in the faith or practice of others who profess with them, and may lament, or seem to lament, the innovations or backslidings of their fellows; and they may for a time keep within the limits of consistency, imitating the actions of those, whom they apprehend to retain something of primitive zeal and uprightness. Some also of these may, in the heat and warmth of the sparks which they have kindled, and with which they have compassed themselves, begin the work of reformation, or rather set about it in their own wills, and after their darkened apprehensions; and when

they see their endeavors not owned nor seconded so readily or quickly as they deem them worthy, for the faithful cannot own them, then it sometimes happens that these spirits burst out into open variance with the body; and so manifest their foundation to the faithful, whose eyes the Lord openeth to see and to discern the good from that which only appears to be so. Such an one, if he is ever favored to see the error of his way, and to turn from it, will have to acknowledge, that all his stirrings, strivings, willings, runnings, his labors and services, even to promote good, were out of that Spirit, whereby alone good can be discovered, embraced or promoted in his own heart, or in the hearts of others. There is then great need for all to wait upon the Lord, to feel his power discovering the evil and the good in us, raising up the one, and enabling us to overcome the other. And as we continue faithful to these discoveries, we shall be made partakers of more of his gifts, and grow in a living experience of his Truth, and in a lively understanding of such things as are best for us to know; until it please the Lord to dispose of us in that part of his vineyard where he 'hath need of us.' Then as we abide in Him, from whom we derive our strength and vigor, we shall bring forth much fruit, not only to his praise and our own peace, but to the edification of the church, and to the comfort of its living members."

*The Mental and Moral State as Influenced by Circumstances of Personal Peril.* By DR. ANDREW MCFARLAND.

*Read before the Association of Medical Superintendents of American Institutions for the Insane, May, 1857.*

While this Association was holding its last anniversary at Cincinnati, the newspapers in the vicinity contained accounts of the burial of a body of coal miners in a bluff in the valley of the Muskingum river, a few miles below Zanesville, under such circumstances as to make their exhumation in a living state seem almost impossible. The public suspense was, however, finally relieved by intelligence of the rescue of the entire number through the exercise of an energy on the part of the mining population of the valley hardly credible, after an examination of the difficulties which had to be overcome. Considering that the experiences of a party of men, who for more than fourteen days contemplated seemingly unavoidable death by the slow process of starvation in the bowels of a mountain, would be of psychological interest, I visited the scene of the accident on the breaking-up of the meeting above mentioned.

The party, whose experience was thus gathered, consisted of four persons, all men of fair intelligence, and who appeared fully able to give a reliable account of what passed during their dreary incarceration. It was evident, in conversing with the individuals, that there were many phenomena attending their singular confinement that

would be interesting if they could be fully drawn out. But they were the unusual experiences of men little in the habit of reflecting on the operations of their minds, little accustomed to give a connected narrative of any past event, and they may also be supposed to have been a little doubtful what use was to be made of what they had to relate. Accordingly, there was no way but to let them tell their story in their own language, allowing the narrative to suggest its own comment. Edgell, from whom the longest narration was obtained, had to be awakened at intervals, so great was his disposition to sleep, although ten days or more had elapsed since his rescue.

The entrance to the mine was just at the margin of the river, and the shaft or passage after a few rods entered the bluff, which rose abruptly to the height of two hundred feet or more. This superincumbent mass of earth and stone made the terror of the catastrophe extremely appalling to those buried, inasmuch as they could only be reached by the slow process of removing the rock which filled up the entrance in a horizontal direction to the length of seven hundred feet—a labor to be accomplished under the greatest disadvantages. It was calculated by experienced miners that to remove that quantity of rock through such a narrow passage was the labor of not less than three months, under ordinary circumstances, for an able-bodied workman. Little hope, then, could be entertained by those who undertook the task that anything more than the lifeless remains of their companions would reward such a toil. None were more fully alive to these difficulties than those who were shut in at the farther extremity of the mine. They retreated as fast as the falling stone buried the way behind them (for the rock continued to fall for many minutes) till they had reached the extremity of a small chamber, the supports of which they knew to be firmer than the rest. In all the terrors of their situation I failed to discover that either (save, perhaps, the youngest, a boy of some sixteen years) betrayed the least unmanly emotion. They conversed among themselves as to the possibility of their rescue, and discussed all the expedients that might effect it. I cannot do better here than to quote the simple but expressive language of one of them, James Edgell, jr., taken down while the memory of the scene was yet fresh in his mind.

"The part of the mine we were now in," says he, "was perfectly solid, though we could hear it cracking and falling out toward the mouth. We all laid down on our bed, which we made in our narrow chamber, just as high as the thickness of the coal-mine (about four feet,) and about as long and wide. Our bed was made from the loose dirt and coal-dust which we scraped up with our shovels. Pearson (the oldest one) said that he thought if the folks on the outside tried to get us out they would commence at the old Owen's entry, which was two hundred feet south of the

entry which we went in at, and dig us out from there. I agreed with him about this, and said they never could open the mine that had fallen in, for the whole mountain had given way. Gatwood said he thought so too, and didn't believe the men on the outside would risk their lives to get us out. While lying here we talked the matter over, and tried to imagine every place where there might be a possibility of escape. We could think of none. After a while we got up and went back to the main entry. We found that the rock was still falling, and the passage getting filled up nearer to us. We explored, as well as we could, both the new and the old passages, but found that the fall had covered them all up alike. Finding our search useless, we came back to our beds again and lay down. It was perfectly clear to us that the place we were in was to be the resting-place for our dead bodies; yet we all talked about it in a manner that seems strange, considering how absolutely certain the conclusion was. While we were lying there Pearson said to us, 'Boys, let us make a bargain among ourselves.' We said to him, 'Well, what is it? I think we will be willing.' He said, 'Whoever of us dies first, let the others lay him on one side of the room; but on no account take him out of it, so that when we're all dead we'll all lie here together.' We made the bargain. If one of us had died, I have no doubt we should have done as we agreed. Our room would not hold more than us four. After the agreement was made, each began to hope that he himself should be the first to go."

A small quantity of food, enough for a dinner for two persons, which was found in the mine, was carefully divided among the four, and eaten on the first approach of hunger. A jug of water was also soon drunk up—no thought of husbanding either being entertained. When the pangs of thirst again became pressing, one of them remembered a pool of water, that lay about fifty feet distant. On dipping it up it was found so strongly impregnated with the copperas with which the mine abounded, as to be hardly drinkable; yet they did drink of it, and all seemed to entertain a strong conviction that it was some medicinal property of the water that sustained them through such a protracted abstinence from food. While groping for a vessel of this water, after the pangs of hunger had become almost unendurable, one of them found a jug of lard oil that had been forgotten by some former miner. Seizing it greedily, he took a draught of it and found it most delicious to the taste; but suddenly thinking, after the first swallow had been taken, how selfish it would be to withhold it from his companions, he crawled toward them with it. He thought, too, how dreadful it would be if the small drink he had already taken should be the means of protracting his own life into a horrid companionship with the dead bodies of his associates. In his confused after-recollection of the

circumstance, he only knew that he had dashed the jug and its contents on the floor, as a most dangerous and uncoveted boon.

The slow approach of starvation was attended by one phenomenon common to each. This was a remarkable heightening of the memory and imagination. "After a time," says Pearson, "I became delirious. Strange dreams were running through my head. Every good dinner that I had ever eaten appeared reproduced again before my eyes with all the circumstances of time and place. It was not a mere dream or imaginary thing, but they were present to me so that I found my hands stretched out to grasp dishes that appeared just before my face; and a stranger thing than all was, that I appeared to smell each article of which every dish was composed. I could even hear the rattling of dishes, just as if eating dinner."

Gatwood's sensations were remarkably similar. "Once," says he, "I seemed to be at home, sitting at the table in front of my mother, in the place I always occupied. She passed me the bread, as I thought; I took it, brought it to my lips, and only recovered my right mind to find that my mouth was filled with bits of coal that I was cranching between my teeth. At another time, I thought my father came into the mine, bearing in his hand a plate holding several pieces of short-cake. Every thing about him was so natural that I could not conceive it to be an imaginary thing. I saw the buttons on his coat, and could have sworn to every article of his dress, and even the length of his beard. I could see the yellow butter running over the edges of the warm cake. My father said to me, 'James, you are starving!' and having handed me the bread, turned round and walked out without saying another word. I could hear his steps, as he went out, growing fainter. I took the cake and brought it to my mouth, as I thought, but was brought to my senses by finding that I was biting my hand.

"That these same thoughts were in all our minds alike, was evident from the fact that our conversation all ran upon the same subject—what was good to eat. First one and then another would begin to mention over what would be especially nice. Gatwood began to talk about an apple that his mother had once given him, and he talked so long and particularly about it that we tried to stop him, for it was evident that he was getting crazy."

"It was perfectly certain," says Edgell, "that Pearson was not in his right mind. We were particularly careful of him—not allowing him to go for water, as we feared that he might lose his way. He had palpitation of the heart, and it grew so bad that we had to lay him in a position that we could not hear his heart beat, as it kept us awake and made us all nervous. His heart sounded like a pleasant drumming in the distance. When Pearson quit talking about food,

which he did after a while, his mind began to run upon his family, which consisted of a wife and one little child. He thought he could see his little boy playing on the green hillside over his head, and at length he began to talk to him in the baby-talk he used when actually with him."

To an inquiry why they were so careful of Pearson, the reply was: "Pearson was the oldest man of us all. He was a man of family, and besides he was one whom we all respected, as he was a very generous and clever fellow in all his dealings. We knew how bad his wife would feel, and we thought of his poor fatherless little boy, and I believe that if there had been a chance for only one of us to have got out, we should have given up our chances to Pearson without a word."

To an inquiry addressed to Pearson, who was apparently the most intelligent of the four, whether he was conscious of any feeling of selfishness, his reply was: "I don't think there was one of us (except Ned, perhaps,) who had any thing like a selfish feeling. When the bank was falling, if we had seen a chance to escape, perhaps there would have been a strife as to who should get out first. But when we were shut in, and looked on death there as a sure thing, I think we all had one common feeling—which was, to die like men. When we divided the food that we found in the mine we did it by the light of our lamps, as we then had a little oil, and I think it was as fair a division as if we were sitting at any common table."

"We thought," says one, when questioned about the measurement of time, "that we could distinguish between day and night by the difference in the feeling of the air." When rescued, their first inquiry was for the day of the week, and when told that it was Thursday, their conclusion was that just a week had elapsed since the mine had fallen—that having occurred on Thursday. It gave them surprise, as they had not reckoned it so long; and when afterward told that two weeks and thirteen hours had passed over them, they could hardly be brought to credit it. The first words uttered by Ned (the boy), on being brought to the air, were a demand for a "chew of tobacco!"

The physical phenomena, so far as they could be inferred from the account of the sufferers, indicated that a state of semi-hibernation had supervened at a pretty early stage of their imprisonment. Their great suffering was from cold. They always appeared on the verge of freezing to death. It was their impression that they could have slept if it had not been for the cold, but were always awakened from a short nap with a sensation as if they were all chilled through. The urinary secretion was the only one that did not appear wholly suspended. Their loss of flesh surprised the bystanders, who, to the number of many hundreds, witnessed their first

glimpse of the day. It was evident that they could have survived yet another week.

Their feelings and impressions on their release may be gathered from the words of one of them:

"When we went into the mine for our day's work, on the morning of the 25th of April, there was not a bud upon the trees. When we looked from our windows the morning after our rescue, on the 10th of May, the forest and hillsides were of a living green. We never knew before what a beautiful world we lived in!"

#### THE IMPORTANCE OF PROPER TRAINING IN YOUTH.

I cannot remember the year, it was long ago, that I passed the night under the hospitable roof of Salem Towne, of Charlton, in the county of Worcester. As we sat together in the evening, and were speaking of education and of schools, Mr. Towne informed me that, about the year 1800, he taught a school in the south-western district of Charlton. An inhabitant of Sturbridge, the adjoining town, had a son, of whose abilities and general character he appeared to entertain a low estimate, and of whom he spoke to Mr. Towne disparagingly, as "a boy who gave him trouble." Mr. Towne, notwithstanding this parental forewarning, consented to receive the lad on probation.

On the evening of the very first day, the school agent came to the teacher, and told him that the boy was a bad boy, and would disturb the whole school, and must be turned out. The agent, very probably, received his impressions from the injudicious parent, who seems to have made no secret of his opinions. Mr. Towne rejected this hasty counsel, and informed the agent that he should keep a watchful eye upon the lad, and that he thought it would be time enough to turn him out of school when he made any disturbance, and that he was entitled to a fair trial. When the boy came, for the first time, to recite his lesson, and had gotten through, Mr. Towne told him to shut up his book. He did so, but instantly recoiled, and dodged his head, as if he expected a blow. The teacher inquired what was the matter; the boy replied that he supposed he should be beaten; and being asked if he had been accustomed to such usage, he replied in the affirmative. Mr. T. then quieted his alarm, and assured him he had nothing to fear if he conducted himself well, and encouraged him by commending his recitation; and was so impressed by the lad's manner of receiving this approbation, that he ventured to say to him, "I believe you are a good boy." These words not only entered at the ear—they reached the heart. I will not adopt the strong expression which I once heard from the lips of a very intelligent Jesuit, and say that the teacher had found a master key to the soul of his disciple, but from that hour he had effectually turned the switch. That beautiful appeal, "My son, give me thy heart," had not

been thus silently made in vain. The lad told his associates, that though others had said he was a bad boy, Mr. Towne had told him he believed he was a good boy, and he was sure he wished to be a good boy.

Not long after, the school agent came again, and earnestly desired that this boy should be dismissed from the school. With this request Mr. Towne refused to comply; and said that he liked the "appearance and conduct of the boy, and thought that, with some little illustration of the law of kindness, he would make himself known in the world as a useful citizen."

This youth continued to attend the school daily, and steadily, and profitably, for two winters. At the close of the second winter the father came to Mr. Towne and said—"Bill says that you say I must send him to college, and have him fitted with some private family, and not at an academy." The father inquired of Mr. Towne what he had seen in Bill to justify the idea of sending him to college. "I see," said Mr. T., "a boy that you will hear from in after life."

This course was followed; the boy went to college, and the predictions of his kind and judicious primary teacher have been verified: *the boy was heard from in after life!* After having filled many stations of the very first importance in our country, and passed the seventieth milestone in the path of man from the cradle to the grave, he is numbered with the dead—that Sturbridge boy, WILLIAM L. MARCY, is no more!

Among the accomplishments and virtues of Mr. Marcy, he possessed and cultivated a genial and grateful temper. He never forgot his obligations to the teacher of the village school in Charlton; and on numerous occasions, private and public, evidently took a particular pleasure in proclaiming them openly.—*Boston Transcript.*

## FRIENDS' REVIEW.

---

PHILADELPHIA, NINTH MONTH 26, 1857.

---

THE LATE YEARLY MEETING IN OHIO.—To many of our readers the account, published in our last number, of the state and proceedings of this body, probably brought feelings of thankfulness and encouragement, on the one hand, and suggested, on the other, serious reflections in regard to the lamentable situation of those Friends in Ohio, who, through a persistent departure from the Discipline and established order of our Religious Society, have become separated from their brethren at home, and debarred from the privileges of religious fellowship and correspondence with all the other Yearly Meetings, excepting, perhaps, *one*. In the condition of *that*, there is much to deplore; nor does it exhibit a single

feature to reconcile us to the disorganizing measures which have marked the course of those, who, for a few years past, have controlled its proceedings. Indeed, it is but too sorrowfully known that as among the seceding Friends in Ohio, so in that portion of Philadelphia Yearly Meeting who recognise them as constituting Ohio Yearly Meeting, there exist views in reference to the "smaller bodies" in New England, New York and Maryland, totally irreconcilable with the maintenance of harmony or even with a continuance as undivided bodies.

Does not this deplorable result furnish evidence that the course of action which led to it was opposed to fundamental principles of the compact by which the Society of Friends is bound together?

On the other hand, it is cause of humble rejoicing to see the great body of Friends in the several Yearly Meetings closely united in Christian love, and faithfully endeavoring to maintain those views of Christian doctrine, life and conversation which belong to our profession. Especially may we derive encouragement from the experience of our brethren in Ohio, who, through no contrivance of their own, but by simply and faithfully following the plain path of duty, have been relieved from a state of discord and confusion, and brought to feel the blessedness and strength of unity amongst themselves and fellowship with the church.

"In passing a review of this Yearly Meeting through my mind," writes a valued correspondent, "I think I never remember attending one that seemed more solemn and weighty, both in the public and business meetings; nor one in which the minds of Friends, both our own members and the strangers so acceptably with us, were so completely harmonised together in the bonds of Gospel love. And in thus saying, I can most freely and fully include our dear friends of Alum Creek Quarterly Meeting, a goodly number of whom were in attendance, who though outwardly strangers, many of them never having attended this meeting before, were cordially received as members and brothers and sisters beloved; and they mingled with us in the exercises of the meeting to the comforting of their and our hearts."

Several members of Alum Creek Quarterly Meeting, in letters we have received, refer with much satisfaction to the Yearly Meeting, having

abundant evidence that in attending it they were in their right place.

**WESTERN MANUAL LABOR SCHOOL.**—We have received a copy of the Catalogue of the Officers and Students of this Institution for the year ending 8th month 28th, 1857. The students were 136 in number; males 83 and females 53. The school is near Annapolis, Parke Co., Indiana, and is under the control of Western Quarterly Meeting of Friends. Its objects are stated to be a thorough course of instruction in Literature, Mathematics and Natural Science; to associate, as far as practicable, useful labor with study, and to impress on the minds of the scholars a proper sense of their moral and religious obligations.

A small farm is connected with the Institution, and is designed to afford profitable labor for young men during their attendance at school. The supply of work, at a fair price, is generally equal to the demand, and many young men and young women have paid a considerable part of their expenses by their labor. The cost of board is about \$2 per week.

The scholastic year is divided into two sessions of twenty-two weeks each: the winter session will commence on the 12th of 10th month next. In the elementary department, the price of tuition is \$7, and in the higher department \$9, per session. For instruction in the French and German languages, and in Commercial Bookkeeping there is a moderate additional charge. Barnabas C. Hobbs is the Principal, and his Assistant for the winter term will be Mary Elizabeth M. Pinkham.

William Holmes and Caleb B. Kemp have offered to accompany Grover Kemp, on his religious visit to some of the West India Islands. They expect to leave England in the 10th month.

**RELIGIOUS MEETING AT PARDSHAW CRAG.**—Amongst the notices, in the *British Friend*, of Friends travelling in the Ministry, we find an account of the visit of Dr. Richard H. Thomas, of Baltimore, to the meetings at Edinburgh, Aberdeen and Glasgow, in Scotland, from whence he proceeded to Carlisle, Cockermouth, Whitehaven and Pardshaw Crag.

On First-day morning, the 23d of Eighth month, continues the account, a public meeting was held in the open air at Pardshaw Crag, which was a very interesting and im-

pressive occasion. Our Friends were seated immediately behind the "Preacher's Clint," and soon after the meeting was settled, R. H. Thomas was engaged in supplication, which appeared to have a solemnizing effect upon those assembled. Afterwards, on rising to address the people, he stepped forward to the Crag, from which, occupying a commanding position, he adverted to our Saviour's miracle of the five barley loaves and the few fishes, and discoursed in a manner appropriate to those who are not much in the habit of attending Friends' meetings. The audience consisted of about 1000 persons, and was principally composed of those residing in the villages and hamlets, in the centre of which Pardshaw Crag is situated. The greatest propriety of demeanor was observed during the whole time of the meeting, those present being seated chiefly on the green sward, the ground sloping gradually for 30 or 40 yards from the base of the "Clint," and our friend was distinctly heard without any apparent exertion of the voice. Before the meeting closed, Jonathan Priestman was briefly engaged also in the ministry. In the evening, another public meeting was held at Friends' meeting house, at Pardshaw Hall.

The meeting on the "Crag" is thus noticed by the *Carlisle Examiner* of the 24th ult:—

"SUNDAY SERVICE AT PARDSHAW CRAG.

"The readers of that most remarkable autobiography, *George Fox's Journal*—a chapter in the history of England, as well as in the history of religion—will remember that Mr. Wilkinson, the luckless owner of 'three steeple houses' in the Abbey Holme, emptied by the preaching of Friends, followed his flock to Pardshaw Crag; went in and out amongst them, like a shepherd seeking to recover his stray sheep; and ended by becoming himself a preacher amongst the sect which flourished here in those days, despite the severity of one 'Musgrave,' then governor of Carlisle Castle, and the five pounds offered to any who would capture one of their preachers. Rare instance of clerical weakness, and a warning example to modern bishops, emulating dissenting success, in preaching from unconsecrated pulpits!

"We know not whether from the days of George Fox, nearly two hundred years ago, until Sunday last, any one had ventured to occupy as an evangelist the natural rostrum on Pardshaw Crag.

"So it was, however, on Sunday last, and properly enough, by a Quaker preacher, from that transatlantic commonwealth which it is the glory of English Puritanism to have planted, Dr. R. H. Thomas, a physician of Baltimore, and of reputation as a minister of the Society of Friends, now on a visit to these parts.

"It was worth a long walk, that very hot day, to witness so rare a sight as a modern congregation assembled in peace and safety on the romantic hill side to which their fathers were glad to

resort for freedom from persecuting justices and sheriffs.

"To those of our readers who do not know the spot, it may be necessary to say that Pardshaw Crag is a huge mass of limestone, which seems to form one of the extremities of the Western Hills, rising up suddenly over a road that branches off the highway from Whitehaven between three and four miles west of Cockermouth. Its front, for the space of several acres, is an easy acclivity; and on its edge is a stone so exactly resembling the front of a pulpit, as to suggest its having been set up for that purpose. From this commanding elevation, half the population of the county might be addressed on a still day; the summit and sides of the Crag, with the field beneath, affording abundant sitting room for a hundred thousand people within ear-shot of a well-managed voice. Dr. Thomas's congregation on Sunday was striking, at first sight; from the distance of half a mile or so they might be mistaken for sheep or stones, clustered and scattered on the Crag. But far more striking was the effect, as one drew near enough to distinguish human forms, to mark the general attitude of devotion, and to catch the familiar accents of prayer, blending with the songs of birds, the hum of insects, and the inarticulate fervor of praise that seemed to rise from nature as she lay basking in the Sabbath smile of her Maker. There were probably at this time about five hundred persons present, most of them reclining on the grass or seated on cushions taken from the vehicles that were left at the foot of the ascent; but for some time after numerous additions were made—the noiseless footfall on the soft green floor of this mighty temple causing no distraction, as elsewhere, to the devout assembly.

"The prayer over, a short interval of silence ensued, during which we had leisure to observe the faces of Friends from Carlisle, Cockermouth and Whitehaven, as well as from the nearer villages and towns. The preacher, on again presenting himself at the stone, announced no text, but simply quoted the words, 'They did all eat and were filled.' Reminding his hearers that this was said of the multitudes whom the Lord fed by miracle in the desert, he proceeded to speak at once of spiritual hunger and of the Divine provision for its satisfaction. On this theme he discoursed for half an hour with an effective simplicity not to be exceeded, entirely abstaining from allusions to the scenery or the associations of the place and to the peculiar doctrines of the Society. He urged with unaffected plainness and fervor, the simple catholic truths, that man has a spiritual nature, which worldly enjoyments cannot satisfy, and to which Divine love has been manifested in the revelation of Jesus Christ. The sermon was succeeded by another space of meditative silence, which was broken by Mr. Jonathan Priestman, of Newcastle, who made an affectionate exhortation to the young and old in the congregation to choose for themselves the

paths of righteousness and peace. Notification was given that another meeting would be held in the evening at Pardshaw Hall, the name of a Friends' meeting-house at the foot of the Crag."

DIED, at the residence of her father, near Harveysburg, Warren Co., Ohio, on the 24th of 7th mo., 1857. in the 19th year of her age, DEBORAH, daughter of William and Mary Harvey, a member of Miami Monthly Meeting.

During the period of more than a year of declining health, her youthful mind seemed to be drawn nearer and nearer to her beloved Saviour; and on the morning of her departure, how solemn and humbling was the thought of such a blessed victory over the power of sin and sorrow; how gently did the angel of death lay his hand upon her, shielding her through the pain and agony which she bore with Christian patience to the last. A few moments before her final close she said, "I am now going." A friend who was waiting on her said, "and we hope it is the Lord's time;" to which she replied, with a sweet countenance, "yes, and that is the time I have long waited for;" reaching forth her feeble hand, she said to her weeping friends, "farewell dear father, farewell my dear good mother, farewell dear brothers and sisters. and don't grieve for me, for I am going to rest, and wont you follow me?" Her dear mother said, "yes, dear child, we will try hard to follow thee." Thus she quietly passed away, whilst a solemn calm covered our minds, with a consoling belief that our great loss is her eternal gain.

—, Suddenly, on the 23d of 8th month, at the residence of Nixon Palin, ELIZABETH, wife of Pedrick Shelp, Mahaska Co., Iowa. The previous day she travelled twelve miles with her husband, and attended Pleasant Plain Quarterly Meeting.

#### WEST-TOWN SCHOOL.

The Committee to superintend the Boarding School at West-Town will meet in Philadelphia on Sixth day the 9th of next month, at 7 o'clock, P. M.

The Committee on Instruction and the Committee on Admissions meet on the same day—the former at 4 o'clock and the latter at 5 o'clock, P. M.

The visiting Committee meet at West-Town on Second day afternoon, the 5th of Tenth month, to attend the semi-annual examination of the Schools.

For the accommodation of the Visiting Committee, there will be a conveyance at West Chester on Second day the 5th of 10th mo., on the arrival of the afternoon train which leaves the depot in this city at 4 o'clock.

*Philadelphia, 9th mo. 15, 1857.—2t.*

#### THE LIBRARY OF CONGRESS.

The Library of Congress was first established during the administration of Jefferson, at his suggestion and by his exertions. It first contained about two thousand five hundred volumes, and was destroyed by fire when the British burned the Capitol in 1814. In the same year a resolution was introduced into Congress to purchase Mr. Jefferson's private library, which was passed, the books bought and brought to Washington, and the Library of Congress again organized. Various valuable additions being made from time to time, the library contained, in 1851, 55,000 volumes.

During that year it accidentally caught fire, and 35,000 volumes were destroyed, and the room was very much injured. This accident finally resulted in the room being made perfectly fire proof, by constructing the alcoves and shelves of cast iron. Soon after this fire an appropriation of \$75,000 was made by Congress for the purchase of books. This fund was judiciously laid out, and a most excellent collection made of standard and rare works. The library now contains about 65,000 volumes, exclusive of a large number of pamphlets, and about 50,000 public documents; and the annual appropriation to the library is \$5,000 for miscellaneous, and \$2,000 for law books.—*Union*.

#### THE MINNESOTA INDIANS.

We are glad to see that some of the papers of Minnesota are beginning to speak in favor of a peaceful policy towards the Indians from whom hostility has lately been feared. It is admitted on all hands now that the Spirit Lake murders were committed by a lawless, outlaw band of savages, not connected with or controlled by any of the great tribes of the Territory, and there can be no doubt that the Indians of the Territory at large greatly prefer peace with the white men to war. The Indians are "men of like passions with ourselves," and liable to be stimulated to violence by real or fancied injustice; but those who rule in the councils and govern the action of the tribes are also men of experience and judgment, who know full well that it is utter madness to contend against the military power of the United States, and who will strive to the utmost to avert such a calamity as a breach of peaceful relations between them and the Government.

We have no doubt the *St. Paul Times* comes very near the truth in the following article, attributing most of the border difficulties to the influence of the deadly "fire-water," which has ever been a more destructive foe of the Indians than the rifle of the white man:

"RUM AMONG THE INDIANS.—We do not claim any original discovery when we assert that alcohol is the stimulating and direct cause of four-fifths of our troubles with the Indians, as it is of four-fifths of the crimes among white men. If the Government would inflict a heavy penalty on any one who sells the fire-water to the red man, and then deputise a vigilant force to carry that law into execution and enforce that penalty, there might be a hope of something like perpetual peace. Indians may smoke their kinnikinik in a calumet, but a drink of whisky is an emblem of contention and crazy wrangling. There is four times the need to-day for the Government to station troops along the frontier to prevent a set of vagabonds from pursuing this everywhere-nefarious traffic, and putting to the red lips of the poor Indian the eup that shall make him mad, than for the suppression of any real hostilities. This

is the key to all our frontier difficulties. We sell to the wild and benighted savage something that makes him drunk, then we send Government troops to bayonet him because he don't keep sober.

"The Chippewas have been furnished with liquor on the Upper Mississippi, and have consequently become unmanageable and warlike. They have threatened the white settlers, and have driven Mr. Breck from his mission at Leech Lake. This infamous traffic not only sets tribes against each other and lights feudal sparks of discord into a blaze, but it puts in jeopardy the lives of our settlers and our settlers' wives and children, and margins our Territory with blood."

We are not sure but that the Spirit Lake outrages had their origin in the same prolific source of evil. The first outbreak occurring at a trader's store, where the "ardent" was in all probability kept, looked very much like it.

Without taking the whisky into the account, there is reason to believe most of the Indian difficulties are chargeable to the white settlers. The men who live upon the frontiers are apt to entertain a contempt for the rights and feelings of the red men, which is not calculated to elicit friendly feelings in return, and the readiness of our pioneers to resort to the rifle as an arbiter in the settlement of disputes with savages, has precipitated many an Indian war which might have been avoided by a little friendly negotiation. The Indian hostilities in California and Oregon were attributed by Government agents themselves, to unprovoked outrages committed by white men, and we believe the United States commander in the latter territory was on the occasion of one "war" so well convinced on which side the blame lay, as to refuse for a long time to employ his troops actively against the Indians.

The eminent success of William Penn's peaceful policy towards the wild warriors of his infant province, the facility with which the French almost everywhere in America maintained friendly relations with the natives, and the affection with which the Spanish and other Catholic missionaries were received and cherished by the tribes they located among, in the Northwest, in California and elsewhere, show that the aborigines of our country are as open as other men to the influence of kindness, and that when they are treated kindly and justly, it is not more difficult to remain at peace with them than with others. We are happy to believe that a large proportion of our Indian Agents and military commanders on the frontiers are disposed to treat the Indians with kindness and forbearance, and that unless the Government is deceived by false representations, there is a fair probability that it will not be hasty to condemn the poor red men without a hearing.—*Pantagraph*.

We are too ready to retaliate, rather than forgive, or gain by love and information.

## MEANING OF ANGLO-SAXON.

May I, at the beginning of this new year, which is to inaugurate also a new era of brotherhood between the United States and England, take the liberty of asking a question on a subject which has often puzzled me? It is probable that some one of your readers on the other side of the Atlantic may be able to explain my difficulty; for I believe the Americans were the first to use the name which I cannot understand, in the sense which seems to be gaining ground. My question is, "What do they, and their English imitators, mean by *Anglo-Saxon*?" What did the United States Consul mean, when, at the dinner lately given to Captain Hartstein, after substituting Turks and Russians for Dr. Watts' dogs and bears and lions, in the well-known little gnomic poem about "barking and biting," he continued,

"But *Anglo-Saxons* should never let  
Such angry passions rise;  
Their great big hands were never made  
To tear each other's eyes!"

I am entirely at a loss to understand this name; and I wish some one would do me the favor to explain what is really meant by it. I know something of a people who were called by it, a good many centuries ago; who founded, in short, by slow degrees, a very powerful state in the largest part of the British Islands; and who, under the general name of Anglo-Saxons, continued to exist in England and Scotland for seven or eight hundred years. I have, indeed, given myself unusual pains to master their now extinct language, to recover much of their lost history and law, and to make the forms of their civilization intelligible to the people who now occupy the country which they occupied. But I have done this solely because these had become unintelligible; because towards the end of the eleventh century that peculiar civilization received a shock, which gave it a totally different direction, and so modified the whole being of the people, as to cause a system of entirely new combinations. From that time there have been assuredly no (or very few) *Anglo-Saxons* left in England, and I presume still fewer in the United States of America. There have been *Englishmen*, deriving their blood from Celts, Saxons, Norsemen, Frenchmen, Flemings, with a little admixture perhaps of the Old Roman. And these Englishmen, I believe, went to America, where they probably varied the stock a little more by some admixture of Dutch, and even Spanish blood, and by a very plentiful admixture of Welsh, Irish, Scotch, and German—both North and South. How all this can be Anglo-Saxon entirely passes my comprehension.

Still less, I presume, can it be meant to imply that the social and political institutions of the United States and Great Britain are Anglo-Saxon. This they most assuredly are not. The Anglo-Saxons certainly had serfs, and the Americans have the "domestic institutions," but the English have not; so that even here the paral-

lel escapes me. American writers have already enriched our language with a number of expressions, which I regret not to be able to look upon as improvements. These have been excused on the ground that they are convenient representatives of novel ideas; but I believe that there was not the least necessity for their introduction among us. But it seems to me that this word *Anglo-Saxon*, if it means anything, means what is historically false, and should therefore be scouted by all true men. I believe, in fact, that it arises entirely from Mr. Thierry's dualistic theory, which arose entirely (by his own admission) from Sir W. Scott's novel of *Ivanhoe*. I believe it is intended to imply that the *people* in England are Anglo-Saxon, but the *nobles* are not Anglo-Saxon, which is historically false: the nobility in England are just what the people are. And if it is further intended to imply that the people in America, being like the people in England, Anglo-Saxon, have an interest apart from the interest of the nobility in England—not being Anglo-Saxon—then I say that it is politically, as well as historically, false, and should be doubly resisted by all true men. If the Americans recognize the fact that the English people, mixed as it is, and of which they are themselves a great and gallant offshoot, possesses noble qualities of self-government, indomitable energy, high principle, and that ἀρχαία φύσις which makes them the lords of the human race, I shall gladly agree with them. But still I must object to calling the English or Anglo-American people, *Anglo-Saxon*. If the Americans read *Beowulf* or *Cædmon*, or the *Laws and Institutes*, or the *Coder Diplomaticus*, or the *Saxons in England*, they would learn that the Englishman of to-day has as little to do with Alfred's language, as he has to do with his legislation: that the tongue we speak, and the institutions we live under, are not more like those of the Anglo-Saxons, than the personal appearance of the Anglo-American is like that of the full, fat, light-haired, blue-eyed Mercian, or the rattling "go-ahead" spirit of the States like the somewhat heavy conservatism of the Anglian kingdoms. I am very ready to admit all the greatness which the Anglo-Americans may be disposed to find in the *English* character; but I wish to remind them, as well as my own countrymen, that the Englishman only became great by ceasing to be an Anglo-Saxon.—[*English*] *Notes and Queries*.

## OUR WASTE OF FOOD.

On a certain day, eighty thousand men, each possessing eight bushels of wheat, sufficient to furnish each of them with a pound and a third of a pound of bread for every day in the year, are seized with an impulse to throw their whole year's supply in the river; from which, on an average, they are distant one mile. They arrange themselves into regiments of eight hundred men each, and each is preceded by a band of music.

We have all seen the commotion in a street when a single regiment of soldiers marches along; young and old coming out to see and hear. But here are one hundred regiments, in regular procession, martial music preceding every one—now pealing loudly in the ear, and then dying away in the distance, ere another comes with its loud crash of brazen instruments—till the whole hundred arrive at the common centre. Every man of the eighty thousand carries on his back a bag containing a bushel of wheat, weighing sixty pounds, which he throws into the river, and hastens back with his empty sack to fill it again with another bushel of wheat, to be thrown into the river in its turn. Eight times over in the course of the day, do the one hundred regiments, of eight hundred men each, repeat this march, with this disposal of their pound and a quarter of bread a day for all the three hundred and sixty-five days of the year! What would the Laputan philosopher say of this voluntary sacrifice? What would he say of citizens, of whom eighty thousand thus voluntarily sentence themselves to twelve months' deprivation of bread? And the matter would not in the least be made more credible, if the traveller were to represent that Manchester and Glasgow were not more insane than other parts of the United Kingdom, inasmuch as five millions of people were thus, day after day, and year after year, throwing away that daily bread for which they were instructed daily to pray.

And what an irrepressible shout of scorn and derision, bringing down the very steeples of Lagado, would arise, were the traveller to say, that the wicked and wanton waste, with the consequent poverty, wretchedness, and absolute starvation, was not one half of the evil occasioned; for that the river into which the bread was thrown was a great seething pot, sending its noxious fumes over the land, and smiting with disease and death all upon whom they fell! Five millions of people destroying their food—that would be incredible enough; but five millions of people converting their food into poison and drinking it all up, and regarding it as a gift of God, too! But yet, however incredible, however insulting to the understanding, the assertion might be regarded there, the sober, the serious, the sad fact is, that here, whatever may be the exact number of bushels of barley and oats—whether seven or eight millions, there is an *equivalent* to five million quarters of wheat, which would have given bread to five millions of people at the rate of a pound and a third every day in the year, annually converted into beer and gin and whisky. Five millions of quarters of bread corn were all that the Anti-Corn-Law League, throughout its seven years' incessant agitation, expected to be imported annually, to feed the hungry and the starving, and an equivalent for five millions is annually sacrificed to the Moloch of Drink. If a Cobden and a Bright deserved national gratitude and a national reward, and a world-wide

reputation, for the five million importation of food, what should be the reward to those who would put a stop to the five-million destruction of it as food, and its conversion into a malign influence, spreading poverty, crime, disease and death, over what would otherwise be a smiling and happy land?

We come back to the GREAT FACT that an abundant supply of bread for five millions of persons is destroyed by the process of brewing and distilling. Let us not be told that what is destroyed is not needed as food. Who can say what is not needed while there is a single family in want? There has not been, during the lifetime of any living man, a single year in which there were not millions who would have been benefited in health and comfort by a more abundant supply of wholesome food. Simply as a bread question, the saving of grain from destruction is quite as important as its increase from importation, and there would be no waste of funds or labor, if a Food-Saving League should spend half a million of money, and seven years of time in effecting the great change.

The first question is only half the question, probably very far short of half the question, for the destruction is not so great an evil as the conversion. In the one case there is deprivation, in the other gross depravity and national degradation. Three-fourths of the pauperism, three-fourths of the insanity, three-fourths of the crime which fill our prisons to overflowing, and the premature deaths of some fifty or sixty thousand persons per annum—a destruction equal to a constantly lasting Crimean war—are all the results of that unrighteous conversion. Is there not, in this double incidence of mischief, inducement enough to the benevolent of all classes to put forth all that energy which characterized the proceedings of the Anti-Corn-Law League? The work has already commenced—and commenced favorably—and it promises soon to increase in extent and intensity. The great object is to instruct the public mind, whether the settlement be legislative, or by the firm compact of the people in a voluntary common purpose. More lecturers must be employed; more tracts must be published, and more and better machinery applied in their distribution; the co-operation of the newspaper press must be courted; the aid of ministers of the gospel must be more pressed as an imperative duty; the assistance of influential and able men, by speech or pen, by labor as well as by money, must be more pressingly invited. The cause is worthy of not only great and united exertion, but even of great sacrifices. One advantage the movement has over that of the Anti-Corn-Law-League—that could be successful *only* by a legislative act. The movement against the destruction of food is forwarded by every individual accession to the ranks of total abstainers, *every act of abstinence occasioning an addition to the quantity of available food.*—*Scottish Review, article "Distillation."*

## WOMEN'S HELP FOR FARMERS' FAMILIES.

A large part of our farmers' wives are over-worked. What with the boarding of the farm hands, the dairy, and all the other unavoidable parts of the routine of daily work, there need to be extra hands to do it, and when these cannot be, or are not furnished, health suffers, the temper is often soured, the beauty of mind and soul is marred, and too often the worn-out mother fails to live out half her days.

We believe most families would gladly hire more assistance, if possible, but there are constant complaints from all parts of the country, of a lack of girls who will consent to hire into farmers' families. It is evident that we cannot expect much of this kind of help from *American girls*. Either they have insufficient health, or their fathers are able to support them without, or they are too proud to "work out," as it is called. And girls of foreign birth, if they have been even for a short time in the city, can seldom be persuaded thereafter to go into the country.

On the other hand, while luxury is everywhere gaining ground, there is small chance that our wants will be simplified, and thus be more readily met. On the contrary, they are vastly more likely to be multiplied. The demand is likely to increase, while the supply diminishes.

The same want is felt to a considerable extent by the farmers in their out-door work, though machines are fast lessening the evil here. Not so in-doors, and the question has become an important one, how is this growing evil to be met?

The most feasible plan that we can suggest is this:—Build a cheap, though comfortable house on the corner of your farm, fence off a few acres of ground to go with it, and let this to some tenant who will be likely to supply your wants. There are enough families in our cities, who, if comfortable provision were made for them, would be glad to go into the country. The Germans are almost always good tenants—neat, industrious and saving, and fond of working the ground. Welsh and sometimes English and Scotch families can also be found who will do well.

The advantages resulting from such an arrangement are numerous. You can easily spare the land, the fire-wood, etc., indeed you would scarcely miss it, and would be sure to want more than the worth of it in work, and the convenience of having help at hand, when wanted, must be great. You are not obliged to hire either men or women when not needed, as they can support themselves from their own share of the ground; neither are you obliged to retain them as tenants if they prove lawless.

One cause of the scarcity of farm laborers is this. You generally insist upon hiring single men. A man with a family could be more easily obtained, and by boarding himself, too, would

relieve the women of part of their burthen. Moreover, the tenant family could probably board any other hands that might be required, and thus materially lessen the crushing labors of the house-wife.

The women of such families, too, are usually hardy as well as industrious, and would commonly be glad to get the job of washing and ironing for the family, or they would come in by the day and clean house, etc., and if there be girls in the family, you can probably hire them steadily by the week or month. By hiring them thus occasionally, from childhood, they would learn your ways, and be much more likely to meet your wants than any fresh importations.

The advantage of such arrangement must, we think, be great to you; and in return, you should make it advantageous to them. Let them have the place on such terms as will make it an object for them to leave the city and hire with you. Make their home a comfortable one, pay fair wages, take no advantage over ignorance or humble position; in short—do as you would be done by. Let there be freedom on both sides to go or stay, or hire as they please, and we are sure the advantage will be mutual.—*Ohio Cultivator*.

For Friends' Review.

## MARCH OF EMANCIPATED SLAVES TO OHIO.

[Written by request for a Literary Association of young Friends.]

Slowly rolled our heavy wagon,  
Slowly fell our lingering footsteps,  
Though with Freedom's star before us,

Every step unbound a chain—  
Carolina! Carolina!

Tears of gladness and of sadness  
Mingling, told our wordless farewell—  
We can never meet again!

Through Virginia's lonely forests,  
Up her lofty steeps ascending,  
We have reached her towering summits,  
We have crossed her crystal streams;

We have rested on her bosom,  
We have cooled within her shadows,  
We have warmed beneath the radiance  
Of her summer's golden beams.

We have pitched our tents at sunset  
In the loveliest of her valleys,  
We have spread our humble pallets

On the green breast of the earth;  
And around our blazing camp-fire  
Thoughtful faces glowed with feeling,  
While around our rude rock-table  
Little faces shone with mirth.

As our mothers' fond caresses  
Rested on our infant foreheads,  
Has the lulling wing of slumber  
Pressed its down on every eye;  
Are the stars all holy watchers?  
Were our white tents angel-guarded,  
That for weeks we slept in safety,  
When our ceiling was the sky?

When our wall was made of mountains,  
And our canopy white cloud-lace,  
And our chamber-lamp a crescent  
Filled with soft, sweet, lunar light?

When such pure, resplendent faces,  
In our deepest midnight visions,  
Beamed upon us, and then wafted  
Toward the West, in robes of white?

There was want amid the mountains,  
Flocks and herds were starving, dying,  
And the breadless poor were driven  
Coarsest bran for bread to use:  
Though unworthy of such mercies,  
Day by day like falling manna,  
We had meal within our barrel,  
We had oil within our cruse.

There was storm upon the mountains,  
And the thunders uttered voices,  
When the lightning spears came flashing  
Thick around us, red with wrath:  
O, the forest moaned and trembled  
When its royal oak was shivered,  
But a dove-like Wing extended  
As a shield above our path!

There was calm amid the mountains  
When the wild birds sung their matins,  
And a deeper calm when twilight  
Breathed her soothing vesper-song;  
And the hymning of the waters,  
With the harping of the breezes,  
Through the old cathedral arches  
Of the forest swept along.

We have trod the very verges  
Of Virginia's crags and ridges,  
With our shuddering forms recoiling  
From her chasms and ravines;  
We have feasted on the grandeur  
Of her billowy seas of mountains,  
Till our full, full hearts grew larger  
With the vastness of the scenes.

We have passed through wildernesses,  
Where her dainty rhododendrons,  
Seemed to feed upon the incense  
Her azaleas offer there:  
We have gazed upon her Hawk's-nest,\*  
Till our spirits bowed within us,  
For its gift of wondrous beauty  
Seemed to call for praise and prayer.

We have watched her lordly eagle  
Soaring from his castled eyrie,  
Up and up to meet the sunbeams,  
Till we lost him in their glow:  
We have viewed the leaping cascades  
From the cliffs of her Kanawha,  
Pouring down their showers of diamonds  
On the poor, bare rocks below:

And the eagle seemed to tell us  
That our spirits should be soaring  
On the wings of prayer unceasing,  
Toward the Source of light and love;  
While each tiny cascade whispered  
Of the pure and countless mercies  
Which our pitying Father poureth  
On His poor ones, from above.

We have met the generous greetings  
Of thy noble sons and daughters,  
And our hearts received their kindness  
As the bud the vernal rain;  
But, Virginia! oh Virginia!  
Joy and grief are strangely blending  
In our gladdened, saddened farewell—  
We can never meet again!

We have heard of vultures roaming  
Far and near above the pastures;  
We have heard of vultures pouncing  
On the lambs within the fold;  
We have heard of vultures bearing  
Children from their frantic mothers,  
To the heights even love maternal  
Never ventured to behold!

We have seen thy keen-eyed "trader,"  
Turn his vulture glance upon us;  
We have heard him name the thousands  
Of his glittering, proffered gold:  
Not for all Virginia's dollars—  
Not for all her charming valleys—  
Not for all her glorious mountains,  
Would our feeblest one be sold.

We have reached the broad Ohio,  
We are waiting at the ferry,  
With a shroud of mist wrapped round us,  
And a pall of cloud above:  
See that sudden burst of sunshine  
On the western bank before us!  
O, that blessed type of Freedom!  
O, that blessed type of Love!

Swiftly o'er the rolling waters,  
We are gliding on in safety,  
For the Arm is everlasting  
That hath borne us to this land.  
"Pass before us, our dear Master!  
Our dear Mistress, pass before us!  
Yours has been a heavy burden,  
Rest ye first on Freedom's strand!

"Here's an arrow-point we bring you—  
Here's a bit of petrification—  
Here's a little shining crystal—  
Here are pebbles and a shell;  
You will keep them as memorials  
Of our passage o'er the river;  
You will keep them as mementoes  
Of the hearts that love you well.

"Onward, onward speeds our wagon,  
Onward bounds each buoyant footstep;  
Sunk like lead beneath the waters  
Every link of Slavery's chain;  
Other brows than ours are brightened—  
Other hearts than yours are lightened—  
Doors, and hearts, and hands are opened—  
In this land must we remain.

"We can bear for you to leave us,  
For the friends of Freedom greet us,  
And the strong man's voice is choking—  
Tears are in the stranger's eye—  
Can such love be merely human?  
Hearts like these must be the channels  
Of the ever-flowing Fountain,  
Of the Love that cannot die.

"Where the ashes of our fathers  
And the dear dust of our mothers,  
With the all that could be mortal  
Of our innocents remain,  
May our Heavenly Father lead you,  
From all evil may He shield you,  
May His peace surround the hearth-stone  
Of the olden 'home' again!

"Now our little farewell treasures  
Must be laid within your casket,  
Though they are but lamb-like ringlets  
Taken from each baby's brow,  
We remember by our Saviour,  
Even these humble hairs ere numbered;  
To that ever-blessed Saviour  
We commend each other now!"

\*For a brief description of the Hawk's-nest, see life of J. J. Gurney, 2d vol., page 108.

## SUMMARY OF NEWS.

**FOREIGN INTELLIGENCE.**—Advices from Liverpool to the 9th inst. have been received.

**ENGLAND.**—The English underwriters have settled for the losses occasioned by the breaking of the Atlantic cable. A proposition was made to purchase it for laying down in the Red Sea, but its construction was found unsuited for a hot climate.

It is announced by authority that the mammoth steamship Great Eastern is to be launched early in next month.

**FRANCE.**—A slight difficulty has occurred with Denmark as to the place where the Sound Dues redemption should be paid.

It is stated that there is an entire agreement between England and France as to their policy in Chinese affairs, and that they will declare war simultaneously, if Lord Elgin should fail to obtain satisfaction.

Cayenne, in South America, being found too sickly for a successful convict colony, the French government proposes to found a new one on the island of New Caledonia, in the Pacific Ocean, and a commission for examining the subject has pronounced favorably. A decree ordering the transfer is expected soon.

The Emperors of France and Russia are to have an interview shortly at Stuttgart.

**SPAIN.**—The government has ordered the suspension of preparations for war with Mexico. It is stated that the Mexican government has accepted the proposition for a settlement of the difficulties by mediation, and they will probably be arranged by the arbitration of England and France.

**PRUSSIA.**—The government has announced by proclamation the legal equality of the different religious denominations.

The deputies from the nobility, towns and communes of the Duchy of Lauenberg have been summoned to an extraordinary session, by royal patent, to deliberate on the new Constitution to be submitted to them by the government.

**DENMARK.**—The Danish government has given orders for a body of troops to march towards Holstein. This decision, taken at a time when the Estates are assembled at Itzehoe, has produced much sensation. The difficulty appears to be in reference to the separation of Schleswig and Holstein, both of which belong to Denmark, but by different titles. Holstein forms part also of the German Confederation, and her people wish that Schleswig, which has the same language, habits, &c., should not be separated from her; while the government of Denmark is unwilling that Schleswig should pass under the rule of the confederation. It is feared this dispute may lead to another war.

**SWEDEN.**—The Chambers of this kingdom have voted \$20,000,000 for the establishment of railroads.

**ITALY.**—The difficulties respecting ecclesiastical matters between Rome and Mexico, are likely to be settled. It is said the sales of church property, and the suppression of convents, already effected in Mexico, are to be recognised by the Pope.

**IONIAN ISLANDS.**—In Corfu the British government has prorogued the Parliament for two years, and great irritation is the consequence.

**PERSIA.**—At the last dates, the Persians were about to evacuate Herat. The delay was owing to the existence of war with the principal Afghan tribes, who claimed possession of the town. The English had evacuated the Persian Gulf. The revolt in India had produced a great sensation in Persia, and the populace gave evidence of very unfriendly feeling towards the English, though the government strove to suppress any public manifestations.

**SOUTH AMERICA.**—In Chili, a general amnesty bill for political offenders has passed Congress. The re-

volutionary movement in Peru continues, but makes no apparent progress.

**MEXICO.**—A new arrangement respecting the Tehuantepec transit has been made, by which both the former grants are annulled; the privilege is to last for sixty years, and the government is to receive fifteen per cent. of the profits. The government absolutely refused to concede any territory farther than shall be absolutely necessary to the road. A citizen of San Francisco, California, has acquired the right of building a city at Ventosa Bay, the Pacific terminus of the Tehuantepec route, and has purchased of the proprietors of the land a square league for that purpose. A railroad is projected between Vera Cruz and Acapulco or some other point on the Pacific, and a liberal charter has been granted to one Antonio Escandon, said to be a man of enterprise and means.

Political disturbances have occurred in various places, but were promptly suppressed by the federal authorities. A serious collision between the civil and ecclesiastical powers has taken place at Puebla. The church authorities having refused burial to an officer of the National Guards, the vaults were opened by force, and the head of the diocese banished. Tranquillity was restored at the latest dates.

**HAYTI.**—A revolution has broken out in the republic of St. Domingo. The President, Baaz, is reported to have been compelled to leave the capital, where a provisional government has been formed.

**DOMESTIC.**—The Kansas Constitutional Convention, which met on the 7th inst., elected as its President Calhoun, Surveyor-General of Kansas and Nebraska. At least half of the members are stated to have been members of the previous spurious legislatures. Sixty members were admitted on the authority of a list of "regularly elected" delegates furnished by the Secretary of the Territory, without other credentials. Two irregularly chosen proslavery delegates from Shawnee county were also admitted, while two free state men similarly chosen from another county were rejected. The Convention, after organizing fully, adjourned to the 19th of next month, which is subsequent to the day fixed for the territorial election. At that election, the United States troops in the territory are to be distributed at the principal towns to be present at the polls, and Sheriffs are also to be stationed there to collect the taxes, without paying which no person will be allowed to vote. Parties are reported to be organizing in Missouri to control the election, and a struggle is apprehended.

Another appalling marine disaster, attended with great sacrifice of life, has occurred on the Atlantic near our shores. The steamer Central America, from Aspinwall for New York, foundered on the 12th inst. about two hundred miles from Cape Hatteras, and of five hundred and sixty-two persons, believed to have been on board, four hundred and thirteen are supposed to have perished. The vessel left Havana on the 8th, and on the 10th encountered a violent gale, which increased to a hurricane, and continued until the 12th. On the 11th, the ship was found to be leaking; the water soon extinguished the fires, rendering the engines and the pumps worked by them useless, and notwithstanding the most strenuous and persevering efforts in bailing, by the crew and passengers, the steamer sank about 8 o'clock P. M. on the 12th. The women and children, fifty-nine in number, and forty-one men, had been previously transferred in boats to a passing brig, which, however, owing to the violence of the wind and sea, was unable to keep near enough to render further assistance. The remainder were furnished with life preservers, and after the sinking of the vessel clung to such fragments as could be found. Of these, forty-nine were rescued by a Norwegian bark, after being several hours in the water, but the greater part probably perished. The survivors were taken to Norfolk.

# FRIENDS' REVIEW.

DEVOTEDNESS OF EARLY FRIENDS.

"Yet peradventure for a good man some would even dare to die." Rom. 5: 7.

[The following account is taken from Letters of Early Friends by A. R. Barclay.]

Second month—called April—1659.

Our Friends, for several years previous to this period, had put forth in print many sad narratives of persecutions and sufferings of their members in various parts of the country, on account of their religious testimonies. Warning addresses had also been written by E. Burrough and others, to the Protector, Oliver Cromwell; yet it seems they were generally unavailing, for he died, leaving the case of these suffering, innocent people unredressed. Further exertions on the part of Friends to obtain relief were made about this time, by application to the new Protector Richard Cromwell, as well as to the Parliament. It appears that on the sixth-day of this month—called April—an address was presented on behalf of Friends to the Speaker of the House of Commons, entitled,

"To the Parliament of the Commonwealth of England, being a declaration of the names, places, and sufferings of such as are now in prison for speaking the truth in several places; for not paying tithes—for meeting together in the fear of God—for not swearing—for wearing their hats—for being accounted as vagrants—for visiting Friends, and for things of the like nature—in all about 144:—Besides, imprisoned and persecuted till death, twenty-one. Also a brief narrative of their sufferings within the last six years or thereabouts, of about one thousand nine hundred and sixty persons already returned; being but part of many more, whose names and sufferings are

not yet returned: all which it is desired may be read and considered of by this Parliament, that right may be done."

Then follows a list of cases of sufferings, arranged under the several counties, and comprised in many pages.

This declaration seems to have laid dormant in the House for a time: at length Friends came forward once more, with the following address to the House of Commons, an appeal calculated—one might suppose—to move the hardest of hearts. This address is printed at large in *Besse's Sufferings*; it is truly a remarkable document, and is well deserving, the Editor thinks, of a place in these historical notices relating to our Society. A considerable number of Friends, probably all whose names are subscribed to the document, attended at the avenues of the House on the occasion.

*From Besse's Sufferings, (Fol.) Preface.*

"There was a printed paper presented to the Parliament in 1659, and subscribed by one hundred and sixty-four of this people; wherein they make an offer of their own bodies, person for person, to lie in prison instead of such of their brethren as were then under confinement, and might be in danger of their lives through extreme durance, which paper was as follows, viz:—

'Friends, Who are called a Parliament of these Nations: we in love to our brethren that lie in prisons, and houses of Correction, and dungeons, and many in fetters and irons, and have been cruelly beat by the cruel gaolers, and many have been persecuted to death, and have died in prison, and many lie sick and weak in prison, and on straw; so we in love to our brethren do offer up our bodies and selves to you, for to put us as lambs into the same dungeons, and houses of Correction, and their straw, and nasty holes and prisons; and do stand ready a sacrifice for to go into their places in love to our brethren, that they may go forth, and that they may not die in prison, as many of the brethren are dead already: for we are willing to lay down our lives for our brethren, and to take their sufferings upon us, which you would inflict upon them. For if our brethren suffer, we cannot but feel it: and Christ saith, "It is he that suffereth and was not visited." This is our love towards God and Christ, and our brethren,

that we owe to them and our enemies, who are lovers of all your souls and your eternal good.

And if you will receive our bodies, which we freely tender to you for our Friends that are now in prison, for speaking the Truth in several places, for not paying tithes—for meeting together in the fear of God—for not swearing—for wearing their hats—for being accounted as vagrants—for visiting Friends, and for things of the like nature, according to a paper entitled, '*A Declaration to the Parliament,*' &c., delivered the 6th day of the second month, called April, 1659, to the then Speaker of the said House: We whose names are hereunto subscribed—being a sufficient number to answer for the present sufferers,—are waiting in Westminster-hall for an answer from you to us, to answer our tenders, and to manifest our love to our Friends, and to stop the wrath and judgment from coming upon our enemies.'

[Signed by 164 Friends.]

From the "*Mercurius Politicus,*" a news book of that period, the following public notice of this occurrence is given forth:—

"1659. Friday, April 15th.—This day and the following, a great number of a sort of people called Quakers came up to London from several parts, and assembled themselves in Westminster-hall, with intent to represent somewhat to the house touching the men of their way.

"Saturday, 16th April.—A paper written on the outside thereof with these words, namely, 'For the Speaker of the Commons assembled in Parliament, these are for him to read to the House of Commons,' was this day read. And upon the reading thereof, the same, amongst other things, referred to another paper entitled '*A Declaration to the Parliament, &c.,*' delivered the 6th day of the second month called April, 1659,' to the then Speaker of the House. The said papers were presented by certain persons commonly called Quakers."

A brief account of what passed in the House on this occasion, drawn up from *Burton's Diary*, and from the *Journals of the House*, is subjoined.

One of the members opened the business by the following remarks:—

*Col. Grosvenor.* "I took notice of a great number of people called Quakers in the Hall yesterday and to-day. I wish you would take some course with the Petition that has laid a long time before you; and that they be dispersed." Another member moved that they be whipped home as vagrants. The petition was at length read. Several members then made a variety of remarks; several are against them, some appear to be in favor of them, or the release of their imprisoned brethren; others were for referring their grievances to a committee; another, that the county members should refer their case to the justices to inquire into their grievances. At length the House resolves,

"That the answer to be given to the persons that presented this paper is, that this House hath read their paper, and the paper thereby referred to; and doth declare their dislike of the scandal thereby cast upon magistracy and ministry; and doth therefore order, that they and other persons concerned, do forthwith resort to their respective habitations, and there apply themselves to their callings, and submit themselves to the laws of the nation, and the magistracy they live under." It was moved that two or three of them be called in. From the Journals of the House, "16th April," it appears, "that Thomas Moor, John Crook, and Edward Byllyng were brought in to the bar," the Sergeant having taken off their hats, and the aforesaid answer was declared to them by the Speaker.

Although little or no apparent effect appeared to be produced at the time in the House from the foregoing affecting appeal, we may notice by the Journals of the Commons, that in the month following a committee was appointed, "to consider of the imprisonment of such persons who continue committed for conscience sake, and how and in what manner they are and continue committed, together with the whole cause thereof, and how they may be discharged; and to report the same to the Parliament." (*Journals under 10th of May, 1659.*) Of this committee the Earl of Pembroke and Vane, (names mentioned in these letters) were members.

The following Letters doubtless allude to this committee.

THOMAS RAWLINSON TO MARGARET FELL.

London, 11th of Third month, (fifth m.) 1659.

DEAR HEART,—My dear love in the Lord Jesus dearly salutes thee, and all the lambs and babes of Christ with thee.

I believe thou hast heard what turnings and changes have been here at London: the Parliament began to sit again the last seventh-day, and they sat on the first-day.\* There is something expected to be done from them. Friends have this day delivered the paper of sufferings into the House, and it is referred to a committee. The army pretends to put all wicked men out of places and offices: if they do as they say, it is more than is expected. They searched many houses last first-day at night for r—[*word not clear*] and papists, and took some prisoners. Thy dear brother in the Truth of God,

THOMAS RAWLINSON.

From the original apparently.

ROBERT BENBRICK TO MARGARET FELL.

London, 21st of Fourth month, (sixth mo.) 1659.

— FRIENDS' sufferings were yesterday taken

\* The following is the entry for this day in the Journals of the House of Commons.

"Lord's day, 8th of May, 1659. The House met this morning (eight o'clock;) and spent it in praying and hearing the word, Dr. Owen praying and preaching before them."

into consideration at Westminster, and grievous things were declared against the priests, and did enter into the hearts of some of the committee; we made them shake their heads, and grieved them; they said, they would have some of the priests up to London, and they would examine them about those things.

ROBERT BENBRICK.

For Friends' Review.

AUGUSTUS HERMANN FRANCKE.

In lately reading the life of Francke, I trust with instruction, a desire arose that some parts thereof might be presented to the attention of the readers of the Review. Certainly such an example of active faith producing good works is calculated to stir up the pure mind by way of remembrance, and to animate all who will be taught the way of righteousness to show forth out of a good conversation their works with meekness of wisdom. A.

In estimating the character of an individual, we are to take into consideration the situation and circumstances in which he is placed; for nothing is more manifest than that they exert a strong influence upon his character. Such is the nature of man, that he cannot avoid receiving more or less impression from his education—associates—the state of moral feeling in his country—and the varied events of his life. If all this influence be salutary, we look upon him who becomes profligate as almost a monster; and, on the contrary, we admire him who, surrounded by wicked men and educated under their influence, dares to live a moral and religious life. It is precisely thus in the history of professed Christians. It is generally found that even those who call themselves the children of God, and confess their obligations to live devoted to his service, sink to the level of religious feeling which prevails around them; or, if it be more elevated than their own, attempt to rise to the same standard. Of course, then, that person, who, in the midst of surrounding coldness and inactivity, resists this downward influence, and manifests the true spirit of the gospel, deserves our esteem more than one who manifests the same spirit in more favorable circumstances. It is for this reason that we admire the character of the leaders of the Reformation, and hold up Luther and Melancthon as examples for our imitation.

If these things be true, there has seldom lived a man who more deserves our admiration than the subject of this little biography. He stands out, with a few others, in the history of his times, as a light in a dark place, exhibiting, under very unfavorable circumstances, a faith and zeal truly remarkable.

Augustus Hermann Francke was born at Lubeck, in the northern part of Germany, on the 23d day of March, 1666. His father was John Francke, a doctor of laws, and a distinguished

officer of the church. In the year 1666, his parents removed from that place to Gotha, where his father was appointed court counsellor and director of schools for that principality, by Duke Ernst the Pious. Of this parent it pleased God to deprive him, by death, at the age of seven years.

His father had been particularly attentive to the education of this, his only son. He had with all a father's anxiety instilled into the mind of his child the principles of the Christian religion, taught him by example and precept his duties to God and man, and employed for him in addition a private teacher. After his father's death, his mother pursued the same course with him, until his thirteenth year. He states, that at this time, study was to him more pleasant than any other employment, which must appear not a little surprising at such an age. He was, also, during this whole period, more or less interested in the subject of religion. In his tenth year he was so completely weaned from the common desires and amusements of childhood, that he asked his mother for a little room, which he might call his own, where he might study and pray without interruption. This request was granted; and it was his habit, when he returned from his teacher, to retire there, and, closing the door, to pray earnestly to God. It is stated, that he used to say frequently at these times, "Lord, all things and all persons will, in the end, be made to glorify thee: but I pray that thou wouldst so order my whole life, that it may be spent to thy glory alone." His youngest sister seems to have exerted a most happy influence upon him. She was three years older than himself, and, to all appearance, loved God from her infancy; and being one of the most lovely and cheerful of the family, and nearest to his age, he was tenderly attached to her. She taught him to imitate her in carefully and frequently reading the Bible and other serious books, and, among the rest, Arnd's "True Christianity." But it was his lot to be soon after separated from this sister; for God took her to himself at an early age. After the death of his sister, he was left without any one who would so directly influence his feelings and conduct. The little spark which had been enkindled in his bosom was not, however, extinguished, though it did not burn with the same vigor as before. He was exposed, too, to the effect of evil example in his daily intercourse, which blunted, to some extent, the tenderness of his feelings, and caused him, in after times, much sorrow, for it led him to neglect these early influences of the Spirit.

In his thirteenth year, he was sent to the Gymnasium, or public school at Gotha, where, notwithstanding his youth, he was soon distinguished on account of his attainments. He received, the year after, the certificate of preparation for the University; but, being too young to pursue his studies there with advantage, he spent

the next two years at home in studying the languages more extensively than was usual in the schools at that time. He manifested, even at this period, a taste for theology, read a number of works of that character, and determined to pursue his studies, in reference to the ministry.\* But, notwithstanding this, he acknowledges that pride and ambition had a strong control over his conduct, and that his zeal in the pursuit of knowledge hindered his attention to more important concerns. He continued, however, his habits of private prayer, and seems, in general, to have been prudent and moral in his deportment.

At the age of sixteen, he went to the University of Erfurt. He attended the lectures upon history, metaphysics, geography, and Hebrew, until the autumn of the same year, (1679,) when, in consequence of the offer of a scholarship in the University of Kiel, of which his uncle had the direction, he went to that place.

In Kiel, Francke lived in the family of the celebrated and excellent professor Kortholt. He attended his lectures on theology, enjoyed the advantages of his library, and received from him, in connexion with one other student, private instructions in church history and philosophy. Besides these, he heard lectures upon natural history, and some other subjects, and studied the English language, all of which he attended to principally in reference to their connection with theology. While at this place, he seems to have been, as is too frequently the case, so much absorbed in his studies, as to have little time or disposition for attention to the more important subject of religion. In speaking of himself, he says, "I knew how, at that time, to discuss all the doctrines of theology and morals, and could prove them from the Bible. I was correct in my external conduct, and neglected none of the forms of religion; but my head, not my heart, was affected. Theology was to me a mere science, in which only my memory and judgment were concerned. I did not make it practical. When I read the Bible, my effort was to become acquainted with its doctrines, not to apply them to myself; and though I wrote volumes of notes upon it, I never took care that its precepts should be written on my heart." The influence which Kortholt exerted upon him, at this period, was such as to lead him, at times, to pray earnestly, that God would change his heart, and give him the spirit of his children. He often walked alone upon the sea-shore in the neighborhood, and meditated upon three things:—how he should become holy—how he should become learned—and how he should acquire the talent of making his knowledge useful to others. He was, how-

ever, still in darkness as to the means of obtaining the favor of God and deliverance from sin.

After a residence of three years at this place, and the completion of the usual course of study, being dissatisfied with his knowledge of Hebrew, he determined to go and put himself under the direction of the famous Hebrew teacher, Ezra Edzardi, at Hamburg. It may not be uninteresting to state, in few words, the plan of study recommended to him. He was directed to make himself thoroughly acquainted with the signification of all the words in the first four chapters of Genesis, and not to trouble himself for the present with the grammar. He was surprised and disappointed at this advice, but followed it; and when he next went to his teacher, found, to his satisfaction, that he had become master of one third of the words in the Hebrew language. Edzardi now advised him to read the Bible through again and again, and afterwards to study the language more accurately. After spending two months in Hamburg, he returned to his friends and family at Gotha. He remained here during the next year, and did, in that time, read the Bible *seven* times through in Hebrew, and thus became familiar with the language. He acquired, at this time, too, a knowledge of the French language. While he was at Gotha, his religious feelings revived and strengthened. Practical piety was more the object of his desire than it had for a long time been, and he felt more deeply its necessity. He did not, however, feel the impropriety of attempting, by all his diligence, to obtain only the honors and pleasures and riches of this world. Inconsistent as it seems with his expectations of preaching the gospel, which declares the friendship of the world to be enmity with God, his expectations of happiness all centered here; and the thought that the earth, with all its enjoyments, is passing away, appears to have too seldom entered his mind. He was yet under the dominion of a carnal and depraved heart, although he knew that God demanded and deserved all his love and obedience.

In the year 1687, the support of the scholarship which Francke had enjoyed at Kiel, was again offered him, with the advice, that he should spend some time at Luneburg under the care of the learned and pious Sandhagen. This offer he accepted, and soon after left Leipzig for that place.

(To be continued.)

#### BOOKS, PAPERS, AND TRACTS

Preach where no audible voice is heard, in the house and out of the house, by the way-side, at the merchant's desk, the stage coach, the steam boat, the rail car, the closet, the domestic circle; they preach and keep preaching, when we sleep and when we wake; likewise, if faithfully written, in the spirit of the gospel, they hesitate not

\* It should be remarked, in explanation of this, that at that time the only qualifications which were generally thought necessary for a minister of the gospel, were external morality of conduct, and an attachment to the forms of the church.

to declare the whole truth, bodily, uncompromisingly. Many pulpits fail to do this.

"It is my conviction," says a periodical, "that more will have to be done through the press than by any other means. Lecturing and preaching are great things, but they are not the greatest. They can do something which the press cannot do. But the press can do much which they cannot do. Printed leaves can go everywhere. They never blush—know no fear—never stammer—never stick fast—never die. They can be multiplied without end by the press. Books and tracts can travel at little expense. They want nothing to eat. They require no lodging. They run up and down like the angels of God, blessing all, giving to all, and asking no gift in return. You can print them of all sizes, on all subjects, in all places, and at all hours. And they can talk to one as well as a multitude, and to a multitude as well as one. They require no public room to tell their story in. They can tell it in the kitchen or the shop, the parlor or the closet, in the railway carriage or the omnibus, on the broad highway or in the footpath through the fields; and they dread no noisy or tumultuous interruption. They take no notice of scoffs, or jeers, or taunts; of noisy folly, or malignant rage. They bear all things, suffer all things, and take harm for nothing. They can talk even when the noise is so great as to drown all other voices; and they stop when they are bid, or at least when they are done. No one can betray them into hasty or random expressions. And they will wait men's time, and suit themselves to men's occasions and convenience. They will break off at any point, and begin at any moment where they broke off. And though they will not always answer questions, they will tell their story twice or thrice, or four times over, if you wish them. And they can be made to speak on every subject, and on every subject they may be made to speak wisely and well. They can, in short, be made vehicles of all truth, the teachers and reformers of all classes, the regenerators and benefactors of all lands.

"We want our friends to give this subject their attention. We feel persuaded that the importance of the press, as a means of spreading simple gospel truth and promoting simple Christian piety, is not yet fully understood; or if it be properly understood, the press has never yet been employed in this great work."

Is it not marvellous, to see how few professing godliness avail themselves of this easy and efficient mode of preaching! How seldom do visitors and travellers furnish themselves with these silent messengers of truth, while the enemy of all righteousness scatters widely the poison of romance, lewdness, and infidelity.

Scatter ye seeds, and flowers will spring;  
Strew them at broadcast o'er hill and glen;  
Sow in your garden, and time will bring  
Bright flowers with seeds to scatter again.

Scatter ye seeds—nor think them lost,

Though they fall amid leaves and are buried in earth;

Spring will awake them, though heedlessly tossed,  
And to beautiful flowers those seeds will give birth.

Scatter ye seeds in the garden of heart,

Seeds of affection, of truth, and of love;

Cultivate carefully each hidden part,  
And thy flowers will be seen by the angels above.

Then scatter ye seeds each passing year;

Sow amid winds and storms of rain;—

Hope give the courage, Faith cast out fear,  
God will requite thee with infinite gain.

*London Friend.*

#### THE POWER OF EXAMPLE IN THE CURE OF INTEMPERANCE.

No principle is more clearly inculcated in the Holy Scriptures, and none, carried out into action, makes a man more Christ-like than self-denial. "If meat make my brother to offend, I will eat no flesh while the world standeth, lest I make my brother to offend." I was able to use without abusing. But seeing to what monstrous abuse the thing had grown, seeing in what a multitude of cases the use was followed by the abuse, and seeing how the example of the upper classes, the practices of ministers, and the habits of church members were used to shield and sanction indulgences so often carried to excess, I saw the case to be one for the apostle's warning: "Take heed lest by any means this liberty of yours become a stumbling-block to them that are weak." Paul says of meat offered unto an idol:—"Meat commendeth us not to God; for neither if we eat are we the better, neither if we eat not are we the worse." And will any man deny, that, save in medical cases, I can with the most perfect truth adopt the words of inspiration, and say of these stimulants what Paul says of meat:—"Drink commendeth us not to God; for neither if we drink are we the better, and neither if we drink not are we the worse." On the contrary, the testimony of physicians, the experience of those who, in arctic cold or Indian heat, have been exposed to influences the most trying to the constitution, the experience also of every one who has exchanged temperate indulgence for rigid abstinence, have demonstrated that, if we drink not, we are the better. There is no greater delusion in this world than that health, or strength, or joyousness is dependent on the use of stimulants. So far as happiness is concerned, we can afford to leave such means to those who inhabit the doleful dens of sin. They cannot want them. They have to relieve the darkness with lurid gleams. They have to drown remorse in the bowl's oblivion. They have to bury the recollection of what they were, the sense of what they are, and the foreboding of what they shall be—as one of them said, "We poor girls could not lead the life we do without the drink."

Grant that there were a sacrifice in abstaining,

what Christian man would hesitate to make it, if by doing so he can honor God and bless mankind? If by a life-long abstinence from all the pleasures which the wine cup yields I can save one child from a life of misery, I can save one mother from premature grey hairs, and griefs that bring her to the grave, I can save one woman from ruin, and by bringing him to Jesus I can save one man from perdition, I should hold myself well repaid. Living thus, living not for myself, when death summons me to my account, and the Judge says,—Man, where is thy brother? I shall be found walking, although at an humble distance, in the foot-prints of him who took his way to Calvary. He said, “If any man will come after me, let him deny himself, and take up his cross daily, and follow me.” This cross, which rose above the scaffold red with martyr’s blood, which has been borne by missionaries to pagan lands, may be carried into our scenes of social enjoyment, and a brighter ornament than any jewels flashing on beauty’s breast may adorn the festive table. If this abstinence is a cross, all the more honor to the men who carry it. It is a right noble thing to live for God and the good of man.—*The City, its sins and sorrows, by Dr. Guthrie.*

To the Editor of Friends’ Review

#### TRIBULATION AS A MEANS OF REFINEMENT.

I have read attentively the volume of Friends’ Review which has just closed, and have been well satisfied with every number; and while I hope it may never lose the distinctive character which has marked it from the beginning as being a religious paper, devoted to the best interests of our beloved and *always tribulated* Society, I very much approve of having its columns enlivened, as they have been, with many articles, both entertaining and instructive, making it attractive to all, particularly to the young. I noticed the last number of the tenth volume closed a very interesting memoir of extreme suffering, as the first commenced with one equally so, and in both cases, the sufferers were brought to embrace the spiritual views of the Gospel dispensation as professed by Friends. How evident it is, that tribulation is one of the appointed means the Lord has chosen to refine his chosen ones. “Behold, I have refined thee, but not with silver, I have chosen thee in the furnace of affliction.” I have been struck with the derivation of the word *tribulation*. I do not remember to have seen it published in the Review; if it has not been, perhaps thou mayest think it worthy of a place in its columns.

“We all know (says a learned writer) that the word *tribulation*, in a general way, which occurs not seldom in Scripture, means affliction, sorrow, anguish; but it is quite worth our while to know how it means this, and to question the word a little closer. It is derived from the

Latin “*tribulum*”—which was the thrashing instrument or roller, whereby the Roman husbandman separated the corn from the husks; and tribulation in its primary signification was the act of this separation. But some Latin writer of the Christian church appropriated the word and image for the setting forth of a higher truth; and sorrow, distress, and adversity, being the appointed means for the separating in men of their chaff from their wheat, of whatever in them was light and trivial, and poor, from the solid and the true, therefore he called their sorrows and griefs ‘*tribulations*,’ thrashings, that is, of the inner spiritual man, without which there could be no fitting him for the heavenly garner.”

#### MARRIAGE.

The following Minute of advice, on the subject of marriage, was adopted by the last Yearly Meeting in London, and directed to be circulated among the several Quarterly and other Meetings. It deserves the close and abiding consideration of young readers in this country.

“This meeting is impressed with a sense of the vast influence, either for good or evil, which marriage exercises on both the temporal and the spiritual condition of man; and earnestly desires that, in the choice of a companion for life, all may seek unto the Lord for his guidance; not allowing any merely exterior advantages to be the primary motive, and bearing in mind that an accordance in religious principles and practice is essential to the perfectness of such a union.

And, seeing that the real enjoyment of life is far more effectually secured by contentment with simple habits, than by any appearance or mode of living which entails anxiety or risk, we would strongly advise parents, whilst they exercise a prudent care over the interests of their children, not to be unduly anxious to secure worldly advantages for them on entering the marriage state. And we would affectionately encourage our younger members, when looking towards this most important step, to be satisfied to set out in life in a manner befitting their circumstances, instead of seeking to imitate in their style of living the example of those who possess larger resources: they would thus, on the one hand, avoid the necessity of unduly deferring their union; and on the other, be less exposed to the temptation of launching into business beyond their means.

Many, we fear, have, under these circumstances, been induced to enter into trade on their own account with borrowed capital, who, had their views been more moderate, might with greater safety, and more real comfort to themselves, have continued, at least for a time, in the employ of others.

And may it ever be borne in mind that, marriage being a Divine ordinance, its solemnization

should in all cases be conducted in the fear of the Lord, and in humble dependance on his blessing; and on these deeply interesting occasions let there not be in the attire of the parties themselves, or in that of their relatives and friends attending, any display unbecoming an assembly of Christian worshippers; and may the subsequent proceedings of the marriage day, whilst characterized by cheerful enjoyment, never pass the boundary line of Christian simplicity, moderation and self-restraint."

(Communicated for Friends' Review.)

*An Epistle from JOHN JOHNSTON, to the beloved Chiefs and principal men of the Shawnee Nation, now in the Territory of Kansas.*

John Johnston, your agent, friend and father, salutes you all, and through you, the young men, women and children of your nation.

My dear friends, my heart has been sorely afflicted to hear of your troubles, and now I rejoice to see the clouds beginning to disappear and a brighter day beginning to dawn upon you. Wise and good men in power, both in Kansas and at Washington, are about reforming the evils existing in your country, and peace, harmony, and justice will once more prevail. Although you have suffered loss by the late disturbances, I am happy to find that you took no part in them. This was right and proper, and should any such state of things occur hereafter, which God forbid, take the advice of your old friend and have no hand in it. If your nation or people suffer loss or damage in their persons or property, on proof being made thereof through your agent, the government will make full satisfaction. This you may depend upon.

The mission of FRIENDS in your Nation having, by the unhappy state of things, been broken up and discontinued for a time, I have lately learned it is about to be resumed, and I have thought it a proper occasion, and at the same time, an indispensable duty to send you this epistle. It may be the last time you will hear my words, for I am now an old man and must soon pass away to the land of spirits. The son of your former friend, Isaae Harvey, with his family, is soon to take charge of the Friends' mission and school. His name is Simon D. Harvey, and I think he is personally known to many of your people. He understands a little of your language, and will soon by practice become useful to your nation. I think you will find him honest and zealous to do your nation good. The Quakers were the first people on this continent to abstain from war and violence against your race. They have pursued the same just and humane course towards the red man to the present day. It is upwards of fifty years since the Friends had a mission among the Miamis on the Wabash during my agency in that country. They have labored everywhere

for the good of your race, spending much of their labor, time and money. They have never asked or received, and never will ask or receive anything in return. They want to do you good, because the great God that has made all men requires us to be just, merciful and kind to his creatures, and He is best pleased with such service. Your old friend and father, who has never forgotten you, calls upon you to open your ears to the counsel and advice of the Quakers. They have come to you again with hearts overflowing with love to your people; receive them, therefore, in the same spirit, and all will be well.

Brothers and Friends of the Shawnees, Delawares and Wyandotts! listen to your old friend and father, who has always given you honest and good counsel, and who has never wronged you. You must now cultivate the soil, and make your living as your white brothers do, or your race must perish. This I have often told you before, and now repeat the solemn warning again in your ears. Be faithful in your marriage contract; love, protect and provide for your women and children. This is what God commands you to do. Be sober, industrious and temperate, and touch not the bottle. And may God enable you to do all these things, is the sincere prayer and wish of your true and affectionate friend who bids you all farewell.

Dated at Cincinnati, Ohio, April 2d, 1857,

JOHN JOHNSTON.

Aged 82 years on the 25th of March, 1857.

#### BURDEN-BEARERS.

*"Bear ye one another's burdens, and so fulfil the law of Christ."*—GALATIANS VI. 2.

All men have some burden to carry as they go through this world, some cares, anxieties, trials, and often we see that these are very heavy. They are generally light in youth, or at least there is more strength then to bear them. But though, by the kindness of God, we may feel no weight on our own spirit, we must see how many around us *have* burdens which oppress them. And what is then our duty? To try and help them under their load. A pitcher of water may be too heavy for one person to carry without fatigue; but if you pass a staff through the handle, it will be no exertion at all for two people to bear it. And so, many cares and troubles can be made much lighter by kind sympathy and help from a friend. Even a child may soon begin this blessed work, and thus fulfil the Saviour's law of love. And if spared long on earth, it is delightful to think, if we begin early, how many sad hearts we may comfort, how many burdens we may help to bear. And if days of trial are appointed for ourselves, how sure we may be in our turn of prayer and sympathy. Have I ever thought of this duty before? If not, should I not begin *to-day*? For seldom a day passes in

which we have not some opportunity to fulfil this law of Christ.

I ask thee for a thoughtful love,  
By constant watching wise,  
To meet the glad with cheerful smiles,  
And to wipe the weeping eyes;  
And a heart at leisure from itself  
To soothe and sympathise.

## FRIENDS' REVIEW.

PHILADELPHIA, TENTH MONTH 3, 1857.

**MONETARY AFFAIRS—ADVICES.**—So careful were the early members of our Religious Society in observing strict uprightness and honesty in their trade and business; so sincere were they in their dealings; so exact and punctual in the performance of their promises; so cautious not to involve themselves in business beyond their ability to manage, or to incur debts which they could not duly discharge, that these traits came to be regarded in the world at large as distinguishing characteristics of the Society; and not only were some strong prejudices against it thus removed, but it attained to such reputation that the saying arose, "The word of a Quaker is as good as his bond."

This conduct was evidently the fruit of a faithful adherence to the dictates of the Holy Spirit on an enlightened conscience; and the same happy result has, in a large measure, marked the lives of many in each successive generation, so that in the present day our Society has not altogether lost its former credit and reputation. It is manifest, however, that from time to time, and even at an early period in our history, there was occasion for the Yearly Meetings to issue earnest advice and affectionate warning to the subordinate meetings and to the members individually in reference to this subject.

At the present juncture, when wide-spread and most afflicting embarrassment in monetary affairs overwhelms the country, it seems to us that some of those advices and warnings may be appropriately revived, more especially as in some parts of our Society they are of easy access to comparatively few of its members.

It is not accordant with our inclination, nor does it form a part of our duty, to judge individuals, or to decide how far Monthly Meetings may have been deficient in keeping "a watchful eye over all their members," and in neglecting duly to extend suitable caution to them. With deep sympathy for all who are suffering in their

business, their families or their character, from the existing pecuniary difficulties, and in the earnest hope that the future welfare of many of our readers, particularly those in early manhood, may be promoted, we introduce the following extracts from Minutes and Epistles of London Yearly Meeting, issued at the several periods indicated by the dates respectively affixed:

Let friends and brethren in their respective meetings watch over one another in the love of God and care of the Gospel; particularly admonish that none trade beyond their ability nor stretch beyond their compass; and that they use few words in their dealings, and keep their word in all things, lest they bring through their forwardness dishonor to the precious truth of God. 1675.

As it hath pleased God to bring forth a day of liberty and freedom to serve Him, let every one have a care so to use this liberty, as that the name of God may be honored by it; and not an occasion taken by any because of the present freedom, to launch forth into trading and worldly business beyond what they can manage honorably and with reputation; and so that they may keep their words with all men, and that their yea may prove yea indeed, and their nay may be nay indeed. 1688. *Printed Epistle.*

It is advised, and earnestly desired, that the payment of just debts be not delayed by any professing truth beyond the time promised and agreed upon; nor occasion given of complaint to those they deal with, by their backwardness of payment where no time is limited; nor any to overcharge themselves with too much trading and commerce, beyond their capacities to discharge with a good conscience towards all men; and that all friends concerned be very careful not to contract extravagant debts, endangering the wronging of others and their families; which some have done, to the grieving the hearts of the upright; nor to break their promises, contracts, or agreements, in their buying or selling, or in any other lawful affairs, to the injuring themselves and others, occasioning strife and contention, and reproach to truth and friends. And it is advised, that all friends that are entering into trade, or that are in trade, and have not stock sufficient of their own to answer the trade they aim at, be very cautious of running themselves into debt, without advising with some of their ancient and experienced friends among whom they live; and more especially such trading as hath its dependence upon sea-adventures. 1692. P. E.

Circumscribed even as we are more than many, it is not unusual, in our pursuit of the things of this life, for our gain and our convenience to clash with our testimony. O then may we be willing to pause, and give time for those passions to subside, which would hurry us to the accomplishment of the desired purpose, ere the still

voice of wisdom be distinctly heard, to guide us in the way in which we should go! 1795. P. E.

We do not tax all who embark in large concerns in trade, with an undue desire after riches; but we much fear that the effect, which their schemes are likely to have upon themselves and their connexions, as affecting their condition, both religious and civil, is not duly regarded. The love of money is said in Scripture to be "the root of all evil;" and we believe it may be shown, that honest industry and moderation of desire are 'roots' of incalculable benefit to the humble Christian. We feel for many of our friends in limited circumstances, in this day of increased, and possibly increasing expense; but we would caution such, and particularly those who are setting out in life, against imitating the manner of living of those whose means are more abundant. We wish, friends, to call you, not to penuriousness but to economy; and we particularly desire that all such as have families of children, even if in more affluent circumstances, would inure them to early industry, and not to habits of depending too much on the services of domestics. 1805. P. E.

We believe that many who begin the world with moderate views, meeting at first with success in trade, go on extending their commercial concerns until they become involved therein to a degree prohibited by the precepts of Christ, and incompatible with their own safety. Thus situated, some may be tempted to adopt a line of conduct, dishonorable in itself, and injurious to others. That contentment which characterizes the pious Christian, is a treasure which we covet for all our members; and we especially desire that those who are setting out in life may so circumscribe their expectations, and limit their domestic establishments, as not to bring upon themselves expenses which could only be supported by an imprudent extension of their trade. Care in this respect will enable them to allot more of their time to the service of their fellow-men, and to the promotion of the Lord's cause. 1815. P. E.

And we would affectionately encourage Friends, who find themselves in embarrassed, or even in doubtful circumstances, not to hesitate, not to be ashamed, to disclose their affairs to men of upright character, in whom they can confide. Such a timely procedure would, we believe, often save the reputation of individuals, call forth the respect and compassion of their creditors, and prevent the keen sufferings of tender wives and innocent children, and such reproach as, in some instances, has been brought upon our high profession.

And may you, dear friends, who are favored with outward prosperity, so live, that when riches increase, you set not your hearts upon them. Be very careful how you venture to increase your ways of accumulating wealth; but walk as examples to those around you, evincing that you are redeemed from the inordinate pursuit of lawful things. You will then be more prepared to

enter with kindness into the situation of others, when they may consult you; you will be more qualified, in a brotherly way, to advise your brethren to take such measures as may prevent those sufferings to which we have alluded.—1819.

He that is concerned to support the character of a follower of Christ,—and who amongst us would disclaim this character?—ought to be earnest in his endeavor that accessions of wealth do not disqualify him for the discharge of any duty. Those who, whilst honestly and diligently endeavoring to provide for their families, have to encounter many difficulties, have a strong claim on the sympathy of their friends; yet they need not fear, as they continue to place their whole trust in our heavenly Father, but that he will care for them in such a way as he sees meet. But if any, whether of the more affluent, or of those who cannot be ranked in this class, are deviating from safe and regular methods of business, if they are carried away by uncertain and hazardous, though plausible schemes for getting rich, if they yield to a desire rapidly to enlarge their possessions—such are in imminent danger. They cannot justly expect the blessing of the Most High on such pursuits; their spiritual eye becomes dim; and they do not perceive with clearness that light which would enable them to attain perfect holiness in the fear of God. 1825. P. E.

It becomes those who are attached to the cause of truth, who love our principles, and are desirous of promoting the best interests of our society, to remember that they are not exempt from danger. Dear friends of this description, and especially you who are young, accept a word of caution offered to you in Christian love. If you attend not to the witness of God in your own hearts, and seek not to be delivered from the spirit of this world, you may, contrary to any apprehensions that you now entertain, be introduced into future trouble. You may obstruct your own usefulness in the church, mar the designs of Infinite Wisdom concerning you, and when it is too late, have bitterly to regret the want of timely withstanding the first temptations of the enemy.

And we would tenderly invite those who may have acquired a competency of outward substance, to watch the proper period at which they may withdraw from the cares of business, and when disengaged from the regular concerns of trade to beware how they employ their property in investments which may involve them anew in care and anxiety. We affectionately desire that neither these nor other cares may disqualify them from acting the part of faithful stewards in the employment of their time, their talents, and their substance, or from being concerned above all things, through watchfulness unto prayer, to have their lamps trimmed, and oil in their vessels; that when the solemn close of life shall come, they may, through redeeming love and

mercy, be prepared to enter into the joy of their Lord. 1826.

We recommend to Friends in their respective quarterly and monthly meetings, to have a watchful eye over all their members; and where they observe any deficient in discharging their contracts and just debts in due time, so as to give reasonable suspicion of weakness or negligence, that Friends do earnestly advise them to a suitable care and necessary inspection into their circumstances, in order that they may be helped. 1732.

It is earnestly recommended, that Friends frequently inspect the state of their affairs, and when any find themselves unable, or have not more than sufficient to pay their just debts, that they immediately disclose their circumstances to some judicious friends, or principal creditors, and take their advice how to act, and be particularly careful not to pay one creditor in preference to another. It is also recommended to all persons concerned in trade to keep their accounts in such a clear and accurate manner, that in case of failure, their creditors may see how the deficiency has happened. 1782.

Our sympathy is much excited for those who, after fair prospects, have, from a sudden depreciation of property, been subjected to many difficulties. We wish kindly to encourage such of these as have it still within their power, to a timely contraction of their domestic expenses. And we desire that their trials may be lightened by beholding in their offspring a disposition to industry and economy, and a willingness that their expectations should not exceed those limits which become a Christian character; this we believe would ultimately tend to their greatest good. Before we quit this subject, we would remind our friends of the former advice of this meeting, that where any have injured others in their property, the greatest frugality should be observed by themselves and their families; and although they may have a legal discharge from their creditors, both equity and our Christian profession demand, that none when they have it in their power should rest satisfied until a just restitution be made to those who have suffered by them. 1817. P. E.

We warn all against a most pernicious practice, too much prevailing amongst the trading part of mankind, which hath often issued in the utter ruin of those concerned therein, viz., that of raising and circulating a fictitious kind of paper credit, (by what are called accommodation bills,) with endorsements and acceptances, to give an appearance of value without an intrinsic reality; a practice highly unbecoming that uprightness which ought to appear in every member of our religious society, and of which practice we therefore think it our incumbent duty to declare our disapprobation and disunity therewith, as absolutely inconsistent with the truth we make profession of. 1771. P. E.

We are engaged to caution every individual

against imprudently entering into joint securities with others; for by these practices many innocent wives and children have been inevitably and unexpectedly involved in ruinous and deplorable circumstances. We therefore earnestly desire friends to keep strictly on their guard, that none, through any specious pretences of rendering acts of friendship to others with safety to themselves, may risk their own peace and reputation, and the security of their families: in order hereunto, we recommend this salutary advice of the wise man to their especial notice and regard: "Be not thou one of them that strike hands, or of them that are sureties for debts. If thou hast nothing to pay, why should he take away thy bed from under thee?" 1771. P. E.

We intreat friends frequently to inspect the state of their affairs, and not to delay the performance of this duty, either from an apprehension that things are going on well, or from a fear to know how their accounts really stand. It is a practice which can be injurious to no one; but it has very frequently been seen, that had it been timely and regularly resorted to, it would in all probability have prevented grievous suffering. Those who hold the property of others, and this may be said to be the case more or less with most who are engaged in trade, are not warranted, on the principles of justice, in neglecting to inform themselves from time to time of the real situation of their affairs. If men conceal from their nearest connexions in life a knowledge of the actual state of their property, they may deprive themselves of salutary counsel and of a kind participation in trouble; family expenses may be incurred, and subsequent distress may ensue, which might have been avoided. And we particularly advise young persons to be cautious not to enter too hastily into business, and, from the time of their being thus engaged, to be very careful to make themselves well acquainted with their annual income and expenditure. This would be greatly facilitated by their early adopting, and regularly pursuing, a clear and methodical system of keeping their accounts, in regard both to trade and domestic expenses.

We know that the experience and sufferings of the past year in this nation, have furnished many useful lessons to those who have escaped the troubles of which others have partaken; and we desire that these lessons may not be without their practical good effect. They should teach us not to trust in uncertain riches; and they should be a warning to parents to be careful how they enlarge their domestic establishments, and not to hold out to their children expectations of ease and abundance, nor to train them up in habits of delicacy and indulgence. O! that both parents and their offspring might fix their hopes of happiness on that which is substantial and eternal, and endeavor to be good stewards of the temporal blessings bestowed upon them. Such

we believe to be the concern of many of our dear friends. 1826.

DIED, on the 18th of 8th month last, at the residence of her son, Isaac Cox, near Richland, Keokuk County, Iowa, after a lingering illness, which she bore with much patience and resignation, NANCY COX, in the 59th year of her age, a member of Richland Monthly Meeting of Friends.

—, On the 8th ult., at his residence in Isle of Wight County, Virginia, JOEL COOK, an esteemed member and Elder of the Lower Monthly Meeting of Friends, in the 75th year of his age.

—, At the residence of her father, David Pickering, at Cadiz, Henry County, Indiana, on the 11th ult., LYDIA JANE, wife of Richard Evans, in the 22d year of her age, after an illness of near 12 months, which she bore with much Christian patience and resignation; a member of Spiceland Monthly Meeting of Friends.

—, Near Annapolis, Parke County, Ind., on the 11th of 9th mo., JAMES NEWLIN, in the 47th year of his age; a member of Bloomfield Monthly Meeting, and for some time occupying the station of an Overseer.

—, On the 11th of 3dmo. last, in Yadkin Co., N.C., in the 42d year of her age, ARIEONA HOBSON, wife of Stephen Hobson, a member of Deep Creek Monthly Meeting of Friends.

By the death of this beloved friend, society has sustained a loss, yet we are consoled in the belief that what is our loss is her eternal gain.

—, In Vassalboro', Maine, on the 26th of 8th mo., HARRIET OWEN, wife of Israel Owen, in the 54th year of her age, a member of Vassalboro' Monthly Meeting of Friends. She embraced the principles of Friends, and became a member of our Society, from conviction, and was concerned to maintain those principles and the usages of Society consistently.

Through her sickness, which was protracted and severe, she exhibited great patience and resignation, and remarked a short time before her decease, that the prospect of death was not unpleasant to her.

—, In the same town, on the 26th of 8th month, PHEBE C., daughter of David T. and Mary N. Pratt, in the 18th year of her age, a member of Vassalboro' Monthly Meeting of Friends.

Her sickness was of about four months' continuance, and towards the last her sufferings were almost insupportable: yet she bore all with Christian fortitude and resignation. In the early part of her illness, she had doubts of her preparation to meet her Heavenly Father in peace; but through His mercy her fears were soon removed, and she was favored with an unclouded evidence that her sins were all forgiven. Many young friends called to see her, for all of whom she had a word of exhortation, and bade them an affectionate farewell.

—, At the residence of her parents, in Knox Co., Ohio, on the 1st ult., PHEBE, daughter of Ellis and Rachel Willits, in the 20th year of her age, a member of Alum Creek Monthly Meeting, leaving to her friends and relatives the consoling belief that all is well with her.

The influences of little things are as real and as constantly about us, as the air we breathe, or the light by which we see. These are the small—the often invisible—the almost unthought of strands, which are inweaving and twisting, by millions, to bind us to character—to good or evil here, and to heaven hereafter.

(From the N. American and U. S. Gazette.)

ESDRÆLON, MOUNT TABOR AND NAZARETH.

Nothing special marked our encampment at Lariun, save the formal visit of the Governor of the place, to whom I had sent my letter from the Pasha of Jerusalem, and who, in consequence, furnished me with two armed and well mounted guards to escort me across the plain of Esdrælon and on to Nazareth.

In a short time we entered upon this celebrated plain, and much as I had read of it I found that it exceeded in breadth and length and beauty all my previous conceptions; that it stood unrivalled as the plain of Syria, dividing by its level belt Northern and Southern Palestine, and therefore a very natural battle ground for the restless tribes and nations which dwelt in its vicinity. In a northeasterly direction it extends about fourteen miles between the mountains of Manasseh and the mountains just south of Nazareth; and with the exception of the interrupting mountains of Gilboa, little Hermon and Tabor, it stretches from northwest to southeast from the Mediterranean sea to the banks of the Jordan.

The valley seems very rich, though only a portion of it was under cultivation; but the soil showed its strength, and the hand of culture would make it the granary of Palestine. With an almost wilting heat we dare not drive our horses fast, and so, without the shelter of a single tree, we slowly marched on. The mountains of Gilboa were on our right just as we enter the plain, and their sides and tops are bald and uninhabited. A melancholy interest attaches to the slopes of Gilboa, because there Saul fought and lost his last battle with the Philistines; and there, when "the battle went sore against him, and the archers hit him, and he was sore wounded of the archers," he said unto his armor-bearer, "Draw thy sword and thrust me through therewith, lest these uncircumcised come and thrust me through and abuse me;" and when his armor-bearer would not, "Saul took a sword and fell upon it. So Saul died, and his three sons and his armor-bearer and all his men that same day together." It was this sad fate of Saul and Jonathan that drew out from David that grand dirge recorded in the opening chapter of the second book of Samuel: "The beauty of Israel is slain upon thy high places! How are the mighty fallen!" and then rising to a majestic strain of prophecy, he wails forth the imprecation, "Ye mountains of Gilboa, let there be no dew; neither let there be rain upon you, nor fields of offering; for there the shield of the mighty is vilely cast away, the shield of Saul, as though he had not been anointed with oil." He ends his lament as he began it: "How are the mighty fallen, and the weapons of war perished!" The grandeur of this dirge, which for its masterly strokes of pathos, its touching allusions, its bold personification, its abandonment to grief, and its felicitous images, is absolutely unrivalled, comes

out with fine effect as we read it under the shadow of Gilboa, and look up every now and then to the spot where fell Saul and Jonathan, to see its barren sides, still void of "fields of offering."

Anxious to get shelter for a little while from the burning sun, we turned aside into the valley of Jezreel, and sought the scanty shade of some ruins not far from the spring of Jezreel. While taking a little refreshment here, we saw coming up the valley seven armed and mounted Bedouins, with their long spears and peculiar dress. We had sent on our baggage, mules and attendant, under charge of one of the guides, and had with us only our dragoman and the other guide. He, poor fellow, was just eating an egg when he spied the Arabs, and he was much alarmed, though as yet, being partly hidden by the ruins, they had not seen us. When opposite to us they wheeled their horses directly in upon us, and we supposed that robbery, to say the least, would soon be perpetrated. Great, however, was the joy of our guide, to say nothing of ourselves, when, after a brief parley, they rode off, because, as he said, though robbers, they were unwilling to attack a party under the protection of one of their men, for they proved to be of the tribe to which our guide belonged, and so we escaped that day. We deemed it best, however, to remain no longer in that exposed place, where so many had been robbed and murdered, and therefore soon resumed our march across the plain of Esdrælon. It was in this valley of Jezreel that Naboth's vineyard "joined hard by the palace of Ahab, King of Samaria," and caused that sad display of covetousness, lying and intrigue on the part of Jezebel, recorded in the 21st chapter of the first book of Kings; and here, also, Elijah met him and denounced against him the fearful curse, "In the place where the dogs licked the blood of Naboth, shall dogs lick thy blood, even thine;" "and of Jezebel also spake the Lord, saying, the dogs shall eat Jezebel by the wall of Jezreel;" and here both prophecies came to pass.

It is in the plain of Esdrælon, however, that the greatest interest centres. It was in this plain that Barak, under the direction of Deborah, met the host of Sabin, King of Hazor, under the command of Sisera, who had with him nine hundred chariots of iron, and defeated him, as is stated in the fourth and fifth chapters of the Book of Judges; a defeat which gave birth to that noble song of Deborah and Barak, in which is pictured with graphic force the battle scene, in which are lofty ascriptions of praise to God, and the latter part of which brings out, with great dramatic effect, the death of Sisera, and the watchings and anticipations of his mother in view of his presumed victory.

Here also occurred the wonderful scenes connected with Gideon, when he blew the trumpet of war and gathered around him the men of Manasseh, and Asher, and Naphtali, and Zebu-

lon—the record of which is preserved in the sixth and seventh chapters of Judges.

It was in this plain that King Josiah went out to battle with Pharaoh Necho, King of Egypt, and where he received from the Egyptian archers the wounds of which he died at Hadad Riu-man, as his chariot was bearing him in haste to Jerusalem.

During the Roman invasion, battles were fought here by the armies of Gabinius and Vespasian; and in the times of the crusades it was the scene of some fierce conflicts between the Moslem and the Christian hosts.

Shortly after we left the valley of Jezreel, Mount Tabor came into view, rising like a graceful dome in solitary majesty, from the northeastern part of the plain. Before coming to it, however, we passed the village of Shunem, where Elijah raised to life the son of the couple who had often received him into their house, and who built for him "a little chamber on the wall." The whole circumstance is told with equal simplicity and beauty in the fourth chapter of the second book of Kings. There we saw the hovels which now represent the city of Nain, where a greater than Elijah raised from the dead, as the bier passed out of the gate, "the only son of his mother, and she a widow," as related by St. Luke. West of this, at a little distance, we saw Endor, famous as the residence of the "woman with a familiar spirit," whom Saul so sinfully consulted the night before the battle of Gilboa.

From the pictures which I had seen of Mount Tabor, I had been led to expect something sharper in outline, more conical and rugose; but instead of that it was almost as well rounded as if made by art, save where a low ridge clamped it to the mountain on the west. Notwithstanding the long prevalent opinion that it was the scene of our Lord's transfiguration is now given up by every writer of credit, Mount Tabor still is full of interest, being linked with many associations from the days of Deborah, the prophetess, to the time of Bonaparte.

Immediately on leaving the plain, we commenced ascending the steep mountains of Nazareth, and were winding over their precipitous sides and along their valley paths, for nearly two hours, before, on turning an angle in the road, we saw on our left, perched on the side of a hill, the town of Nazareth. We rode along the eastern edge of the village until we came to the northern point, and there, under some venerable olive trees, and close by the spring of the Annunciation, pitched our tent and rested our wearied bodies.

I have alluded once or twice to threatened attacks, and to the dangers of the road, and I may here remark, that at times there is great danger of being robbed, and sometimes of even a worse fate than the taking of your money. I have not yet met with a single traveller who has not, in some way, been menaced or attacked. Most

persons making the tour of Syria carry guns or pistols, but my companion and myself were unarmed, and my dragoman, though he had a gun, yet had no powder, and he wore a sword more to mark his office than for use.

The most famous places for these marauders are Petra, the plain of Jericho, and the Jordan, and the plain of Esdrælon. Occasionally, however, they are met in all places, though some may, perhaps, travel from Dan to Beersheba and meet with no molestation. That we had thus far escaped so lightly, we attributed, not to the valorous aspect of our party or our own prowess, but to the care of that Heavenly Father whose right hand led us along the path of safety, and whose banner over us was Love. W. B. S.

HAVE LIVE FROGS AND TOADS EVER BEEN FOUND IN SOLID STONE?

An opinion has long been prevalent, that frogs and toads are often found alive in solid rock at a great depth from the surface of the earth. The statements of many popular writers on natural history have tended very much to confirm this opinion. They have detailed a number of apparently well-attested instances of this kind, and declared that, however improbable they might appear to be, they could not resist the creditable evidence by which they were supported. Paragraphs are constantly occurring in the newspapers, recording fresh instances of this phenomenon; and even so late as the 20th of July last, two cases were inserted in the *Dumfries Courier*—the one of a frog of an extraordinary size having been found at Ingleton coal-works, at the depth of 368 feet; and the other of a toad, dug from the solid stone, 80 feet from the surface, within a tunnel then in the course of formation in the neighborhood of Bangor. The nature of the animals themselves seems also to favor this belief. It is well known that they remain in a state of torpidity during the winter, and that they are capable of living a long period without either food or air. The consequence has been, that people in general seem to give implicit credence to every statement on this subject, and are no more disposed to call it in question than to discredit the best established physical or historical fact. Now, with all due deference to the general opinion and the great names by which it is supported, it may be confidently asserted, that there are good grounds for regarding it altogether as a gross popular delusion. In order to prove this assertion, let attention be first paid to the nature of the evidence, on the authority of which, instances of this supposed phenomenon have been published to the world. Most of the cases detailed by natural historians are said to have occurred in foreign countries, and at a remote period; and therefore it is quite impossible now to verify them, and it is even no easy matter to ascertain the particulars of those recorded in

newspapers. Very rarely are these accounts vouched for by the name of any responsible person who has been an eye-witness of the alleged fact, and of whom due inquiries might be made. In general, the designation of some obscure quarry or coal-pit is only given, the exact locality of which it is difficult to discover. Great pains have, however, been taken by not a few scientific men to arrive at a correct conclusion on this subject, and the result has been a thorough conviction on their minds, that the whole of the recorded cases of this extraordinary phenomenon are utterly fallacious and unfounded.

In illustration of this, reference may be briefly made to two or three cases which were subjected to a searching investigation by a gentleman of Edinburgh. About three years ago, a paragraph appeared in the *Scotsman* newspaper, affirming that a live toad had been found imbedded in the limestone of Burdichouse Quarry, situated about four miles south of the Scottish metropolis. This gentleman went instantly to the spot, and inquired of the workmen if they had recently discovered a live toad in the limestone. They answered that they had neither found it nor seen it themselves, but they had been told that a mass of limestone had fallen from a cart while proceeding along Nicolson Street, Edinburgh; and that a live toad had been found among the fragments on the ground. No cavity, so far as they had heard, had been seen in which the animal had been inclosed, and they were inclined to think with the gentleman, that the existence of a live toad in a piece of stone that had been subjected to the intense heat of a lime-kiln, was the height of absurdity and improbability. There can be no doubt that the animal had either been previously in the cart and overturned by the fall of the piece of limestone, or had been crawling on the ground near the spot on which the limestone fell.

The next case to which his attention was called, was detailed in a Stirling newspaper. It was there reported that, during the formation of the railway tunnel at Falkirk, a live toad had been found in the stone, of a species different from any now existing. He immediately repaired to the spot, accompanied by twelve other scientific gentlemen. The workmen were strictly interrogated, when it came out that, in conducting their operations, a large quantity of diluvium had been disengaged from the surface, and had rushed from the excavation below. On clearing away the rubbish, a live toad was found, which, at the time the mass was precipitated, was no doubt either crawling on the ground, or snugly ensconced in some of its concealed haunts near the surface. The party returned to Edinburgh, thoroughly convinced that in this case, at least, a gross imposition had been attempted on the credulity of the public. The same gentleman, when on a visit to Huddersfield, in England, a few years ago, was one day waited on by a young

friend of his, the son of an extensive landed proprietor in the neighborhood of that town, who apprised him of the wonderful fact, that some laborers in a quarry belonging to his father had discovered a frog at a great depth in the solid rock. On the Edinburgh gentleman expressing some doubt of this fact, the young man said that the truth of it was not to be questioned, as the workmen were persons of excellent character, and their veracity was not to be impeached; and he stated further, that he had drawn up an account of the discovery, which he intended to publish in a Huddersfield newspaper. The gentleman from Edinburgh requested his friend, previous to his doing so, to accompany him to the quarry, that he might put a few questions to the workmen. They accordingly proceeded thither, and inquired of the laborers if they had seen the frog in the stone. They declared that they had not, but that they had seen it leap away from a piece of stone which had been newly broken. They were asked if they had noticed any cavity in the stone in which the animal might have lived. They said they had not, and had paid no regard to such a thing. They were then asked if they had preserved the stone in which the animal was found. They replied that it had been broken and removed, as they took very little interest in the matter, and had their work to attend to. After these and some further inquiries, the young gentleman declared that he was now satisfied that the whole affair was a delusion, and he at once abandoned the idea of giving it any further publicity. Now, had all the other cases of this sort been as carefully scrutinized as those now alluded to, there is little cause to doubt that they would all have been found to be equally deceptive and unreal.

But further, to say nothing of the utter improbability of an animal living for thousands, some say millions, of years without air or food, do the discoveries of geology afford any countenance to the common belief of the existence of frogs and toads in solid stone? The very reverse of this is the case. The disclosures of geology may be regarded as the strongest and most conclusive evidence against it, and are amply sufficient, were there nothing else, to overturn the popular doctrine, and to set the question for ever at rest. It is the common report, that these animals are frequently discovered in the carboniferous system. For instance, one of the paragraphs inserted in the *Dumfries Courier* asserts that several frogs had recently been discovered in the coal-works at Ingleton, 368 feet below the surface. Now, it is a fact known to every geologist, that not a single specimen of a fossil frog or toad has ever been found in the coal measures. When so many live frogs are said to be found, it is but reasonable to expect that skeletons of these animals would not be uncommon. But how stands the case? While impressions of various kinds of plants and fishes

are abundant, both in carboniferous sandstone and limestone, not a single vestige of the remains of a frog or a toad has yet been discovered. The fact is, that after the keen and unwearied investigations of geologists for half a century, it has been ascertained that the first trace of an animal supposed to belong to the lizard kind, occurs in the new red sandstone, which is entirely a different and a much later formation. In the lias and oolite, still more recent formations, impressions of lizards are more distinctly observed, but none of them are similar to the species of animals which inhabit our globe at the present day, and least of all to any species of the frog or toad. Upon the whole, then, the conclusion is warranted, that the cases hitherto published of frogs and toads existing in solid stone, are founded on false and imperfect evidence, and are utterly at variance with the most indubitable facts of physiological and geological science.—*Hogg's Instructor.*

#### A TERRIBLE PEST.

A St. Helena letter to the Journal of Commerce says:

The island has been sorely pestered these few years past by a species of small white ant, that was brought here in the wood of a vessel from the coast of Africa, and now swarms by millions in all our houses, stores, trees, &c. It first has wings which very soon drop off, and then this mite eats into wood, cloth, provisions, trees, vegetables and everything that can be destroyed; and the first we know of its destructive power, is our house tumbling about our ears. They eat into the wood, and then eat up all inside, leaving but a shell, which with your finger you can penetrate. And only in darkness do they work, for their deeds are evil. Houses thoroughly repaired are in less than two years crumbling to ruin. It is a most unfortunate evil to the island, and causes a yearly loss of thousands of pounds. We shall be compelled soon to live in iron houses.

#### WILD LANDS IN PENNSYLVANIA.

The folly of supposing that high prices for wild lands in the far West can be maintained after the speculative fever is checked, may be seen in the large quantities of fertile lands in the old States, and much nearer the best markets, which are sold at lower prices than have been asked for wild lands in the West, so distant that transportation to market will in all ordinary seasons absorb nearly all the value of the produce. A writer in the *Philadelphia Ledger* states that in Centre County, Pennsylvania, within less than a day's ride by rail of Philadelphia or New York, are some of the best coal, timber and tillage lands in the country, and yet there "the dun deer lies down under shady covert in safety, the wolf

howls through the silent and beautiful valley, the scream of the panther is heard in the stilly night, and nature still claims her solitary reign." In this region, the writer says, there are four veins of coal, averaging from four to seven feet in thickness, the lower vein cannel coal; and also two strata of fine clay underlying the two upper veins of coal. This coal is very easily worked, and it is of the best quality for making iron, vast beds of which ore, of superior quality, are close at hand. Some of the best forests of white pine and white oak ever seen in Pennsylvania, are found in this central part of the State. Large tracts of it will cut from 50,000 to 70,000 feet of saw timber to the acre; and white oak in proportion is found. Much of the land is of the best quality for wheat and for grazing; and there is also a large body of lands known as sugar-camp lands, still superior, a chocolate loam, free from stones. The whole region is well watered and has numerous fine mill sites.

---

MOSESSES.

No spot is too desolate, none too sterile, for mosses to inhabit and enliven. From Spitzbergen to the islands on the Antarctic Ocean, along the sides of lofty mountains, in the most exposed situations, couching on wild heaths, overspreading old walls, nestling in hedges, clinging to the bark of trees, loving much and equally frost and snow, wind and tempest, needing nothing but moisture for their sustenance—everywhere they may be seen, adding fresh beauty to even the loveliest spots, making gay the solitary places of the earth, and causing the arid desert to rejoice and be glad. Not only are they the first plants which, as by a miracle, make their appearance in a newly-formed soil, but, with fond tenacity they cling to the spot where they have once taken root, long after all other plants have deserted it, and, tender in their nature, delicate in structure though they be, show wonderful power in resisting influences which are generally fatal to the vegetable creation. In this respect close akin to the lichens, they may appear to be destroyed by drought; but no sooner does the generous rain descend upon them, than suddenly they are invested with new life, and their leaflets reappear as fresh, as luxuriant as ever.—*Frazer's Magazine.*

---

An exquisite watch went irregularly, though no defect could be discovered in it. At last it was found that the balance wheel had been near a *magnet*: and here was all the mischief. If the soundest mind be magnetised by any predilection, it must act irregularly.

---

Mirth should be the embroidery of conversation, not the web: and wit the ornament of the mind, not the furniture.

From the Illustrated London News.  
BE THANKFUL, AND GO ON.

BY G. D. THOMPSON.

Be thankful and go on thy way;  
Thy life is at its dawn;  
Whate'er befall thee, trust and pray;  
Be thankful and go on.  
Where'er ye be,  
On land or sea,  
By will or calling drawn;  
Through all the strife  
That clings to life,  
Be thankful and go on.

If pride derides thee, onward go;  
If malice seeks to tire,  
Care not to make a wretch thy foe  
Who is beneath thine ire.  
Rouse up thy will,  
And mount the hill—  
Thou'lt reach a level lawn;  
Who mocks thy toil  
True faith will foil;  
Be thankful and go on.

If some have played upon thy heart,  
And done thee bitter wrong,  
Go on, and nobly act thy part—  
We suffer to grow strong.  
A heart sincere  
Thine own shall cheer;  
On wealth let weakness fawn;  
To by-gones blind  
Ne'er look behind;  
Be thankful and go on.

Be thankful for the star that led  
The shepherds on their way  
To where, upon his lowly bed,  
The infant Saviour lay.  
That guiding light,  
That then burned bright,  
Has never been withdrawn;  
It guideth still;  
Then do His will;  
Be thankful and go on.

Go on, until He bids thee rest;  
His mercy is thy stay;  
And think, when by affliction pressed,  
Upon a brighter day.  
Though darkness loom  
Around the tomb,  
Deem not that hope is gone;  
Thy home on high  
Perchance is nigh—  
Be thankful and pass on.

---

SUMMARY OF NEWS.

FOREIGN INTELLIGENCE.—Advices from Liverpool are to the 12th inst.

ENGLAND.—Letters have been received from Lady Franklin's Arctic Expedition, dated from Baul's river, Greenland, saying that the progress of the expedition had exceeded the expectations entertained when starting.

At a meeting of the Manchester Cotton Supply Association Dr. Livingstone explained the commercial resources of Africa. He said that it was well adapted to the production of sugar and cotton, and that he intended to devote his future life to the development of those products in Africa. The meeting adopted a resolution asking the government to furnish Dr. Livingstone with a steamer with which to ascend the Bambest river.

The riots at Belfast have been renewed, and the

Catholics have organized an armed club for protection against Orangemen.

The Indian Relief Fund of London exceeds twenty thousand pounds sterling. Meetings to inaugurate subscriptions were taking place in various parts of England.

The submarine telegraph cable between Europe and Africa was successfully laid, on the 9th inst., between Bona and Cape Teulada, a distance of 145 miles. The depth of the sea was more than two miles for a part of the distance. There are yet 17 miles to be laid between Teulada and Sparte Vento.

It is stated that the laying of the Atlantic telegraph cable will not be resumed till next spring.

FRANCE.—A panic had existed in Paris in consequence of rumors of difficulties in the affairs of the *Credit Mobilier*, a Bank established by Louis Napoleon for the avowed purpose of developing the resources of the nation. At last advices, however, the difficulties had been settled.

The returns of the Bank of France show a large increase of bullion. According to the official accounts, the yield of the harvest in France exceeded the general expectation.

Auguste Comte, chief of the modern school of positive philosophy, is dead.

British agents for the purpose of recruiting for the British army have arrived at Lille, but they are not to enrol French subjects.

SPAIN.—Reinforcements continue to be sent off to Cuba, and 1,200 men had been sent in a few days.

SWEDEN.—A medical consultation having declared the King of Sweden unable to sustain the burden of public affairs, the king has requested the States to make provision for their government during his illness.

DENMARK.—The Holstein Diet, adopting the conclusions of the reports of the Commissioners appointed by them to examine the project of a new constitution, has refused to discuss that project until the relations between Holstein and Denmark are definitely settled.

AUSTRIA.—A difficulty has occurred between France and Austria in regard to reforms in the Papal States.

RUSSIA.—The government of Russia has received a note from the Cabinet of Copenhagen, setting forth the position it has taken on the Holstein question in regard to Austria and Prussia. According to this note, Denmark will make no fresh concessions. The Russian government agrees entirely with the views of the Cabinet of Copenhagen, and has notified the courts interested of the fact.

TURKEY.—Reshid Pacha has been deprived of his title of President of the Council of Tanzimat, which was given him when he retired from the office of Vizier. It is asserted that the Porte is about to change the whole political system upon which it has hitherto acted.

PERSIA.—Late advices state that the Shah of Persia has placed his Mabometan, Christian and Jewish subjects on a footing of perfect equality. Ilerat was not yet evacuated, and 50,000 men were assembled at Khorasan.

AFRICA.—Late dates from the West Coast of Africa state that the slave trade was carried on very briskly in the Bights of Benin. A slaver under Spanish colors had been captured with 230 slaves on board, another had been destroyed at Accra, and another, which ran ashore to escape a cruiser, had been seized and destroyed.

DOMESTIC NEWS.—UTAH.—The Interior Department at Washington has received official information that a colony of 300 Mormons has taken possession of the valley of Deer Creek, one hundred miles west of Fort Laramie, and driven away a band of Sioux Indians, whom the Indian agent had settled there and induced to plant corn; that region of country having been as-

signed to them by the treaty of 1851. The Mormons had ploughed and planted 200 acres of prairie, and were building houses for 500 persons.

KANSAS.—Governor Walker has issued a proclamation relative to the coming election, in which, while admitting the injustice of the Apportionment which excludes the inhabitants of fifteen counties from taking part in the election, he endeavors to exculpate himself, declaring that only four days remained to make the apportionment after his arrival in the Territory; that he did not know that a law existed requiring him to make the apportionment, and the duty, therefore, devolved on others. He expresses the opinion that no one can vote except those who are qualified under the territorial law of the 20th of Second month last; and that a territorial tax is not required as a qualification for a voter. He states that troops will be stationed at the various voting places where violence is apprehended. Two companies of artillery have arrived at New Orleans on their way to Kansas.

The United States Circuit Court (Judge Grier) at Trenton, has decided the Passaic bridge suits, dismissing all the cases, on the ground that the States have jurisdiction over navigable rivers which are wholly within their boundaries, and that any bridge on such a river, authorized by the State Legislature, is lawful, however much it may obstruct the navigation of the river.

The Bank of Pennsylvania closed its doors on the morning of the 25th inst., in consequence of which, a run upon all the Banks and other moneyed institutions of this city commenced, and continued throughout the day, during which time a million and a half dollars in specie were paid out by the Banks. In the afternoon, a meeting of the Presidents of the different Banks took place, and it was concluded to advise the Directors to suspend specie payments for a time, in order to prevent a total drawing of specie from the Banks. The advice was adopted and the suspension took place on the following morning. Most of the Banks, however, continue to redeem their smaller notes.

On the reception of the news of this suspension, the Banks at Harrisburg, Lancaster, Reading, Pittsburg and other cities in Pennsylvania also suspended. It is thought the suspension will be temporary, most of our Banks being in a good condition. Governor Pollock has issued a proclamation calling an extra session of the Legislature, to meet on the 6th inst., in order to take action in relation to the Bank crisis. The Banks of Baltimore also have suspended specie payments. In New England and New York no general suspension has yet taken place, though a number of Banks have been closed. The citizens of Wheeling have held a meeting at which it was resolved to request the Banks to suspend specie payments until the business interests of the community would justify a resumption. Each day brings news of suspensions of the Banks in different parts of the country, and it appears probable that a general suspension of specie payments will take place. The Banks of Washington, D. C., many of those in Virginia, and those at Wilmington, Del., and Providence, R. I., with many of the New Jersey Banks, have suspended.

Three days later advices from Europe have been received. Cholera is raging fatally at Stockholm, Hamburg and other places. The Bank of Holland has increased its rates to 5 per cent, and it is anticipated that most of the German Banks will be obliged to follow its example. Further advices from India have been received. Delhi had not fallen. The insurgents continued to make sorties therefrom, in which great numbers of their own men and five hundred British troops had been killed. It was reported that Agra had fallen into the hands of the insurgents. Sir Colin Campbell has assumed the command of the Indian army.

# FRIENDS' REVIEW.

A RELIGIOUS, LITERARY, AND MISCELLANEOUS JOURNAL.

VOL. XI.

PHILADELPHIA, TENTH MONTH 10, 1857.

No. 5.

EDITED BY SAMUEL RHOADS,

TO WHOM ALL COMMUNICATIONS MAY BE ADDRESSED.

PUBLISHED WEEKLY

At No. 50 North Fourth Street,  
PHILADELPHIA.

Price, PAYABLE IN ADVANCE, Two dollars per annum, or six copies for Ten dollars.

Postage on this paper, when paid quarterly or yearly in advance, 13 cents per annum in Pennsylvania, and 26 cents per annum in other States.

AUGUSTUS HERMANN FRANCKE.

[Continued from page 52.]

Francke was accustomed to call Luneburg the place of his spiritual birth. It was here that he was led to the adoption of those views, and to the exercise of those feelings which so strikingly mark his after life, and which brought upon him so much censure from the enemies of vital piety. We have already given some account of his spiritual state, up to the time of his departure for Leipzig. At that place, he manifested much zeal in the study of the Holy Scriptures, and some inclination to a more devoted life; but still he did not feel at ease with himself. There was something wanting to his happiness—a void in his soul which the world could not fill. He knew that he was far from being in either a safe or proper state, but was, notwithstanding, unacquainted with his own heart and his spiritual helplessness. He was without that faith which consists not in an exercise of the intellect—which is not a thing of mere knowledge—but a sincere confidence and trust in God, and a sense of the preciousness of the Saviour.

Francke has given an account of this part of his life and of his conversion, of which the following is the substance:—"About the twenty-fourth year of my age, I began to feel, more than ever before, my wretched condition as to spiritual things, and to desire more ardently that I might be delivered from it. I do not remember that any external means led to this result, unless it may have been my theological and biblical studies, which I pursued, however, with an entirely worldly spirit. I was surrounded at this time (at Leipzig,) with the temptations which worldly society constantly presents, and was not a little affected by them. But, in the midst of them,

God, of his mercy, sent his Spirit to lead me away from every earthly good, and inclined me to humble myself before Him, and pray for grace to serve him in 'newness of life.' These words of Scripture were impressed upon my mind: 'For when ye ought for the time to be teachers, ye have need that one teach you again what are the first principles of the oracles of God.' (*Heb.* v. 12.)—I had been engaged in the study of theology for nearly seven years, and was familiar with the doctrines of our church, and could defend them against opposers; I had read the Bible much, and many other practical works; but all had only affected my understanding; my heart was as yet unchanged, and it was necessary for me to begin anew to be a Christian. I found myself so deplorably situated, so bound to earthly things, and so attached to the pursuit of knowledge, that though I felt the need of reformation, I was like one cast into a mire, who can only stretch out his hands and ask for aid. But God, in his infinite compassion, did not leave me in this helpless condition. He removed obstacle after obstacle from before me, and thus prepared the way for my deliverance from the bonds of sin. I became diligent in using the means of grace, and neglected no opportunity of worshipping and serving Him. I began to see a little light dawning upon my path, but it was more like twilight than the perfect day. I seemed to have placed one foot upon the threshold of the temple of life and salvation, but lingered there, being too much attracted by the temptations of the world to enter. The conviction of my duty was very strong, but my habits were so fixed upon me, that I could not avoid indiscretions in word and action, which caused the keenest pain. At the same time, there was such a change in my feelings, that I now longed after and loved holiness, spoke of it frequently, and declared to some of my friends, that I was determined to live, hereafter, a godly life. Such a change was observable in me, that some of them thought me a very devoted Christian; but I know well that I was, at that time, too much under the influence of the world, and that my resistance to my evil dispositions was very feeble. How miserable would have been my condition, had I continued in this state, grasping earth with one hand, and reaching after heaven with the other—desiring to enjoy both the world and God, but being at peace

with neither! How great is the love of God manifested to men through Christ Jesus! He did not cast me off for ever, as I richly deserved, on account of my heinous sinfulness, but bore with me, supported my weakness, and enabled me to seek him. I can testify, from my own experience, that man has no ground of complaint against God in the matter of his salvation, for he ever opens the door of mercy to the soul that sincerely seeks his grace. He has taken me by the hand and led me forward as a tender parent does her offspring, and even when I would have left his side, he has brought me back again. He has, in answer to my prayer, placed me now in a situation where the world need not allure me from the path of duty, and where I have every advantage for serving him."

This situation to which he alludes was that at Lunenburg, where he was free from the distracting cares and duties, as well as the temptations of Leipzig, and enjoyed the society of a few truly devout Christians. He now made the duties of religion a constant object of his attention, and devoted much of his time to secret prayer and meditation.

Shortly after his arrival at Lunenburg, he was appointed to preach a sermon in the church of St. John, principally with the design of giving him the opportunity of improving himself in the art of public speaking. But his mind was now in such a state that he could not be satisfied with the idea of merely making a display of his talents before the people; he desired rather to do them good. While he was thus meditating, he fell upon the text, "But these things are written that ye might believe on the Son of God, and that ye might have life through his name," and chose it as the subject of his sermon. From these words he proposed to show the nature of true faith in Christ, as distinguished from a merely imaginary or speculative belief. While reflecting upon this passage, the thought arose in his mind, that he himself had no such faith as that which he was about to describe; and so much did it affect him, that he neglected his sermon entirely, and turned his attention to himself. He sought, in various ways, to obtain that state of feeling which he desired; but the more he strove, the greater was his doubt and difficulty. He found no relief either in the Scripture or the writings of pious men; all were alike obscure and unmeaning to him. "My whole past life," says he, "now came before my mind, and I could look over every part of it as one who examines a city from some lofty steeple. At first, my attention was attracted by individual sins; but soon I forgot them in the contemplation of that one which had been the fountain of all the rest, *unbelief*." This discovery of himself threw him into the greatest distress. He had neither rest nor peace, but spent his time principally alone in his apartment, sometimes restlessly walking up and down—and then, falling upon his knees, and praying "to the God

whom he did not know," as he expresses it; sometimes saying, "If there be a God, oh! let him have mercy on me."

"One Sabbath," he continues, "it seemed to me, that I could not, in this state of mind, preach the sermon which had been appointed me, and I thought of postponing it again; for I could not bear the idea of preaching against my own experience, and deceiving the people as to my own state. I felt deeply what it is to have no God upon whom my soul could depend: to mourn over sin, and yet know not why it was, or what it was that caused me such distress; to deplore my wretchedness, and yet know no way of deliverance—no Saviour; even to be ignorant whether there was a God who could be angry with me! In this state of anguish I kneeled down again and again, and prayed earnestly to that God and Saviour in whom I had, as yet, no faith, that if He indeed existed, he would deliver me from my misery. At last he heard me! He was pleased, in his wondrous love, to manifest himself, and that, not in taking away, by degrees, my doubts and fears, but *at once*, and as if to overpower all my objections to his power and his faithfulness. *All my doubts disappeared at once, and I was assured of his favor.* I could not only call him God, but my Father. All my distress was dispelled, and I was, as it were, inundated with a flood of joy, so that I could do nothing but praise and bless the Lord. I had bowed before Him in the deepest misery, but I arose with indescribable peace and joy. I seemed to myself to have just awaked from a dream, in which all my past life had been spent. I was convinced, that the world, with all its pleasures, could not give such enjoyment as I now experienced, and felt that, after such a foretaste of the grace and goodness of God, the temptations of earth would have but little effect upon me."

A few days after this, he preached the sermon already mentioned, and with much peace of mind. He was able to say, now, with the Apostle, "We have the same Spirit of faith, according as it is written; I believe, therefore have I spoken; we also believe, and therefore speak."

From this time he dated his conversion, and, forty years after, in his last prayer in the garden of the Orphan House, he said, that a fountain had been opened in his heart from which streams of happiness had uninterruptedly flowed. From that time, religion had been to him a reality, enabling him to deny himself all ungodliness, and every worldly desire and affection. Francke began at that time to regard the honor of God and the salvation of men as the most important of all subjects, and to estimate the riches and honors of the world as "vanity of vanities." He had now obtained that knowledge for which he had been so long seeking; and the display which is made in his experience, of the blindness of the natural man, is truly striking and instructive. With the Bible constantly before him, and books

upon practical piety shedding their light upon his path, he wandered, as if in perfect darkness, till God shone into his mind with "the light of the knowledge of the glory of God in Christ Jesus." It was not until he had been brought to a most humbling conviction of his unworthiness and helplessness, and despaired utterly of obtaining deliverance from sin by his own efforts, that he could see the meetness of the Lord Jesus as a Saviour; and not until he felt an assurance of pardon, through faith in him, that he found any permanent peace. This is the only plan upon which the sinner can be admitted to the favor of God; and it is the glory and love, manifested in this plan, which it will be the privilege of the saints above for ever to admire and adore.

[To be continued.]

#### THE HAPPY MAN—A TRUE CHRISTIAN.

The happy man was born in the city of Regeneration, in the parish of Repentance unto Life. He was educated at the school of Obedience, and now lives in Perseverance. He works at the trade of Diligence, notwithstanding he has a large estate in the country of Christian Contentment, and many times does jobs of Self-denial. He wears the plain garment of Humility, although he has a better suit to put on when he goes to court called the robe of Christ's Righteousness. He often walks in the valley of Self-abasement, and sometimes climbs the mountains of Spiritual-mindedness. He breakfasts every morning on spiritual prayer, and sups every evening on the same. He has meat to eat, that the world knows not of, and his drink is the sincere milk of the word. Thus happy he *lives*, and happy he *dies*. Happy is he who has gospel submission in his will, due order in his affections, sanctifying grace in his soul, the Redeemer's yoke on his neck, a vain world under his feet, and a crown of glory over his head. Happy is the life of such a one; in order to attain which, pray fervently, believe firmly, wait patiently, live holy, die daily, watch your heart, guide your affections, redeem your time, love Christ, and long for glory.

#### THE SAUDS—A MORAL SECT OF THE HINDOOS.

"Not the hearers of the law are just before God, but the doers of the law shall be justified. For when the Gentiles, which have not the law, do by nature the things contained in the law, these having not the law, are a law unto themselves; which show the work of the law written in their hearts, their conscience also bearing witness, and their thought the meanwhile accusing or else excusing one another." Rom. ii. 13—15.

A curious exemplification of the apostle's doctrine respecting the practical excellence of some of those Gentiles, who are destitute of any knowledge either of the Jewish law or of the Christian revelation, will be found in the following extract from an account of the *Sauds*, a moral sect of the Hindoos, who dwell in the north western part of Hindoostan. It has been kindly com-

municated to me by W. H. Trant, a gentleman of great respectability, who once occupied an important post in the civil service of the East India Company, and who personally visited this singular people.

"In March, 1816, I went with two other gentlemen from Tutteghugh, on the invitation of the principal persons of the Saud sect, to witness an assemblage of them for the purpose of religious worship in the city of Furrukhabad, the general meeting of the sect being held that year in that city. The assembly took place within the court yard of a large house. The number of men, women, and children was considerable: we were received with great attention, and chairs were placed for us in the front of the hall. After some time, when the place was quite full of people, the worship commenced. It consisted solely in the chanting of a hymn; this being the only mode of public worship used by the Sauds.

"The Sauds utterly reject and abhor all kinds of idolatry, and the Ganges is considered by them with no greater veneration than by Christians; although the converts are made chiefly, if not entirely, among the Hindoos, whom they resemble in outward appearance. Their name for God is *Sutgur*; and *Saud*, the appellation of the sect, means servant of God; they are pure theists, and their form of worship is most simple, as I have already stated.

"The Sauds resemble the Quakers in their customs, to a remarkable degree. Ornaments and gay apparel of every kind are strictly prohibited: their dress is always white; they never make any obeisance or *salam*; they will not take an oath, and they are exempted in the courts of justice; their asseveration, like that of the Quakers, being considered equivalent. The Sauds profess to abstain from all luxuries, such as tobacco, pawn, opium and wine; they never have *nautches* or dances. All attack on man or beast is forbidden; but in self-defence resistance is allowable. Industry is strongly enjoined. The Sauds, like the Quakers, take great care of their poor and infirm people; to receive assistance out of the *punt* or tribe would be reckoned disgraceful, and render the offender liable to excommunication. All parade of worship is forbidden; secret prayer is commended; alms should be unostentatious; they are not to be done that they should be seen of men. The due regulation of the tongue is a principal duty.

"The chief seats of the Saud sect are Delhi, Agra, Jypoor, and Furrukhabad; but there are several of the sect scattered over the country. An annual meeting takes place at one or other of the cities above mentioned, at which the concerns of the sect are settled.

"The magistrate of Furrukhabad informed me that he had found the Sauds an orderly and well conducted people. They are chiefly engaged in trade.

“Bhuivance Dos, one of their leaders, was anxious to become acquainted with the Christian religion, and I gave him some copies of the New Testament in Persian and Hindoostanee, which he said he had read and shown to his people, and much approved. I had no copy of the Old Testament in any language which he understood well; but, as he expressed a strong desire to know the account of the Creation, as given in it, I explained it to him from an Arabic version of which he knew a little. I promised to procure him a Persian or Hindoostanee Old Testament, if possible. I am of opinion that the Sauds are a very interesting people, and that some intelligent and zealous missionary would find great facility in communicating with them.”

W. H. Trant informs me that, previously to the adoption of their present views, the Sauds do not appear to have received any Christian instruction. The head of their tribe assured him that they knew nothing of Christianity.—*Note in J. J. Gurney's Observations on Distinguishing Views, &c.*

#### INFLUENCE OF CHARACTER.

There is much in the following suggestions of Bishop Potter, of New York, as profitable for the meditation of parents as of teachers, to whom, as a class, they were specially addressed. We quote from an address delivered before the State Normal School at Albany:

“The teacher cannot impart to others what he does not possess himself. If he be coarse and clownish, he will not do much to refine and humanise his pupils. If he be void of feeling and sentiment, dead to the beauties of nature, and to the beauties of thought and language, there will be nothing suggestive in his glances at nature and life; no repetition of beautiful stories, or of beautiful scraps of simple poetry, to kindle the feeling and imagination of his pupils, and to teach them to recognise and admire what is admirable in sentiment and language.

“Speaking, then, of things which are over and above the elementary instruction you have to impart, I would say to you emphatically, that just in proportion as you improve yourselves in all the respects to which I have now referred, in just such proportion will you contribute to the improvement of your pupils. Of all the daily lessons you can set before them, the best and most valuable is the presence of a beautiful character. O, it is character—character in the parent, character in the teacher—which works upon the young, drawing them into a resemblance to itself, and doing more to improve their minds, their hearts, and their manners, than can be effected by the most diligent instruction in mere book knowledge.

“Take the children and youth who are often collected together in a rural school, and not one of whom, perhaps, has ever enjoyed the privilege

of familiar communication with a person of real refinement and cultivation; and what a wonder it must be to them, and what a blessing, to find themselves daily looking upon, listening to, conversing with a teacher who seems a superior being; a being invested with a wonderful charm, from the gentleness and dignity of his or her manners; the elevation of his sentiments; the sweetness and gravity of his speech; and the wide range of his thoughts.

“They behold human character in a more engaging form than ever before; and while they admire, they learn to imitate. They perceive that there is something more excellent than their coarse manners and slovenly speech; and they become chastened and refined under the daily example, almost without thinking of it. The teacher reasons with caution and discrimination in their presence; kindles into admiration of some lofty trait of virtue; or expresses horror at some instance of meanness, cruelty, or depravity; or exercises patience and tenderness toward some infirm and wayward pupil; or points out something exquisitely beautiful in thought and sentiment and character; and as they look on and listen, they begin to feel more deeply what is noble and what is mean; they begin to perceive what it is to reason accurately.

“The character and demeanor of the teacher is a new revelation of goodness and wisdom, and they are glad to become disciples; their intellectual and moral nature catches a glow, is put into healthful exercise, and they gain more by a kind of infection and transfusion from the one superior character than they could acquire from the greatest amount of mere cold and barren lessons. Accurate and vigorous instruction there must of course be—without that, it is mere folly and impertinence to pretend to the higher influences of which I have been speaking. But the higher the culture of the teacher, the better he will know how to make that instruction pleasant and effective; and how to throw over it and around it beautiful and touching lessons for the heart, the fancy, and the taste.”

#### THE MONITOR—NO. IX.

##### NEWSPAPERS AND THE BIBLE.

It is said that James Simpson once startled into serious reflection a meeting of Friends noted for their attention to gain through marketing, by commencing his sermon with the exclamation, “Friends, what’s the price of butter!” Had he lived at the present day, possibly he might have varied his appeal to the words, “Friends, have you read the last papers!”

There are two queries I would like to propose to some members of the Society of Friends, whom I love and esteem,—and these are, 1. What is the aggregate amount of time which you spend in one year, reading newspapers? 2. What is the amount consumed yearly in reading the Bible?

Faithful, accurate answers would, I think, afford materials for profitable reflection. We may watch over others for evil, and also watch over them for good; and I trust it is rather the latter object than the former that has induced me to observe the habits of some in this particular. A friend with whom I recently spent a few days, told me that the morning paper was as essential to him as his breakfast; and that when deprived of it he missed it as much as a regular meal. I perceived that although the Bible lay on the table of his room, it was not sought with the same frequency and earnestness as the "Tribune," "Courier," and "Gazette;" it seemed frequently to be entirely forgotten both morning and evening. Although he was a person of religious feeling and principle, yet I think he would have been much more so by daily contemplating the heavenly views which the solemn and earnest perusal of a few chapters would have presented.

To men of business, the commercial intelligence of the day is important; and in addition to this an outline of historical occurrences among different nations is desirable. Little more than these need occupy any one's attention, and a few minutes, perhaps not generally more than three to five for a daily paper, and ten or fifteen for a weekly or semi-weekly paper. The time beyond this is usually spent in reading acrimonious paragraphs of a political character, containing often many personalities, and showing very little Christian love, and in time leavening the reader into the same censorious and bitter spirit; or what is perhaps still worse, the attention is attracted by the low wit and vulgar jesting, or worthless tales, with which newspapers so much at present abound. There are a large number of the members of the Society of Friends who read little else than such newspapers. What must be the inevitable result? What would be the result if they spent an hour every day in conversation with bitter partizans and low jesters, or in the company of men whose ruling motives were far from those of the regenerate Christian? The effect would be scarcely worse than it now is in drinking in the spirit of our political newspapers. An hour spent with them each day would be six hours a week, *even if they were never looked into on the First day.* Must not the influence of these six hours of evil or un sanctified thoughts be far greater than that of the few minutes devoted to reading the Scriptures, or the single hour or two in attending religious meetings? Evil impressions should not be entertained by the mind for a single moment. A young man once remarked, that allowing himself to read in a bad book for fifteen minutes had poisoned his purity and happiness for years.

Who are the educators of our members, and who mould the form of their minds? Are they not chiefly newspaper editors? Are they to teach Quakerism and Christianity? Does the mental and moral food they dispense assist in the work of regeneration, purification and prayer? Do

they bring the realities of eternity nearer to our view? Are the thoughts which newspapers suggest such as we should like to dwell upon in our last moments? Those in whose minds all distaste for the Scriptures has not been produced, and to whom the religious writings of Friends remain interesting, are competent to decide these questions candidly.

Young people and children quickly copy the example of their parents and superiors. Whatever the words, precepts and admonitions of these may be, their real actions, their hearts, are soon read. If parents say in the language of conduct, "We like the words and instructions of the 'Times' and 'Herald' much better than those of the Lord Jesus Christ," the children will quickly copy their example. Are such papers as these, or the *best* of newspapers, properly so called, the fit instructors of the rising generation of the Society of Friends? No—we may rely upon the truth, that if our Society dwindles in any place, it is not from any deficiency in the Christian principles adopted and held by the Society, for they are immutable and will stand the test of time, but because the members keep constantly before their vision the perverted morality of political partizans, until this evil becomes to them an apparent good, and the pure, the heart-searching, the sublime and glorious truths taught by the sacred Scriptures, scarcely ever, and then only superficially, occupy the attention of the mind.

T.

---

#### INSENSIBILITY TO THE CAUSE OF PEACE.

"The Cause of Peace!—O, when *will* the ministers and followers of the Prince of Peace imbibe his spirit to such a degree that they will enter heartily into this blessed cause? As our good friend Ladd used to say, 'I almost lose my patience with them at times;' but, like all other great reforms, this must be effected by slow degrees. It will, however, it *must* prevail; for the glorious gospel can never have its proper influence on human hearts and lives, till it *does* bring peace on earth. We must, therefore, continue to pray, and labor, and wait."

So writes a gifted and venerable friend; one whose heart, as that of every Christian's should be, is enlisted in any good cause, and whose spirit, if breathed into all the followers of Christ, or even into the mass of his ministers, would speed, by many ages, the advent of that day which shall see the whole earth filled with the glory of God as the waters do the sea. It is grateful as dew on Hermon, refreshing as the cooling stream to the weary traveller on Arabian sands, to meet now and then such proofs of reliable sympathy and co-operation. Thanks to the God of peace for such occasional oases along the pathway of this peculiarly difficult but most blessed, glorious reform. We do find some that enter heartily into this deepest and most far-reaching of all reforms;

and we rejoice in the belief that their number is increasing, and their influence silently extending in all directions. May the divine leaven soon pervade every Christian community!

But such cases are "few and far between." Not one Christian in a hundred, scarce one in a thousand, has even begun as yet to open his mind fully to the importance and claims of this cause. The hereditary influences of more than a hundred generations have been constantly distilling themselves on the whole community, on every Christian, until only here and there a trace of the peculiar distinctive teachings of Christ and his apostles on the subject of peace is to be found. History, poetry, philosophy, education, the press, the pulpit, nearly all are practically, not avowedly, enlisted *against* peace, and in favor of the world's immemorial war-habits. Search all Christendom; and how few will you find possessed on this subject of views practically different from those of Cicero or Seneca!

Such is the general state of the church on the question of peace. Neither her members nor her ministers have as a body thought enough about it to learn or fully suspect their own errors. The modes of thought and feeling prevalent in pagan Greece and Rome are claimed in effect to be the teachings of him who bade us love our enemies, turn the other cheek to the smiter, and overcome evil, not with evil, but only with good.

Here and there, however, we find Christians getting into the mind of Christ on this subject. May the Spirit of all truth and grace multiply their number! This greatest and most difficult of all reforms, the very culmination of the gospel in its influence on the social relations of mankind, is fairly begun, and never can go back, but must hold on its way until the song of the angels, in all its glory and blessedness, shall be fulfilled in every land and every habitation,—PEACE ON EARTH, AND GOOD WILL AMONG MEN.—*Advocate of Peace.*

#### MODELS FOR MEN OF BUSINESS.

A blessing which real religion confers on its mercantile possessor is, moderation in prosperity. "He that maketh haste to be rich shall not be innocent." "But thou shalt remember the Lord thy God, for it is he that giveth thee power to get wealth." "If rich, be not too joyful in having, too solicitous in keeping, too anxious in increasing, nor too sorrowful in losing." These golden sentences were inscribed on the account-books of a London merchant, who, not content with writing them in his books, embodied them in the consistent practice of fifty years. The Lord gave him power to get wealth, and just when he was on the way to get a great deal more, he said, "It is enough," and, retiring from a prosperous trade, devoted his remaining years to doing good. His income was not great, but he had once been happy with a great deal less; and though

he might have lived his remaining years up to that income, there was one thing which hindered him. "None of us liveth to himself." "Ye are bought with a price." And accordingly, when one day he took a young friend to see Abney Park, at that time offered for sale, and had shown him with enthusiasm the house where Dr. Watts so long resided, the room in which he composed his beautiful works, the bed-room where he slept, and the turret on the roof, where he used to sit gazing on the scenery—his companion wondered that he did not buy the place and live in it. "I might," was his answer, "but to live here would consume all my income, and nothing would compensate for the pleasure I have in living within my income, that I may serve God with the surplus." And that moderate income, blessed by God and wisely expended, was the means of providing more places of evangelical worship in this metropolis, and raising up more faithful ministers, than any single income ever did since the days of Lady Huntingdon. The horse-leech hath seven daughters, saying, Give, give; and the love of money hath as many, saying, Get, get; and the only antidote to this self-feeding rapacity is the gospel. The only man who ever found a competency is the man who has found in godliness with contentment great gain. When business prospers, he can still live on little, and give a large amount away; and he can even achieve the prodigy at which so many marvel—retire from a thriving business, and bid adieu to boundless prospects, in order to live on a limited or lessened revenue.

Another benefit of true piety is the support which it affords its possessor in a season of commercial calamity. We have few more delightful biographies than that of Joseph Williams. He was a carpet manufacturer at Kidderminster, a hundred years ago; and in a letter to Mr. Walker of Truro, he says: "I am an old man; a tradesman also of no small account in this neighborhood; but I trust my more beloved, because more gainful traffic lies in a far country. Grace unknown, though not unfelt, put me in this way forty-four years ago. I was then inclined to seek goodly pearls, and having found one pearl of great price, I was willing to sell all and buy it. And now my traffic is to the country beyond Jordan, and my chief correspondence with the King of Zion, a good friend to merchantmen. He first condescended to traffic with me, furnished me with the stock, made me many valuable remittances, and hath firmly assured me of a great and good inheritance to which I am to sail and take possession, as soon as I shall be ready for it, and our mutual interest will be thereby best promoted. And I have so high an opinion of Zion's king, and can so firmly rely on his promises, that I look on my said possession as a done thing, for, indeed, he hath confirmed his promises by many undeniable pledges." This happy old Christian was tried at his outset by heavy losses which

nearly overwhelmed him ; but his heart was fixed, and in the midst of all his anxieties and disasters, we find him saying : " Surely I find my soul growing in submission to God's will, and in delight in God and in duty. Surely I am enabled to love God more, not only by means of this trial, but for it." And the steady hand with which he carried the cup of prosperity when full, and the serene countenance with which he drank the cup when embittered ; the meekness and modesty with which he sustained success, and the perfect peace which he enjoyed when in danger of losing all, were the result of the self-same thing. He had commenced his business with God, and with God in prayer and consultation he carried it on. Or, as he himself expressed it, " he traded for Christ." There was in partnership with him a wonderful Counsellor, to whom he could resort in every dilemma, and who could send him supplies in the most wonderful ways—a friend as wise as he was kind, who kept him from losing courage in the most threatening conjunctures, and who kept his heart from breaking in the most crushing disasters. And so, dear sirs, if you would secure a blessing on your business, let it be your first concern to consecrate that business. Let each dedicate his traffic even as he dedicates himself and his household to the Lord.

When Charles Grant was the East India Company's commercial resident at Malta, the profits of his office were so great that after a few years he sent his books to Bengal to be examined, stating that he was making money so fast that he feared it could not all be correct, though he himself could not find out the mistake. But the Governor-General instantly returned them unopened, bidding him keep his mind quite easy, and telling him that nobody except himself was troubled with such nervousness. And it would be easy to quote abundant instances where uprightness and integrity have made the Christian stand out in bright relief, and have wrung even from a reluctant world, a moment's plaudit or the more solid tribute of lasting respect and confidence. And this is the best service which any man can render to the gospel, the most precious and welcome of all contributions—the contribution of a consistent character.—*Dr. James Hamilton.*

A violent sectarian spirit is a sign of religious declension. Honest men stand firm for the vitals of religion. If the mind were right, the circumstantial of religion would not be made matters of fierce contention. The spirit of St. Paul was of another kind. " If meat make my brother to offend, I will eat no meat while the world standeth, lest I make my brother to offend. One believeth that he may eat all things : another, who is weak, eateth herbs. Let not him that eateth, despise him that eateth not : and let not him that eateth not, judge him that eateth."

THE DAILY CROSS.

" If any man will come after me, . . . let him take up his cross daily, and follow me."—LUKE ix. 23.

There are some crosses which God himself lays upon us, and which we cannot escape. Such is the cross of severe sickness, or sad bereavement. These we must bear in the spirit of submission and patient resignation. But there are others which may be avoided if we choose. Such is the cross of reproach and contempt for the sake of Christ, or many daily crosses of self-denial, trials of temper and patience, duties which we know to be right, but which are irksome and unpleasant. These crosses God in his providence lays before us ; and Jesus says, if we are to be His faithful followers, we must take them up and patiently carry them, not turn away and refuse to lift them.

No one likes the cross, yet we must often expect it if we are to live long in this world. Only they who die very young can get the crown without the cross. Perhaps, if we are already feeling ours, we may envy *their* happiness. But we should rather seek, boldly and cheerfully, to follow Jesus, bearing our cross ; and assured that He will not appoint for us more than is for our real good, or than He will *help* us to bear, if we look to Him for strength. And then, after the cross, how delightful the *crown* will be.

There are thorns besetting every path,  
That call for patient care ;  
There is a cross in every lot  
And an earnest need of prayer ;  
But a lowly mind that leans on Thee  
Is happy everywhere.

In the service which Thy love appoints  
There are no bonds for me,  
For my secret heart is taught the truth  
That makes Thy people free ;  
And a life of self-renouncing love  
Is a life of liberty.

WHAT OF THE CHINESE SUGAR CANE ?

Every day's mail now brings us a number of reports—many times too numerous for publication. These are mostly encouraging as to the present growth and *prospects* of the crop, but we consider a decisive judgment upon its merits as yet premature, that is, as respects its profitable adaptation to sugar-making at the North. That it is valuable as a forage crop, in any place where Indian Corn will grow, may be considered a fixed fact. Abundant experiments will be made during this month, with sufficient accuracy to show how far north it will be available for sugar or syrup. In the Southern States, success has already attended the efforts of those who have tried it for making sweetening in the form of syrup. A planter in Texas sent 65 casks of Chinese Sugar-Cane Syrup to the New-Orleans market, where it commanded a high price, for its good quality. Similar reports come from other Southern localities.

\* \* \*

We recently conversed with Mr. A. Stoutenborough, of Dallas Co., Ala., who has been making syrup successfully this year, and we give his experience, writing from memory. He planted several acres of Chinese Sugar Cane, in drills, putting one seed in a place. Each seed produced one large central stalk with a number of suckers. The suckers not being so forward as the main stalks, he commenced cutting out and grinding the latter toward the close of August, or as soon as the seed began to ripen. The suckers are to be pressed as they mature. He constructed two upright wooden rollers, of large size, putting an iron band around the ends of them, and fitting with wooden cogs to make them turn together. They were set into a strong frame, one of them projecting up for the attachment of a lever for driving by horse. With this mill he pressed out about 70 gallons of juice in the fore part of the day, which were put into a 120 gallon cauldron, or iron kettle, and boiled down *just as he would sap for maple sugar*. The scum rising from time to time was skimmed off, and when it had become clear he added to it 14 or 15 tea-spoonfuls of slacked lime, first stirring it in water to the consistence of milk. The boiling was continued, skimming when needed, and with a slower heat towards the close of the process. The result was, 12 to 14 gallons of thick syrup of very superior quality from each 70 gallons of juice.

The experiment, on a rough scale, by one without previous experience in sugar-making, will be suggestive to others in like circumstances. In boiling down the juice, it is important to heat it soon after it is expressed. The heat should be kept just below boiling until most of the scum rises, when it may be taken off, the lime added as previously described, and the boiling be continued as long as desired, removing from time to time all scum that accumulates. The syrup will be improved by letting it cool after boiling down, say one-half; then strain it through a woolen cloth; stir in some whites of eggs; heat it again gradually and skim, and then complete the boiling.—*American Agriculturist*.

## FRIENDS' REVIEW.

PHILADELPHIA, TENTH MONTH 10, 1857.

FRIENDS' SCHOOL IN TENNESSEE.—A letter from Tennessee enables us to state, for the information of such of our readers as have felt interested in the establishment of the "Friendsville Institute and Newberry Female School," that its second session commenced on the 24th of 8th mo. last, and when our correspondent wrote, 9th mo. 8th, the number of scholars was seventy-one, with a prospect of about twelve more shortly.

The first session, which closed in the Fifth

month, was satisfactory, so far as the means for imparting instruction were in possession of the school; but it is evident that to carry into effectual operation the object of the institution, there should be a supply of chemical and philosophical apparatus and a further selection of books. The liberal contributions made by Friends in Tennessee to build the school house and form a permanent school fund, prove that they are disposed to help themselves, and, therefore, are entitled to the generous aid of those in other places who have money to spare for benevolent purposes. Dr. Beesley, N. W. corner of Arch and Tenth Streets, Philadelphia, will properly appropriate any funds which may be sent to him or placed in his hands.

INDIANA YEARLY MEETING.—An attentive correspondent informs that this assembly convened at Richmond, on Fifth day, the 1st inst., and was largely attended. Of the large number of Representatives only nine were absent. Certificates and minutes were read for the following ministers from other Yearly Meetings, viz.: Robert and Sarah Lindsey, Priscilla Green, and Mary Nicholson, from England; John Meader, Eli and Sybil Jones, and Charles Coffin, from New England; Wm. H. Chase, from New York; and Joseph Brown, from Canada West. Epistles addressed to Indiana Yearly Meeting from London and Dublin, and from all the American Yearly Meetings, except Philadelphia, were read; also the London General Epistle; and a Committee was appointed, as usual, to prepare answers to the former.

After a sitting of four hours, the meeting adjourned until 10 o'clock, Sixth day morning.

We hope to receive an account of the subsequent proceedings in time for our next number.

MARRIED, At Bethel, Morgan Co., Ind., Ninth mo. 24th, JOSEPH POOL to MARY HADLEY, both members of White Lick Monthly Meeting.

—, At Friend's Meeting, Newberry, Ohio, on the 20th of Eighth month last, GEORGE JANNEY to REBECCA A., daughter of C. C. Betts.

DIED, At the residence of her husband, Cedar Co., Iowa, ESTHER C., wife of Samuel Lloyd, after a short but severe illness, in the 32nd year of her age.

She was a member of Red Cedar Monthly Meeting of Friends, and for several years past has been conscientiously opposed to using the products of slave labor, bearing by her example and precept a faithful testimony against it. She expressed a wish that when the solemn messenger of death should come, her remains should be clothed only in articles free from the taint of slavery. Her mind was preserved in much

calmness and entire resignation to the will of her Heavenly Father, and she was enabled to part with all dear to her, we reverently believe, to inherit joys unspeakable beyond the grave; and in reviewing the life and daily walk of our beloved friend, we are reminded of the declaration, "They that say such things declare plainly that they seek a country." "But now they seek a better country, that is an heavenly; wherefore God is not ashamed to be called their God; for he hath prepared for them a city."

**DEED,** At his residence in the city of Salem, Massachusetts, on the 25th of Ninth month, PHILIP CHASE, aged near 90 years. His long life had been remarkable for activity and usefulness, doing all that was in his power for the comfort and benefit of others. His powers of mind continued clear, and as he drew near to the close of his earthly pilgrimage, he was patient in suffering, calm, loving and joyful in the hope of a happy immortality.

—, On the 12th of last month, in Muscatine, Iowa, aged 19, GEORGE, eldest son of Samuel C. Adams. In the early part of his sickness, under an apprehension that he might not recover, he said: "Life is sweet and friends are dear; how can I leave you?" But after passing through much exercise of spirit, he was mercifully favored with the assurance that his sins were forgiven, and on one occasion when he was told that the physicians thought he might yet recover, he said, "I am sorry. I am ready to die, I am so happy." The last morning of his life his symptoms seemed more favorable, but on taking some nourishment, he said, "I am going home this morning, mother;" and his close was quiet and peaceful.

—, In Fairfield, on the 4th of Seventh month, 1857, DANIEL PADDAK, in the 67th year of his age, an esteemed elder of Sidney Monthly Meeting. Having submitted in early life to the pointings of truth in his heart, our dear friend had long filled the most important trusts in Society, in all of which he had manifested himself a faithful steward; yet that which shone most conspicuously in his Christian character was his unaffected humility, being ever ready to prefer others to himself, ascribing all to unmerited mercy. But while survivors feel that they have lost a tender father, a kind husband and affectionate friend, they are consoled with the belief that to him it was putting off the pains of mortality for a crown immortal, and the joys of the redeemed.

—, On the 8th of last month, at Hamilton, N. Y., ZEBULON WEAVER, a minister. He had been afflicted with a painful lameness in his left knee, and in the latter end of the Sixth month last, the limb was fractured by a fall, causing great subsequent agony. During his sufferings he often uttered vocal prayer, which was ever characterized by a spirit of perfect resignation to the Divine will. He gratefully acknowledged the kindness of the students in Madison University, who gladly watched by him at night in the whole period of his sufferings, and many of them have said that at his bed-side they learned profitable lessons which should never be forgotten. Towards the close of his life, he became more comfortable in body, but was never free from pain. In the same sweet spirit in which he had lived and suffered, he quietly and consciously passed away.

—, On the 18th ult., PENNINA NICHOLSON, in the 77th year of her age, an esteemed member of Walnut Ridge Monthly Meeting of Friends, Rush Co., Ind.

—, In the vicinity of Elmgrove, Henry Co., Ind., on the 25th of Seventh month last, LUCINDA, wife of Jesse B. Jessup, in the 27th year of her age, a member of Spiceland Monthly Meeting.

—, Near Martinsville, Clinton Co., Ohio, on the 16th of Sixth month last, in the 32nd year of her age, PATIENCE, wife of Daniel Coffin, an esteemed member of Newberry Monthly Meeting.

For Friends' Review.

EGYPTIAN ANTIQUITIES.

The remains of Thebes have long been celebrated as amongst the most remarkable of ancient ruins. The following description of some of them is from Upham's Letters, recently published by Henry Longstreth, No. 915 Market Street, Philadelphia.

The plain of Thebes is wonderful. I gazed upon it from one of the mountain heights; and also from the top of one of the temples of Karnac. From both places the eye easily reached its limits as they are defined by the mountains, though it is a circuit apparently of thirty miles. As viewed from the ascent in the mountains, the curving Nile, seen through the whole length of the plain and glittering in the sun, flowed through it like a river of gold. The plain waved with luxuriant vegetation. It is not surprising that the first inhabitants, who viewed it in its primitive beauty, made it their stopping place, and laid the foundations of the great city. Thebes, unlike the cities of the east generally, had no walls. In the time of its greatness it probably occupied the whole plain. Reaching out from both banks of the Nile, it was guarded on all sides by vast deserts, and still nearer by the continuous line of mountains which intervened between the plain and the deserts. It had but little need, therefore, of walls. The hundred gates of Thebes mentioned by Homer were not gates as is commonly supposed, which furnished an entrance through city walls, but the gates of palaces and temples. And the Thebean gate, which is thus commemorated in early poetry, is not a mere portal, through which a man can scarcely enter, but a great architectural and historical arch, some fifty or sixty feet high, which in its proportions, sculptures, and massive boldness, leaves Greece and Rome behind.

We were three days in the plain and mountains of Western Thebes. I mention what we saw during these successive days;—arranging it in the order suggested by the nature of the objects, rather than by that of the specific day or hour in which they were seen. I shall give but part, however, in the present letter.

We first came to the statue of Memnon; and we had opportunity to examine it again on another day. It stands at the extremity of the plain, and at the foot of the Lybian heights; sculptured from the solid rock with a care which preserves grandeur, without violating truth and simplicity. Rising from the base of the pedestal to the height of sixty feet, and with head and breast and shoulders, and hands and feet all in proportion to the height, it had the appearance, as it rose up suddenly before us, of some mysterious and mighty apparition;—holding as it were the gate of the mountains, and keeping the guardianship of temples and tombs.

The statue of Memnon is only one among many which formerly existed here. Another, of equal

size, but not of equal celebrity, is standing near; and others at no great distance, in mighty fragments, like fallen giants with their limbs dislocated, lie prostrate upon the ground. The Memnon statue is the one so often alluded to by ancient writers, which was said to welcome with notes of music the first bright rays of the rising sun. We had the opportunity of listening to the sounds which probably gave rise to this interesting fiction. They are produced by striking on a hollow portion of the stone in the lap of the statue, which has the peculiarity of emitting a sharp metallic sound like that of brass when it is struck. The statue is seated; and is so large that the boy who ascended it, and went to the furthest lap for the purpose of producing the sounds, was entirely out of sight; so that the statue itself seemed to have the power of uttering them.

Leaving the statue of Memnon, we next came to the place called Medeenet Haboo,—the Arabic name which is given to a portion of the plain of Thebes, on the western side of the river. Among the ruins which are found here, are the remains of the great "temple palace," as it has sometimes been denominated, of Remeses III. There were other ruins around, some of them of Roman origin; but our attention was particularly directed to this. We were perplexed at first in forming a satisfactory idea of the plan of this great work. Our guides furnished us but little assistance. But we were able, after a time, and with some little effort, to ascertain, as we thought, the general outlines and position, with the successive entrances and courts; and thus, with what still remained of massive walls and splendid columns, to fill up mentally the original and grand conception.

This temple, which was the abode of royalty as well as of the Egyptian gods, may justly be regarded in its objects, the style of its architecture, and its hieroglyphical sculptures, as one of the great monuments of primitive Egypt. Some of its columns are more than twenty feet in circumference. The scenes, deeply sculptured with great skill on the walls, are chiefly battle scenes. Remeses is represented in one place as putting to rout his Asiatic enemies, who are in full armor, but in flight before him; and in another as smiting the captives taken in war, in the presence of the god Amunre. War then, as now, when prosecuted successfully, constituted glory. There are some scenes, however, of a more domestic nature. Among the sculptures, for instance, on the walls of the private apartment of this edifice, is a representation of Remeses seated on an elegant divan, surrounded with female attendants who wave their fans before him, and present him with flowers.

In another place he is represented as seated on a canopied throne, which is borne by twelve Egyptian princes, and attended by officers, who carry in their hands the royal insignia and arms.

This temple or "temple-palace" dates back in its origin to the reign of its builder, Remeses III. This king began to reign in the year 1235 before the Christian era; about three hundred years after the time of Moses.

There are interesting ruins at the Arab village called Goorneh or Koorneh, which is nearly opposite Karnae, and not far from the bank of the river;—especially the remains of a large and beautiful temple, older than the one I have mentioned. These remains are scattered over a large extent of ground, and bear the evidences of mechanical skill, as well as of sublime conception, which generally characterize the architectural remains found in this region. And not far from these ruins are other fragmentary remains of a temple, which dates back to the time of the third Thothmes, the contemporary of Moses. But I found myself more interested by the ruins generally but perhaps incorrectly known as the Memnonium, which are found between Medeenet Haboo and Koorneh.

The temple, which bears this name, was originally entered through the opening in the vast pyramidal towers, built of massive stone, and covered with sculptures, which still stand as the magnificent front of the large area or court which first opens behind them. This court, which is more than two hundred feet in length, by an hundred and eighty in breadth, was originally ornamented with a double row of columns on each side, some fragments of which only remain now. This large area opens into another court or area, a little smaller in size, which had lateral corridors of large circular columns. There were also rows of pillars of a different form at the northern and southern extremities of this court. The second court connects itself with a third, an hundred feet in length, covered with a solid roof, painted of a light blue color, and studded with stars. Forty-eight large columns of great beauty, originally supported this roof; many of which are still standing, as also a considerable number of those in the second court. The twelve central columns in the third court are thirty-two feet in height, and twenty-one in circumference. Some of the columns are prostrate. The remains of pedestals and statues are strewed around them.

The surfaces of these remarkable ruins are covered with hieroglyphical and other sculptures. Many of them seem to be historical in their character. Towns are taken. Chiefs are led captive with ropes about their necks. In one place a town, favorably situated on a rocky eminence, is defended with obstinacy, but at length overcome. Those who are able to interpret the hieroglyphical characters, state that the towns were taken in the fourth year of Remeses II., who was styled the Great. He is the same with the Sesostris of the Greek historians. There are other sculptures of a different character. Some represent religious ceremonies. In one place is

a procession of the sons and daughters of this Remeses.

One of the most remarkable things here is the statue of Remeses Sesostris. It lies near the entrance of the second court, prostrate and broken. Its estimated weight is a little less than 900 tons. It is sculptured from a single block of sienite. The passing traveller is obliged to rely chiefly upon the statements of others. I will only add, therefore, that those who have investigated the subject, inform us, that it was overthrown by the Persian king, Cambyses, when he overran and conquered Egypt, so that it may be said to have taken a nation's strength to erect it, and a nation's strength to throw it down. The king, in the Egyptian idea of government, represented the State; and the statue which was erected in his honor, may be said to have embodied the king. And as I stood beside the mighty fragments, and saw the head severed from the body and the face prostrate and hidden in the dust, I seemed to be looking upon a fallen empire.

A mere transient stranger in the land,—a sojourner of a few days,—I can of course see but little; but I have already seen more than I was prepared for. A new ray of intelligence has broken in upon the mind. I can understand now better than I once could, why Greece, in her desire to obtain knowledge, came to Egypt. But where Egypt received her high civilization, and under what circumstances it was developed, is still a problem. Of the fact of such civilization, including both knowledge and art, the numerous monuments which still remain leave no doubt. So far as I could perceive, as I looked upon the standing or fallen statues and columns, and upon the numberless beautiful sculptures on the walls, and upon the paintings still fresh and distinct, they exhibited all the attributes of just conception and finished execution which constitute excellence in art. Of course, as there were many hands employed, there are different degrees of excellence. And it is true also, that the Egyptian idea of the outward or formal representation of works of art is different from that of the Greeks and Romans. But beauty is infinitely varied. Of all the numberless works of the Creator no two are entirely alike; and the power of genius is seen in retaining the essence and divinity of the thing, (that which is its life and character,) under a variety of forms. The eye of the Egyptian artist is oriental; and accustomed to scenery and life which are found nowhere else, it is filled with the forms of oriental beauty. And that is not all which is to be said. What Egypt was, and what she was able to effect, is not to be estimated by European ideas, nor by the specimens of Egyptian architecture, which are to be found from time to time in Europe and America. She is to be judged not only in connection with her oriental position, which in part gives a character to her works; but in the light

of her own intellectual and moral history, from her own massive ruins, and on her own soil.

What I have seen of these ruins is only the beginning. I can say nothing further at present. I will only add, that new forms of life are generated, or take up their abode amidst destruction. I did not see the moss and the ivy growing upon the wall, as on the ruins of Italy and England. But these are not the only signs of change. What were once the palaces of kings or the temples of heathen deities, have other inhabitants now. Aroused by the noise of our coming, a lizard thrust his head from a hole in a column. Countless birds flew around us from the crevices in the walls. A flock of sheep and goats came in from the plain, and reposed themselves in the shade of the towers and of the fallen statue of Remeses. Groups of Arabs were seated on the massy fragments. The noise of children echoed through the walls.

#### LONDON AND ITS PEOPLE.

Think of what London is. At the last census there were 2,362,236 persons of both sexes in it; 1,106,558 males, of whom 146,449 were under 5 years of age; and 1,255,678 females, of whom 147,173 were under 5 years of age. The unmarried males were 670,380, ditto females 735,871; the married men were 399,098, the wives 409,731; the widowers were 37,080, the widows 110,076. Last year the number of children born in London was 86,833; in the same period 56,786 persons died. The Registrar General assumes that, with the additional births, and by the fact of soldiers and sailors returning from the seat of war, and of persons engaged in peaceful pursuits, settling in the capital, sustenance, clothing and house accommodation must now be found in London for about 60,000 inhabitants more than it contained at the end of 1855. Think of that—the population of a large city absorbed in London, and no perceptible inconvenience occasioned by it! Houses are still to let; there are still the usual tickets hung up in windows in quiet neighborhoods, intimating that apartments furnished for the use of single gentlemen can be had within; the country still supplies the town with meat and bread, and we hear of no starvation in consequence of deficient supply. During the last ten years the annual deaths have been, on the average, 25 to 1,000 of the population; in 1856 the proportion was 22 to 1,000; yet, in spite of this, half of the deaths that happen on an average in London between the ages of 20 and 40 are from consumption and diseases of the respiratory organs. The Registrar traces this to the state of the streets. He says: "There can be no doubt that the dirty dust suspended in the air that people of London breathe often excites diseases of the respiratory organs. The dirt of the streets is produced and ground down by innumerable horses, omnibuses and carriages, and

then beat up in fine dust, which fills the mouth, and inevitably enters the air passages in large quantities. The dust is not removed every day, but, saturated with water in the great thoroughfares, sometimes ferments in damp weather, and at other times ascends again, under the heat of the summer sun, as atmospheric dust."

London, says Henry Mayhew, may be safely asserted to be the most densely populated city in all the world; containing one-fourth more people than Pekin, and two-thirds more than Paris—more than twice as many as Constantinople—four times as many as St. Petersburg—five times as many as Vienna, or New York, or Madrid—nearly seven times as many as Berlin—eight times as many as Amsterdam—nine times as many as Rome—fifteen times as many as Copenhagen—and seventeen times as many as Stockholm. "London," says Horace Say, "*c'est une province couverte de maisons.*" It covers an area of 122 square miles in extent, or 70,029 statute acres; and contains 327,391 houses. Annually 4,000 new houses are in erection for upwards of 40,000 new comers. The continuous line of buildings stretching from Holloway to Camberwell is said to be twelve miles long. It is computed if the buildings were set in a row, they would reach across the whole of England and France, from York to the Pyrenees. London has 10,500 distinct streets, squares, circuses, crescents, terraces, villas, rows, buildings, places, lanes, courts, alleys, mews, yards, rents. The paved streets of London, according to a return published in 1856, number over 5,000, and exceed 2,000 miles in length; the cost of this paved roading was fourteen millions, and the repairs cost £1,800,000 per annum. London contains 1,900 miles of gas pipes, with a capital of nearly £4,000,000 spent in the preparation of gas. The cost of gas lighting is half a million. It has 360,000 lights; and 13,000,000 cubic feet of gas burnt every night. Last year along these streets the enormous quantity of upwards of eighty millions of gallons of water rushed for the supply of the inhabitants, being nearly double what it was in 1845. Mr. Mayhew says, if the entire people of the capital were to be drawn up in marching order, two and two, the length of the great army of Londoners would be no less than 670 miles, and, supposing them to move at the rate of three miles an hour, it would require more than nine days and nine nights for the average population to pass by. To accommodate this crowd, 125,000 vehicles pass through the thoroughfares in the course of twelve hours; 3,000 cabs, 1,000 omnibuses, 10,000 private and job carriages and carts ply daily in the streets; 3,000 conveyances enter the metropolis daily from the surrounding country.

Speaking generally, Tennyson tells us,

"Every minute dies a man,  
Every minute one is born."

In London, Mr. Mayhew calculates 169 people die daily, a baby is born every five minutes. The number of persons, says the Registrar General, who died in 1856, in 116 public institutions, such as workhouses and hospitals, was 10,381. It is really shocking to think, and a deep stigma on the people—or on the artificial arrangements of society by which so much poverty is perpetuated—that nearly one person out of five who died last year closed his days under a roof provided by law or public charity. It is calculated 500 people are drowned in the Thames every year. In the first week of the present year there were five deaths from intemperance alone. How much wretchedness lies in these two facts! for the deaths from actual intemperance bear but a small proportion to the deaths induced by the immoderate use of intoxicating liquors; and of the 500 drowned, by far the larger class, we have every reason to believe, are of the number of whom Hood wrote—

"Mad with life's history,  
Glad to death's mystery  
Swift to be hurled,  
Anywhere, anywhere  
Out of the world!"

A meeting has just been held of the unemployed, chiefly the carpenters, bricklayers, and bricklayers' laborers, of the metropolis, in which it was stated that their number—though very probably there may be some exaggeration here—is 35,000. If these men are married and have families, we get a further idea of the deep distress in this wealthy and luxurious capital, where the gold of Australia, the jewels of Goleonda, the silks and spices of the East, come for sale, and are lavished as freely on the most questionable purposes and persons as on the noblest specimens of humanity, and the most glorious objects for which men care to live. Then think of the inmates of the lunatic asylums, and the poor-houses, and the hospitals, in most cases sent there as the result of their own ignorance or imprudence. Add to these our prison population, and our criminal classes, and our prostitutes, and what a picture we get of the Night Side of London, of the classes whose existence is a reproach or a curse. In London, one man in every nine belongs to the criminal class.

According to the last reports, there were in London 143,000 vagrants admitted in one year into the casual wards of the workhouses.

Mr. Timbs calculates the number of professional beggars in London at 35,000, two-thirds of whom are Irish. 30,000 men, women and children are employed in the costermonger trade; besides, we have, according to Mr. Mayhew, 2,000 street sellers of green stuff, 4,000 street sellers of eatables and drinkables, 1,000 street sellers of stationery, 4,000 street sellers of other articles, whose receipts are three millions sterling, and whose incomes may be put down at one. Let us extend our survey, and we shall not won-

der that the public houses, and the gin palaces, and the casinos, and the theatres, and the penny gaffs, and the lowest and vilest places of resort in London, are full. In Spitalfields there are 70,000 weavers with but 10s. per week; there are 22,479 tailors, 30,805 shoemakers, 43,928 milliners; sempstresses, 21,210; bonnet makers, 1769; cap makers, 1,277. What hard, wretched work is theirs!—"Night Side of London."

From the Country Gentleman.  
BETTER STAY AT HOME.

We have seen that millions of acres of Western lands have been recently bought on speculation, and not intended for occupation by their purchasers, and that these millions lie hundreds of miles beyond other millions which were purchased under the same influences twenty years and upwards before them, and still lie unimproved. We have seen, too, that many hundreds of town, village, and city sites, have been laid out, mapped, and partially sold in small parts, some of them rapidly building up—others making a feint that way, while more lie solitary, waiting for the "good time to come." Here then, in these unoccupied wild lands and unpeopled towns, lie millions of the earnings of years of industry which our people have been so eager to plant as "a permanent investment," and where probably a great many of those investments will remain for the time of a generation before the principal and interest will return, if ever. Thousands of the adventurers who went out to locate their lands and invest their capital, have finished up their labors and returned home without the slightest idea of ever returning there as residents, or for any other purpose than to sell their acres and receive the money for them; consequently it is solely on the emigrants from home, or abroad, that their future hopes and anticipations of wealth are founded.

Now let us look for a moment at the matter in this stage of its progress. The investments are made under high hopes—the imagination and the first flush of successful speculation have been gratified, and amid the congratulations of friends, and the assurance of great success from others in the same pursuits, the adventurer turns his reluctant course homeward, from the lamented fact that he has no more money to invest, as the nucleus for another fortune. He has bought tracts of land—"well located," of course—within a mile or two of a new county seat, if not embracing the county seat itself, a village site or two, with a projected railroad running right through it, where there is sure to be a "station," and perhaps a "junction" of two or three "leading lines." This land may have cost, by the purchase of land warrants at home, by direct entry at the land office or buying at second hand, one, two, three, five, ten, or even more dollars an acre. He may have been offered perhaps,

while on the ground, a large advance on one or more of his purchases, with a small payment down, and "the balance on time." But all such propositions are scouted—nothing short of "a fortune" is to be made, and the adventurer returns home in high glee, and warms the hearts of his family and friends at his great sagacity and good luck. He is looked upon with envious eyes by his cashless neighbors, and blamed or pitied by his wiser ones for the revolution which his affairs are hereafter to undergo, according to the circumstances under which he has invested his money. If he had it of his own, free of debt, no matter. If he borrowed it, why then he must look out for pay-day, soon to be at hand. We need not pursue this branch of the affair; each party interested will attend to that.

Now, in relation to non-resident lands and land-holders, every one having any knowledge of the people who live where the lands lie, knows that the one is subjected to all the taxes and all the impositions that can be laid upon them, while the others are hated as their own downright enemies in interest. The non-resident has invested his money among them in the hope of gaining by their enterprise and industry. The actual residents improve their lands, open roads, build bridges, school-houses, churches, &c., to which the non-resident contributes nothing but what the sharp hand of taxation levies on his lands. The people, aware of this, tax his lands, of course, to the utmost, and oftentimes by the crooks and quirks of sharp practice among themselves, these lands are sold for unpaid taxes, or otherwise hampered so as to be a perpetual source of annoyance to the owners. The anticipated villages do not thrive—the expected railroad takes another route, "bursts up," or was never intended to be built at all; and so the towns, cities and county seats, gradually fade out of the landscape. Shortly the tide of emigration turns; another new and more valuable country is discovered away beyond, and the region lately so full of excitement, where one could never get land enough, is of no more account with the later adventurer, than if it had never been made, or even discovered by a speculator. Thousands of such investments will have to bide their time. The needy farming emigrant will go on till he can find "cheap land" at Congress price, while the foreign adventurers, coming out in squads and communities, usually have a shrewd purveyor, one of their countrymen, in the field, months in advance of their own coming, who has shrewdly picked up all the lands they need for immediate use, and thus they are provided for without benefit to the speculator at large.

We might name numerous cases of sunken fortunes made on *paper* twenty years ago, in like manner—of men who had accumulated competencies in active business, and invested them all in new lands, and by reverses, or loss of credit at home, were obliged to follow their new invest-

ments, to the disappointment of themselves, and the misery of their families, who had no taste for pioneer life and privations, and wrecked their happiness there, or returned after a time to seek a livelihood in the fields they had once tilled, or the work-shops, or stores or offices they had thrown up as no longer worth their attention. These, understand, were and are of the class of speculators who invest their money in new lands with a hope of future profit solely in their rise of value. Some of them among the whole number, to be sure, by the fortunate turn of circumstances, or shrewd management, have made, and will make large gains, but they are the exception—not the rule. The real gains are made by the industrious and enterprising men who actually settle the country, apply their whole energies to its development, till the soil and build its towns and villages—the natural, gradual result of their own well directed industry.

Hundreds of thrifty farms and quiet homes in the older States have been mortgaged to raise money to invest in new lands at the West, in the expectation of enormous profits. But very many of these farmers will have to work out their debts from the produce of their own acres, and scores of happy homes will be sold to pay their incumbrances, while the far-away wild lands will be grazed by the cattle of strangers refusing to buy them, or remain in their solitary wildness, unheeded and unsought by the new settler. All this is the result of over-purchase in lands not now wanted, and which will not be wanted so long as still newer lands continue to be opened, and new railways are projected to reach them. Emigration goes in shoals, as fish run in the ocean. The "first run" over, the course is changed, a new feeding ground is discovered, and away go the succeeding shoal as regardless of the discoveries of those who went before, as if they had never lived, or found a resting place on which to halt. Thus, then, the partial number who are sparsely planted as settlers, apply themselves to their own resources, work their own land, and get on as best they may, improving their fortunes or not, as their industry and sagacity shall determine. A.

#### AGRICULTURE.

Many men, who had considered themselves rich, have been heard to say within the last few weeks, that they would willingly sacrifice all the luxury and glitter of the town for some quiet homestead in the country, where they could rise, at morning, without the fear of unpaid notes before their eyes, and lie down at night free from the terrors of impending bankruptcy. Everything, a wise man has said, has its compensations. It will not be the least of the benefits which this money pressure is destined to work out, that agriculture, of late so much neglected, will again draw thousands to its ranks. As the tendency

of modern civilization is to aggregate population into towns, so the tendency of these "crises" is to drive them back into the country, and thus restore the balance between producers and consumers.

To pass from the turmoil, the care and the suspense of monetary circles, into the quiet, rural atmosphere, is like going from a dark vault, full of horrible noises, out into the breezy, sunny atmosphere of one of these delicious October days. To those who can throw off anxiety for the future, it is a revelation of peace and comfort such as they have hardly had since childhood. It brings visions of cattle lowing in fragrant meadows, of silver maples whitening in the wind, of undulating golden wheat, of new made hay, of sparkling brooks, of pigeons cooing on the eaves of barns, of swallows twittering and darting, of hills bathed in sunshine, of green valleys smiling in the distance, of peaceful lives, and quiet Christian death-beds. It pours over the soul the calm of a moral Sabbath inexpressibly sweet and consoling.

Agriculture, even if less lucrative, would be a desirable pursuit for the wise man, because of its benign influence on his character and happiness. But it is more remunerative than is usually supposed. It is both the most certain and the most productive of all manual occupations. Even for the large capitalist, it presents inducements which few other things can rival. One of the most successful farmers of this State, who had been a successful merchant in earlier life, has publicly asserted that there is no business in which money can be invested that makes a better return, if the averages of ten or twenty years are taken. Whatever tends to foster a love for agriculture should receive the countenance of statesmen, journalists and reformers.—*Public Ledger*.

#### COPPER IN THE SEA.

Some five years ago, two French chemists demonstrated that the ocean contained a notable portion of silver. Recently, these and other philosophers have again been at work upon the same subject; following it up, however, much closer, they now tell us that, calculating the whole ocean, it cannot contain less than two millions of tons of silver in solution. The truth of this statement is verified by experiments tried at various parts of the world—one more famous than the rest, by Mr. Field, an English chemist, who lives at Coquimbo, in Chili. The water he analysed was taken from the Pacific Ocean, and afforded the same result as that which the French chemist obtained from water taken off St. Malo, France, in the English Channel. That the ocean should contain minute portions of every substance of the globe that is soluble in saline water is not surprising; therefore we are, in a measure, prepared for the further discovery that the "old greybeard," ocean, contains also an enormous

quantity of copper—a fact recently proved in the laboratory of our London contributor, Mr. Septimus Piesse.

The beautiful blue color of portions of the Mediterranean Sea, is due, he says, to an ammoniacal salt of copper, while the greenness of other seas is owing to the chloride of copper. The method of extracting silver from the sea is one of simple affinity. Granulated copper being suspended in the “briny waves,” any silver salt that is contained therein is decomposed, a portion of the copper is dissolved, and the silver is precipitated thereon, from which it is afterwards parted by the usual means adopted in every laboratory. By a happy analogy, Mr. Piesse separated copper from the sea by the same process. His experiments were performed between the ports of Marseilles, on the French Mediterranean coast, and Nice in Sardinia. A bag of nails and scrap iron was suspended at the side of the steamer which plies between these places, and after the first voyage (about 12 hours) copper was indicated to be present in the iron. Four separate voyages, however, were made before the bag of iron was removed to the laboratory; then the quantity of copper was found to be so great that much surprise was shown that the presence of this metal had not been previously discovered, especially when the action of sea water on ship's bottoms has long been known.—*Scientific American*.

For Friends' Review.

CAST IN THY MITE.

Cast in thy mite—to burst the bonds that fetter half mankind—  
 To break oppression's iron rod—emancipate the mind—  
 To check the tide of error, and truth evoke to light—  
 Is surely worth an effort—let all cast in their mite!

However slight the influence that each may call his own,  
 Whate'er our rank or name may be, illustrious or unknown,  
 Caressed or slighted, loved or scorned, hopes fair or quenched in night,  
 The trumpet call, to each and all, proclaims—cast in thy mite.

If chilling want assail thee, and summer friends depart,  
 How oft the tear of sympathy relieves the troubled heart!  
 Each word of kindness spoken, each tone that yields delight,  
 Is lessening human misery, is casting in thy mite.

If fortune's golden favors attend thy pathway here,  
 Relieve the homeless wanderer, the sad and suffering cheer,  
 Seek out the lone and destitute, bring buried worth to light,  
 Reclaim the lost and erring ones and thus cast in thy mite.

O, every action, every word that soothes the widow's care,  
 Pours balm into the mourner's heart and prompts the orphan's prayer,

That cheers the sick, revives the faint, diffuses gospel light,

*Increases human happiness*—O, then cast in thy mite.  
*Rockwood, Ninth mo., 1857.* W. W.

Tremble! oh human heart,  
 When the unclouded sunshade is thy dower,  
 And sorrows darkening hour  
 Hath in thy dream no part.

Beneath the unseen cloud  
 The sheathed lightning may long hidden lie;  
 But ere the storm sweeps by,  
 Blossom and leaf are bowed.

H. Lloyd,

SUMMARY OF NEWS.

FOREIGN INTELLIGENCE.—Liverpool dates to the 19th ult. have been received.

ENGLAND.—Meetings for the relief of the sufferers by the mutiny in India continue to be held. The Atlantic Telegraph Company have decided to take the cable from the vessels and stow it, until needed, in the Plymouth naval dock yard. The company have adopted measures for raising the submerged portion of the cable. A large engineering firm has made proposals for laying the cable;—the laying to be completed by Sixth or Seventh month next.

The state of the crops is encouraging, the wheat crop being above the average.

IRELAND.—The present season is pronounced more favorable for the crops than any since 1826. The symptoms of potato-rot, which had shown themselves in some localities, have entirely disappeared.

Martial law has been proclaimed in Belfast, and a Commission has been sent to inquire into the causes of the late outrages.

FRANCE.—A monetary panic had occurred at the Paris Bourse and the Credit Mobiliers fell 17 francs. The manufacturers of Lyons have suffered severely in consequence of an inundation in the department of Ardeche. Various speculations were afloat respecting the Imperial interview at Stuttgart. It is reported that the reduction of the standing armies will be one of the subjects discussed.

SPAIN.—The ministers had given in their resignations, which were not accepted by the Queen. Seizures of the Spanish papers continued to be made, and various foreign papers had also been confiscated.

ITALY.—The Inauguration of the statue of the Immaculate Conception took place at Rome on the 8th ult. The Pope, attended by numerous prelates, proceeded to the Piazza di Spagna, where the column surmounted by the statue is situated, bestowed his benediction on the statue and burned incense around it.

AUSTRIA.—The monetary panic had extended to Vienna, the National Bank having reduced its issues preparatory to resuming cash payments. Some new financial step is said to be about to be taken by the Government. Numerous failures had taken place in leading cities of Hungary.

PRUSSIA.—The Evangelical Alliance had commenced its conferences at Berlin. The attendance was numerous, delegates having been sent from all quarters.

INDIA.—Advices from Calcutta are to 8th mo. 10th. Gen. Havelock had retaken Cawnpore. Delhi was not taken, and it was reported that the English troops had been obliged to retire from before it in consequence of sickness. Other reports state that reinforcements had arrived and an assault upon the town was expected to be made in a few days. A detachment of troops which had gone in pursuit of the Dinapore mutineers were defeated and obliged to retreat. Mutinies continued to break out in various places, including one in the Bengal Presidency. A plot to

murder the Europeans at Benares and Jessore had been discovered and thwarted.

A revolutionary spirit is manifesting itself in the Dutch possessions in India, and an expedition is about to be sent by the Dutch Governor against the Radschas of Didak and Takaip residing in the island of Timor, one of the Moluccas. It is said that the insurrectionary spirit prevails throughout Eastern Asia from the 50th degree north to the 20th degree south latitude.

**AUSTRALIA.**—Dates from Melbourne are to 7th mo. 22d. The production of gold is increasing. Wool has declined 2d per pound. At Buckland River, about 300 Europeans had attacked 1500 Chinese and defeated them. The ringleaders had been taken into custody, and the miners, both Europeans and Chinese, had returned to their labors.

**GUATEMALA.**—Cholera prevails extensively in Guatemala. In the less elevated portions of the country the deaths have been proportionally few, but in the *tierras calientes*, it has been extremely fatal, carrying off its victims in a few hours. The U. S. Minister to Guatemala, W. E. Venable, died of cholera on the 22d ult.

**HONDURAS.**—The country continues tranquil. The engineers of the Honduras Railroad are busily engaged in making surveys. According to the estimates made by some of these, it appears that the cost of the work will be twenty-five millions of dollars.

**NICARAGUA.**—A treaty of amity regulating the boundary between Nicaragua and Costa Rica was ratified by Nicaragua on the 12th of the 8th mo. last. The city of Granada is being rapidly rebuilt. A decree relative to duties on imports and exports prohibits the exportation of gold above the value of sixteen dollars except on payment of two per cent. Coined silver is to pay four per cent. Gold and silver in transit is to pay one per cent. at the port of entry.

**COSTA RICA.**—Gen. Canas had returned from Nicaragua and was received with demonstrations of joy by all classes.

It was reported that Nicaragua had seized the San Juan river boats in the name of Vanderbilt, but the report wants confirmation.

**PERU.**—The news from the seat of war is unsatisfactory. Nothing of importance appears to have been done on either side. A severe shock of an earthquake took place on the 20th ult., by which the city of Pnira suffered severely. The shock lasted one minute and forty-five seconds, completely destroying a number of churches and injuring every building in the town. The river Pnira, which had been dry, suddenly rose; in other places the ground opened and ejected jets of dark colored water.

**BUENOS AYRES.**—Disturbances had occurred in the provinces under Urquiza, and though they had been suppressed, a general feeling of dissatisfaction with his government was manifest. The Provincial Legislature had confiscated all the lands conferred by Rosas upon his minions. The first railroad in the Argentine States was to be inaugurated on the 30th of the 8th month. It runs from Buenos Ayres to a small inland town, and is only twelve miles in length.

**MEXICO.**—A revolution had broken out at Guatulara, and was still progressing. Several arrests of a political character had been made at Vera Cruz.

**CALIFORNIA.**—California dates to the 15th ult. have been received by the steamship *Star of the West*. She brings \$1,250,000 in gold. The State election resulted in the success of the Democratic ticket. The vote for Governor stood, Weller (Dem.) 40,000; Stanley (Rep.) 27,000; Bower (Amer.) 27,000.

The town of Columbia, Tuolumne Co., was almost totally destroyed by fire on the 25th of Eighth month last, only a few buildings on the outskirts of the town escaping the general ruin. Several persons were killed by an explosion of powder in one of the houses.

A large majority of the votes cast at the late election were in favor of paying the State Debt. The chief cutter in the Branch Mint at San Francisco has been arrested for purloining gold therefrom. He has confessed that he has abstracted gold to the amount of \$33,000. A Vigilance Committee has been formed in Carson Valley, in consequence of outrages committed by a gang of desperadoes. A number of overland emigrants had been murdered by the Indians. The engineers of the Kirk expedition have ascertained that Honey Lake Valley lies within the State limits. It has heretofore been considered a portion of Utah Territory.

**LOWER CALIFORNIA.**—A formidable expedition composed of a hundred convicts who had escaped from the penal settlements on Carmen Island, had landed at Muleje, a port on the Gulf. Under the command of a notorious bandit Juan Pico, they had seized a vessel and made this attempt to force their way out of the country. Gen. Castro was making preparations to meet the desperadoes and force them into subjection.

**OREGON.**—The Convention of delegates to frame a State Convention for Oregon, met at Salem, on the 17th of the 8th mo. Judge Deady, a strong pro-slavery man, was chosen President of the Convention. It was thought that a clause authorizing slavery in the State would be ingrafted in the Constitution, but it is hoped that a clause so abhorrent to the principles lying at the foundation of our Government will be rejected by the people.

**DOMESTIC.**—The election for members of the Territorial Legislature of Kansas was to take place on the 5th inst. The Lawrence Herald of Freedom states that small parties have been going into the Territory from Missouri, and spreading themselves over the country for the purpose of voting. Col. Titus declares thousands would be sent quietly into the Territory and that the pro-slavery judges would receive their votes.

A full and satisfactory treaty with the Pawnee Indians was concluded at Table Creek on the 24th ult.

Captain Russell, who has arrived in Missonri from Salt Lake, states that the Mormons have fortified Fort Bridges with the declared intention of defending it against the United States troops. A part of the troops belonging to the Utah expedition had arrived at Fort Kearney, and a hundred kegs of powder in a Mormon train had been seized by Col. Hoffman.

The monetary difficulties continue unabated. The extensive banking house of Clark, Dodge & Co., New York, suspended payment on the 4th inst., and on the same day it became known that the Reading Railroad notes, issued on its floating debt, had been protested. Every day brings news of the suspension of Banks and mercantile houses, and the closing of factories, throwing out of employment great numbers of laborers.

It is estimated that over 20,000 sewing machines were sold in the United States during the past year.

Four days later intelligence has been received from Europe. The East India Company has accepted the proffer of the European and American Steamship Companies for steamers to convey troops by the overland route. More details of news from India are published. The merchants of Calcutta have petitioned the Queen to take the control of India. Another mutiny at Bombay has been repressed. Gen. Havelock had resumed his march on Lucknow.

It was believed that there would be no change in the Spanish Cabinet. The recent trouble was the refusal of the Queen to remove Gen. Concha. England refuses to give up the Island of Perim to Turkey. Accounts from China state that teas were coming forward, and a large supply was anticipated, if the route continued open.

A reconciliation between Austria and Russia is anticipated. Cholera is raging in the north of Europe.

# FRIENDS' REVIEW.

A RELIGIOUS, LITERARY, AND MISCELLANEOUS JOURNAL.

VOL. XI.

PHILADELPHIA, TENTH MONTH 17, 1857.

No. 6.

EDITED BY SAMUEL RHOADS,  
TO WHOM ALL COMMUNICATIONS MAY BE ADDRESSED.

PUBLISHED WEEKLY  
At No. 50 North Fourth Street,  
PHILADELPHIA.

Price, PAYABLE IN ADVANCE, Two dollars per annum  
or six copies for Ten dollars.

Postage on this paper, when paid quarterly or  
yearly in advance, 13 cents per annum in Pennsyl-  
vania, and 26 cents per annum in other States.

*A Testimony from the Monthly Meeting of Friends<sup>s</sup>  
for the Eastern Division of Cornwall, respect-  
ing SARAH RUNDELL, deceased; aged about 92  
years; a Minister about 50 years.*

This our beloved friend was the eldest daughter  
of William and Charity James, and was born at  
Redruth, in 1764. Of her early religious experi-  
ence little is now known; but there is reason  
to believe that while in the prime and vigor of  
her days she was concerned to yield her heart to  
the Lord. During the last nine years of the life  
of Catherine Phillips she was her affectionate  
companion.

On her marriage, in 1803, with our late friend  
Samuel Rundell, of Liskeard, she became a mem-  
ber of this Monthly Meeting, where, a sphere of  
religious duty opening before her, she endeavored  
to exercise the gift of the ministry bestowed upon  
her with faithfulness and integrity of heart. She  
was recorded as a minister in 1808.

Diligent also in the performance of social  
duties, she promoted, with characteristic energy,  
measures for elevating the condition of the poor  
and improving the education of their children.  
Though not exempt from affliction, she was  
enabled to bear it with meekness and resignation.

With the approbation of her friends, she was  
often engaged in religious services, chiefly in  
this county, in conjunction with her valued hus-  
band and other ministers; and from 1828 to  
1831, in company with another Friend, she per-  
formed at different times visits to the meetings  
and families of Friends comprising the Quarterly  
Meeting of London and Middlesex.

The last service of this nature was in 1844,  
when her husband and herself, (both then aged  
about 80,) visited the families of their own par-  
ticular meeting, thus continuing to manifest a

lively concern for the religious welfare of their  
friends.

In the exercise of her gift in the ministry we  
believe she was careful to wait for the fresh  
anointing for service; and although her commu-  
nications were generally short, they were lively  
and weighty. Good judgment, united with reli-  
gious experience, rendered her serviceable also  
in meetings for discipline, which she attended  
with much regularity through a long series of  
years.

Our beloved friend survived most of her early  
contemporaries. She continued to attend her  
own meeting occasionally, with the help of a  
wheeled chair, as long as her strength permitted.  
For the last two or three years this effort was too  
great; yet in the state of weakness to which she  
was now reduced, love to her friends and sympathy  
with the poor and afflicted were not diminished.  
Under a grateful sense that her own wants were  
well supplied, she was anxious to relieve those of  
others.

Her protracted life and the very gradual de-  
cline of the natural powers precluded much ex-  
pression of her feelings toward the close. But  
while, even in advanced years, a sense of con-  
tinued liability to temptation, and of the daily  
need of watchfulness, often brought her low, she  
was also cheered with an animating confidence  
that a brighter day awaited her; and in the con-  
viction that she had nothing of her own to trust  
in, she expressed at times a humble hope in the  
love and mercy of her Redeemer.

She peacefully departed this life without much  
apparent suffering, on the 22nd day of the second  
month, 1856; and her remains were interred at  
Halbathic, near Liskeard, on the 27th of the  
same.

## A TRUE GENTLEMAN.

The true gentleman is God's servant, the  
world's master, and his own man. Virtue is his  
business, study his recreation, contentedness his  
rest. God is his father, the church his mother,  
the saints his brethren, and all that need him  
are his friends. Heaven is his inheritance, reli-  
gion is his mistress, loyalty and justice are two  
ladies of honor, devotion is his chaplain, chastity  
his chamberlain, sobriety is his butler, and tem-  
perance his cook; hospitality is his housekeeper,  
and providence his steward.

## AUGUSTUS HERMANN FRANCKE.

(Continued from page 67.)

During the remainder of his stay at Luneberg, Francke continued his studies under the care of Sandhagan, paying particular attention to the languages, and interpretation of the Bible.

About February, 1688, he left this place, and went to Hamburg, where he resided until nearly the close of the same year. He was very happily situated here, on account of the Christian society, with which he had the opportunity of mingling. He found intercourse with persons of like feelings with himself, to be both pleasant and profitable. He recommends strongly to Christians the practice of associating with one another, for mutual improvement; for it is with them, he said, as with coals of fire, which, when placed together, increase each other's heat; but when separated, are soon extinguished. He became acquainted here, with the pious and excellent Nicholas Lange, afterwards superintendent in Brandenburg. By conversing with him on the subject of education, he became so much interested therein, that he determined to open a private school for children in Hamburg. This employment had an important influence on his character, and the course of his future life. He states, that in the teaching of this school, he learned to practice that patience and forbearance, for which he was afterwards so remarkable. He discovered here the great deficiency of proper instruction in the schools of his country; and hence arose a strong desire to be the means of improving and reforming them. He often said, his engagements at Hamburg were the cause of all the exertions he afterwards made in the same way.

In December, 1688, he received again the offer of the scholarship, which had supported him at Kiel, with the permission to go to any other university which he might choose. While making up his mind where he should now continue his studies, the words of our Saviour to Peter, "when thou art converted, strengthen thy brethren," determined him to return to Leipzig. Here he had received the appointment of private teacher, and had a large circle of acquaintances, so that his opportunities of usefulness would be considerable, both among them and the students. He trusted, too, that as some interest had been excited there, in the study of the Bible, during his former residence, it would not be difficult to renew and increase that interest, and thus gain access to the minds of many. He foresaw that his views of the necessity of an entire change of heart, and of the importance of something more than mere knowledge, to prepare one for the duties of the ministry, would not be approved at Leipzig. But he determined, relying upon divine assistance, to declare the truth openly and faithfully, whatever difficulties might be thrown in his way.

But before he began his labors, he determined

to pay a visit to Spener, that he might gain some knowledge of his character and mode of preaching; and confirm himself, by intercourse with him, in the views which he had adopted. He accordingly went to Dresden, where he was most kindly received by Spener, in whose family he took up his abode. During a stay of two months, he had full opportunity of making known his plans and wishes, and of receiving counsel and encouragement. Spener fully approved his plans and feelings, and gave him the promise of his countenance and support. These two months Francke ever considered as among the most happy and improving of his life.

In the early part of the year 1689, he began, as a private teacher, to deliver lectures, the subjects of which were generally some of the Epistles of Paul in the New Testament. He read a course of lectures, too, upon the difficulties of the study of Theology. They were all of a practical character, and promised, together with the societies for the study of the Scriptures, which increased in number and interest, to be very useful. The approbation with which he was received was so great, that the room in which he lectured could not contain his class, and he was obliged to obtain the use of one of the public lecture rooms. But even this was very soon so much crowded that many of his hearers were compelled to stand at the door and windows. He employed various other means, which it is unnecessary to relate, for producing the effect which he desired—the promotion of true religion.

His untiring exertions were not without effect. Olearius, the Rector of the University, when Francke visited him one day, embraced him, and said, with tears of gratitude, that he had seen the effects of his labors upon his son, who, before he had come to Leipzig, had been far from promising, but was now an entirely different man, and had been the means of a great change in his whole family. There were many instances of this kind. Not a few of the theological students, who were without piety, were brought to true repentance, and began their studies with new zeal and a new spirit. Francke expresses his gratitude to God, that he had been permitted to see this result, and that many of them were enabled to endure, with a truly Christian temper, the reproaches cast on them by their fellow students on account of their change of character.

We have stated that Francke anticipated opposition in his labors at Leipzig. In this he was not disappointed. The party in the church who were so violent in their censures of Spener, could not look with indifference upon these efforts of Francke to extend the hated principles of Pietism. He was envied, too, on account of the number of his hearers, and his popularity among the students. The most trivial objections were made against him; as, for instance, that he delivered some of his lectures in the German instead of the Latin language, which was commonly used among

scholars at that day; that he made the way of salvation too difficult; that he held himself up as a model of piety; that he professed to know more of the plan of salvation than those older and wiser than he; that "he strained at a gnat, and swallowed a camel." They called him a Separatist, a founder of a new sect of Pietists, and a hypocrite; and all because they could not understand how any one should seek after holiness with so much earnestness as he did, or labor with so much activity to do good without some wrong motive at heart. Their bitterness and activity against him created, eventually, a considerable excitement; and the Court, hearing of it, ordered an investigation of the difficulties. Francke was summoned before a commission appointed for this purpose, together with some of his friends; but although the theological faculty, and the ministers of the city, were, for the most part, opposed to him, he was declared innocent of any improper conduct.

After he had finished his business at Lubeck, and was preparing to return to Leipzig again, he received an invitation to preach in the church of St. Augustine, in Erfurt. He looked upon this call as providential; and though, from the sentiments of the ministers at Erfurt, he could expect nothing but violent opposition there, he determined to accept it. He was soon after appointed preacher in that church.

Among the ministers at this place he found one of the same views with himself, who afterwards proved himself a faithful friend. This was Dr. I. J. Breithaupt, whom he had known at Kiel. They both preached, with earnestness and plainness, the necessity of an entire change of heart, and a union with the Lord Jesus Christ by faith, as the only ground of salvation. The people, who were awakened by these representations to a sense of their true situation, could find nothing to satisfy the longings of their souls after holiness and happiness, in the cold and merely moral sermons of the other ministers of Erfurt. They flocked to the churches of Francke and Breithaupt, where the way of mercy was opened to their darkened minds, and many were converted unto the Lord. Many of the Catholics, too, attended their preaching, and were brought to a knowledge of the truth. Besides their public preaching, Francke and Breithaupt held social meetings daily in their houses, in which they explained to the people more familiarly the sermons which they heard, and spoke with individuals on the state of their own hearts. Francke also delivered lectures daily upon the Bible to the students at this place, and a number of students left Leipzig and Jena, for the express purpose of attending them. Another means of doing good which he employed, and which was peculiarly important among a people so ignorant on the subject of religion, was the selling and gratuitous distribution of New Testaments, and other books upon practical piety.

It was not to be expected that these labors would pass without frequent and severe censure. To most of the people of Erfurt, the doctrines which he preached, though the simple truths of the gospel, were entirely new. A few who compared them with the Scriptures, acknowledged that they accorded with them; but the majority could give them no other name than pietism, or fanaticism. The circumstance that he had frequently ordered New Testaments, and "Arnd's True Christianity," from Luneburg, occasioned a report that he was circulating heretical books among the people. The magistrates issued an order that no such books should be brought into the city. Francke did not, as was natural, suppose that such books as he had sent for were forbidden by this edict, and continued to circulate them. They now gave directions to take possession of every package which was directed to him. Very soon after, one arrived; and Francke being called before them, was asked, "how he had dared to disobey their order;" he assured them that he had not done so. The officer, to convict him of guilt, caused the package to be brought and opened, when, to his surprise and confusion, it was found to contain nothing but New Testaments. Francke was of course honorably dismissed. The effect of the affair was to make it known through the city, that he had New Testaments to dispose of, and thus to increase the demand for them a hundred fold.

He had now resided fifteen months in Erfurt, when, in consequence of some secret insinuations of his enemies, which came to the ears of the Elector of Mayence, he sent a decree to Erfurt, which directed that, "inasmuch as Mr. Francke was a leader of a new sect of fanatics, and the cause of much disturbance, he should be dismissed from his office, and ordered immediately to leave the city." As soon as Francke heard of this, he went before the council, and complained to them, but without effect; for he was immediately deposed from his office, and ordered to leave the city within twenty-four hours. He did not resist this order; but, conscious of his innocence, wrote a letter to the magistrate, calmly representing the impropriety of condemning him unheard, and even without letting him know the crimes of which he was accused; thus denying him a privilege which was granted even to robbers and murderers. A large and respectable body of citizens petitioned in his behalf, and the children of his congregation came and asked upon their knees that he might remain. But it was all in vain, and he was compelled to prepare for his departure.

The few hours that he was allowed to remain in the city, he spent in exhorting his friends, who assembled at his house, to continue steadfast in the grace which they had received. They wept sore at the thought of his departure; but he was comforted by the abundant consolations of the Holy Spirit, and left the city in a very

happy state of mind. He returned to his mother and family at Gotha, and by the way composed a beautiful hymn, expressive of his peace and joy.

The Duke of Gotha, when he heard of these proceedings, sent one of his ministers to inquire into the affair; and being convinced of Francke's entire innocence, expostulated with the magistrates of Erfurt; and when this produced no effect, with the Elector himself. His object was not, however, to restore him to his station at Erfurt; he wished to retain him in his own dominions. At the same time he received offers from several of the neighboring princes; from the Duke of Saxe-Coburg of a professorship, and from the Duke of Saxe-Weimar, of the station of court preacher. But the finger of Providence seemed to him to have already pointed out the path of duty. The same day that he was ordered to leave Erfurt, he received a letter from the Elector of Brandenburg, inviting him to his dominions; and he determined to wait the issue of this invitation. About a month afterwards, he received the appointment of professor of Greek and Oriental languages in the new University at Halle, and Pastor of the church of St. George in Glaucha, a suburb of that place. He arrived in Halle in January 1692.

[To be continued.]

For Friends' Review.  
EVIL SPEAKING.

There are some excellent remarks, in the writings of Archbishop Leighton, on evil speaking, a sin which has in all ages of the church demanded its peculiar care, and against which individuals should maintain a faithful watch on all occasions, from the creeping and crafty manner it uses to obtain an entrance into their minds.

After very forcibly shewing the great injustice that the enemies of the truth have done to its professors by evilly speaking against them, and insinuating calumnious charges wherever they find prejudice has opened the way to receive them, he goes on to address the professors of the truth themselves in the language of warning.

"Beware," says he, "seeing this is the very character of the profane mind, and the badge of the enemies of religion, beware of sharing in the least with them in it. Give not easy entertainment to the reports of profane or mere civil men against the professors of religion; they are undoubtedly partial, and their testimony may be justly suspected. Lend them not a ready ear to receive their evil speakings, much less your tongue to divulge them and set them further going: yea, take heed that you take not pleasure in any, the least kind of scoffs, against the sincerity and power of religion. And all of you who desire to walk as Christians be very wary that you wrong not one another, and help not the wicked against you by your mental miscon-

structions and miscensures one of another. Far be it from you to take pleasure in hearing others evilly spoken of; whether unjustly, or though it be in some way deservedly, yet let it be always grievous to you, and no way pleasing to hear such things, much less to speak of them. It is the devil's delight to be pleased with evil speakings. The Syrian calls him 'Eater of calumnies or slanders.' They are a dish that pleases his palate, and men are naturally fond of this diet. In Psalm xxv. 16, there is a word that is rendered, mockers at feasts, or feasting mockers—persons who feasted men's ears at their meetings with speaking of the faults of others scoffingly, and therefore shared with them of their feasts. But to a renewed Christian mind, which hath a new taste and all its senses new, there is nothing more unsavory than to hear the defaming of others, especially of such as profess religion. Did the law of love possess our hearts, it would regulate both the ear and the tongue, and make them most tender of the name of our brethren: it would teach us the faculty of covering their infirmities, and judging favorably, taking always the best side and most charitable sense of their actions; it would teach us to blunt the edge of our censures upon ourselves, our own hard hearts and rebellious wills within, that they might remain no more sharp against others than is needful for their good.

"And this would cut short those that are with out, from a great deal of provisions of evil speaking against Christians, that they many times are furnished with by Christians themselves, through their uncharitable carriage one toward another."

"'Could the beauty of virtue be seen,' said a philosopher, 'it would draw all to love it.' A Christian, holy conversation hath such a beauty, that when they who are strangers to it, begin to discern it at all aright, they cannot choose but love it; and where it begets not love, yet it silences calumny or at least evinces its falsehood."

INHUMANITY OF WAR—ITS NECESSARY OUT-  
RAGE ON THE NATURAL AFFECTIONS.

In the reign of Queen Anne, a soldier, belonging to the marching regiment quartered in the city of Worcester, was taken up for desertion, and, being tried by a court martial, was sentenced to be shot. The Colonel and Lieut. Colonel being at the time in London, the command of the regiment had descended in course to the Major, a most cruel and inhuman man. The day on which the deserter was to be executed having arrived, the regiment, as is usual on these occasions, was drawn out to see the execution.

It is the custom to draw lots among the several corporals for this disagreeable office; and when every one expected to see these lots as usual, they were surprised to find that the Major had given

orders that the prisoner should die by the hand of his own brother, who was only a private man in the same company; and who, when the cruel order arrived, was taking leave of his unhappy brother, and, with tears fast flowing, was hanging for the last time about his neck.

On his knees did the poor fellow beg that he might not have a hand in his brother's death; and the poor prisoner, forgetting for the moment his petitions to heaven, begged to die by any hands but those of a brother. The unrelenting officer, however, could by no means be prevailed on to revoke his cruel sentence, though entreated to do so by every officer of the regiment. On the contrary, he swore that the brother, and he only, should be the executioner, if it were merely for example's sake, to make justice appear more terrible. When much time had been wasted in fruitless endeavors to soften the rigor of this inhuman sentence, the prisoner prepared to die, and the brother to be the executioner.

The Major, strict to the maxims of war cruelty, stands close to see that the piece is properly loaded, which being done, he directs that the third motion of his cane shall be the signal to fire. Accordingly, at the third motion, the Major, instead of the prisoner, received the bullet through his own head, and fell lifeless to the ground.

The man had no sooner discharged the piece, than throwing it on the ground, he exclaimed: "He that can give no mercy, no mercy let him receive. I had rather die this hour for that man's death, than live a hundred years, and take away the life of my brother."

No one seemed to be sorry for this unexpected retribution on the inhuman Major; and the man being ordered into custody, many gentlemen present, who had been witnesses to the whole affair, joined to entreat the officers to defer the execution of the other brother till the Queen's pleasure should be known. The request being complied with, the city chamber that very night drew up a very feeling and pathetic address to her Majesty, setting forth the unparalleled cruelty of the deceased officer, and humbly entreated her Majesty's pardon for both the brothers. The brothers were pardoned, and discharged from the army.

There is nothing very unusual for war in this tale of a former age. It is a fair specimen of the spirit, the usages and exigencies of the custom. It must, in order to exist at all, ignore and spurn all claims of humanity incompatible with its selfish purposes. Very true, such cases are comparatively rare now; but this must be credited to influences that are undermining the whole custom as a relic of barbarism, and not to any good inherent in the system itself. It is in principle the same it ever has been; and should its future exigencies require, it may even surpass hereafter all its past outrages.—*Advocate of Peace.*

For Friends' Review.

JOHN PARKHURST, THE LEXICOGRAPHER.

John Parkhurst (using the words of his biographer prefixed to one of his *Lexicons*;) "was born in June, 1728. He received the earliest rudiments of his education at the school of Rugby, Warwickshire, England, an education which, by intense mental labor, aided by a mind eminently gifted with sound judgment and deep penetration, he rendered excellent in itself, and beneficial to the world of letters, as well as to the cause of the Christian religion. The whole life of this truly excellent man and devout Christian was honorable to human nature, and his death a sublime example of faith and resignation."

The feature in his character likely to attract attention, and especially worthy of imitation at the present time, is the high sense he entertained of strict justice, and the steady resolution with which he practised it on all occasions. An incident which occurred between him and one of his tenants will illustrate the high value he put upon that important principle. "The tenant falling behind hand in the payment of his rent, which was £500 per annum, it was represented to his landlord that it was owing to his being over rented. This being believed to be the case, a new valuation was made; it was then agreed that, for the future, the rent should not be more than £450. Justly inferring, moreover, that if the farm was *then* too dear, it must necessarily have been *always* too dear; unasked and of his own accord, he immediately struck off £50 from the commencement of the lease, and instantly refunded all that he had received more than the £450 per annum."

The example set by this worthy man was brought to mind in a conversation which passed between a wealthy gentleman and myself lately, during which he informed me, that his father had been for many years a manufacturer of cotton goods, and it is generally understood that the wealth bequeathed to this son had been acquired in that business. He continued the business after his father, but some years since gave it up on account of its connection with slavery; and, rather than run the risk of using slave grown materials, he had restricted himself to the use of linen, and had for a considerable length of time abstained from the use of sugar. The example which he thus far set, one could not refrain from commending, yet it seemed to indicate a relationship to one more step in the same direction: the example of Parkhurst was spoken of, and the question respectfully put whether their cases were not strikingly parallel, and whether his high sense of strict justice was not worthy of imitation.

And, now, should these hints catch the eye of any one similarly circumstanced, that is, in the enjoyment of wealth obtained by means which a more enlightened conscience now repudiates, to

such an one the query is respectfully and affectionately proposed, whether a portion of the property thus obtained should not be appropriated towards promoting the liberty and welfare of those whose "hire had been kept back by fraud." "Finally," as says the Apostle, "*Whatsoever things are honest, whatsoever things are just, if their be any virtue, think on these things.*"

Monkton, Vt., 9mo.

#### FRIENDLY INTERNATIONAL ADDRESSES.

A significant tribute to the efficacy of these Addresses to promote peace was paid by the French ambassador now in England, at the Lord Mayor's dinner, at the Mansion House, in March last. Adverting to the address sent by the merchants and traders of London to the French nation in 1853, which was presented to the Emperor by a deputation of whom the late Samuel Gurney was one, Count Persigny used these emphatic words: "At that time circumstances were a serious aspect. Violent passion sought to revive old national hatred, by representing the re-establishment of the empire as the signal of a fresh war between the two countries. On both sides of the channel, minds were occupied with dangerous anticipations, when suddenly the voice of the city of London was heard emphatically to declare that the English nation desired the friendship of France, and from that day the Anglo-French Alliance commenced. \* \* \* The city of London, by its address to the Emperor, achieved a great deed; and I am happy now, as representing my sovereign and my country, to have this solemn occasion of thanking you for it."—*Report of London Peace Society.*

#### THE TRAVELLER.

"And, behold, a man of Ethiopia, an eunuch of great authority under Candace queen of the Ethiopians, who had the charge of all her treasure, and had come to Jerusalem for to worship, was returning, and sitting in his chariot, read Esaias the prophet."—ACTS viii. 27, 28.

There is much to be admired and imitated, in what we read of this stranger. He was born a heathen, in a country far from the land of promise. He occupied a high and responsible situation at court, amid all the snares of prosperity. Yet he was a believer in the true God, and he found time to take a long and difficult journey, in order to worship in His holy temple of Jerusalem. Surely, after reading this, none of us can say that we are prevented by circumstances from attending to our souls. We may learn, also, from this Ethiopian, to seek to improve diligently the advantages we enjoy. He was no mere formal worshipper; for now that the services were over, he is still engaged in recollecting and meditating upon them. He is truly "*redeeming the time,*" studying the Scriptures, while travelling, and, some think, must have been reading aloud to his servant, so that Philip heard him.

Surely his example may well make us ashamed to think how often we attend carelessly at the public worship of our God, and how little we seek to improve what we have heard afterwards at home.

In Thy name, O Lord, assembling,  
We, Thy people, now draw near:  
Teach us to rejoice with trembling:  
Speak, and let Thy servants hear.  
Hear with meekness,  
Hear Thy word with Godly fear.

While our days on earth are lengthen'd,  
May we give them, Lord, to Thee!  
Cheer'd by hope, and daily strengthen'd,  
May we run, nor weary be,  
Till Thy glory,  
Without clouds, in heaven we see.

(Communicated for Friends' Review.)

#### ASTRONOMICAL DISTANCES.

The question is often asked by those who have not examined the subject, when the distances of the heavenly bodies are stated,—"*How do you know the moon or the sun is so far off—you have never been there?*" The answer might be given in many ways, for the proofs are innumerable; but a few simple reasons will suffice at present. A common land-surveyor will readily determine the width of a large river, by measuring a few rods on one side, without ever crossing it—the *direction* or relative position of the objects varying, as he moves one way or the other; and by observing accurately the amount of variation, he calculates as accurately the distance. Persons are sometimes met with, who will not believe the moon to be any larger than a balloon; yet they do not reflect that a balloon at its utmost height can be seen only a few miles; while the moon appears alike over the whole earth. It passes across the face of the sun and causes an eclipse—the partial shadow of that eclipse is thousands of miles in breadth. This shadow shows something of its real magnitude. That which, seen at the same time from places ten thousand miles from each other, is apparently the same in size from each, must be many times ten thousand miles distant. In the same way, but on a much larger scale, that a surveyor measures the distance of an object ten miles off across water, an astronomer determines the remoteness of a planet or star many million miles distant.

Those who have heard the distances to the heavenly bodies repeatedly given in numbers, generally have but little appreciation of the comparative distances. The *real* distances cannot of course be comprehended at all. It has often afforded an interesting occupation to the mind, to compute the various periods of time which swiftly moving objects would be in reaching those bodies. Take, for example, a swift railway train. One of our most rapid "expresses" or "lightning trains," if running day and night, would travel 700 miles in twenty-four hours. It would pass the whole circumference of the earth in thirty-

six days; it would travel the distance of the moon in less than a year. It would traverse the whole face of the sun in less than four years, and would pass from here to the sun in three hundred and fifty years.

The earth sweeps around the sun yearly in a circle one hundred and ninety millions of miles in diameter. The swift railway train would require about seven hundred years to perform the same journey. Yet the *fixed stars* are so remote, that when seen from opposite sides of this immense orbit, they appear in precisely the same position. Travelling round that enormous circle, has not apparently changed their direction from us in the slightest degree. Even the most powerful telescopes had not until within a few years, detected the faintest change in their position—showing their remoteness to be immeasurably greater than the breadth of the earth's orbit. New and powerful instruments, however, and careful observation, have at last determined their distance. The nearest have been found invariably to appear to move backward and forward once a year, as the earth advances and recedes in its yearly course. Yet this apparent motion of the stars is not greater, even with those that move the furthest, than would be the motion of an object a mile distant by the movement of the eye only one-third of an inch!

Determined in this way, the following distances of some of the fixed stars have been ascertained with comparative accuracy:—

The nearest fixed star (Alpha Centauri, only seen in the Southern hemisphere,) is twenty million million miles.

The North Star is about two hundred million million miles.

The bright star in the constellation Lyra (Alpha Lyrae) is about one hundred and twenty million millions.

A small star in the leg of the Great Bear (called 1830 Groombridge) is about eighty million millions. Sirius (the dog star) is about the same distance.

A star in the Swan (known as 61 Cygni) is about sixty million millions.

These are some of the *nearest*.

Now, it may be interesting to estimate the time required for moving objects to reach one of those stars. Many years ago, and when their distance was only guessed at, a fine writer made use of the following striking comparison; "If the dove which returned no more to Noah, had then been commissioned on an errand to the nearest fixed star, it would still be on its journey; after towering for forty successive centuries through the heights of space, it would not yet have reached the middle of its destined way!" This estimate was quite as safe as it is poetical; to prove which another may be employed:—If the swiftest express train that ever thundered over a railway, could have left the earth for the nearest fixed star, in the days of Adam, (travel-

ling at the rate of 260,000 miles a year,) it would not yet have passed over one ten thousandth part of its course, and the star would still appear to the onward travellers precisely the same in size, as when they set out even before the commencement of antiquity, and of the empires which have arisen and decayed through the sixty centuries of time.

The velocity of light has been determined in various ways, to be equal to

192,000 miles per second;
11,400,000 " " minute;
684,000,000 " " hour;
16,000,000,000 " " day; and
6,000,000,000,000 " " year.

Light would be more than three years in coming from the nearest fixed star; twelve years in reaching us from Sirius, and thirty years from the North Star. If the latter, therefore, were this day blotted from existence, it would continue for thirty years to come, to guide the footsteps of the escaping fugitive.

The onward motion of the fixed stars among each other, furnishes an interesting estimate of their vast distance. Many have actually been discovered to have progressive motion; but it is so small *apparently*, that they are usually termed fixed, as the lapse of centuries effects but little in their appearance, the constellations having scarcely changed a particle since in the book of Job we are told of Pleiades, Arcturus, and Orion. The star which appears to move most rapidly, is the one already spoken of as "1830 Groombridge." Its distance being determined, its real velocity has been found, and is truly surprising. It travels about five times as fast as the earth in its orbit, 87 miles per second, (apparently as swiftly as lightning,) 7,000,000 miles a day, or twenty-six hundred millions of miles in a year. Yet such is its enormous distance (eighty million millions) that it requires more than five hundred years for it to move a single degree across the sky, at this inconceivable velocity.

There are many other stars moving forward with various degrees of speed; there are thirty whose apparent motion is more than one second (one three thousand six hundredth of a degree) a year. It has now been long known that the sun itself is sweeping through the universe with its system of planets, and its actual velocity has been determined, which is about one-fourth as fast as the earth in its orbit, or one hundred and sixty million miles per annum. The point towards which we are all tending, is 260 degrees right ascension, and 34 degrees north declination—a point in the constellation *Hercules*, about midway between the Northern Crown and Lyra. This point may now be examined and determined any clear evening, these constellations being now visible in the west till near midnight.

That we are then moving onward through the depths of space, and at a velocity six hundred times greater than that of a rapid railway train,

towards this point in the heavens, is proved to a demonstration; from that point the stars are opening like a vista, and in the opposite direction in the heavens they are closing together—while mid-way between, they are going backward, like distant objects passing a steamer under headway. But there is another position of astronomers not so clearly proved, namely, that the sun and its system are moving in a *circle* around a great center. Many years of observation will be required to determine the truth of this position; if the point continues the same for centuries, it will show that our course is direct or in a right line; if the point continues to vary regularly towards one side, it will show our *curvilinear* progress. A century may yet be required to ascertain this fact. The constellation Pleiades is supposed by some, and not without reason, to be the great center of motion—if this should prove to be the case, it would require about 20 millions of years to complete the entire circuit; that is, we have not as yet travelled, since the creation of man, over a thousandth part of the stupendous journey.

In looking up into the starry vault in the evening, a common impression on the mind is, "How thickly the stars are clustered together—many appear almost to touch;" and this often lessens the appreciation of their vast remoteness from each other. This close proximity is only apparent, not real. It arises mainly from the fact that the stars appear vastly broader than they really would at so great a distance—in other words, their *discs* are far less than their apparent sizes. A candle in a dark night, at the distance of half a mile, appears as large as a cart-wheel would at that distance. But the light of the sun (and of the stars, which are suns,) is many thousand times brighter than a candle. To illustrate this enlarged appearance, make a hole with a fine needle through a sheet of dark-colored paper, and place this across a window or smaller space through which the sun is shining into a darkened room; place the eye at several feet distance, so as to see a portion of the sun through this needle-hole—and instead of seeming like a minute point of light, the rays will spread out and appear a foot or more in diameter. Could this be seen in the night, its size would be still larger; and at a great distance, it would be yet more increased. Now, suppose that such an object as the sun—so large that the swiftest lightning train would be over three years in crossing its face,—larger than the whole sweep of the moon around its orbit,—suppose this immense and intensely dazzling object were removed so far from us as to be reduced in size to only a little twinkling point, visible in the darkest night! The *real* diameter of that little twinkler, small as it would appear, would be many thousand times less to the eye than its apparent size. Take the North star as an example. If this is as large as our sun, and as remote as it is known to be,—its *apparent* diameter, being about one-twentieth of a degree, is as much greater

than its disc would appear, as the *great pyramid of Egypt is larger than the head of a pin!* This may seem incredible, but a calculation will show that it is nearly correct, but space will not allow the computation here.

One more estimate will close these remarks. In order to take a *comparative* and comprehensive view of astronomical distances, let the universe be reduced to an almost immeasurably small scale. Let the earth, with all its seas and continents, its cities, empires and millions of people, be reduced so small as to be no larger than the smallest mustard seed—the sun, the size of a walnut, would be eight feet from it, and the whole solar system would be contained within about an acre of ground. The nearest fixed star would be one thousand miles distant; the North star would be as far as India, and small telescopic stars as distant as the moon now is. Vast as are the heavenly bodies in reality,—the earth alone, puny as it may seem among these myriads of suns and worlds, actually containing *four hundred thousand million cubic miles* of matter—the *space* between them seems bewildering to contemplate, and shows the utter folly of the fears, sometimes felt, of collisions between these moving worlds.

In contemplating these enormous bulks and distances, and at the same time reflecting on the minute perfection of every part, as displayed by the beauty and finish of all natural objects seen through the microscope, there is one thought which irresistibly forces itself on the mind—and that is the extreme presumption of so insignificant an object as man in attempting to criticise, to find fault, or even to comprehend the plans of the great Architect of these myriads of worlds!

## FRIENDS' REVIEW.

---

PHILADELPHIA, TENTH MONTH 17, 1857.

---

INDIANA YEARLY MEETING.—Continuing our account of the proceedings of this meeting, we may state that on Sixth day, the 2d inst., after the re-appointment of the former clerk and his assistants, the meeting entered into a consideration of the condition of its branches by reading the answers sent up by them to the queries. It appeared that five new Monthly, and six new Preparative Meetings had been established, and that eleven Friends had been approved and acknowledged as Ministers, during the past year. The report of the Central Book and Tract Committee was read, and showed that the Committee had been actively engaged in its labors. The number of tracts circulated since last report, is 43,713.

The Committee to whom was referred the sub-

ject of making some change in the discipline in respect to the treatment of members who accomplish their marriage contrary to our order, presented a report which, on deliberate consideration, was adopted. It will probably be laid before our readers when we receive a copy of the printed Minutes.

*Seventh-day.*—A Committee was appointed to attend the opening in the Ninth month next, of the new Western Yearly Meeting, and a paragraph was directed to be inserted in the Epistles to the other Yearly Meetings, reminding them of the case, and thus opening the way for them to appoint similar Committees should they incline to do it. The reading of two documents accompanying the Epistle from London was then proceeded with: "A salutation in the love of Christ, &c.," and "An Address to parents, &c." It was concluded to print and circulate them with the Minutes, and the Book and Tract Committee was directed to print 5000 additional copies for general distribution. The Meeting for Sufferings has charge of 1000 copies furnished for circulation by London Yearly Meeting.

In accordance with requests made last year, the meeting united with the setting up of two new Quarterly Meetings in Iowa, to be known, respectively, by the names of "Red Cedar" and "Western Plain," and Committees were appointed to attend their opening in the 5th and 6th months of next year. A Committee was also appointed to visit for its encouragement and help, the Quarterly Meeting of Salem, from which Red Cedar Quarterly Meeting is to be set off.

The Boarding School Committee made a very full report, by which it appeared that the institution had not been able to sustain itself during the year.

On *First-day*, meetings for divine worship were held, both morning and afternoon, in the meeting-house and in the yard, and the number of persons in attendance was thought to be larger than last year. Many Friends were engaged in ministering to the assembled multitudes.

*Second-day.*—From an interesting report made by the Committee to whose care is entrusted the important subject of Education, it appeared that there are upwards of 8000 children, belonging to the Yearly Meeting, of a suitable age to attend school. First-day schools were held during the past summer within the limits of 138 meetings; 23 meetings being without such schools. The

Committee charged with the concerns of the people of color, laid a report before the meeting showing that about 700 of their children have received instruction in schools mostly under the care of colored teachers, and they have had nine First-day schools.

The reports from the Trustees of the *White's* Indiana and Iowa Manual Labor Schools were read, and gave information of further progress in preparing for their establishment.

The "Indian Committee" laid before the meeting an interesting statement of their labors the past year. The school for Indian children in Kansas has been re-opened, and attended by from 20 to 30 scholars, and the meeting concluded to raise \$1000 to assist the further operations of the Committee.

Near the close of this sitting the memorial of Whitewater Monthly Meeting concerning our late beloved friend Nathan C. Hoag, was read, bringing much solemnity over the meeting. It was directed that the memorial should be printed with the minutes, and 500 copies prepared for separate circulation.

*Third day.*—The large Committee on the Boarding School reported this morning in favor of requesting those Quarterly Meetings, which have not paid their proportions of the \$10,000 directed to be raised last year, to send forward their respective quotas as soon as practicable. The committee also recommended the sale of a part of the land connected with the school premises to discharge the debt incurred during the past year, and that the school committee be instructed not to permit the expenses of the school in future to exceed the income. These propositions were all united with by the meeting, and it was agreed that children who are not members but have one parent in membership, may be admitted into the school.

Returning minutes were adopted for the ministers in attendance with certificates, and epistles were addressed to all the Yearly Meetings excepting Philadelphia, after which the meeting came to a very solemn conclusion. Great harmony of feeling and sentiment prevailed throughout the several sittings.

MARRIED, at Friends' Meeting, Humboldt, Humboldt County, Iowa, on the 24th of 9th mo., MAHLON D. COLLINS, son of Peter and Sarah Collins, to KETURAH A. WILLIAMS, daughter of Dr. D. Williams, all of the same place.

DIED, on the 31st of 8th mo. last, in Parke Co., Indiana, HANNAH, wife of George Maris, in the 59th year of her age, an Elder of Rush Creek Monthly Meeting of Friends.

—, At his residence, Burlington, N. J., on the 2d inst., IRA B. UNDERHILL, in the 58th year of his age, a member of Burlington Monthly Meeting.

—, On the 2d inst., near this city, CAROLINE, beloved daughter of Richard D. and Julianna R. Wood, aged nineteen years, having survived a fall from a horse about twenty-four hours.

She was lovely in life, and her daily walk was that of a Christian. We may then humbly trust she is now among the ransomed for whom Christ died.

—, In Uxbridge, Mass., the 4th of 10th mo., RUTH E., wife of Aaron White, in the 23d year of her age, and JOSEPHINE, daughter of Joseph Gaskill, in the 18th year of her age, members of Uxbridge Monthly Meeting.

#### A WISE FOOL.

In the same individual we often see the greatest wisdom and sagacity in regard to the things of time, combined with the most consummate folly respecting the things of eternity. How often does the shrewd, busy, and prosperous merchant, show himself to be in lamentable ignorance of the practical truths of Christianity, and the hidden life of the true believer! He can calculate with unerring precision the profit or loss of a worldly transaction, but he seldom considers what it will cost him to refuse Christ, and turn a deaf ear to the calls of his Spirit. He may attend regularly on public worship, and duly observe the ordinances, but he will find one day that shadow is not substance, and works are dead without faith; and when his race is run, and he enters upon the future, the hand of truth must take up his idle pen, and write across the pages of his ledger, journal, and cash-book—"What shall it profit a man if he gain the whole world and lose his own soul?"

#### POST-OFFICE STATISTICS OF GREAT BRITAIN AND IRELAND.

Last year, 1856, the number of post-offices in the United Kingdom was increased by 368, making the whole present number 10,866. During the last year 52 additional towns were provided with day-mails to or from the metropolis. Exclusive of conveyance by steam-vessels and boats, and not counting the walks of letter-carriers or rural messengers, or the carriage of the mails from post-offices to railway stations, the whole distance over which mails are now conveyed within the United Kingdom, is upwards of 61,000 miles per day, being about 2600 miles more than at the end of 1855. This increase is principally in railway conveyance; but it will be seen that more than half the duty is still performed by coaches and mail-carts. With regard to the mails conveyed by railway, the average number of miles travelled over by them each week-day has been 22,285 in England, 2766 miles in Ireland, and 3641 miles in Scotland—

total, 28,692 in the United Kingdom, at an average cost per mile of 9½d. With regard to mails conveyed by coaches, omnibuses, mail-carts, etc., the number of miles daily travelled has been in England, 19,298, in Ireland, 8528, and in Scotland, 4885—total in the United Kingdom, 32,711 miles, at an average cost of 10¼d. per mile. The number of letters delivered in England during the year—estimated from the number actually delivered in one week of every month—was 388,000,000, being about 20 to each person; in Ireland, 42,000,000, about 17 to each person; in Scotland, 48,000,000, about 16 to each person—total 478,000,000, about 17 to each person. (In London, the proportion is as high as about 40 letters to each person). As compared with the previous year, this number shows an increase of upwards of 22,000,000; and, as compared with the year previous to the introduction of the penny postage (1839), an increase (omitting franks) of 402,000,000, or more than six-fold. Of the whole number of letters, nearly a quarter are delivered in London and the suburban districts; and, counting those also which are despatched, nearly half the letters pass through the London office. The number of newspapers of all kinds which passed through the post-office last year is estimated at 71,000,000, about three-quarters of which bore the impressed or newspaper stamp, the others having been franked by postage stamps. The number of letters returned to the writers last year, owing to the failure of the attempts to deliver them, was nearly the same as in the previous year—viz., about 2,400,000, or 1 in 200 of the whole number of letters posted. Owing to the same cause 550,000 newspapers were undelivered, being about 1 in 129 of the whole number. The number of book-packets posted last year, exclusive of newspapers, is estimated at nearly 3,000,000. The money-order offices now number 2095. The amount sent by such orders was in the year 1856, for England and Wales, £10,099,366; for Ireland, £806,942; for Scotland, £899,253—total, £11,805,561. The fact of this enormous amount being sent in sums not less than 40s.—the total number of orders being more than 6,000,000—is a proof how universally the trading and laboring classes profit by the system. In England and Wales the proportion was 1 order to every 4 of the population; in Scotland, 1 to 6; and in Ireland, 1 to 13. Ireland, however, is getting on, since the increase per cent. on the year is 7, while England's is only 7½, and Scotland's is as low as 5½. The money-order offices now bring in a fair sum to the departmental exchequer. For the years 1847-8 there was a loss, and 1849 only showed a profit of £322; but the case is widely different now. The profit for the year 1856 was not less than £22,674, being an increase of £2422 on the preceding twelvemonth. The extension of the system to Constantinople, Seutari, and

Balaklava, was attended with signal success, "more that £71,000 having been sent home by the soldiers and seamen—£35,000 by the army works corps." The remittances from Aldershot during the past year amounted to more than £22,000, the average amount of each being only £1 1s. 4d.—*Leisure Hour.*

Correspondence of N. Y. Tribune.

THE PRAIRIES.

*Naperville, Ill., July 2, 1857.*

A little child who rode fifty miles in a railroad train, then took a coach to her uncle's house, some five miles further, was asked, on her arrival, if she came by the cars. "We came a little ways in the cars, and then all the rest of the way in a carriage." In a similar manner, I reached this place from Chicago. The first twenty-five miles of the journey were, practically considered, but a very small part of the distance. The last few miles were the difficulty. So great the difference between steam and horses—between an iron track and the common roads of the country. The distance accomplished by rail seemed the more astonishingly brief when I remembered travelling the same a few years before with an ox team. Once a long day's journey—now an hour's ride.

This Western land is well adapted for railroads. In no country are they more easily constructed. There are no rocks to tunnel, no mountains to grade or cut away, no lofty embankments to rear, no yawning chasms to bridge. Far back from the lake spreads the prairie, upon the verge of which Chicago stands, almost as level as the lake itself. Nine miles from the city, upon the Galena Road, we reached Cottage Hill. Cottages we saw, but where was the Hill? Any slight undulation here is a hill, and any modest hill is a mountain. But let no one suppose that the prairies are all one dead level. There are two kinds of prairie—the low prairie and the high prairie, the flat and the rolling. The low prairies are bottom lands, which border the lakes and streams, or mark the spot where water, still or flowing, once has been. The edges of these lands are usually fringed with groves; irregular lines of timber or thickets, beyond which rolls up the high prairie, in gentle undulations. Sometimes you find an acclivity of unusual abruptness and altitude, like the tenth wave at sea, from the summit of which many miles of country can be seen. I have ascended elevations commanding views of uncomputed distances, interrupted by not a single grove; prairie beyond prairie, wave after wave, beautiful, green, monotonous, only now and then a dim white speck, perhaps a house, appearing like a sail near the horizon. It is pleasant to watch, on a Summer day, the shadows of great clouds sweep across the expanse. Yonder dark, scattered objects are cattle feeding. Those gray, broken, slow-moving

masses are flocks of sheep; the little dots are shepherds. On each side are groves, winding by hidden streams—groves beyond groves, and glimpses of prairie between. And lo, another object, a swift, dark monster, emerging from the east, unfolding a long, surging stream of smoke, rattling and clanging as it approaches, then uttering its fierce, shrill snort of salutation, and passing on to startle the buffalo and the wild turkey in the wilderness further west.

It is a country, you would say, ready made to man's hand. Here the pioneer finds mighty clearings before him, meadows awaiting the scythe, and fallows prepared for the plough. He has but to turn over the turf, and drop a little seed, to produce gigantic maize. Here are endless pastures for his cattle, and plenty of wild poultry for the shooting. The soil is of prodigal richness. But here also the great law of compensation holds. For every favor in one particular there is deprivation in another. The scarcity of wood and water cramps human progress. Civilization, like the growths of timber, is confined to the neighborhood of streams. There are stretches of prairie which shall long remain as deserts until wood and water can be supplied by the device of man. If it required sturdy labor to mow away Eastern forests, it shall require no less toil and patience to plant with indispensable trees these natural clearings of the West. Rich as is the soil, it is not reliable for certain grains. Its very exuberance proves fatal. Wheat, winter kills; or if it arrives near maturity, a summer rain, succeeded by warm, steaming afternoons, sends the mounting juices too impetuously through the tender stalk, which bursts with their abundance, and suffers them to waste through opening pores, in what the farmer calls rust. Fruits are no more fortunate. Frost, or mice, or rabbits, or insects, or some unknown disease, destroy the trees; or if they survive, it seems by some rare chance that ever they bear fruit. "I will tax your invention, your patience and your love," Nature seems to say, "or no fruit shall be secure to you." I have no more doubt of the fact that apples and peaches will some day be a sure crop even here, than that corn will continue to be raised. But with deeper insight than has yet been applied, man must study the climate and the genus of trees. Then let him, if necessary, build walls to protect his orchards from deadly winds. If he is favored here in other matters, he shall show his gratitude by using all his energy and ingenuity in this.

It is a great grazing country. Year by year the wild grass of the prairie is growing finer and sweeter. The eye of beauty regrets the disappearance of the tribes of flowers that carpeted with gorgeous colors these undulating floors. But the savage ornament was destined to fade. Yonder are fields where I have seen the deer stand antler-deep in grass. Now oxen feed there; or the farmer's scythe shaves the sward.

Wool has of late years enriched many farmers. Those who have not convenient pasturage on their own lands, unite their several flocks and employ a shepherd to tend them on the unfenced prairies. A cheap pen receives them at night—keeps the sheep in and the wolves out. Now is the shearing time, and sheep-bells tinkle daily along the road between the pasture-grounds and farm-yards. The sight of wolves is still of frequent occurrence. They are a cowardly pack; but hunger often overcomes their fear. A few days ago one of these animals entered a flock which a boy was watching, and refused to retire until he had immolated a fat lamb. The boy ran and gave the alarm; his mother came with a broom, and the wolf was finally forced to retreat.

The season has been cold and dry. All the crops are late. Last Winter, farmers tell me, was excessively severe. Scarce and sparse the Fall grain that has survived. Large spots of grass, from which the snow was blown, were Winter-killed. Fodder became short; farmers fed out the roofs of their thatched sheds. Many cattle died of starvation; and out of many flocks one-half the sheep lost their lambs. Still the country is gradually and surely increasing in prosperity. Ample reward, certain though late, follows early enterprise and long suffering. Men who came here a few years ago with hardly sufficient means to purchase a yoke of oxen, now stand upon the threshold of independence. Land, for which ten shillings an acre was originally paid, is now worth from \$20 to \$40. The price of some lands has doubled within four years. Railroads bring us near market and create an interest and activity through all the regions they intersect.

#### A TROUBLESOME FLY.

At this season of the year many of our readers will be experiencing the annoyance produced by swarms of flies. Now is the time when the blue-bottle buzzes sonorously as he makes ineffectual attempts to escape through the window-pane; and now is the season when the common house fly swarms round our tables, helping himself, without leave asked or granted, to our jam and our sugar. Little, however, does many an English housewife, as she prepares her ingenious fly-trap of cut paper, or her more deadly mixture of poison, know the terror which a fly can sometimes inspire. Astonished, no doubt, will she be to learn that there is one little insect of this character, the sight of which has given more alarm to many an enterprising colonist or traveller, than would the spectacle of a lion or tiger in full fury. It is indeed so. The civilization of some parts of Africa has been as much hindered by the presence of a certain fly as by the slave trade. Indeed, we do not know but that the latter, in the localities in question, is the least formidable danger of the two. The slave trade may in

time be put down; but, for the other pest, no remedy is yet known.

The insect in question is the *tsetse*, or poison-fly of Africa (*Glossina morsitans*.) Possessed of a particular sort of venom, it infixes its sting into cattle, which fall dead before it. In vain does the traveller carry horses or other animals with him, for this scourge annihilates them, while, as a necessary consequence, it precludes whole tribes of Africans from pastoral pursuits, which could not properly be carried on without the aid of cattle.

Mr. Andersson, a very enterprising traveller, whose work on Lake Ngami will be found full of interest, has preserved some curious notices of this destructive insect. We now give the results of his observation, referring such of our readers as wish more information about the other productions of Africa to his lively and adventurous volume.

"The *tsetse*," he writes, "is found chiefly in the bush, or amongst the reeds, but rarely in the open country. It is confined to particular spots, and is never known to shift its haunts. Thus, cattle may be seen grazing securely on one side of a river, whilst the opposite bank swarms with the insect. Should the natives, who are well acquainted with localities frequented by the fly, have occasion to change their cattle-posts, and be obliged to pass through tracts of country where it exists, they choose, I am told, a moonlight winter's night; as during the hours of rest in the cold season, it does not bite.

"In size, the *tsetse* is somewhat less than the common blue fly that settles on meat; but its wings are longer. Yet, though so small and insignificant in appearance, its bite carries with it a poison equal to that of the most deadly reptile. Many is the traveller who, from his draught-oxen and horses having been destroyed by this pestiferous insect, has not only had the object of his journey completely marred, but his personal safety endangered by the loss of his means of conveyance.

"Very lately, indeed, a party of Griquas, about twenty in number, who were elephant-hunting to the north-west of the Ngami, and who were provided with three wagons and a large number of trek, or draught-oxen, lost, prior to their return to the lake, all their cattle by the bite of the *tsetse*. Some horses, brought with them to further their sport, shared a similar fate.

"The very same year that this disaster happened to the Griquas, a party of Englishmen, amongst whom was my friend, Mr. Frederick Green, attempted to reach Libèbè; but they had only proceeded seven or eight days' journey to the north of the Ngami, when both horses and cattle were bitten by the fly in question, and the party were in consequence compelled to make a hasty retreat. One of the number, I am told, was thus deprived of as many as thirty-six horses,

excellent hunters, and all sustained heavy losses in cattle.

"There are large tribes which cannot keep either cattle or sheep because the tsetse abounds in their country. But it is only fatal to domestic animals, as wild animals feed undisturbed in parts infested by the insect. Yet many of them, such as oxen and buffaloes, horses and zebras, dogs and jackals, etc., possess somewhat the same nature. Moreover, it bites man and no danger follows. The sensation experienced has not inaptly been likened to the sting of a flea. The problem to be solved is, what quality exists in domestication which renders domestic animals obnoxious to this poison? Is a man not as much a domestic animal as a dog? Is it the tsetse at all which kills the animal?"

"Captain Vardon, of the Indian army, one of the earlier pioneers of the more interior parts of Southern Africa, was amongst the first to decide the point; for he rode his horse up a hill infested by tsetse, and in twenty days his doubts were removed by the death of his horse.

"According to the statement of the celebrated explorers, Messrs. Oswell and Livingston, who were severe sufferers by the tsetse, the following symptoms are observed in the ox when bitten; the eye runs, the glands under the throat swell, the coat loses its gloss, there is a peculiar flaccidity of the muscles generally, and emaciation commences, which proceeds unchecked until—perhaps months after the bite—purging supervenes, and the animal perishes of exhaustion. Some die soon after the bite is inflicted, especially if they are in good condition, or should rain fall; but, in general, the process of emaciation goes on for many weeks. In some cases, the animals become blind before they die.

"From what I have seen of the tsetse," writes Mr. Oswell to me, "I believe that three or four flies are sufficient to kill a full-grown ox. We examined about twenty of ours that were bitten and died, and the appearances were *similar* in all. On raising the skin, we perceived a glairy appearance of the muscles and flesh, which were much wasted. The stomach and intestines were healthy; heart, lungs, and liver, sometimes all, but invariably one or the other, much diseased. The heart in particular attracted our attention. It was no longer a firm and muscular organ, but collapsed readily on compression, and had the appearance of flesh that had been steeped in water. The blood of the whole carcass was greatly diminished in quantity. Not more than twenty pints (a small pail full) were obtained from the largest ox, and this thick and albuminous; the hands, when plunged into it, came out free of stain. The poison would seem to grow in the blood, and, through the blood, affect the vital organs.

"A curious feature in the case is, that dogs, though reared on milk, die if bitten, while calves, and other young *sucking* animals, are safe as long

as they *suck*. Man, and all the wild animals, escape with impunity. Can the poison be alkaline, and neutralized by the acid?"

After such a narrative as this, we do not doubt that spiders will appear to our readers a much more praiseworthy class of insects than they have hitherto seemed. Indeed, had Domitian, with his fly-killing propensities, been some African potentate, who confined himself to the massacre of the tsetse, he would have earned a title to the gratitude of posterity, instead of getting the stigma of cruelty affixed to him, and coming down to us with the words, *Ne musca quidem* ("not even a fly") appended to his name.—*Leisure Hour*.

#### SNAKES.

Snakes are much abused animals. As supposed types of the first deceiver, a sort of religious dread has ever attached to them, among Christian people; and a few of the species being really venomous and others possessing imaginary attributes, far transcending the actual powers of any of the class, it is not very wonderful that the sons and daughters of Eve should inherit a hearty hatred of snakes.

First—What are the venomous snakes? In the United States we have the Rattlesnakes, Copperheads, and Moccasins. No others—and, in fact, there are no other poisonous reptiles in our country.

The Moccasin is a southern species: and so is the Great Diamond Rattlesnake—the worst of the species. The Copperhead is a very bad snake; fortunately very rare now. Robert Kennicott, who is collecting specimens in the region of Jonesborough and Cairo, writes that he has just secured a genuine Copperhead in Illinois. The Banded Rattlesnake is also found in that region, and he is not to be despised; as his bite is truly dangerous, though rarely fatal to man.

But the snake, about cures for whose bite so much has been said in this paper, is quite a different customer—not a very agreeable inmate of one's house, (though we have killed two found in ours,) and quite sufficiently venomous for the snake's own purpose. Still, that our prairie Rattlesnake has ever caused the death of a single human being—whether "doctored" or not—we have yet to learn.

And this brings us to the second question. Is there any specific antidote for snake poison? Possibly. But who knows it? Not we; and we studied medicine, practiced medicine, and believed in medicine for nearly thirty years.

Our first experience with snake bites was in the State of Mississippi, where children, and especially careless negroes, were occasionally bitten by the "ground rattlesnake," a small species of *Crotolophorus*, much like ours of the western prairies. We do not remember a case of bite from any other species; nor did we know of a

snake bite there or in the State of Louisiana, where we tarried for several years.

Since then, a residence of over twenty-one years in Illinois—with as extensive a country practice as any other physician—and in a region and during a time where and when rattlesnakes abounded, no death from their bite has ever come to our knowledge. That is, no death of man, woman or child—a few small animals, usually bitten in the nose, have died; and deaths among large animals have been reported to us, but we never saw a case. Of human subjects we have treated many cases, and know many that had no treatment at all, or were treated in all ways; and the result was always the same—all recovered; though some suffered horribly for a little while.—*Prairie (Ill.) Farmer.*

#### CUNNING AS THE FOX.

The Dumfries (Scotland) Courier, says a gentleman in the Highlands sent the editor of that paper the following note:

"A game-keeper on the estate near Loehawe, who had been annoyed by the depredations of foxes, discovered a kennel in the glen at the side of a small loch. While watching, one evening, for the appearance of the tenants, he observed a brace of wild ducks floating on the loch. In a little while a fox was seen approaching the water side with cautious steps; on reaching it, he picked up a bunch of heather, and placed it in his mouth, so as to cover his head; then slipping into the water, and immersing all but his nose, floated slowly and quietly down to where the birds were quacking out delight in fancied security, seeing nothing near them but a bunch of weed. In due time he neared the ducks, dropped the heather and seized a duck, with which he returned to the loch side, and was making off to his young with the prize, when the keeper, who had noted all his movements, elosed them by the discharge of a double-barrel.

#### WHAT SCIENCE SAYS OF BREADMAKING.

It is a praiseworthy characteristic of the American people, that they are curious to know the philosophy of all things. Causality, as the phrenologist would say, is large among us. We analyze the smallest as well as the greatest objects. The reason why the stars keep in their orbits is hardly more interesting to our practical minds than the mysteries involved in bread-making.

For the making of good bread, to thousands and tens of thousands of housewives even, is a mystery. Cooks pride themselves on their success in the art; and naturally; for it is a distinction to be able to insure light bread. Yet of a hundred thousand breadmakers, how few understand why it is that the bread is sometimes good and sometimes bad. The proficient has a knack in kneading and baking her bread; and

that is all she knows about it. The rival, whose bread is a failure, can only say that the baking went wrong: and is as much in the dark as the other.

To make bread the flour has first to be kneaded. But why knead it? Because a certain quantity of water, in addition to that existing in the flour, is necessary to produce those chemical changes, without which good bread can never be made. The water dissolves the sugar and albumen; combines with and hydrates the starch; and moistens the minute particles of gluten, so as to induce them to cement together, and thus bind the whole into a coherent mass. The good housewife knows, by practice, when this state of things has been brought about; in other words, when her dough is properly kneaded. For as only a certain limited quantity of water can be used to produce this effect, as too much or too little would wholly frustrate the end, it is plain that the water must be carefully and thoroughly worked into the flour, so as to bring every separate particle of the one into contact with the required amount of the other. Kneading, with the hand, is the sole way to do this. The competent housewife tells by the feeling when her dough is fit to put away to rise. No machinery can do it perfectly.

The next process is the fermentation. This is produced generally, by yeast; and always more safely and perfectly by it. Yeast, as the microscope has proved, is a vegetable—a true plant belonging to the fungus tribe. It makes bread rise, by producing a change of the gluten or albumen, which acts upon the sugar, breaking it up into alcohol and carbonic acid gas. If the dough has been skilfully kneaded, and the fermentation is regular and equal, the gas is evolved evenly throughout the mass, so that the bread, when cut, will be honeycombed with numberless minute pores. Bad yeast, or a bad fermentation, makes the bread sour, which the experienced housewife corrects with a little alkali. Chemical substances are sometimes used to make bread rise. But Youmans, the chemist, to whom we are indebted for most of these facts, says, that as such substances are not nutritive, but medicinal, they exert a disturbing action on the healthy organism, and consequently, ought not to be employed habitually. Other writers, also, have attributed the increase of dyspepsia to the wide-spread introduction of these agents as a substitute for yeast.

The baking of the loaf, as every housewife knows, is not the least part of the "art and mystery" of bread-baking. The heat of the oven should be equal everywhere throughout it, and should continue constant for a considerable time. If the heat is insufficient, the bread will be soft, wet and pasty; if too great, the crust will be burnt, the inside raw dough. The baking temperature of an oven should range from 350 deg. Fahrenheit to 500 deg. An ordinary way of testing when an oven is proper for baking, is to

strew fresh flour on the bottom, and if the flour turns brown the heat is right, but if the flour chars, the heat is excessive. The loaf diminishes in weight and enlarges in size by baking, in consequence of the evaporation of the water, the expansion of its carbonic acid gas, and the vaporizing of its alcohol. The crust is caused by chemical changes in the outer surface of the loaf, producing an organic matter which chemists call *assamar*. Such is the scientific history of bread-making.—*Public Ledger*.

*Lines on seeing two Scarlet Runners unite and suspend themselves on a beautiful young Apple Tree.*

[In a letter to a wife.]

BY WILLIAM JAY.

A recent sight, my dearest Anne,  
Engaged mine eye and heart,  
And I the scene, and moral too,  
Would now to thee impart;  
A truth was never deemed the worse,  
Expressed in figure or in verse.

'Twas in my lovely garden, where  
I late and early rove,  
In lonely walk, or happier still,  
Indulged with her I love;  
And where, to thought or talk resigned,  
A part of Eden yet I find.

'Twas there two plants of tender form  
Upgrowing I surveyed;  
Both conscious of their weakness seemed,  
And seemed to ask for aid;  
I marked with anxious watch their bent,  
And judged a union their intent.

And so it proved; for soon they clasped,  
And curling round and round,  
Looked fearful lest they each should lose  
The helper each had found;  
But, coupled, soon their firmness gained,  
And reached a height not else attained.

But bending now, as weightier grown,  
They feel their junction weak,  
And something both may rest upon  
They now together seek;  
A tree at hand their wishes drew,  
And on this prop they hung and grew.

But as I stood, and while I gazed,  
A voice mine ear addressed:  
"All nature is a book, and he  
Who reads is wise and blessed;  
No humble monitor disdain,  
Nor let a trifle preach in vain.

"If 'twas not good for man to live  
In Paradise alone,  
Two in a desert's weary wilds  
Are better far than one;  
Mutual their wants and wishes too,  
They help, conjoined, each other through.

"Thus thou and thy dear partner both,  
In pleasant bands entwined,  
Not bound by others, but attached,  
By sympathy inclined,  
Aspiring upwards to the skies,  
Should aid each other as you rise;

"Nor think each other help enough,  
Though you the gift esteem,  
But mindful of the tree of life,  
And both embracing Him,  
On Him, your sure, almighty Friend,  
Your blended hopes and cares suspend."

Although, my Anne, a lot like ours  
Has been indulged to few,  
E'en we have had wherewith to try  
And prove the counsel true;  
But as to Him we turned and prayed,  
Our griefs and fears have been allayed.

And should the scene in future change,  
And heavier cloudings lower,  
The closer we'll embrace his aid,  
And meet the trying hour,  
And on his grace and strength rely,  
Engaged to help us till we die.

*Poundsford Park, Sept. 10, 1810.*

#### SUMMARY OF NEWS.

FOREIGN INTELLIGENCE.—Liverpool dates are to the 30th ult.

ENGLAND.—A proclamation had been issued, appointing the 7th inst. to be observed as a day of national humiliation and prayer on account of the Indian difficulties.

It was reported that Lord Elgin was to be appointed Governor-General of India, in place of Lord Canning.

The subscription for the relief of the sufferers by the Indian mutiny, had reached the amount of upwards of \$250,000. The Sultan of Turkey had contributed \$5000; the Emperor Napoleon had also sent a large sum, and a subscription for the same object had been opened at Paris, under the auspices of the Prefect of the Seine. At Edinburgh, \$20,000 were raised at a single meeting, and Liverpool speedily subscribed \$45,000. In Ireland, a portion of the people appear to sympathize with the mutineers, and inflammatory placards have been posted in Tipperary, calling upon the Irish to rise in the same way; but the more respectable portion of the Roman Catholic press discountenances such proceedings. A considerable number of fugitives from India have arrived in England.

The proposal to form an army brigade from the middle ranks of the people, was attracting much attention, and it was supposed the pressure of public opinion would induce the government to consider it.

FRANCE.—Inundations in the south of France had caused great destruction of property, and the loss of several lives. The grape harvest was progressing, and was abundant.

The Emperors of Russia and France met at Stuttgart on the 25th ult.

SPAIN.—Mexico has accepted the mediation of England and France in her differences with Spain. The conference is expected to be held in London.

PORTUGAL.—Great excitement existed at Lisbon on account of the supposed outbreak of yellow fever, though it was said to be really typhus.

DENMARK.—A Berlin dispatch says that the separate negotiations between Prussia and Denmark had been broken off, and that Prussia and Austria had determined for the present not to carry the affairs with the Duchies before the Diet, but to await the representations of Holstein.

AUSTRIA.—The Austrian Government has resolved so to improve the port of Vienna as to render that city accessible to large merchant vessels.

RUSSIA.—The Emperor had consented to accept an

address from the Evangelical Alliance in session at Berlin, in which they solicit the removal of the prohibition to print the Scriptures in modern Russian which is now in force. It was not thought likely that the request would be granted.

It is stated that before leaving St. Petersburg, the Emperor approved the draft of a project for the partial abolition of serfdom, and that on his return the project will become a law, and a proclamation will be issued inviting masters to arrange for the liberation of their serfs. The contracts between the land owners and the peasants will be required to contain these clauses: 1. The land appropriated to each peasant to be farmed for rent must be sufficient to support him and his family. 2. The peasants must engage not to leave the lands, at least for the present. 3. The payment of the taxes due the State must be guaranteed. Other particulars are to be left to the option of the parties.

The condition of the Jews in Russia has been lately much improved, though they are still prohibited from residing in St. Petersburg, Moscow, and Sebastopol. Much is done for their education; schools of high character are established for them in various parts of the empire; and they can now acquire some privileges which formerly belonged only to the nobility.

**SWEDEN.**—Both the Swedish Parliament and the Norwegian Storting have accepted the King's proposal that the Crown Prince shall be Regent during his illness.

**TURKEY.**—A caravan of 500 persons, with 1300 camels, on the way from Damascus to Bagdad, recently went astray in the desert, and all except 20 men perished of thirst.

It was reported that the Porte was about to propose an administrative union of the Principalities, extending even to the army. The elections in Moldavia indicated a large majority in favor of union; those in Wallachia were not concluded.

Great dissatisfaction with the government exists among the bigoted Mohammedan population, on account of its connection with foreign powers. Hence the authorities have really very little power in many parts of the empire.

**EGYPT.**—Two Austrian travellers, engaged in a scientific expedition to the sources of the Nile, have reached the 4th degree.

**PERSIA.**—Official intelligence of the evacuation of Herat by the Persian troops had been received at Teheran. It was reported that the Afghans were preparing to take possession of it, in which case it was feared the Persians would again advance upon it.

**CHINA.**—A letter from Hong Kong, received in Paris, states that the United States vessel *Levant*, to avenge the pillage of an American merchant-ship by a gang of pirates, had burned a village on the island of Formosa, which the pirates occupied.

Military operations at Canton were suspended at the last accounts, except that Admiral Seymour had declared a blockade of the Canton river. The rebels were approaching the city, had gained some victories over the imperialists, and appeared to be reducing the country around. The intercourse between the Chinese and English at the northern ports continued friendly, and the prospects of trade at Shanghai were favorable.

**INDIA.**—Lord Elgin arrived at Calcutta from China on the 8th of 8th month, with 1700 troops, who were to proceed up the Ganges forthwith. He wished to obtain, in exchange for service in China, some of the native Bengal troops, who had been disarmed as a precautionary measure, but who, it was thought, might be relied upon in a foreign country. Many fugitives from the disturbed districts were flocking to Calcutta.

**LIBERIA.**—Recent arrivals contradict the report of apprehensions of famine in this Republic. Flour was scarce and dear, but other articles of food were abundant.

**DOMESTIC NEWS.**—The financial crisis continues, and is extending over the country. Heavy failures occur daily in all our principal cities, and a general feeling of anxiety and distrust pervades the commercial community. Large quantities of produce are accumulating in western ports, but on account of the derangement of exchanges it cannot be forwarded to eastern markets. The same difficulty is experienced in respect to cotton, which is beginning to arrive at New Orleans. Meetings of merchants to suggest measures of relief have been held in various places, but without any practical results. The banks of New York City suspended specie payments on the 13th. At a meeting of the Bank Presidents of Boston held the 14th inst., a general suspension of specie payments was voted. The Banks of Albany, Trenton and Portland, Me., also suspended on the 14th inst.

Pursuant to the call of the Governor, the Pennsylvania legislature convened in extra session on the 6th inst. The Governor sent a message, setting forth the financial difficulties now prevailing, and recommending such measures as he thought calculated to give relief. Various bills and propositions relative to the banks were introduced and discussed in both Houses. A bill passed the Senate on the 9th, suspending the penalties now affixed by law to a suspension of specie payments by banks or other corporations, till the 12th of 4th month next; authorizing a stay of execution on judgments for one year, where the defendant possesses property worth the amount of such judgment above all incumbrances; requiring that deposits to the credit of the Commonwealth, in the banks, shall be paid in specie when required by the Treasurer to enable him to pay the interest of the State debt; and extending the notice required for payments in the charters of the Saving Funds and Trust Companies to two months. The bill was rejected in the House of Representatives on the 12th, but was reconsidered the next day, and passed with amendments. The Senate having further amended it, a Committee of Conference was appointed, and reported a bill, substantially the same as that originally passed by the Senate, with some additions. This bill was adopted by both Houses, which then adjourned *sine die*.

The statements of the results of the election in Kansas are so conflicting that the truth cannot yet be ascertained, but there appears some reason to believe that the Free State delegate to Congress is elected.

An earthquake, sufficiently violent to make houses tremble, was experienced in Missouri and Illinois on the 8th inst.

The Secretary of State has issued a circular letter to U. S. Marshals, District Attorneys, &c., enjoining to diligence in enforcing the laws against those who may be found preparing military expeditions against Mexico, Nicaragua or Costa Rica. Walker is said to be organizing a company for a second invasion of the latter States.

Three additional passengers of the *Central America* have been brought to New York, having been picked up at sea by a British vessel, nine days after the sinking of the steamer. One of them floated on a plank for 72 hours, when he fell in with an empty boat; and the next day he took up the other two, who were on a part of the deck of the vessel which had served them as a raft, and were the only survivors of 12 men who had been on it. Their sufferings were extreme, as they were 8 days without water, until partially relieved by a shower of rain, and except a fish which leaped upon the raft, they had no food, while the sea broke over the boat most of the time.

# FRIENDS' REVIEW.

A RELIGIOUS, LITERARY, AND MISCELLANEOUS JOURNAL.

VOL. XI.

PHILADELPHIA, TENTH MONTH 24, 1857.

## THE MINISTRY.

*Samuel Fothergill to Susanna Hatton.\**

Sixth month 27th, 1760.

In some sense of that sympathy and union which renders the church of Christ a compact body, I tenderly and affectionately salute thee. I most sincerely wish thee a good journey; good to thyself and so to others. I cannot doubt of the propriety of thy mission to that part of the Lord's vineyard; I had an evidence in myself, in solemn silence, that thou wast under the Master's appointment for that service, and I earnestly desire the wisdom and power of Truth may seal its own evidence on all thy labors; and dear

\* This Friend was born at Grange, in the north of Ireland, in 1720. Very early in life, her mind was brought under the tender visitations of Divine love, and such was her zeal and her love for the Truth, that she generally went many miles on foot to attend meetings, and labored hard in the service of her employer to make up for the time thus occupied. In the seventeenth year of her age, she received a gift in the ministry, and as one planted by the Master's hand, so rapid was her growth therein, that, with the unity of her friends, she paid a general visit, before she was eighteen years of age, to Friends on the continent of America, in company with Ruth Courtney. She was married in 1742, and for many years had to pass through many outward difficulties, as well as inward exercises and trials, for the cause and testimony she had espoused, and she was favored to hold fast her integrity to the Truth. She travelled much as a minister in several parts of Great Britain and Ireland. In 1760, being then a widow, she embarked on a second visit to America. She afterwards married Thomas Lightfoot, and they settled in Pennsylvania, where she continued to be a faithful laborer in the cause and service of Truth. She was a living and powerful minister, awful and weighty in prayer, careful to wait for the fresh anointing for right qualification. She departed this life on the 8th of Fifth month, 1781, aged sixty-one, a minister forty-five years.

friend, though I apprehend myself a younger brother, and now addressing myself to one who was in Christ before me, yet permit me to offer to thy thoughts a few sentiments, which have been scaled usefully on my heart.

First.—It is a most solemn and awful thing to assume the name of the Lord's ambassador; I believe thou considers it so. Thence ought we also to consider the high obligations we are under to receive from him, not only his instructions, but our credentials.

Secondly.—These will not be withheld, if we wait our Master's time; his sound will be certain, and his discoveries clear. We shall not say, like Ahimaz, When I ran, there was a tumult; but distinctly receive and deliver our Master's message, in his own wisdom and spirit.

Thirdly.—In all our service, let us remember our Lord's dignity, and endeavor to maintain it according to the proportion of strength vouchsafed, both in purity of life, and singleness to him, in our ministerial capacity, being empty without him, and only filled with his fulness.

Fourthly.—Let us learn to try the spirits, whether they are of God. I have seen a danger, especially in your sex, of being taken by the passions; the passionate preacher hath affected the passionate hearer; both have been in raptures, and neither of them profited. This is a place I would endeavor to guard thee in, my dear friend, as I am apprehensive the emotions of thy mind are sometimes strong and animated. Mistake not the warmth of passion for the gospel authority; the first is like the rattling thunder, which frights, but never hurts; the last is like the lightning from the east, which illuminates, and at times breaks through all opposition, and melts down every obstruction. I know the integrity of thy heart, and what is infinitely better, our Father who is in heaven also knows it, and will not forget to be gracious; and, therefore, with the most unreserved freedom, I remind thee of these things. May thy Urim and Thummim be with thy Holy One, whom thou didst prove at Massah, which implies the hour of temptation, and with whom thou didst strive at the waters of Meribah, or strife. Look carefully to him in all thy goings, so shalt thou dip thy foot in oil, when thou treadest on high places, and the arms of thy hands will be strengthened by the Mighty God of Jacob. If deep poverty be thy lot, be not

disquieted, neither pour forth thy complaints to any mortal; have no confidant, but eternal Help. I never knew deeper poverty, nor more glorious riches, than in that land; but I found it safe to wear my sackcloth on my loins, and put on my best garments honestly and sparingly. Receive no obligation from that quarter, which thou can avoid, lest they say, "I have requited her labor," or make vain the purport of thy testimony.

In the course of thy passage, be courteous to all, unless restricted by secret direction with respect to any particular, which I have found my peculiar duty in some parts. Let not affability enervate thy mind, nor lead from the steady stability attending the faithful minister; and yet guard against a spirit which leads zealous people sometimes to say, "There is none righteous, no not one," and therein to overlook the hidden, suffering seed. Let thy eye be in thy head, so shall thy goings be ordered of the Lord, and be attended with peace to thyself, comfort to the living, and general usefulness to the church. Be not hasty to embrace the offer of any companion in service; try their spirits, and feel the liberty of Truth in it. I should rather choose to take one occasionally, as way might open, than engage for any considerable journey. I think it is still more necessary to press thy declining any companion from England or Europe, who might have a concern for themselves to discharge their own duty, without regard to thine, and so might another be oppressed by thee. Farewell, and may the Lord of all consolation be with thee in every trial, and support thee by his arm, enrich thee by his grace, replenish thee by his wisdom, and comfort thee by his rod and staff.

SAMUEL FOTHERGILL.

#### AUGUSTUS HERMANN FRANCKE.

[Continued from page 84.]

Francke employed, also, a means for doing good, which is very common at the present day, and which has been attended with very great success; that is, the writing and circulation of tracts.

From one of them, entitled "Scriptural rules for living," we cannot refrain from making some extracts. "It contains," says its author, "directions how to live in peace with men, and to preserve a good conscience in the sight of God," and—

##### "1. Rules for our conduct in company.

"Company offers many temptations to sin. If you would preserve a good conscience in the sight of God, remember that He, the Majesty of Heaven and Earth, is present; and that in such a situation a solemn awe becomes you.

"Never speak of your enemies except in love, for their good and the honor of God.

"Do not speak much. When it is necessary to say any thing, do it respectfully, advisedly

and kindly. Always speak with earnestness, with clearness, and deliberation.

"Do not make the things of this world a subject of conversation, except when God may be honored, or good done to your neighbor thereby.

"Avoid all severe and reproachful language, and every thing that might excite evil feeling. Inquire of a friend whether you ever offend in this way; for you may do it unconsciously.

"Profanity is a great sin. If you use the name of God, do it with reverence, as if in his presence. Never make the name of God or Christ a mere by-word. He who honors God in his heart, will not dishonor Him with his lips.

"Be cautious, in narrating any thing, that you adhere strictly to truth. Men sometimes supply some circumstances from their own invention, which their memory has not retained. Think afterwards whether you have not in your conversation done this.

"Trifling jests and anecdotes do not become a Christian. When you are in conversation, avoid speaking of yourself or desiring so to do.

"Never change the conversation from a profitable subject. Much is to be learnt, both in the discipline of the mind and in the collection of facts, by much conversation on the same topic.

"Never interrupt a person who is speaking, and be silent if you yourself are interrupted.

"If you would reprove another for some misconduct, take care first to conquer the fear of man. But it is well, before hand, to think of your own defects, that you may reprove with meekness and with love.

"Avoid unnecessary mirth. All laughter is not sinful, but it should be the mark of a peaceful and joyful, not a trifling state of mind. If others laugh at foolish jests and improper expressions, do not join with them. If they are not pleasing to God, why should they be to you? If you laugh with those who delight in these things, you are a partaker of their sin; if, on the contrary, you preserve a grave countenance, you reprove them.

"Cultivate a talent for directing conversation in a proper channel.

"Never think more highly of yourself than of another, on account of any advantage of station which you may possess. Both of you are dust and ashes, and equal in the sight of God.

"Love is humble, and secures the respect and friendship of others; but a haughty man is disagreeable to all.

"Remain not a moment in society, when your only object is that you may thus pass time away.

##### "2. Rules for Solitude.

"If you are truly convinced of the presence of God when you are alone, you need have no weariness of solitude. Will you be weary of an eternity spent in his presence, where you hope to find your perfect happiness?

Fear nothing visible or invisible but God, who can save, and can destroy.

"Engage in no unprofitable work; for you shall give account of every moment of your time, and of the manner in which it has been employed.

"Read no trifling nor useless books for the sake of passing away time.

"Indulge no thought which you would be ashamed to utter; for though you may conceal it from men, God beholds your inmost soul, and knows your thoughts afar off.

"Do nothing in private which you would avoid in the presence of the wise and good. You have respect for them; ought you not to respect much more the Great Jehovah? &c."

These were the means which this truly excellent man applied with so much fidelity. In every department of labor, whether in the pulpit, in the social meeting, or in the distribution of tracts, he seems ever to have acted in view of that day, when he should render his account of his stewardship. And his efforts were not in vain. He had the happiness of seeing many brought from darkness to light. A great sensation was created throughout the city. Large numbers of people came to hear him preach, and both high and low took seats in his church. The state of society improved in Glaucha, and the Lord evidently blessed his endeavors to do good.

We have already stated that Francke made use of his pen, as an auxiliary to his pastoral labors. This was also the case in those of his professorship.

One of his publications caused him no little trouble. This was a monthly periodical work entitled "Biblical Observations," the object of which was to correct some mistranslations in the German version of the Bible made by Luther, and to give the practical application of the passages as corrected. The circumstances attending the publication of this work are not a little interesting, as they display so much of that self-denying spirit which always attends a high degree of piety. He was meditating, he tells us, on a certain occasion, upon that passage in the ninth chapter of the second epistle to the Corinthians in which it is said that, "God is able to make all grace abound towards you, that ye, having all sufficiency in all things, may be able to abound unto every good work." "How can God do this?" was his inquiry, and one of much interest to him, as he was frequently compelled to suffer the poor, whom he would gladly have assisted, to go away from him unrelieved. Just at this time he received a letter from a friend, informing him that he had been reduced by misfortunes to poverty and distress, and requesting of him some assistance. This moved the heart of Francke still more; and after praying over the subject, the plan of the "Biblical Observations" struck him as the most likely to enable him to do any thing for his relief. His employments were,

however, at this time so pressing, that every part of the day was devoted to some particular object, none of which could be set aside; and it seemed likely still that his plan would fail. But he, ever fertile in expedients, determined to take the time which he usually spent at his evening meal for this purpose; and was thus enabled to finish the number with punctuality.

The sentiments of the work appear to have been correct and scriptural, and his criticisms were no doubt well founded. Still, the work was unacceptable both to some of his friends, and to his foes; first, because he seemed to manifest a want of respect for Luther, in finding fault with some of his translations; and second, because he issued the work in monthly numbers, which was uncommon at that time, except with works of a very frivolous character. He sent some of these numbers for distribution and for sale to a friend of his at Berlin, a man of sincere piety, but of ardent temperament. They seem to have struck him unfavorably; for he replied to Francke in a letter containing the severest reproof. The answer of Francke is characteristic.

"It gives me much pleasure, dear brother, that you have reproved me; for you have done so with a sincere love to me and to the church of God. I am therefore not displeased with your severity; on the contrary, it has given me a higher esteem for you than I have ever before felt; and this letter is more precious to me than any other I have received from you. I beseech you ever to deal thus with me, and without the least reserve to tell me of my faults and my indiscretions. Be assured that such reproof will ever be agreeable to me. All that I complain of between us is, that we so unfrequently tell each other of our failings, and that when we do, our feelings are so often excited thereby. Some time ago you wrote to me, exhorting me to awake and be diligent in the service of the Lord; and for that advice I sincerely thanked you. You have now reproved me, and I thank you still more. Be assured that I am tenderly attached to you, and that I pray the Lord to bless you for your kindness to me." He now relates to him the causes of his undertaking the work, and states his reasons for publishing it in the way he did; reasons which it is unnecessary to repeat here, inasmuch as by our readers he will not be thought to have committed any fault.

"In this whole affair," he continues, "I have not sowed to myself, and do not expect to reap to myself. My object was the honor of God, and the spiritual as well as temporal good of men; and this being the case, I feel no regret for what I have done, nor any desire to discontinue this effort. I am not accustomed to lay up a single farthing for myself: if I have food and raiment, I am content; and these my Heavenly Father constantly supplies me." He concludes in the following language: "Your letter has been of much service to me, in leading me to self-ex-

amination—to prayer—to the exercise of caution and sincerity in my conduct. I again thank you for your plainness and frankness with me. May the Lord reward you! In time to come watch over me, and do not spare me when you find any thing blame-worthy. I should not have defended myself, nor mentioned what led to this publication, had I not supposed it wrong to leave you prejudiced against, and ignorant of the reasons which influenced me. I cannot but hope that your opinion will now change. Will it not my brother? Can we not be again joined in heart? You have asked my pardon, in case you had misunderstood me. I desire no apology from you—I must, on the contrary, ask to be forgiven for causing you pain and ill will. \* \* \* The friend for whom I have been laboring, has been compelled even to sell his Bible. Will you not do something for his relief? May the Lord Jesus be your support and strength!”

This truly humble and Christian reply completely changed the views and feelings of his friend, who acknowledged his error in writing so hastily, and sent a donation for the benefit of the afflicted individual.\*

Many attacks were made upon Francke, but they had little effect either upon him or his labors. His peace of mind and confidence in the rectitude of his cause, never forsook him. The reproaches of his enemies served only to make him more guarded in all his deportment, and so far from fixing any stigma upon his character, they rather served to create friends for him, by leading men to examine the grounds of accusation against him. “All the machinations of his enemies,” says his biographer, “were completely powerless against that faith which he exercised, and never destroyed that peace of his, which ‘the world can neither give nor take away.’”

[To be continued.]

From “Priesthood and Clergy unknown to Christianity.”

#### PREACHING THE GOSPEL AND ORDINATION OF MINISTERS.

Then, as to “preaching the Gospel,” no such faculty was conveyed by any imposition of hands or any ordination; for if that had been the case, then of course no other door to preaching the Gospel could have been opened, as the simultaneous existence of ordained and unordained preachers would have made it appear that ordination, for preaching the gospel at least, was a ceremony that might be dispensed with. Now to the existence of unordained preachers we have a direct testimony: “Saul made havoc of the church, entering into every house, and haling men and women, committed them to prison; therefore they that were scattered abroad went

every where preaching the word.” (Acts viii. 4.) Was this an irregular and uncanonical proceeding? Of course all clergymen are bound to declare that it was, because these preachers had not received “holy orders;” but the Scriptures here, as in all other ecclesiastical questions, disagree with the clergy, for it is written further, “Now they which were scattered abroad upon the persecution that arose about Stephen, travelled as far as Antioch, preaching the word. And the hand of the Lord was with them: and a great number believed, and turned unto the Lord.” (xi. 19–21.)

Now if this had been irregular, not only would the inspired writer have marked it with disapprobation, but the then existing church would assuredly have corrected the practice, and laid down some canon against “lay preaching:” but not so; for the “tidings of these things came unto the ears of the church: . . . and they sent forth Barnabas, that he should go as far as Antioch: who, when he came, and had seen the grace of God, was glad, and exhorted them all, that with purpose of heart they would cleave to the Lord.” (verse 22–24.)

This narrative, if duly weighed, incurably ruins the whole fabric of “a regular ministry ordained to preach the Gospel;” for it brings us to acknowledge this point, that the churches of the apostacy will not tolerate those practices in which the saints of the apostolical age greatly rejoiced, and which drew forth the commendation and thankfulness of “good men who were full of the Holy Ghost and of faith.” Would the Church of England, in similar circumstances, send forth its “lay members” to preach the Gospel? Did it do so in the time of the Commonwealth, when the hand of power bore heavily on the episcopal party? Has the Church of Rome ever authorized preaching by any but clergymen? or would it, or could it, under any circumstances, tolerate such an irregularity? Do the Dissenters allow “lay men” to preach in their chapels? Assuredly not. If lay men were allowed to assume this ministerial prerogative, it would ruin the clergy, disenthroned the oligarchy of the pulpit, and bring to nought that “official distinction and authority,” which we are assured is not always sufficiently valued\* in their ordained ministers, though “they are appointed as living oracles to announce, and as ministers of the temple to interpret, the utterances and will of God.” (*Discourses of R. M'All, LL. D.*, i. 421.)

In the Pontifical of the Church of Rome we find that the bishop, in the ordination of a clergyman, confers for the first time the power of preaching when he grants deacon's orders; as in the previous grades of doorkeeper, reader,

\* The income of the work was such, in addition to this, as to enable him to fulfil completely his benevolent intentions.

\* “It is my decided conviction, that in some of our churches the pastor is depressed far below his just level. He is considered merely in the light of a speaking brother. He has no official distinction and authority.”—*Church Member's Guide*, p. 57.

xorcist, acolyth, and subdeacon, this privilege is withheld. In conferring deacon's orders, the bishop says, "Dearly beloved son, as thou art now to be promoted to the Levitical order, deeply ponder to what a degree in the church thou art approaching, for a deacon ought to minister at the altar, to baptize and to preach:" and in the Church of England, the bishop says to the deacon, "Take thou authority to read the Gospel in the Church of God, and to preach the same, if thou be thereto licensed by the bishop." This is man's order; but it is not so in the Holy Scriptures.

The case of Apollos (Acts. xviii. 24), is exactly to the point. "He was an eloquent man, and mighty in the Scriptures . . . instructed in the way of the Lord; and being fervent in spirit, he spake and taught diligently the things of the Lord." This was his *ordination*, "I have believed and therefore have I spoken;" and this is the only ordination that a Christian, instructed from the word, is called upon to own—the ordination of faith granted by the Holy Spirit. "We having the same spirit of faith according as it is written, I believed, and therefore have I spoken; we also believe, and therefore speak." (2 Cor. iv. 13.)

This also was the ordination of others whom Paul mentions: "I beseech you, brethren, (ye know the house of Stephanas, that it is the first fruits of Achaia, and that they have addicted themselves to the ministry [*diakonia*] of the saints), that ye submit yourselves to all such, and to every one that helpeth with us, and laboureth." (1 Cor. xvi. 15, 16.) This is remarkable; "the house of Stephanas," a very wide expression, the whole family had addicted themselves to the ministry; they had not been ordained to this ministry by canonical sanctions, but had most irregularly, without the help of a bishop, or of the presbytery, taken upon themselves "the sacred functions." Besides this, they had not only addicted themselves, but *ordained* themselves; for so the translators were bound to render the word *εταξαν*, *etaxan*, if they had had any regard to consistency. In Romans xiii. 1, they so give it, "The powers that be are *ordained* of God;" but here the translation is softened, and a meaning is given which the original will scarcely bear. To these irregular ministers Paul requires that the Corinthians should submit themselves, and not only to them, but to all who, like them, had helped the service of the Gospel. Such is the ordination of the Scriptures! which the translators keep back where it might appear, or bring forward where there is no authority for it, as in Acts i. 22, "Must one be *ordained* to be a witness with us of his resurrection." The ecclesiastical phrase "*ordained to be*," a phrase most important for the translators in that passage, is wholly wanting in the original. The word is simply *γενεσθαι*, *genesthai*, and we should read the passage thus, "Wherefore of these men

which have companied with us all the time the Lord Jesus went in and out amongst us . . . must one be a witness with us of his resurrection."

Remembering then that the words "*ordination*" and "*ordain*," when used in matters of sacred import, are liable to be misunderstood, and that though they will carry the signification of "*appointment*," yet by juxtaposition with certain circumstances recorded, they may convey the idea of *clerical consecration*, we shall easily perceive how these words in the English translation of the Scriptures may mislead the unsuspecting reader by an ambiguous sense. In Titus i. 5, we read it thus, "I left thee in Crete . . . that thou shouldst *ordain* elders in every city as I appointed thee." This certainly looks not a little like consecration or canonical ordination, and we know that the text is continually quoted by the ignorant or the disingenuous to establish the clerical figment, but the words of the original will by no means bear such an interpretation, as we shall presently see. The word "*ordain*" is the rendering of the verb *καθιστημι*, *kathistemi*, meaning "*to appoint*," "*to make*," "*to constitute*." In the following instances it is so translated:

Matt. xxv. 21. "I will *make* (*katasteso*) thee ruler over many things."

Luke xii. 14. "Who *made* (*katesese*) me a judge or a divider over you?"

Rom. v. 19. "As by one man's disobedience many were *made* (*katesathesin*) sinners, so by the obedience of one many shall be *made* (*kathisthesontai*) righteous."

Acts vi. 3. "Look out seven men . . . whom we may *appoint* (*katastesomen*) over this business."

Such being the usage of the word and its true meaning, we can at once perceive how the rendering it by the word *ordain* in Titus i. 5, is calculated to make us suppose that Titus did by clerical consecration ordain certain elders; whereas he only *appointed* them where churches existed, selecting those individuals who were spiritually gifted for superintendence—recognizing the gift which would determine the station to be taken by the persons professing it, for it was "the gift" and not Titus which determined what the men were to be; and according to that gift must they exercise their ministry, whatever form of it "the gift" might have imparted: hence Paul enjoins Timothy not to neglect "the gift" which he had received, and which was given him by prophecy and the laying on of the hands of the presbytery. The prophets prophesied, the presbytery laid on their hands, and Timothy received a gift; but what that particular gift might be, we are not informed. Assuredly it was not to preach the Gospel and "administer the sacraments."

In the case of Titus, then, he recognized a gift received, and the persons whom he recognized and appointed were the overseers, or superinten-

dents, or, to use an ecclesiastical word, *Bishops*, for this is the name given to them in the next verse; and it is worthy of remark, that this very passage, which is much quoted by the Episcopalians as one particularly fortifying the views of their party, does in fact sadly damage the diocesan theory, for we find that Titus is appointing overseers or bishops in every city and town in Crete: not one bishop for the whole island to rule the diocese of Crete, but bishops, a plurality of them, that is more than one, perhaps many, in every city, and that by Paul's express desire! Crete is an island about two hundred and seventy miles long and fifty miles broad, and in the days of Paul contained a hundred cities; as, therefore, the direction given to Titus was to appoint bishops in every city, there must have been a large number of them in the island—far too large to allow the diocesan system elbow-room. Indeed, it is hereby manifest that “the bishop” of the Scriptures could have had a diocese only as large as the city or town in which he dwelt; though even there his diocese must have been divided, for Paul speaks of these elders or bishops in the plural number, “Elders in every city,” more than one—two or more; as many as had received the gift for the office! Neither is this a solitary confutation of the diocesan theory, for we read elsewhere that Paul and Barnabas chose elders “in every city of Lycaonia” (Acts xiv. 23.)

To return, however, to the passage in question, we conclude that it ought thus to be translated—“For this cause I left thee in Crete, that thou shouldst appoint elders in every city, as I had directed thee.”

The original is again translated “ordain” in passages where clerical consecration might thereby seem to be implied. “Every high priest taken from among men is ordained for men in things pertaining to God.” (Heb. v. 1.) “Every high priest is ordained to offer gifts and sacrifices” (Heb. viii. 3); and yet, in another text, relating to the same subject, in the same Epistle, this word is truly translated, “The law maketh men high priests which have infirmity,” (vii. 28); “ordination” was not here wanted, as it speaks not of priests ordaining priests, but in v. 1 and viii. 3, a dubious rendering is given, leaving it uncertain whether the Scripture does not mean in those passages that the high priest, by virtue of his ordination, made offerings and sacrifices; which, though it was quite true in the law, because no offering in the law could be offered without previous consecration of him that made the offering, yet is not alluded to in the texts in question. Neither is this to be considered a small and unimportant matter; for when we find in one place of Scripture that Titus “ordained” elders or bishops in the cities of Crete, and in another that the high priest was “ordained” to make offerings and sacrifices, is it surprising that the unsuspecting reader should connect the two ordinations together, and should

find in the ordination of the high priest something very like the ordination of the bishop? A careful examination of the text does, however, immediately dissipate the dream, and brings before us quite another appearance of things.

But the clerical consecration through the instrumentality of the word “ordain,” appears in the translation given to the word *χειροτονέω*, *cheirotoneo*. “And when Paul and Barnabas had ordained them elders in every church, and had prayed with fasting, they commended them to the Lord on whom they believed.” (Acts xiv. 23.) Here, questionless, it is generally understood that Paul and Barnabas consecrated elders into the clerical office; but let us see how “ordination,” thus ingeniously introduced through this word, is, in the only other passages where it occurs, evaded. “God raised up Jesus of Nazareth and showed him openly, not to all the people, but unto witnesses chosen before (*χειροτονήσας*) of God.” (Acts x. 41.) Why not *ordained before of God*; or if “chosen” were the right word here, why was it the wrong one in the other passages?

But again; “we have sent Titus who was chosen (*χειροτονήσας*) of the churches to travel with us.” (2 Cor. viii. 19.) This is truly remarkable; the translators will allow Paul and Barnabas to “ordain” elders, but they will not permit the churches to ordain Titus—“the bishop of Crete;” in fine, on this subject, they make the Scriptures say whatever suits their purpose, keeping back or bringing forward that mysterious word “ordain” with marvellous forethought, and never losing sight of that system which they were determined to uphold.

[To be continued.]

#### CAPTAIN VICARS; OR THE PROOF OF A GENERAL DEGENERACY AMONG CHRISTIANS.

The papers report the recent completion of a monument in London to this reputedly Christian warrior, who died while waging one of the most inexcusably offensive wars on record, and fell in the very act of slaughtering on their own soil men who had never done him any personal injury. We do not now propose a criticism on the man; but such a tribute to his memory has set us to thinking anew upon the sad degeneracy of public opinion among Christians, that could write, circulate and eulogize the biography of one whose profession was the work of human butchery! Yet we find the memory of this professional murderer published by our Sunday-School Societies, recommended without qualification by Christian editors, and put by thousands in our Sabbath-School libraries, to inoculate the young with the war-virus, and train them to just those habits of thought and feeling which have, from time immemorial, covered the earth with the vices, crimes and woes of war.

Strange lack of reflection that could lead the

mass of Christians speaking the English language, so to contradict or ignore their religion of Peace in admiring this young warrior! We do not recollect to find a solitary writer for the Christian press, outside of publications expressly devoted to the Peace Reform, making any exception to the book on this ground, but rather treating it as a matter of special gratulation and joy. Such treatment of the subject just shows the current mode of thinking and feeling common among Christians, and the urgent necessity of a fundamental, all-providing reform among them. Not one in ten has yet thought enough about the matter even to suspect himself to be at all in the wrong.

But we will, at present, only quote the following letter on the subject from a paper in Dublin, Ireland:—

"I had shrunk from reading it, (Life of Captain Vicars,) fearing it might have the effect of too closely uniting two things, which I look on as widely apart as the antipodes—War and Christianity. Truly, the perusal of this book introduces one into new company. Soldiers, fervent in their piety, loving their Saviour fervently, forming prayer-unions for the spread of religion, animated with a large share of the missionary spirit, heedless of the fear of cholera, or the thousand perils, if they could but lead their fellows to the footstool of that Saviour whose name is Love! Such became Headley Vicars, after he had been for years a thoughtless, pleasure-loving soldier; and those who read his memoirs will learn that there are officers and men more than a few of his stamp.

But can such men stop here? Can those who have such bright realizations of the love of God in Christ, practically limit that love to their countrymen, and have no yearnings towards those whom they call their enemies? Can they much longer continue so to limit that boundless love, as not to realize that it includes alike, in its limitless expansiveness, the Russian, the Afghan and the Kaffir? Yes, there is yet a further lesson to be learned by the Christian soldiers of our armies,—that the full force of 'LOVE YOUR ENEMIES' has yet to break with all its heavenly fulness on their souls; that they have yet to learn, that there is a higher duty than that of fighting for their country; that they will yet have, with the boldness of a Peter or a Paul, to utter 'Whether we are to obey God or man, judge ye'; that they will have to say, with the young Maximilian, and others of the early Christians, 'I am a Christian, and, therefore, I cannot fight'!

How comparatively slight a matter might have led the ingenuous mind of Headley Vicars to realize the great truth of the *practical* universality of the gospel of peace and love. Had he been thrown amongst the wounded Russians, had he been made a prisoner, who can doubt but that his sympathies would have expanded towards

Russian sufferers, that he would have realized practically his Saviour as yearning for the souls of all? Alas! that the last act of his life should have been the hurrying of two souls into eternity, there is too much reason to apprehend, in a fearfully unprepared state! Let us remember his own admission, that, had he seen things as he did at a later period of his life, he would not have entered the army.

What strange anomalies and views war brings out! I remember reading, that, in the attack on the Redan, a Russian and an English officer exchanged the masonic sign, and became at once each other's shield. Shall the Christian sign have no such effect? Is it right in one case, and wrong in the other?"—*London Herald of Peace.*

#### A HAPPY CHILDHOOD.

"A happy childhood," says Isaac Taylor, "is a precious inheritance, with which, as a fund, to begin trading in practical wisdom and active usefulness. It is a great thing only to have known by experience, that tranquil, temperate happiness is actually attainable on earth: and we should think so, if we knew how many have pursued a reckless course because, or chiefly because, they early learned to think of happiness as a chimera, and believed momentary gratifications to be the only substitute placed within the reach of man. Practical happiness is much oftener *thrown away* than *snatched from* us; but it is the most likely to be pursued and overtaken and husbanded by those who already, and during some considerable period of their lives, have been happy. To have known nothing but misery is the most portentous condition under which human nature can start on its course."

#### THE ARTESIAN WELL IN THE DESERT.

A correspondent of the *Moniteur de l'Armes*, a military French journal, gives an interesting account of the finding water in boring an artesian well in the desert, by French engineers in Algeria. The place was the oasis of Sidi Rached, which had already become nearly burnt up from want of water, and threatened to entirely disappear; and the water was found and rose to the surface on the 13th of March, from the depth of fifty-four metres, or about one hundred and fifty-seven feet. As soon as the hard pan or bed was pierced the water instantly rose in the pipes, pouring out a thousand gallons a minute, at a temperature of twenty-four degrees Reaumer. The engineer estimated that as soon as it had reached its level of ascension fairly, the quantity would average about twelve hundred and fifty gallons per minute. Think of a fountain springing up in a wasting desert, with a perennial flow of twenty hogsheads per minute! The fountain formed is described as truly magnificent.

At the moment of the water's bursting forth no Arab was present, but the news quickly spread,

and in a few minutes the whole population of the village rushed to the spot, and threw themselves upon the works with such frenzy that force was necessary to remove them. Women and children lay down in the stream, as if they had never seen water before. The Sheik Sidi Rached could not repress his emotion; he threw himself on his knees by the trough and wept for joy. The next day the inhabitants of the neighboring Arab villages came to thank the engineer and to bless the fountain, while in the evening there was a dance and a grand merry-making, and this festival was kept up for six days. In the meantime, the people went immediately to work and constructed a sluice to convey the vivifying stream to the portion of the oasis which was dead for the want of moisture.

From the Christian Witness.

'COME THIS WAY, FATHER.'

'During a short visit to the sea-shore of our State, some two years since, with a party of friends, it was proposed one bright afternoon that we should go down the harbor on a fishing excursion. We accordingly started, and after sailing about three miles, a young lady of the company declined going farther and requested us to land her on one of the small islands in the harbor, where she proposed to stay until our return. My little boy, then about four years old, preferred remaining with her. Accordingly we left them and proceeded some six miles farther. We remained out much longer than we intended, and as night approached a thick fog set in, entirely enshrouding us. Without compass, and not knowing the right direction to steer, we groped our way along for some hours, until finally we distinguished the breaking of the surf on the rocks of one of the islands, but were at a loss to know which one of them. I stood up in the stern of the boat, where I had been steering, and shouted with all my strength. I listened a moment and heard through the thick fog and above the breaking of the surf, the sweet voice of my boy calling, 'Come this way, father!—steer straight for me—I'm here waiting for you.' We steered by that sound and soon my little boy leaped into my arms with joy, saying, 'I knew you would hear me, father,' and nestled to sleep in my bosom. The child and the maiden are both sleeping now. They died within two short weeks after the period I have referred to, with hardly an interval of time between their deaths. Now tossed on the rough sea of life, enveloped in the fog and surrounded by rocks, I seem to hear the sound of that cherub voice calling from the bright shore, 'Come this way, father!—steer straight for me!' When oppressed with sadness, I take my way to our quiet cemetery, still, as I stand by one little mound, the same musical voice echoes from thence—'Come this way, father!—I'm waiting for thee!'

I remember a voice which once guided my way,  
When lost on the sea, fog-enshrouded I lay,  
'Twas the voice of a child as he stood on the shore,  
It sounded out clear o'er the dark billows roar—  
'Come this way, my father! steer straight for me;  
Here safe on the shore I am waiting for thee!'

I remember my joy when I held to my breast  
The form of that dear one, and soothed it to rest;  
And the clear, simple words yet ring in my ear,  
'I called you, dear father, and knew you would hear  
The voice of your darling far o'er the dark sea,  
While safe on the shore I was waiting for thee!'

That voice is now hushed which then guided my way;  
The form I then pressed is now mingled with clay;  
But the tones of my child still sound in my ear—  
'I am calling you, father!—O, can you not hear  
The voice of your darling as you toss on life's sea?  
For on a bright shore I am waiting for thee.

I remember that voice; in many a lone hour  
It speaks to my heart with fresh beauty and power,  
And still echoes far out over life's troubled wave,  
And sounds from loved lips that lie in the grave—  
'Come this way my father! O steer straight for me;  
Here safely in Heaven, I am waiting for thee.'

"To think ourselves more religious than our neighbors because our dress is less graceful, our manners less pleasing, and our minds more ignorant and uncultivated, is to shake the very foundation of revealed religion: its derivation from Him who gave us the sense of beauty we despise, the social instincts which we violate, and the love of knowledge which we condemn."

## FRIENDS' REVIEW.

PHILADELPHIA, TENTH MONTH 24, 1857.

THE SEPARATE MEETINGS IN NEWPORT AND MOUNT PLEASANT.—While Philadelphia Yearly Meeting continues in its present unsettled position in reference to the Yearly Meetings of New England and Ohio, its members, and the members of all the other Yearly Meetings, cannot but feel a strong interest in the proceedings of the meeting at Newport, generally known as the "smaller body," and of that at Mount Pleasant of which Benjamin Hoyle is clerk. It seems due therefore to our readers, that we should lay before them correct information, so far as we are able to obtain it, of such facts in the proceedings of these meetings as have a direct bearing upon the important question whether they are entitled to the character of Yearly Meetings in the Society of Friends, which they assume, and which in the name of Philadelphia Yearly Meeting has been fully granted in one case and partially in the other.

In a late number of the *British Friend*, published at Glasgow, Scotland, we find the following paragraphs in an account of a meeting of the "smaller body" at Newport in the 6th mo. last. The meeting referred to in Iowa is composed of a few persons who seceded two or three years since from Red Cedar Monthly Meeting and, it appears, hold a separate meeting.

"Two Friends in the ministry were present with certificates from within the limits of New York Yearly Meeting [Poplar Ridge], and sev-

ral members in their private capacity from that, and from Ohio and Philadelphia Yearly Meetings.

Epistles were received from the Yearly Meeting of New York, recently held at Poplar Ridge, in Cayuga county, and from Baltimore Yearly Meeting, now held at Nottingham in Maryland, and a committee was appointed to essay replies, as way might open therefor. A communication addressed to the Yearly Meeting was mentioned by the clerk as being received by him, from a body, claiming to be Salem Quarterly Meeting, in Iowa; which was referred to a committee to examine and report as to the propriety of its engaging the attention of the meeting. To the afternoon sitting they reported that they were willing the communication should be read, which was accordingly done. It expressed the unity and sympathy of Friends of that Quarterly Meeting with their brethren of New England, New York, and Baltimore Yearly Meetings, in their deep trials from the prevailing defection, and encouraged them to continued faithfulness in their allotment. A minute was made recording its reception, and the clerk was directed to transmit a copy thereof to the meeting in Iowa."

The meeting held at Mount Pleasant, Ohio, of which B. Hoyle is clerk, commenced on the 5th and closed on the 7th inst. Mead Atwater, a minister in connection with the Meeting of Separatists known as "New York Yearly Meeting held at Poplar Ridge," was present, occupying what is considered the head seat in the meeting. Soon after the representatives had been called, he laid a paper on the clerk's table, saying it was a certificate from his friends at home stating his position in Society and their approbation of his present journey. An expression followed from more than thirty persons in favor of reading his certificate and that of his companion. The clerk then said, he had unity with the Friend, and owned his ministry as being in the anointing; but was not prepared to hear his certificate at present on account of some violation of discipline on the part of those who liberated him for service here. As a further reason for not reading the certificate it was stated that the Ohio meeting was not in correspondence with the meeting from which the Friend came. A discussion, occupying more than two hours, ensued. The clerk attempted to show wherein the discipline had been violated and also gave a short account of the separation in New England. He stated that the separation in Swanzea Monthly Meeting was brought about by setting up a clerk over the regularly appointed one, and that the members of the smaller body were right, up to the division

in Rhode Island Quarterly Meeting. They then appealed to the Yearly Meeting, which referred the subject to the representatives to decide which was the true Rhode Island Quarterly Meeting, which he thought a proper course; but instead of making good their claim before the representatives, four out of the forty-five representatives brought forward the name of T. B. Gould for clerk, and, said he, "as well might we justify those who went off with J. Binns, as such a procedure." These and other views advanced by the clerk, were earnestly controverted, but the subject was finally dropped; the certificate of Mead Atwater not being read.

After the transaction of some other business, M. Atwater said his friends at home had liberated him to visit some of the subordinate meetings, but as his certificate had not been read in the Yearly Meeting, he thought it might be proper, perhaps, for him to return homeward. This seemed to produce much feeling; many spoke on the subject, and all united in encouraging him to pursue his prospect. We have here a striking instance of the inconsistency into which those are led who depart from the plain provisions and principles of the discipline, which all profess to believe was established in Divine wisdom. On the one hand, the discipline forbids the attendance of persons who are not members of the Society; and on the other, it requires the reading of the certificates of ministers coming, under a religious concern, from other Yearly Meetings. In this case there was a clear violation of the discipline, either in permitting Mead Atwater to attend the meeting, or in refusing to read his certificate; and after the meeting had declined to recognize him as a regularly accredited minister, neither the discipline nor the order of our Society warranted his visiting the subordinate meetings. Towards the close of the sitting next day, he spread before the meeting a concern to appoint a meeting at some suitable time for the youth. This was also united with, and 3 o'clock the following afternoon was agreed upon as a proper time.

On *Fourth day*, the propriety of disowning the "Separatists" was considered. This was strongly urged by one section of the meeting, and objected to by the other. Some thought a loss had been sustained by postponing disciplinary proceedings, and that a further postponement would tend to weaken their hands, until eventually the

subject would die out. The principal objection urged to this was that *they were not enough united amongst themselves to engage in disowning those who had separated from them.*

The Report of a Committee appointed last year to attend to the rights of members in Iowa was read, recommending that all the certificates of those members should be sent to Stillwater Monthly Meeting, Ohio; and that Stillwater Quarterly Meeting should have the care of establishing meetings in Iowa. Some united with this report, but it was strongly opposed by others, so much so that the subject was again referred to the Committee, to report next year. The principal ground of objection appears to have been that the adoption of the report would entirely set aside the meeting in Iowa which we have already mentioned, as composed of persons who have separated from Red Cedar Monthly Meeting.

The question of correspondence with the "smaller bodies" of Newport, Poplar Ridge and Nottingham, appears to have been deferred or passed over for the present. No epistle was received, and none was issued.

Perhaps the best comment we can make upon the divided and discordant state of this body; its singular disregard of discipline and long established order, and its painful isolation from the Society of Friends, will be a reference to our account of the proceedings and condition of Ohio Yearly Meeting a few weeks since. "By their fruits ye shall know them." Notwithstanding the charges of "defection" and departure from the faith so constantly and persistently reiterated, we think it safe to say that love and unity exist among the members of that meeting as becomes the followers of Christ; and that they are, in all sincerity and religious concern, faithfully and humbly endeavoring to uphold not only the principles and practice of church order, but also the Christian doctrines and testimonies always acknowledged and maintained by our religious Society.

DIED, on the 1st inst., in Randolph Co., North Carolina, BENJAMIN MILLIKAN, in the 74th year of his age, an Elder of Springfield Monthly Meeting of Friends.

—, On the 8th inst., aged 57 years, JOSEPH GASKELL, of Uxbridge, Mass. He was an esteemed Elder and Overseer of Uxbridge Monthly Meeting, a diligent attender of religious meetings, and of circumspect and exemplary life and conversation. The last number of the Review contained an account of the decease of his daughters, Caroline Josephine Gaskell and Ruth Elizabeth White, on the 4th inst.

— On the 27th of 9th mo., at the residence of her uncle George Congdon, in Dutchess County, New York, CATHARINE BRUSH, in the 40th year of her age, a much beloved and useful member of Oswego Monthly Meeting of Friends.

She endured a long and suffering illness without being heard to murmur or complain, although her numerous relatives and friends feel the loss of her interesting company, they have consolation in believing that their loss is her eternal gain. A few days before her dissolution she expressed a thankful sense of the kind attention she had received, and that her close was near; that she felt prepared to go; that it was all in mercy she enjoyed peace, sweet peace. Thus composed and resigned to the end, she quietly passed away.

#### SPECIE PAYMENTS.

In the midst of an appalling and disastrous panic, the cry is raised that a resumption of specie payments is the only salvation. There are men who believe and worship the golden dollar as a god. They seem to think if the banks will only pay out coin the country must be safe, and all perils disappear. In the excess of their glittering delusion, they forget entirely, or purposely shut out of view the important fact that the community at large are debtors to the banks. If there be good reason why the banks should pay their debts in gold and silver, we take it for granted there ought to be as equally good reason why other people, who are precisely in the same category, should do the same thing. There is no moral difference between the two cases. The merchant, the manufacturer or the mechanic, who makes his notes, and buys property or produce with them, does precisely what the banks do, and incurs the same obligation to society to the extent of the responsibility which he assumes. The currency of those notes depends upon his credit, based on real or supposed resources, and they are merchantable according to this measure of value. The banks being incorporated under associated capital, which individual wealth could not readily command, have become the accepted agencies through which the operations of business are conducted. They take the notes of the merchant, manufacturer, or mechanic, and issue their own to pay for merchandize or labor. While these notes are paid there is no trouble, but when a panic comes they are not paid, and then the banks are disabled. Just at such a moment, everybody rushes in under the exaggerated impulse of self preservation, and the consequence is that all supplies are necessarily cut off, and the gates shut down. The banks, like many merchants, may have surpluses of hundreds of thousands of good assets to show, but be utterly without the ability to convert them into gold and silver, when every dollar is hoarded and hid in a dark corner.

Yet politicians clamor for "resumption" as the panacea for every evil. They care not what the distress of the people may be, how much commerce may languish, how manufacturers may be broken down, or mining stopped—all these are nothing, so that the banks pay specie. According to this cry the banks may stop discounting, they may drive the community into liquidation, they may invoke ruin upon our heads by compelling

sacrifices, so long as they go on shelling out the gold and silver. This is the demand, and to make it plausible, the welfare and prosperity of the working classes are urged as its justification. In the haste to excite bad passions and to agitate, these reckless fomenters of discord do not stop to inquire how the working man is to be benefited at this crisis by such a policy. We ask what advantage will it be to him for the banks to pay specie if he has no notes to offer for redemption? If he is thrown out of employment, is penniless and starving, with his wife and children wanting bread, how will it avail him that the banks have resumed? These are practical questions which reach every man's fireside, and we want them answered, not with the cant of politicians who are striving to make capital over the sufferings of this community, but by plain and conclusive facts.

If compelling the banks to pay specie, to contract their discounts, to withdraw their circulation, and to close all business but the compulsory collection of the debts due them, will reopen the manufactories that have been closed, will distribute work among the industrious and needy, will revive trade, will restore confidence, will unlock our mines and bring forward our agriculture, let there be a speedy and universal resumption. But if it will not accomplish these desirable ends which now absorb the anxiety and the efforts of this community, then the demand is an insult to every citizen of the State, and one that will be deeply avenged in good time, by a suffering and indignant people.—*N. American.*

From the American Agriculturist.

#### THE SEWING MACHINE.

A large number of inquiries from our readers, on this topic, aside from our own personal interest in the matter, as a purchaser, has induced us to devote considerable time to investigating not only the respective claims of different machines offered to the public, but also whether even the best of them would be a paying investment. On the latter point we have become fully convinced that nearly all kinds of family sewing can be done more rapidly, and even better by machinery than by hand. We consider the difference in this respect as fully equal to that of threshing grain by a machine and by hand. Take a single illustration. The other evening on going home we found a sheet just "basted," ready to be hemmed or stitched. Though we have never learned to use a thimble, (having always been favored with a kind mother, sister, wife or friend, to do all needed stitching,) on the above occasion we proposed to turn *seamster*, and stitch the sheet. The result of the trial was, we stitched the edges of the sheet, at the rate of a yard in three minutes, "including stoppings," and some good judges, present, pronounced our work not to be excelled in fineness, regularity and beauty of stitch, by the

best hand sewer. This was our first trial on actual needle work—we had played sew, with pieces of cloth, a dozen times before. We have since far excelled our first effort. Any of our lady readers can estimate the advantages of sewing a close, fine, strong stitch, even at only the rate of a yard in three minutes.

We could give many illustrations that have already been developed in our own family in less than one month's trial; but it may suffice to say that where there is much sewing to be done in a family—and where is there not?—it is cheaper to employ a good machine, even if it cost \$200 or \$300, or more. Suppose a housewife could, with a machine, do up her family sewing during a year, *easier* than by working with a needle and having the assistance of a seamstress five weeks. This would save, in wages and board, say \$25, which would pay the interest on \$200, and leave \$11 for wear and repair. We estimate the saving as greater than this, and we are free to say that, looking at the subject in barely an economical point of view, if our machine could not be replaced, we would not part with it for \$100 or \$500. The cost was \$125—\$110 for the machine itself, and \$15 for having it put in an extra cabinet, which serves the triple purpose of a table, work-stand, and an all chest of drawers, besides being a handsome piece of "furniture."

With regard to the difficulty of using the sewing machine, on which point many inquiries have been made of us, we think it requires just about the same degree of skill, or "gumption," as the Yankees term it, to use a sewing machine successfully, that it does to operate a common grain-thresher, or a mowing machine. Our own was sent home with only the manufacturers' printed directions, and it has been worked successfully. Others have found some difficulty, though not of an insurmountable character where a good machine has been obtained.

As to the best *kind* of sewing machines, we are loth to say a word, and have no interest in doing so. There are three, perhaps four kinds now before the public, either of which is better than no kind. We have found none of them sold at less than \$85 to \$100 and upward, which we considered worth buying. Wheeler & Wilson's, Singer's, and Grover & Baker's machines, all work under Howe's patent, and are, so far, the best machines made, we think. We were interested in witnessing the operation of Robinson & Roper's, but not enough to give it any preference over the others. For our own family use, we became fully satisfied that Grover & Baker's machine is the best, and we accordingly purchased it.

From among the many letters on this topic, from ladies who have used the sewing machines, we have only room for the following, from Anna Hope, whose contributions on Household Economy are familiar to many of the older readers of this Journal.

To the Editor of the American Agriculturist :

An intelligent farmer would despise himself if he failed to make subservient to his interests any improvement in agricultural implements, or neglected to derive advantage from any new invention of which his circumstances would permit him to avail himself. That the more expensive implements find many purchasers, may be readily seen from the sales books of firms who deal in them. One such house of my acquaintance has sold this year about two thousand mowing machines, and from two to three thousand threshers, the prices of which are \$120 and \$130, and these machines are of course needed only for a few weeks in the year. That the purchase of them is good economy, may fairly be inferred from the fact that so many are sold, and that they give so good satisfaction. We rejoice in all these helps afforded to *men* to make their labor easier or more productive, and we wish most fervently that *woman* might be equally relieved in her own sphere of labor; nor are we unmindful that whatever diminishes the number of "hands" on a farm, diminishes the number of mouths to be fed, and the number of dishes to be washed, and thus indirectly makes the labor of the house less burdensome. But woman needs "aid and comfort" designed expressly for herself. She is too often considered very much of an agricultural implement—a piece of property secured at the altar—to be employed in any way that will add most, with the least outlay, to the money income of the farm, and she is not always cared for with the same watchfulness and anxiety that is bestowed on the horses and cattle of her husband. They must not be neglected, nor over-worked, but she, poor creature, is never supposed to be weary nor over-burdened. This idea of property in woman is a remnant of barbarism, when brute force was the basis of power, and is an indication of remaining barbarism in the so-called civilized world. The more thoroughly the world becomes civilized and Christianized, the more general will be the recognition of woman as an individual *embodied soul*, with wants and capacities no less numerous and actual than man's, and whatever will contribute to her comfort will be deemed no less important than what contributes to his.

The inventive genius of the present age is beginning to develop itself in mechanical contrivances for the relief of woman, and none of these are destined to prove a greater blessing than that of the Sewing Machine. Many a life has been sacrificed in unremitting toil, and the needle has pierced more hearts than the stiletto or sword; but a brighter day is dawning, and the sewing of a family need no longer be looked upon with trembling and dread. For several years I have been much interested in sewing machines, as a means of emancipation to woman, and have examined with great interest every new improvement that came to my knowledge. The price alone deterred me from long ago availing myself

of the services of one, for after seeing how quickly and well they did their work, I could not be satisfied with the slow progress made by my fingers, and I could not but feel that I was bringing myself down to the level of mere matter, if I willingly did what a machine could do much better and more rapidly. At length I grew desperate, for I was haunted by unfinished work, and it would neither "down," nor be done at my bidding, nor by my persevering efforts. Wherever I went, shirts with outstretched sleeves and dangling wrist-bands hung in mid-air before my eyes, hurling defiance at me, like some evil genius of fairy times, and grinning with most hideous triumph. For months these frightful spirits tormented me, but, thanks to the Inventor of the Sewing Machine, I at length found a spell powerful enough to "lay them," and since I have used it, not one has dared to show his ugly head. Shirts are now no longer frisked about in the air by hobgoblins, but remain quietly in the drawer, and do not at all detract from my happiness, for to make one is but the work of a few hours, and I have leisure to look at the "estray" buttons. I am not, by any means, the only woman whose peace has been disturbed by necessary but unaccomplished work. I have had abundance of sympathy in these trials, and now I should be most happy to enjoy equal sympathy in the relief I have found from them.

For several months I have used in my family one of Grover & Baker's Cabinet Machines, and have found it capable of accomplishing all I expected from it, and all that it promised. I have done upon it every variety of family sewing, from muslin sleeves to dresses and pantaloons, and the work has proved equally strong and durable as sewing done by hand. I never feel hurried in my sewing, nor do I feel that I have not leisure for rest. I can afford time for an excursion with my children, without neglecting any necessary work, and I have no twinges of conscience when I sit down to read a paper or a book. It is not simply because of the actual work done that a Sewing Machine is one of the richest of family blessings, but it possesses a high value in bringing with it freedom from wearying care and anxiety. There are few families that do not need the relief such a seamstress would afford, and perhaps none need it more than those of farmers, for their domestic cares and labors are usually numerous and pressing. There is certainly no class of persons for whom I feel a deeper interest, or a more earnest respect, for the blood of farmers flows in my veins, and with it a most ardent love of country life; and if by adding my testimony to that of others in regard to the value of a machine which may bring relief to my over-burdened sisters, I can do aught to benefit them, I am happy to give them the result of my experience. I know something of their toil, of their weariness, of their need of relaxation, and I would fain introduce to their notice that which will lighten the toil, di-

minish the weariness, and give them leisure for social enjoyment.

This is indeed "a working-day world," but one not alone for work for the *body*. It must be cared for, but the mind, the heart, the soul, must not be neglected. Every mother has a higher duty to perform than to feed and clothe her children. They are to be educated, and to be educated for Heaven, and whatever will enable her to give more time to this nobler work is to her and hers no small blessing. What if Sewing Machines are expensive? They are no more so than Mowers and Threshers, and *money* should not be weighed in the balance against *time*, for on one depends only the lower needs of this life, while on the proper use of the other depends our eternal destiny. Next to the gospel, I consider the general introduction of the Sewing Machine the best gift to woman, for it gives her time to cultivate her own higher nature, and to devote herself more fully to the best interests of her children.

ANNA HOPE.

From the Student's Magazine.

CALIFORNIA.

BY A TRAVELLER.

I propose to furnish for the Magazine, a series of brief articles concerning California and the Territories of Oregon and Washington. I do not propose an elaborate essay upon each branch of the subject, for that would require a large volume—but brief sketches of the History, Climate, Soil, Productions, Future Prospects, &c., such as will, I trust, prove instructive to the youthful readers of the Magazine.

A careful study of the map of the world, with reference to the comparative importance of different places in a political and commercial point of view, must convince us that California occupies a very important position in relation to the rest of the world. The discovery of gold and the settlement of these shores by an enterprising race of Anglo-Saxons, are but the prelude to an entire revolution in the commerce of the world, as regards the great channels through which it shall flow. No doubt can be entertained that so soon as a good rail-road shall be built between the magnificent Bay of San Francisco and the valley of the Mississippi—most of the trade of China and the Islands of the Pacific with the United States, and even with a part of Europe, will pass across this continent by way of San Francisco.

Who can fail to perceive that the States which are growing up on this side of the continent are destined soon to exert a powerful influence upon the rest of the world; not only upon the people of our own country, but especially upon the half barbarous people of the Polynesian Islands, and the eastern coasts of Asia. Already constant and almost weekly communication is had with the Sandwich Islands, and with China. The

result of this easy communication with China is seen in the fact, that already about forty thousand Chinese have emigrated to this State and have become permanent residents. How unspeakably important it is that these shores shall be settled and occupied by those whose influence upon those ignorant and superstitious Chinamen, shall be for good and not for evil. And how important that the people of the Eastern States should possess correct information respecting this country. But how imperfect is the general knowledge on this subject. It is true that in almost every neighborhood in the United States persons may be found who have visited this country and remained a longer or a shorter period. But the great mass of those persons came here with no wish or object but to gather gold dust—win a fortune, and return home. Whether these early pioneers returned with or without the great object for which they braved the perils of the wilderness, or the fevers of the tropics, they are not generally qualified to impart useful information concerning anything but digging and washing the golden sands. The remark is therefore undoubtedly true,—that at this time, the people of the eastern States are better informed with respect to the condition and resources of some of their neighbors across the Atlantic, than of their *brethren* across their own continent.

I need not dwell upon the geography of this country; your readers are supposed to be conversant with the common school atlas at least, and to know that our possessions upon the Pacific extend from the 49th parallel of latitude to the gulf of California—that they embrace Puget's Sound in Washington Territory—the mouth of the great Columbia river in Oregon Territory—the unequalled bay and harbor of San Francisco in California, at about the same latitude as that of Baltimore or St. Louis.

Having occupied so much space with preliminary observations, I have only room in this number for a few remarks on the history of California.

On this branch of my subject, very little can be said. The history of this country has not been written, and I know of no materials accessible to the general student of history from which anything more than a brief outline can be sketched. Indeed, California has no history, except as relates to the aborigines, and the few Catholic Missions which have long existed in the country.

An authentic and full history of the rise, progress, and decline of the Jesuit Missions and influence in Spanish America, would be very interesting and instructive. But such a history has not been written in English, and probably never will be. Suffice it to say,—that in pursuance of the general policy of Roman Catholicism, the Jesuits, at a very early period, long before the revolution which put an end to Span-

ish dominion in Mexico, obtained grants of land, and many extraordinary privileges, with the ostensible object of converting the heathen Indians of the then almost unknown regions extending from the Rio Grande to the Bay of San Francisco. With untiring zeal, and amid much privation, these priests labored to conciliate the savage tribes, and to introduce among them a new religion scarcely less superstitious than their own, and but little further removed from idolatry. By the exercise of uniform kindness, and the use of all the means calculated to win the favor and confidence of the natives, these far seeing agents of the Roman Hierarchy obtained at length complete control of many of the largest and most influential of the Indian tribes throughout this vast region. Many whole tribes forsook their roving habits, and came to dwell in the immediate vicinity of the Missions, where they were little by little taught to labor for the priests. And now by means of the labor of the natives, large churches were erected, high walls were built enclosing large gardens and orchards, deep ditches were dug around whole leagues of land, as a substitute for fences, and in a word, these missions became beautiful and pleasant places, and in the absence of any other settlements, they were as oases in the wilderness. The priests owned large herds of cattle and horses, raised wheat and vegetables and all kinds of fruits in abundance, and by the sale of hides and tallow to the few trading vessels which visited the coast, they became quite wealthy. But at length, when the Mexican people began to settle in the country, and the Mexican government began to exercise jurisdiction over it, the Jesuits, so long accustomed to rule, disputed the authority of any but the priesthood, and thus much difficulty was engendered, which increased, until at length the temporal authority of the priests was wholly taken away by an act of the Mexican Congress, and they were henceforth confined to the exercise of their clerical functions alone. From this time the influence of the priests over the Indians began to melt away; their lofty edifices—built of unburnt brick—to decay; their ditch enclosures to fill up—until at length, when the American government took possession of the country, under the treaty of Guadaloupe Hidalgo—these ancient establishments were many of them little better than ruins. It is proper to remark in this connection, that although the influence of the Catholics was for a century unbounded with the Indian tribes, and their professed object was to introduce among them Christianity—yet at this day scarce a vestige of the fruit of their labor is to be seen. The Indian of this country is an Indian still. Not so with respect to the orchards and vineyards which were planted by these same pioneers. These gardens remain, and generally have been well preserved. I have gathered figs, olives, grapes, &c., from trees and vines, fifty or a hundred years old. A most interesting and

thrilling chapter might be written concerning the gold discovery of California, the rush of emigration to these shores—the sufferings of the emigrants—the horrible state of the early society—the struggles between the good and the bad men—the final triumph of the good in San Francisco last year—and the brighter prospect in a moral point of view for the future, &c.

The entire Pacific Coast from the straits of Magellan to Behring's, is mountainous and rugged, with only occasional plains and valleys, and these, with few exceptions, quite limited in extent. One vast chain of mountains extends through the whole distance, the spurs and offshoots of which extend every where in every conceivable size and form, down to the very beach of the Pacific. California forms no exception to the general rule. The "coast range" rises immediately out of the ocean and extends interior some thirty or forty miles. Then comes a valley of considerable extent, through which flow the San Joaquin, and Sacramento rivers; the one running northward and the other southward, until uniting their waters, they flow together to the ocean through the Bay of San Francisco. Immediately eastward of these rivers, rise the lofty Sierra Nevada mountains, broken at intervals by several small rivers which rapidly flow down their sides and join the San Joaquin and Sacramento nearly at right angles. At several points along the coast, and along all the rivers and streams, valleys are found, of greater or less extent; some of them very beautiful and fertile. But a very large proportion of the "face of the country" consists of rough and broken hills and high mountains. Some surveyors recently reported the discovery of a low pass across the Sierra Nevada, which was "only two thousand feet in height."

It will readily be supposed that the climate of this State is very various. The valleys enjoy a mild and equable climate, literally without winter; whilst the mountain regions are covered with snow during several months of the year, and even in summer know but little warmth. But this depends upon the latitude entirely. I have stood in the valleys and beheld around me blooming flowers, and fruits and vegetables in the full vigor of their growth—the mountain sides green with vegetation up to a certain height—while pure white snow glistened in the sunbeams on the summit. And this is a common sight from the valleys during all the so-called winter months.

But the inequalities of the surface of the earth, whilst they no doubt modify the climate, are by no means sufficient to account for all its peculiarities.

The great Pacific ocean is no doubt the principal agent in the hands of Providence, in producing the very singular climate we enjoy. All our philosophy is insufficient to account satisfactorily for the great difference between the climate of the eastern and western coasts of the continent. It is true that learned observers have at-

tempted to account for this difference by a mere statement of the fact—that the prevailing winds on the Atlantic side blow from the land to the ocean whilst on the opposite side of the continent, they blow from the ocean to the land. Now these facts are but secondary causes, and how account for them?

Suffice it to say in conclusion, that the climate of California is very delightful, except on the mountains. The seasons are divided into "rainy" and "dry." The rainy season commences usually about the first of twelfth month, and closes about the first of fifth month. These periods of change are by no means arbitrary, but like all nature's changes they vary. Sometimes quite sufficient rain falls to saturate the earth deep enough to insure good crops; but sometimes there is a deficiency of moisture. I shall allude more particularly to this point when I come to speak of the "Productions" of the State. In winter we have little or no sea breeze, very little frost, no snow in the valleys, no thunder storms, and seldom more than twenty or thirty rainy days. The rains generally appear to come from the mountains, as the winds during the rains blow from the interior toward the coast.

Toward the beginning of the fifth month the breezes set in from the sea, and blow with great regularity each afternoon, and generally quite strongly. The mornings are still and mild, but the evenings are quite cool. These grateful sea breezes, while they seem to prevent the possibility of rain, do themselves compensate in some degree for this lack. They bring moisture with them, and frequently in the immediate vicinity of the ocean, there are fogs. When the nights are clear very heavy dews are condensed. So that, although there falls no rain for six or seven months of the year, yet the moisture evaporates so slowly, owing to the causes above mentioned—that the usual crops come to great perfection, if planted in good season.

The climate of Oregon and Washington Territories is very similar to that of California. More rain and more snow fall there, and the weather in all seasons is cooler. Upon the whole it may be repeated, in conclusion, that the climate is truly pleasant in all these countries, and especially healthful, both in the valleys and on the mountains.

[Selected for Friends' Review.]

#### DEPARTING SUMMER.

By GEORGE M. HORTON, a Slave of North Carolina.

When auburn Autumn mounts the stage,  
And Summer fails her charms to yield,  
Bleak Nature turns another page,  
To blight the glories of the field.

At once the vale declines to bloom;  
The forest smiles no longer gay;  
Gardens are left without perfume—  
The rose and lily pine away.

The orchard bows her fruitless head,

As one divested of her store;  
Or like a queen whose train has fled,  
And left her sad, to smile no more.

That bird which breathed her vernal song,  
And hopp'd along the flowery spray,  
Now silent holds her warbling tongue,  
Which dulcifies the feast of May.

But let each bitter have its sweet,  
No change of Nature is in vain;  
'Tis just, alternate cold and heat,  
For time is pleasure mixed with pain.

#### SUMMARY OF NEWS.

FOREIGN INTELLIGENCE.—Liverpool dates to the 7th inst., have been received.

ENGLAND.—The arrangements for the reception of the Atlantic telegraph cable at the Plymouth Navy Yard were so far completed that the landing was expected to commence the following week. The discharge will begin from the Niagara; the wire will pass through boiling oil, and its delivery will probably occupy six weeks.

More troops are held in readiness for India, and ten thousand additional militia have been embodied. According to French advices from India, the rebels are under European generals, who have commenced operations to prevent the union of the British forces, and five years hard fighting may be looked for, the native troops being nowhere faithful to the British.

An expedition to the river Niger, headed by Dr. Backie of the Royal Navy, has left the Copper River. It consists of seventy-five natives and fourteen Europeans, among whom are botanists, mineralogists, &c. Another expedition, commanded by Ladislaus Magyar, of the Portuguese army, is now exploring the river Congo. He is ordered to make a full survey of that stream, and is accompanied by a corps of men of science.

FRANCE.—The Emperor left Stuttgardt on the 29th ult., on his return to France. A letter from Paris states that the fact of the expulsion of refugees from Genoa was confirmed by the publication of the names of those who had been expelled. The difficulty between France and Denmark in relation to the Sound Dues has been amicably adjusted.

SWITZERLAND.—A conflict which threatens again to disturb the public peace, has recently taken place between the federal government and the Canton de Vaud. A large emigration is going on from Switzerland to Brazil. Since 1850 not fewer than 70,000 emigrants have gone from the Canton of Berne alone.

GERMANY.—A railroad from Lubeck to Hamburg, to unite the German ocean to the Baltic, is much talked of; as is likewise a canal between the Rhine and the Weser.

The Evangelical Alliance at Berlin has closed its meetings. It numbered 1254 members, of whom twenty-three were from America. The King of Prussia attended several of the meetings. The Protestants of Hungary complain bitterly of the intolerance to which they are subjected, and are petitioning to be placed in their former condition, and to be allowed to hold a Synod. Sisters of Charity who wished to settle in Saxony and to attend the sick in the Catholic hospitals, have not been allowed to do so as members of a conventional order.

It is rumored that among the projects discussed at the Stuttgardt Conference was one for the establishment of a permanent Conference among the great Powers for settling by arbitration all differences that may arise in Europe.

RUSSIA.—A rescript from the minister of the Interior has been issued to secure apprentices against un-

wholesome and immortal influences. It goes into minute details respecting food, clothing, couches, cleanliness, &c., and requires masters to watch over the religious education of their apprentices. A fortress of the first rank is to be built on the Mithridates mountain, near Kertch, to protect the passage between Yenikale and the sea of Azof.

The Russian frigate Laporte had capsized between Revel and Cronstadt with the loss of 1,400 lives, including three Admirals, with their wives and children.

**SWEDEN.**—The Prince Royal of Sweden has been proclaimed Regent during the King's illness.

**TURKEY.**—Schaymil had taken prisoner the Governor of Khanatz, and an emuete had broken out in the district. Affairs are assuming a new aspect in that part of Bosnia which lies between the rivers Bosnia and Drina. The oppressed Rayahs are beginning to manifest hostility towards the Catholic and Greek hierarchy. In the Posavina, a Franciscan friar has been obliged to seek safety by flight, and the Metropolitan of the Russo-Greek Church has been menaced by the people. The cause of the animosity of the Rayahs to their Christian superiors is said to be that, without the knowledge of the people, they promised to pay certain taxes to the Porte, at the time that the Tanzimal was introduced into Bosnia. Troops have been sent against them. The Pasha of Scutari has sent a strong body of troops against the mountaineers on the southern and eastern frontiers of Montenegro, who have assumed a kind of independence and refused to pay tribute to the Porte.

**CHINA.**—At Foochow, the market was fairly supplied with tea and a large business was doing at advanced prices.

A proclamation at Shanghai, levying additional imposts on tea and silk, has been posted at the Custom House, and the foreign Consuls have had a correspondence with the Chinese authorities on the subject, and appealed against such an increase of the export duties, but without success.

Despatches have been received at the French Foreign Office from the French Minister in China. They represent the situation of affairs as unfavorable, and announce that the Court of Peking will not agree to any arrangement.

Late advices have been received from Ningpo to the effect that the Chinese (Cantonese) and Portuguese have had an engagement, in which the former were victorious, and destroyed the vessels of the latter, but committed no outrage or degradation upon foreign residents or shipping. Quiet is now completely restored there.

**INDIA.**—Telegraphic news from Cawnpore to 8th mo. 18th had been received in London. Gen. Havelock had defeated the insurgents near that place, on the 16th, but he had lost 100 of his men by cholera. The dates from Lucknow are to the same period. Nothing new had occurred there.

**AFRICA.**—The French squadron was before Tunis and had demanded of the Bey equality of rights among his subjects, the abolition of monopoly, freedom of commerce, the right of foreigners to acquire lands, equality in the imposts, the liberty of conscience, &c. The Bey promptly acceded to the demand.

**CHILI.**—Dates from Valparaiso are to 8 mo. 31st. The Senate has passed a law prohibiting the government police from voting at elections, and requiring that persons be able to read and write as a qualification for the full enjoyment of citizenship. It is apprehended that the Executive will veto this measure.

**PERU.**—Lima dates are to the 12th ult. The revolutionary armies had not met. The troops of Gen. Castilla had occupied the plaza at Islay, but were dislodged by some shells thrown from the frigate Apurimac. The town was entirely deserted. The

arrival of Don Domingo Elias from France was believed to be the forerunner of another revolution.

**MEXICO.**—The government of this country is in an anomalous condition in consequence of the recent dismissal of the Ministers and of the non-assembling of Congress, who should have proclaimed the President. President Comonfort was assiduously occupied in promulgating decrees of reform in the administration. An extensive conspiracy existed against the government of Comonfort, and a large number of persons, including men of high military and civic position, had been arrested. The government has authorized the foundation on the Isthmus of Tehuantepec, of three cities, to be named Colon, Irturbide and Humboldt.

**CALIFORNIA.**—San Francisco dates are to the 20th ult., brought by the steamship Northern Light, which brings also \$1,660,000 in gold and a list of the passengers by the Central America. At the late election, the Democrats elected their Governor and a large majority of members of the Legislature. A large majority of the people voted in favor of paying the State debt and against a Convention to revise the Constitution. The first of the overland mails arrived at San Diego on the 31st of the 8th month, having left San Antonio, Texas, on the 9th and 24th of the 7th month. On the evening of election day a severe shock of an earthquake was felt in most of the interior counties of the State lying along the base of the Sierra Nevada, and on the following day the sea-beach in the neighborhood of Blackpoint was covered with small, reddish animals from an inch to half an inch in length, so numerous as to disorder the water to the distance of 90 feet from shore. They were soft, and in form like caterpillars, and each was enclosed in a tubular shell which appeared to be broken off of some hard substance at the bottom of the sea, by the action of the waves. They are supposed to be the larvæ of some species of marine invertebrata.

The melter and refiner of the U. S. Mint at San Francisco has been arrested on the charge of having embezzled therefrom gold to the amount of upwards \$150,000.

The first mechanic's fair ever held on the Pacific coast was opened on the 9th ult.

**OREGON.**—Dates from this Territory are to the 5th ult. The Constitutional Convention has referred the slavery question to a committee. It is understood to be the intention of the majority to submit the question to the people by separate clauses for or against slavery.

**UTAH.**—The latest news from Salt Lake are to the 8th mo. 5th. The Mormons breathe defiance against the general government and appear determined to resist the mandates of its officials.

**DOMESTIC.**—The treaty recently concluded with the Pawnee Indians secures to the United States from ten to twelve million acres of land. These Indians pledge themselves to remain at peace with the United States and to use their influence with the neighboring tribes to the same end.

All the Banks in New York and Boston and most of those throughout New England and the State of New York have suspended specie payments, as have also those of Norfolk, Va., Wilmington, N. C., Augusta and Savannah, Ga., the bank of Tennessee, and others. In New Orleans, a run of two days upon the Banks caused the suspension of the Union. Merchants' and Traders' and the Bank of New Orleans. The other Banks promptly met all demands, and the run has ceased.

No official or reliable returns of the election in Kansas have been received. In Pennsylvania the Democratic ticket has succeeded by a large majority. Salmon P. Chase, the Republican, candidate has been elected Governor of Ohio.

# FRIENDS' REVIEW.

A RELIGIOUS, LITERARY, AND MISCELLANEOUS JOURNAL.

VOL. XI.

PHILADELPHIA, TENTH MONTH 31, 1857.

No. 8.

EDITED BY SAMUEL RHOADS,

TO WHOM ALL COMMUNICATIONS MAY BE ADDRESSED.

PUBLISHED WEEKLY

At No. 50 North Fourth Street,

PHILADELPHIA.

Postage on this paper, when paid quarterly or yearly in advance, 13 cents per annum in Pennsylvania, and 26 cents per annum in other States.

From "Priesthood and Clergy unknown to Christianity."

PREACHING THE GOSPEL AND ORDINATION OF MINISTERS.

(Concluded from page 102.)

It is worthy of observation, in passing, that though our translators have prevented the ordination of Titus by the churches, they have not been able to suppress the unmanageable fact, that Matthias was chosen or "ordained" into the apostolical office by the one hundred and twenty disciples at Jerusalem, some of whom were women (Acts i. 14, 15, 26,) which, if duly considered, must for ever vitiate the origin of the apostolical office, as it is represented to us by the Episcopalians. The apostolical office, they tell us, is perpetuated in their bishops, and the translators have done their utmost to help this figment by making Judas a bishop (Acts i. 20); but granting all this to be true, then we find that the first bishop after our Lord's departure was "ordained" *by the disciples* at Jerusalem; from which fact we draw this conclusion, that if the fountain-head is of this nature, the whole stream that flows from it ought to partake of the same elements; but that if the stream be entirely different, it cannot spring from the fountain, the waters of which we have analyzed, but must have some other origin congruous with the elements which we find in the stream.

One more instance may suffice: "and he *ordained* ~~twelve~~ *epoiëse* twelve, that they should be with him, and that he might send them forth and preach." (Mark iii. 14.) This is obviously an important place in which to introduce ordination: it is the record of our Lord's choosing the twelve apostles; and we so read the fact here as if our Lord had in some way conferred ordination as a necessary preliminary to preaching the Gospel. But "ordain" is here the unwarranted

translation of a word which simply means to make or do: it occurs some hundred times in the New Testament, but has no where else been thus rendered. If a secondary and figurative meaning were required for the word, "appoint" was obviously that which ought to have been selected, according to the sense in Rev. i. 6, "*has made* (*epoiësen, appointed*) us kings and priests." Calvin has, however, thus expressed the meaning—"Et fecit ut duodecim essent secum, et ut emitteret eos ad prædicandum."

Having, then, thus unravelled some of the perplexities of this question, it may be instructive to see the ill use which clergymen have made of the Scriptures in order to perpetuate a delusion. "When our Lord," says Bishop Beveridge, "had died and risen from the grave, and when he was about to ascend into heaven, he promoted his apostles into the episcopacy, that he *might leave behind him the conservators of his own place*. The first form of this episcopal consecration is recorded in John xx. 21, 22: where Jesus says to his apostles who were all collected together—"Peace be unto you: as my Father has sent me, even so send I you; and when he had said this, he breathed on them, and saith unto them, Receive ye the Holy Ghost." I confess that our Lord had before this ordained his apostles, but only to preach the Gospel, and to confirm it with miracles. (Mark. iii. 13, 14; Matt. x. 1.) But now for the first time after his resurrection, he says, 'As the Father has sent me, so send I you.' From which it most clearly appears, that by this second and last ordination, celebrated as it were by many ceremonies, the apostles were advanced to a higher grade than they enjoyed before, or rather (as far as relates to the faculty of ordaining and exercising ecclesiastical discipline,) to that very grade into which Christ himself had been consecrated by the Father. By the virtue of their first ordination, therefore, the apostles preached the Gospel; but by this last consecration they were made bishops, and so, supplying upon earth the place of their absent Lord, they did themselves create other bishops."

Thus it is that the eyes of ecclesiastics, dimmed by the suffusion of prejudice, and impaired in their healthy faculties, discern the specks of their own apostasy even in the clearest fields of scriptural vision, and conjure up the phantoms of

their order in the pure kingdom of the Son of God. But mark the fatal error of this strange passage! for the prelate, in his anxiety to establish ceremonies of consecration and worldly mitres, has forgotten or concealed the fact that, on the occasion recorded in John xx. 21, 22, and on which he builds his whole theory, *Thomas, one of the apostles, was absent*; for it follows immediately—"but Thomas, one of the twelve, was not with them when Jesus came." So that, according to this interpretation of the prelate, "the apostolical college" would be deficient in the mystery of consecration; and Thomas, a favorite apostle with the Episcopalians, would receive no "faculty of ordaining and exercising discipline," and consequently must have lost his station "as a conservator of the place of Christ," to the no small detriment of "the apostolical succession," and all its fabled benefits and prerogatives.

A word further as to imposition of hands; take the following instance, which is much urged by clergymen: "Now there were in the church at Antioch certain prophets and teachers . . . and as they ministered to the Lord and fasted, the Holy Ghost said, Separate me Barnabas and Saul for the work whereunto I have called them; and when they had fasted and prayed, and *laid their hands on them, they sent them away,*" (Acts xiii.) Here then, if this instance is of any avail, it ought to be shown that Paul and Barnabas had never preached the Gospel before; that they never had been sent forth before to the ministry or service of the Lord; and that on this occasion they for the first time received license "to preach the Gospel, and administer the sacraments." We find, however, an account of Paul's preaching (Acts ix. 20,) some long time, not less than seven years, before this event: nay, both Paul and Barnabas had been preaching *in Antioch* a whole year, and had been sent by the disciples of that city to Jerusalem, with a collection made for the brethren at Judea (xi. 30,) so that their ministry not only elsewhere, but remarkably in this very Antioch, had been for a long time tolerated without imposition of hands. Again, if this was indeed an "ordination" of Paul, we find the teachers and prophets ordaining an apostle!—a fact that would sadly derange the theory of the apostolical succession, which declares that our Lord alone ordained the apostles, and the apostles ordained the clergy. Moreover, it would reverse the order of precedence formally stated in Scripture, "God hath set some in the church, first apostles, secondarily prophets, thirdly teachers," (1 Cor. xii. 28,) whereas, in this narrative, supposing Paul and Barnabas to have been ordained by imposition of hands for the ministry, the order must have been "first prophets and teachers, secondarily apostles."

Again, this sending-forth of Paul and Barnabas was by the Holy Ghost (Acts xiii. 4); and where is that power of ordination now? The bishops in the Romish and English communions

do indeed *pretend* to convey the Holy Ghost in their ceremonies of ordination; but we know that it is only a pretence. And as for the Presbyterians and Dissenters, they do not now *profess* to convey any spiritual gift, ordinary or extraordinary, by their imposition of hands; and therefore they practice a ceremony without power or meaning—a mere nullity; but it was not in the days of the apostles that empty ceremonies were performed. The apostles did not observe customs to perpetuate a delusion, or to consecrate a phantom of forfeited power.

Again, the apostle Paul, in his Epistle to the Galatians, takes pains to make them understand that he did not owe his ministry to any ordination or appointment of man, "I neither received the Gospel of man, neither was I taught it, . . . but when it pleased God . . . to reveal his Son in me, that I might preach him among the heathen; immediately I conferred not with flesh and blood [that is, I consulted not with any man, nor did I follow any man's advice, order, or direction]: neither went I up to Jerusalem to them which were apostles before me; but I went into Arabia. . . . Then after three years I went up to Jerusalem to see Peter, and abode with him fifteen days. But other of the apostles saw I none, save James the Lord's brother." This is indeed a plain statement; and it is manifest thereby that Paul thought nothing of any appointment of man, though that man might be an apostle. When he believed, he spoke; and having received an ordination of God's grace, he was content with it: "I went not up to Jerusalem to them which were apostles before me." According to the opinion of the traditional school, the apostles were the fountain of all lawful authority for ministry; but Paul sought not that fountain; nay, he takes pains to inform us that he kept clear of it: therefore, as he was not ordained by the apostles, we may be quite sure he was not ordained several years afterwards by the prophets and teachers of Antioch, when he had been long engaged in the ministry.

Another passage in the Scripture is frequently wrested from its true meaning to prove ordination by imposition of hands. It is in Paul's Epistle to Timothy, "Neglect not the gift that is in thee, which was given thee by prophecy, with the *laying on of the hands* of the presbytery;" (1 Tim. iv. 14); and again, "Wherefore I put thee in remembrance that thou stir up the gift which is in thee by the *putting on of my hands.*" (2 Tim. i. 6.) What then was this gift? The gift of preaching the Gospel and license to administer the sacraments? Certainly not: it was a special gift—*χαρισμα*, *charisma*—of the Holy Ghost, which was conveyed to Timothy, as it would appear, by the laying on of the hands of Paul and the elders: and we know that this power did exist in those days; for we find that Peter and John, after praying that the Samaritan converts might receive the gift, "*laid their hands on them, and*

they received the Holy Ghost; and when Simon saw that through laying on of the apostles' hands the Holy Ghost was given, he offered money, saying, *Give me also this power*, that on whomsoever I lay hands he may receive the Holy Ghost." (Acts viii. 18.) And again, at Ephesus, Paul found certain disciples who knew only of John's baptism: on these Christians, after they had been baptized in the name of Jesus, Paul laid his hands, and then "the Holy Ghost came upon them, and they spake with tongues and prophesied." (Acts xix. 6.) It was therefore some such gift as this which Timothy had received; perhaps the gift of tongues or of prophecy, or the power of working miracles, "signs and wonders," any or all of these, or some other gift, of which perhaps there is no record left: and this word *charisma*, which Paul uses in allusion to this gift imparted to Timothy, is the appropriate term for the gifts which the Holy Ghost then conferred on the church. (See Rom. i. 11; xii. 6; 1 Cor. i. 7; xii. 4, 9, 28, 30.)

If then, Timothy was ordained into the clerical caste by imposition of hands, so also were the Samaritan converts and the "certain disciples" at Ephesus; for they also received a gift by imposition of hands: and indeed the advocates of the clerical order ought boldly to assert that the Samaritan and Ephesian disciples were ordained either priests or deacons, if they would build anything on the case of Timothy.

But in all this question we do not find Paul's first *ordination* is ever brought forward, which, after all, but for one inconvenient circumstance, might be more plausibly referred to than any other, as an instance required. Thus it is recorded:—"Ananias . . . . entered into the house; and putting his hands on him [Paul] said, Brother Saul, the Lord, even Jesus, that appeared unto thee in the way as thou camest, hath sent me, that thou mightest receive thy sight, and be filled with the Holy Ghost. And immediately there fell from his eyes as it had been scales; and he received sight forthwith, and was baptized." (Acts ix. 17.)

This instance is full to the point that Paul received the Holy Ghost by the imposition of hands, and that it was at the very beginning of his service in the church; this, therefore, looks much like "ordination by imposition of hands;" but then, unfortunately, if this be allowed, it would follow that Paul was ordained before he was baptized, an uncanonical irregularity wholly unknown in clergyman's law; and moreover, the person who then "ordained him by imposition of hands" was not a bishop or elder, but simply a "certain disciple at Damascus named Ananias" (ver. 10); in fact, according to the Papal ideas of these days, a mere layman: and yet this "lay-man," without the assistance of any of the clergy, without the presence of any bishop, lays his hands on Paul, and so confers on him the Holy Ghost! We can therefore well understand how the advo-

ates of a "regular ordained ministry" are disposed to pass over this remarkable occurrence, and prefer rather to quote the imposition of hands by the church at Antioch (Acts xiii.) which has been already examined.

Having then seen that imposition of hands does not, according to the Scripture record, confer the power of "preaching the Gospel and administering the sacraments," and having seen also that in many cases the imposition of hands took place, where confessedly no clerical designation or privilege was intended, and that this is conceded even by clergymen, we need not feel any remnant of perplexity on this question, but we may conclude by stating—

1. That imposition of hands sometimes means simple benediction: "Then were there brought unto him little children, that he should put his hands on them and pray: and he laid his hands on them." (Matt. xix. 13.)

2. Sometimes recognition of service in the church, as in the case of the seven brethren chosen "to serve tables," which certainly was not ordination to the "ministry," as the serving of tables on that occasion was markedly and avowedly kept distinct from "ministry of the word." (Acts vi. 4-6.)

3. Sometimes commendation to a particular work, and that by express command of the Holy Ghost. (Acts xiii.)

4. Sometimes an act whereby the gift of the Holy Ghost was imparted, as when Ananias, "a certain disciple," laid his hands on the apostle Paul (Acts ix. 27); or, as when the apostles gave this gift to others (Acts viii. 18; xix. 6); or, as in the case of Timothy and the elders—a case which is moreover peculiarly designated as having been in obedience to prophecy; or—

5. A visible sign of performing a miracle, as when the disciples to whom the power was given "laid their hands on the sick, and they recovered." (Mark xvi. 18.)

For Friends' Review.

#### THE PROPER INSTRUCTION OF YOUTH.

"Train up a child in the way he should go, and when he is old he will not depart from it."

We have abundant evidence left on record that the early training of the youthful mind is a subject which has, more or less, claimed the serious and weighty consideration of the religious (or righteous) in all ages of the world.

And among the many evidences of it, perhaps, there is not a more instructive and impressive one than the case of Moses and the Children of Israel, which we find in the sixth chapter of Deuteronomy. In a very emphatical manner he impressed on the chosen people the importance of having the *words*, which he commanded them, in their *hearts*, and then to teach them diligently unto their *children*. "Hear, O Israel; the Lord our God is one Lord; and thou shalt love the

Lord thy God with all thy heart, and with all thy soul, and with all thy might. And these words which I command thee this day shall be in thine heart; and thou shalt teach them diligently unto thy children, and shalt talk of them in thine house, and when thou walkest by the way, and when thou liest down, and when thou risest up," &c. And I believe it remains to be at this day, as it was then, an indispensable preparation or qualification for parents and guardians of youth, in the first place, to be duly impressed at heart with the importance of the subject themselves, and then we should be enabled as we continued to look to Him who alone is able to give us this preparation of heart, to move on in that ability which he will grant to his truly dependent ones, and teach diligently our children.

And we would be concerned that our conversation around our tables, at our firesides, on our farms, and wherever our lawful business called us, should be of that kind which would make a lasting impression on their young and susceptible minds for good, to be kept in store; the benefit of which might be experienced after many days. Thus their training might be going on from day to day from which they would not be likely materially to depart in after-life. And as we abode under this living concern for their religious growth and establishment in all best things; when the time came that they must be placed, in some degree at least, under the influence of other caretakers and associates, in order to acquire a competent literary education, I believe we should be earnestly engaged, "to procure such tutors of our own religious persuasion, as are not only capable of instructing them in useful learning, to fit them for business in relation to temporal concerns, but to train them up in the knowledge of their duty to God and one towards another." Although we cannot confer grace upon our children, yet I believe it is our duty to make use of all the means which a kind Providence has placed within our reach, as caretakers of the youth and as accountable beings, to protect them from the contaminating and baneful influence of hurtful associations.

I have been encouraged in believing that it is the desire of very many dear friends to pursue that course of instruction, both at home and at school, which would keep their beloved offspring firmly attached to the Doctrines and Testimonies, the value of which they themselves have long appreciated. To such and all of my beloved friends who feel this concern resting upon them, including myself, I would say, before we come to the conclusion to send our children to district schools, let us look well to what exertions we have made, and what still remains for us yet to make in order to get them to such schools as are kept by members of our Society and under the regulations of Friends. Let us not be too easily discouraged; but if we cannot, by reason of the fewness of our numbers in some places, have

large schools, let us be willing to patronize small ones, even if it costs a little more.

Although many instances may be mentioned in which youth who were isolated from the Society, have received their education in district and other public schools, and who during that time, and subsequently, have been preserved in the simplicity of the truth and in fellowship with our Society, yet if our Heavenly Father hath in his abundant goodness, preserved such from being contaminated with the evils that surround them, it does not seem to me that we should look upon that as any reason why we should not use every reasonable effort to give our children a guarded education in such schools as the Society has from its earliest days encouraged its members to support.

I would therefore encourage all my dear friends everywhere to use every reasonable effort to support schools under their own care, by having family schools, neighborhood schools, or boarding their children from home, and I do believe a blessing will attend it; and in time, as this kind of instruction, both at home and at school, is with full purpose of heart attended to, we shall have cause to rejoice and take courage in the fruits of our labor.

If we had "a mind to work," as those had of old who were with Nehemiah, and a living concern was in us to labor harmoniously together in rebuilding this part of the wall of the city of our forefathers, which is now much broken down, the work would prosper in our hands. J. B.

*Ohio, 10th mo., 1857.*

#### SAMUEL FOTHERGILL.

Samuel Fothergill, the sixth son of John and Margaret Fothergill, was born at Carr-End, on the 9th of Ninth month, 1715, O. S. He was very little more than three years old, when the death of his mother deprived him of her tender care. Of his early youth but little is now known. He and his brother John were at school together at Briggflats, near Sedbergh; and he also passed some time at Sutton in Cheshire, the residence of his maternal uncle, Thomas Hough, to whom, with others of his relations and friends, John Fothergill committed the care of his children, during his second visit to America, and when absent on other religious services. Of this charge a large share devolved upon Thomas Hough, who was well qualified for the trust, and discharged it faithfully. In particular, the care and education of John and Joseph had devolved much upon him, and through his means their brother Samuel was placed apprentice, as a shop-keeper, with Henry Arden, a Friend at Stockport.

Samuel Fothergill was at this time about seventeen years of age; he was endowed with considerable talents; he had a strong mind, and was of an active, lively, and even volatile disposition. These qualities caused his company to be much

sought after, and early introduced him into society at Stockport, of an injurious and hurtful character, calculated to dissipate and eradicate those lessons of piety and virtue which his worthy father had earnestly labored to impress upon the minds of all his children.

Yielding to the temptations to which he was thus exposed, Samuel gave way to the indulgence of his evil passions, and, with his new companions, abandoned himself to the pursuit of folly and dissipation. This downward path he continued for some time, and the state into which it brought him, as afterwards described by himself, and the view which he subsequently took of his condition at this time, is striking and affecting:—"I wandered far from the garden enclosed, and laid myself open to the enemy of my soul: I kept the worst company, and subjected myself to almost every temptation, broke through the fence of the sacred enclosure, and trampled it under my feet; and when for a time I found the least inclination to do good, evil was present with me, and I went from one degree of iniquity to another. My wickedness so far increased with my diligence, that at length, alas! I beheld the strong wall broken down, the garden wall destroyed, the mound left defenceless, and no hope left of returning peace to my afflicted soul!"—"I strayed to that degree, that my life became a burden to me, and I wished that I had never been born."

The downward course which he thus pursued was not, however, of long duration, nor was he utterly cast off or forsaken, even in the midst of this sinful career. Many were the strivings of the Spirit of Truth with his soul, and frequent the visitations of Divine grace. He says—"He who had kindled breathings in my soul after Him, would [even then] sometimes break in upon me." And again:—"Though I had drunk up iniquity as an ox drinketh up water, although I had exceeded all others in sin, and had long done despite to him, yet there was mercy with him that he might be feared."

Yet did he continue for a time to resist these offers of mercy, and to turn aside from the visitations of Divine regard, thus graciously continued to him; and many were the deep trials and conflicts through which he passed, alternately yielding and resisting, until at length his spiritual state and his danger were very forcibly brought before him, attended by a deep persuasion that these offers of mercy would be no more renewed, and that if he now any longer resisted, the day of his visitation would be over, and his destruction certain and inevitable. So powerful was this impression, that it brought him into great trouble and distress, and caused renewed and very earnest prayers for help and strength; he cried mightily for deliverance, and says: "My lips quivered, and my belly trembled, that my soul might rest in the day of trouble."

This help and this strength were mercifully granted, and he was enabled to maintain his

ground: he was now twenty years of age, and the altered circumstances in which he was placed were favorable to the progress of repentance and conversion: he was removed from Stockport, and had found a shelter and a home in the family of his brother Joseph at Warrington; here, and in the house of his uncle Thomas Hough, at Sntton, he had many seasons of retirement, peculiarly favorable to the present state of his mind.

The intended departure of his father for America, and their parting interview, were also conducive to his help.

Deeply afflicting to John Fothergill was the past conduct of his son Samuel: the evil of his ways, and his grievous departure from those paths of truth and virtue, in which he had, by long example and often inculcated precept, endeavored to train all his children, caused him much sorrow and distress. He was now about to embark for a distant land, in the service and cause of his Lord and Master, and the conviction that he was leaving behind him a beloved son, for whose restoration and welfare he had often put up his prayers, and yet who had so deeply revolted from the law of God, was as the worm-wood and the gall—bitter indeed to his soul. Memorable and affecting was their last interview; after once more imparting to his son deep and impressive counsel, he took his leave in these words:—"And now, son Samuel, farewell!—farewell—and unless it be as a changed man, I cannot say that I have any wish ever to see thee again."

These parting expressions, this powerful appeal from a father whom, notwithstanding his disobedience, he still tenderly loved, uttered during what might probably be the last time they should meet in this life, together with the awful solemnity and deep feeling with which they were accompanied, produced a strong impression upon Samuel Fothergill; they remained as if engraven upon his heart, and assisted to confirm and strengthen him in the path of repentance and conversion upon which he had entered, and which, happily for him, he now experienced to be permanent.

Thus, yielding to the powerful convictions of Divine grace, and as the spirit that convinceth of sin, of righteousness, and of judgment, wrought in his heart, he came to feel the terrors of the Lord forsin, and was made willing to abide under his righteous judgment, because he had sinned, and so was brought into a state of deep repentance; and as a brand plucked out of the burning, and as one awakened from the sleep of death, in due time, he witnessed a deliverance from the bondage of corruption, and a being created anew unto holiness, the end whereof is eternal life, through Jesus Christ our Lord.

Of the many conflicts and baptisms through which he passed during this work, or of the advancement which he was enabled to make towards that thorough establishment and settlement in

the truth, which he was favored afterwards so eminently to experience, no distinct or separate account is now to be found: such a record from his own pen would have been interesting and deeply instructive. Yet there is ground to believe that after a time his progress was rapid and steady.

In his correspondence he was sometimes led to speak of his state, and of the dealings of the Lord with his soul, as some of his letters show; they also contain proofs of the rejoicing which his return and conversion produced in the minds of his friends, mingled with excellent counsel and earnest solicitude for his stability and preservation.

Amongst those who thus extended towards him this care, was Susanna Croudson, of Warrington [afterwards his wife]; she was an acceptable minister in the Society, of which they both were members. She was some years older than himself, and by her religious experience, and the care, advice, and judicious encouragement, which were early and frequently extended, she was made peculiarly helpful to him. He found in her a friend to whom he could unburthen his mind of a portion of its distress, and from whose sympathy and advice he often found relief, and with whom, as he advanced in his spiritual path, he often took sweet counsel.

Soon after the return of John Fothergill from America, he went to the Quarterly Meeting at York, which was large, and attended by many Friends from different parts of the nation. His company was very acceptable; and the occasion was, in a peculiar degree, solemn and instructive.

Here he met his son Samuel. Tradition has handed down (and there is no other record of it) a remarkable circumstance connected with this, their first interview, since the return of the father to England. It is said that, from some accidental circumstance, John Fothergill did not arrive in York until the morning of the day of the meeting, and that it was late when he entered the meeting-house: after a short period of silence he stood up, and appeared in testimony; but after he had proceeded a short time, he stopped, and informed the meeting that his way was closed; that what he had before him was taken away, and was, he believed, given to another. He resumed his seat, and another Friend immediately rose, and taking up the subject, enlarged upon it in a weighty and impressive testimony, delivered with great power. It is added, that at the close of the meeting John Fothergill inquired who the Friend was that had been so remarkably engaged amongst them, and was informed that it was his own son *Samuel*.

Their thus meeting together, under circumstances so different to those in which their last memorable interview had taken place, previous to John Fothergill's departure from England, was peculiarly moving and affecting to them both. The son *then* in a state of rebellion and alienation

from good—*now* become "changed" indeed, and a fellow-laborer with his father in the ministry of the gospel, powerfully advocating and enforcing those great and solemn truths he had formerly neglected and trodden down, and engaged earnestly to beseech others to become as he was, reconciled unto God.

The good old man received his son as one restored from the spiritually dead, and wept and rejoiced over him with no common joy.\*

#### SOUTHERN TESTIMONY AGAINST SLAVERY.

THE VOICE OF JEFFERSON.

On the 39th and 40th pages of his Notes on Virginia, Jefferson says:

"There must doubtless be an unhappy influence on the manners of our people, produced by the existence of slavery among us. The whole commerce between master and slave is a perpetual exercise of the most boisterous passions—the most unremitting despotism on the one part, and degrading submission on the other. Our children see this, and learn to imitate it; for man is an imitative animal. This quality is the germ of all education in him. From his cradle to his grave, he is learning to do what he sees others do. If a parent could find no motive, either in his philanthropy or his self-love, for restraining the intemperance of passion towards his slave, it should always be a sufficient one that his child is present. But generally it is not sufficient. The parent storms, the child looks on, catches the lineaments of wrath, puts on the same airs in the circle of smaller slaves, gives a loose rein to the worst of passions; and, thus nursed, educated, and daily exercised in tyranny, cannot but be stamped by it with odious peculiarities. The man must be a prodigy who can retain his manners and morals undepraved by such circumstances. And with what execration should the Statesman be loaded, who, permitting one half the citizens thus to trample on the rights of the other, transforms those into despots and these into enemies, destroys the morals of the one part, and the *amor patriæ* of the other; for if a slave can have a country in this world, it must be any other in preference to that in which he is born to live and labor for another; in which he must lock up the facilities of his nature, contribute, as far as depends on his individual endeavors, to the evanishment of the human race, or entail his own miserable condition on the endless generations proceeding from him. With the morals of the people, their industry is also destroyed; for, in a warm climate, no man will labor for himself who can make another labor for him. This is so true, that of the proprietors of slaves a very small portion, indeed, are ever seen to labor.

\* Several different versions of this meeting between John Fothergill and his son are extant, and I have thought it best not to omit it. The account here given, I believe to be the most correct—G. C.

And can the liberties of a nation be thought secure, when we have removed their only firm basis—a conviction in the minds of the people that these liberties are the gift of God? that they are not to be violated but with his wrath? Indeed, I tremble for my country when I reflect that God is just; that his justice cannot sleep forever; that considering numbers, nature, and natural means only, a revolution of the wheel of fortune, an exchange of situation, is among possible events; that it may become probable by supernatural interference! The Almighty has no attribute which can take side with us in such a contest."

While Virginia was yet a Colony, in 1774, she held a Convention to appoint delegates to attend the first general Congress, which was to assemble, and did assemble, in Philadelphia, in September of the same year. Before that Convention, Mr. Jefferson made an exposition of the rights of British America, in which he said:

"The abolition of domestic slavery is the greatest object of desire in these Colonies, where it was unhappily introduced in their infant State.—But previous to the enfranchisement of the slaves, it is necessary to exclude further importations from Africa. Yet our repeated attempts to effect this by prohibitions, and by imposing duties which might amount to prohibition, have been hitherto defeated by his Majesty's negative; thus preferring the immediate advantage of a few African corsairs to the lasting interests of the American States, and the rights of human nature, deeply wounded by this infamous practice."

In the original draft of the Declaration of Independence, of which it is well known he was the author, we find this charge against the King of Great Britain:

"He has waged cruel war against human nature itself, violating its most sacred rights of life and liberty, in the persons of a distant people who never offended him, captivating and carrying them into slavery into another hemisphere, or to incur miserable death in their transportation thither.—This piratical warfare, the opprobrium of infidel powers, is the warfare of the Christian King of Great Britain. Determined to keep a market where men should be bought and sold, he has at length prostituted his negative for suppressing any legislative attempt to prohibit and restrain this execrable commerce."

Hear him further; he says:

"We hold these truths to be self-evident, that all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness; that to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed."

Under date of August 7th, 1785, in a letter to Dr. Price, of London, he says:

"Northward of the Chesapeake you may find,

here and there an opponent of your doctrine, as you may find, here and there, a robber and murderer; but in no great number. Emancipation is put into such a train, that in a few years there will be no slaves northward of Maryland. In Maryland I do not find such a disposition to begin the redress of this enormity, as in Virginia. This is the next State to which we may turn our eyes for the interesting spectacle of justice in conflict with avarice and oppression; a conflict wherein the sacred side is gaining daily recruits from the influx into office of young men grown up, and growing up. These have sucked in the principles of liberty, as it were, with their mother's milk; and it is to them I look with anxiety to turn the fate of the question."

In another letter, written to a friend, in 1814, he made use of the following emphatic language:

"Your favor of July 31st was duly received, and read with peculiar pleasure. The sentiments do honor to the head and heart of the writer. Mine on the subject of the slavery of negroes have long since been in the possession of the public, and time has only served to give them stronger root. The love of justice and the love of country plead equally the cause of these people, and it is a reproach to us that they should have pleaded it so long in vain."

Again, he says:

"What an incomprehensible machine is man! who can endure toil, famine, stripes, imprisonment, and death itself, in vindication of his liberty; and the next moment be deaf to all those motives whose power supported him through his trial, and inflict on his fellow man a bondage, one hour of which is fraught with more misery than ages of that which he rose in rebellion to oppose."

Throughout the South, at the present day, especially among slaveholders, negroes are almost invariably spoken of as "goods and chattels," "property," "human cattle." In our first quotation from Jefferson's works, we have seen that he spoke of the blacks as *citizens*. We shall now hear him speak of them as *brethren*. He says:

"We must wait with patience the workings of an overruling Providence, and hope that that is preparing the deliverance of these our brethren. When the measure of their tears shall be full, when their groans shall have involved Heaven itself in darkness, doubtless a God of justice will awaken to their distress. Nothing is more certainly written in the Book of Fate, than that this people shall be free."

In a letter to James Heaton, on this same subject, dated May 20, 1826, only six weeks before his death, he says:

"My sentiments have been forty years before the public. Had I repeated them forty times, they would have only become the more stale and threadbare. Although I shall not live to see

them consummated, they will not die with me."

From the Montreal Gazette.

CANADIAN PROGRESS.

The population of Canada may be safely stated at almost, if not quite, two millions and a half. When it is remembered that in 1848 the population of the United Provinces was but 1,500,000, the rate of increase in ten years is indeed something to boast of. Two-thirds added to the population of a country, with such variety of soil and climate, in that time, we believe, without precedent. The increase of the United States during the ten years ending 1850 was thirty-five and a half per cent.; that of Upper Canada during the ten years from 1841 to 1851, one hundred and four and a half per cent.; and now for the whole Province, since 1848, it is sixty-five to seventy per cent., or nearly double the rate of increase of the United States. The third of a century is generally reckoned as a generation. During that period, the population of Canada has increased from 582,000 to 2,500,000, or more than twice doubled itself. In fact, our population doubles itself in rather less than fifteen years. If the ratio of increase be continued, Canada will have, at the beginning of the next century, 20,000,000, of inhabitants. Nor is it in population alone that Canadian progress is remarkable. The splendid success of our ocean steamers, (the arrival of one of which, after a passage of less than ten days, we chronicle this morning,) marks the strides of Canadian commerce; and the great Provincial Exhibition just terminated here, imperfect as it was in several respects, yet showed that, both in agriculture and manufactures, our day of small things and slow things had passed away, and we were entering on a competition with the world. No one can stroll through the streets of this city, the commercial metropolis of the Province, seeing everywhere splendid ware-houses, beautiful churches, and fine mansions in course of erection, and fail to see the marks of progress at once swift and sure. At the west and south of us, long grievous accounts of commercial disaster come to us. Montreal keeps good heart and good faith, and goes quietly on with her business.

"How many who have deemed themselves antagonists, will smile hereafter, when they look back upon the world's wide harvest-field, and perceive, that, in unconscious brotherhood, they were helping to bind the self-same sheaf."—*Hawthorne*.

The affection of old age is one of the greatest consolations of humanity. I have often thought what a melancholy world this would be without children, and what an inhuman world without the aged.—*Coleridge*.

THE PLEASANT JOURNEY.

"Surely goodness and mercy shall follow me all the days of my life, and I shall dwell in the house of the Lord for ever."—PSALM xxiii. 6.

How delightful it is on a fine summer morning to think that we have a pleasant journey before us, along with a kind friend to cheer the way, and then at night to come to our dear happy home. David was probably a young man when he wrote this beautiful psalm, and something like this he seems to have felt, looking forward to the rest of his way through life. And yet he knew that he must meet with many trials, and have the valley of the shadow of death to go through at last.

The young Christian now may feel the same. If he is determined, by the help of grace, to "follow the Lord fully," he may be sure that Jesus will be ever with him, as a friend, a helper, a comforter, a guide, supporting him under every sorrow, and giving him from time to time new peace, and strength, and joy, and carrying him safely through the Jordan of death to the good land of promise on the other side. Yes, if I belong to Jesus, all is well:

If thou, my Jesus, still art nigh,  
Cheerful I live, and joyful die.

Whether my journey be long or short, it will be a happy one. And then, oh the blessedness of heaven at the end!

Then let us, while we dwell below,  
Obey our Father's voice,  
To all his dispensations bow,  
And in his name rejoice.

How sweet to hear him say at last,  
"Ye blessed children come;  
The days of banishment are past,  
And heaven is now your home."

FRIENDS' REVIEW.

PHILADELPHIA, TENTH MONTH 31, 1857.

BALTIMORE YEARLY MEETING.—Having been kindly furnished with a copy of the minutes of this meeting, we are enabled to state that it convened at Baltimore on *Second-day*, the 19th, and closed its sittings on the 22nd inst. Certificates were presented and acceptably read for the following ministers: Charles F. Coffin, Lemuel Gifford and Thomas Grover of New England, John L. Eddy of Ohio, and Thomas Frazier of Indiana Yearly Meeting.

Epistles were received from the Yearly Meetings of London, Dublin, New England, New York, Ohio, Indiana and North Carolina, and read "with desires that this intercourse may be maintained in that love and life, which will qualify us to strengthen and comfort one another." The

London General Epistle was read to comfort and edification, and 700 copies were directed to be printed for distribution.

The "Address to all who bear the name of Friends" and an Address to Parents, issued by London Yearly Meeting, were also read, and seven hundred copies of the latter and fifteen hundred of the former, were directed to be reprinted for general distribution.

*Third-day.*—The queries, with answers from the Quarterly Meetings, and the Half-Year's Meeting of Virginia, were read.

While engaged in this important and interesting subject the meeting was introduced into a living exercise for the advancement of Truth and the support of our Christian testimonies. The regular attendance of all our meetings was felt to be a testimony of great importance both to members and meetings. How can we expect to grow in grace if we suffer any worldly business to interfere with this solemn duty, and how discouraging it is to the rightly exercised mind to witness the number of those who are absenting themselves from our afternoon and week-day meetings. Would that there was more faithfulness in this respect, and that there might be a willingness to make a sacrifice, even at some cost. We believe that a blessing would rest upon it.

While we rejoice that love becoming our Christian profession prevails amongst us, we were cautioned still to keep closely on the watch, lest, as we have had mournfully to experience in time past, any thing should creep in to destroy that harmony.

The guarded education of our youth was felt to be a subject of very great importance, that their tender minds might be early imbued with the principles of Divine Truth. That we shall endeavor to train them in the fear and love of God, instructing them in the Holy Scriptures, directing them to the influence of the Holy Spirit in their own hearts, and by example and precept as well as by constraining love, training them up in plainness of speech, deportment and apparel, explaining to them as they advance to years of discretion the grounds upon which our testimonies are maintained. We believe that if parents are livingly concerned to seek after qualifications for these solemn duties, they would be mercifully granted to their own comfort and to their children's happiness.

Overseers and other concerned Friends were encouraged to cultivate that social and affectionate intercourse with our members generally which it is believed will often open the way for religious instruction, draw us nearer together as a people, and prevent many hurtful associations with the world.

Much concern was felt and expressed that we

should faithfully maintain our testimony against the use of intoxicating drinks, both as a society and as individuals, and when any give ground for fear in this respect, they should be promptly dealt with in the spirit of restoring love, as enjoined by our discipline.

A report from the Committee on Indian Concerns, was read as follows:

*To the Yearly Meeting:*

We are in receipt of the following report of the Committee on Indian Concerns of Indiana Yearly Meeting, by which we are pleased to find that the School has been resumed under favorable circumstances; and, while no active duties have devolved upon us the past year, we continue to feel a lively interest in the concern, and would encourage our dear Friends of Indiana in their arduous labors.

We propose that our usual subscription of \$100 be raised for this purpose, and forwarded to the Treasurer of the Committee.

"Soon after the close of our last Yearly Meeting the Committee engaged our Friend William H. Coffin, of Kansas, to visit the school, and make arrangements to prevent the premises being injured until suitable Friends could be found to take charge of the Establishment as Superintendents. John Denny and his wife, who were left in charge of the premises by our former Superintendent, were engaged to reside at the school and take charge of the stock, put in the winter wheat, and perform such other labor about the premises as was necessary to keep them in order during the winter.

"Early last Spring, our dear Friends, Simon D. Harvey and his wife, Mary H. Harvey, feeling a deep interest in the welfare of the Indians, consented to go out and take charge of the Establishment, as Superintendents. They left their home early in the Fourth month last, accompanied by Martha Townsend as Teacher, and our aged Friend, John Poole, who had kindly offered to accompany them and remain a few months:—his advice and labor while at the Establishment were very serviceable.

"The school was opened on the 20th of the 4th month, with ten scholars, and increased the next week to twenty-three, and from twenty to thirty children have been in attendance during the past Summer.

"In consequence of the Committee not being able to procure suitable assistance on the farm, and in the house, our Superintendents have been under the necessity of laboring very hard, and have had to endure many privations;—but in speaking of these, they say, that some of the bitter cups which they have partaken of have been sweetened by expressions of thankfulness and gratitude, frequently made by the poor Indians, that they were there to take the care and oversight of their children. In those labors

and privations our dear Friend, John Poole, largely participated.

"Our committee have very recently engaged our friends Caleb and Rebecca Harvey for two years to assist on the farm and in the house—this we have no doubt will afford great relief to our Superintendents, and we trust, will enable them to devote a small portion of their time to visiting, in the love of the Gospel, some of the Indians in their several localities, which service has seemed to rest with much weight upon their minds. And we may say, we have hopes, that ere another year shall have passed away, this establishment will be in a much more prosperous condition than it has heretofore been; for we are convinced that it is a good work, and our faith is strong that the Lord will bless our feeble efforts.

"In relation to the crop, we are informed by the Report that they have put up 350 dozen of wheat, not very good; they have 30 acres of oats, and 35 acres in corn, both of which were very promising; they have about 4 acres in garden vegetables, cultivated by our friend John Poole, which looked well."

*Fourth-day.*—Having been informed by Indiana Yearly Meeting of the proposed opening of a new Yearly Meeting within its present limits, in the 9th month next, to be called Western Yearly Meeting of Friends, our hearts have been drawn in affectionate and brotherly feeling to our dear Friends who are about entering upon this responsible position, and desiring to salute them as beloved brethren, and welcome them into the brotherhood of Yearly Meetings, we have appointed the following Committee to attend the opening of their Meeting with a copy of this Minute, viz.: Richard H. Thomas, John Scott, William A. Thomas, Bond Valentine, and John B. Crenshaw. Our Committee on Epistles was directed to prepare one to be presented to Western Yearly Meeting at its opening.

The Committee to visit the Subordinate Meetings during the past year, reported that in the 12th month, a part of their number visited the Quarterly Meeting of Dunning's Creek and the Monthly Meetings and most of the families belonging to it; and in the 1st month, four of the Committee attended Cedar Creek Monthly Meeting, at Richmond, Va., and visited most of its members. The Committee was continued to further service as way may open.

"Epistles to our brethren of other Yearly Meetings were produced by the Committee, read, and with some alterations approved. They were directed to be transcribed, signed and forwarded.

We have been comforted and strengthened from sitting to sitting, in having been favored to transact the business which has been before us in much love and unity, and desire that in re-

turning to our several homes and Meetings we may not be forgetful of the mercies which have been granted us, but endeavor with renewed faith and diligence to serve Him from whom all our blessings flow.

The Meeting concluded—to meet at the usual time next year, if the Lord permit.

FRANCIS T. KING, *Clerk.*

MARRIED, at Friends' Meeting House, at Haddonfield, N. J., on the 15th inst., J. NEWBOLD REEVE, of Greenwich, N. J., to ANNA N., daughter of the late Blakey Sharpless, of the former place.

DIED, at the residence of his father, Gerard Ladd, in Highland Co., Ohio, on the 28th of 9th mo., in the 25th year of his age, WILLIAM WALLACE LADD, a member of Fairfield Monthly Meeting of Friends.

Seldom has it fallen to the lot of survivors to record the demise of one more generally beloved and respected by a very large circle of relatives and friends, to whom he was endeared by his kindly disposition, inoffensive and unobtrusive manners, together with an unblemished moral character.

The deceased bore a protracted illness of typhoid fever with becoming composure, and finally passed calmly and peacefully away, as one falling into a sleep.

—, In Blackstone, Mass., the 1st inst., EUNICE, widow of the late Seth Kelly, and daughter of John Earl, of Newport, R. I., in the 84th year of her age, an esteemed member of Smithfield Monthly Meeting.

—, On the first inst., at his father's residence, Macedon, N. Y., after an illness of nearly a year, ABRAHAM PURDY, aged 24 years, son of Alexander and Esther A. Purdy, a member of Farmington Monthly Meeting. A short time before his death he expressed a willingness to go, and said he was going to his heavenly home. His relatives and friends have the consoling belief that his end was peace.

ELIZA P. GURNEY has returned from her continental journey. At Devonshire House Monthly Meeting, [London], in the 9th month, Robert and Christine Alsop returned the minutes which had been given them for religious service on the Continent of Europe, as companions to Eliza P. Gurney. Robert Alsop gave an interesting account of the religious engagements of the journey. In the first instance they had proceeded to the valleys of Piedmont, in which district they had held ten public meetings. Hence they proceeded to Turin and Nice, at which places, as well as at Cannes and Marseilles, they held public meetings. They next visited the meetings constituting the Two Months' Meeting of Congenies, and held public meetings at Nismes, and other places in the neighborhood. In the course of this part of the journey (we believe on the route to Nice) our Friends had an agreeable and satisfactory interview with the Empress Dowager of Russia. Meetings were held at St. Etienne, Ammonay and New Valence, also at Lyons and Paris, and they reached home about the middle of the First month. Early in the Sixth month they resumed their journey, proceeding to Brussels, Minden and Pymont,

where meetings were held, and the meetings of Friends in the latter places visited. Hence they proceeded to Berlin, where they held a public meeting, and afterwards to Potsdam, where a religious interview was had with the King, Queen, and Royal Family of Prussia. A public meeting was held at Dusseldorf, and, proceeding into Switzerland, others were held at Neufchatel and Geneva, after which they returned homewards. Many of the public meetings were large and all were generally satisfactory.—*London Friend*.

---

#### ANNUAL MONITOR.

Several months since notice was given in the Friends' Review, that a committee of the Friends' Tract Association in New York proposed to publish an Annual Monitor, and requesting the co-operation of those who feel an interest in such a work. The year is now rapidly drawing to a close, and but little material has as yet been forwarded to the committee.

A mere record of those who have been removed from the scene of trial during the year, would be worth preserving; and when to this can be added some traits of character—some account of the varied labors, in the cause of humanity, as well as in the cause of the Redeemer—in which the parties may have been engaged, the value of such record would be materially enhanced.

The committee again request of those who feel disposed to aid the undertaking, to forward to either of the undersigned, by the middle of Eleventh month, such particulars as can readily be obtained respecting those who have deceased during the past year. *Eulogies* are not desired. Plain, truthful statements are all that we ask for.

WILLIAM WOOD, 389 Broadway, New York.  
HENRY DICKINSON, Cliff Street, New York.

---

#### AUGUSTUS HERMANN FRANCKE.

[Continued from page 100.]

It is a remark not unfrequently illustrated in the experience of Christians, that those who live in entire devotion to the service of God, are often permitted, in the use of means apparently the most insignificant, to behold extensive and blessed results. This was pre-eminently the case with Francke in his labors, and especially in his efforts for the poor. He was not rich, yet he commenced and completed, by Divine assistance, an establishment as extensive as almost any other of its kind in Europe, with which his name will ever be associated, and by which his memory will no doubt reach to distant generations.—Faith seems in him to have been, indeed, a *living* principle, enabling him, with full assurance of success when in the path of duty, to undertake any enterprise which promised to do good. His life was a life of dependence upon

the Son of God; and the secret of his usefulness was, that he "committed his ways unto the Lord," and "leaned not to his own understanding." This truth will be fully exemplified in the history of the Orphan House, of which he was the founder.

It was then customary at Halle for the poor to call, at stated times, at the houses of their benefactors, to receive alms. In the suburb of Glaucha, they generally came once a week; and on these occasions Francke was in the habit of giving them food, &c. A company of beggars is, in general, a most disgusting sight, and the feelings of pity which they excite are commonly mingled with those of disapprobation and abhorrence. Such, however, were not the emotions of Francke, as, week after week, they assembled before his house in considerable numbers. He saw, indeed, many among them whose vices were the sole cause of their misery, and whose condition was truly wretched, being lost almost to the common feelings of humanity. But there was another class not less miserable, but less guilty, who interested his feelings much more, and these were the children and youth, who were growing up in the midst of the most pernicious influences, and becoming daily more depraved.

One day as they collected before his door, having long meditated some plan for doing them good without coming to any particular result, he went out and brought them all into his house, and caused them to be seated, the older people on one side, and the children on the other. He then began to question the children upon the Catechism, and to inquire into their knowledge of Divine truth, in a kind and engaging manner, permitting the parents and older persons to hear. After continuing this a quarter of an hour, he made a short prayer and dismissed them, after distributing to them their usual alms. He requested them to come in a similar way every week, that he might impart to them spiritual and temporal food at the same time. This was about the beginning of the year 1694, about the time that he entered upon the duties of his Professorship.

In examining the children on these occasions, he found among them the most deplorable ignorance. His first desire, of course, was to give them some proper ideas of the nature of religion, as the foundation of all moral improvement; and as this could not be well done but by teaching them to read, he determined to give them the means of instruction. He distributed to their parents a small sum of money weekly; sufficient, however, to enable them to send their children to school. He soon discovered that this plan was not about to secure his object; for many of them used the money for other purposes, and neglected their children; and of those who came to school, very few received any particular advantage.

Another class of poor, to wit, those whose

feelings would not suffer them to beg, but who were not the less in need of aid, interested his feelings. To relieve their necessities, and to support the charity he had already begun to the poor children, he obtained a box, and sent it around weekly, among the pious students and others, for contributions. The collection thus made was very small, and soon ceased altogether, on account of the poverty of those who had contributed. He then fastened up a box in his house, above which he made this inscription, "Whoso hath this world's good, and seeth his brother have need, and shutteth up his bowels of compassion from him, how dwelleth the love of God in him?" and below, this, "Every man as he hath purposed in his heart, so let him give, not grudgingly or of necessity; for God loveth a cheerful giver." This box was more successful than the former, for frequent donations were made to it by those who came into his house.

About three months afterwards, some person deposited in this box at one time, the sum of four dollars and sixteen groschen,\* for the poor. When Francke saw this sum, he was much delighted, and said, in joyful faith, "This is a considerable capital, worthy to be laid out in some important undertaking: I will commence a charity-school therewith." This resolution was no sooner adopted, than he began to put it in execution. He purchased books to the amount of two dollars, and engaged an indigent student, for a small sum, to teach the children he might collect, two hours daily. The children received the books gladly, and came willingly to school; but of the twenty-seven who received them, only four or five returned on the second day; their parents or they themselves having disposed of their books, and being on this account ashamed to come again. This misfortune at the outset did not, however, discourage Francke. He expended the remainder of his money in books, and took care that the children should not take them home with them.

He was as yet unable to hire a place for the school; but, ever ready to make sacrifices of personal comfort for the purpose of doing good, he appropriated a part of his own study to this object. In this room he placed another box with this inscription, "For the education and assistance of poor children;" and "He that hath pity on the poor, lendeth to the Lord; and that which he hath given, will He pay him again." About two months afterwards, in June, 1695, he was visited by some friends, who were gratified with his efforts, and contributed several dollars to the support of the school. He received, too, from time to time,

small donations by his box. Soon after this, some of the citizens who saw that the children under his care were well instructed, offered to send some of their children to the school, paying a small sum for each child; enough, however, to enable him to increase the salary of the teacher, and increase the number of hours employed in giving instruction. He had altogether about fifty or sixty scholars this summer; the poorer of whom, besides gratuitous instruction, received other alms, two or three times a week. His undertaking had now become so well known, that he received, occasionally, donations of money and clothing for the poor children. It was during this summer, that he laid the foundation of the "Royal School," as it was afterwards called. A widow lady of rank, made application to him for a teacher to take charge of her children, and those of her friends; and he, being unable to find one who had made the necessary attainments for such a station, proposed that these children should be sent to Halle, where he would take charge of them, and put them under the direction of competent teachers and guardians. This plan was agreed to; and in the course of a few months, some more pupils were sent in the same way, so that the school gradually grew in reputation and importance, having, in 1709, seventy scholars and twenty teachers.

This summer, too, he received a donation, which formed quite an era in the history of his charitable efforts. This was the sum of five hundred dollars, sent him by a pious individual, to be applied to the use of the poor, and especially the poor students, of whom there are always many at the German Universities. It may be supposed that it was with no little joy that he looked upon this sum, which gave to his efforts an importance which he had as yet scarcely attached to them himself. Besides this, he received, in the course of the autumn, one or two other donations, amounting to a hundred and twenty dollars; part of which was expressly for the charity-school. About this time his scholars had increased so much, they could not be taught in the room they had thus far occupied, and he rented another, in a neighboring house, and shortly after one more. He now divided the children of the citizens, from the charity scholars, and appointed a separate teacher for each department.

Francke could not but remark, that though the children were carefully taught, many of them lost all the advantages of their instruction from the evil influence of their companions out of school, who were generally depraved and ignorant. The idea occurred to him, that he should take some of these children entirely into his own hands, and bring them up under his own eye. This was the thought which gave origin to the Orphan House; for from this he was led on, step by step, until he was almost compelled to undertake the work of erecting that establish-

\* A German or Rix dollar, is about 70 cents American currency; and the Groschen, of which 24 make the dollar, are, of course, equal to nearly three cents each. Money was, at that time, in Prussia, much more valuable than at present, which will partly account for the amount accomplished by this small sum.

ment. He mentioned the plan of taking some of the orphan, and other poor children, under his own care, to some friends, one of whom dying shortly after, left him five hundred dollars, the interest of which was to be appropriated to their support. He looked upon this event as a mark of divine approbation of his plan; and began immediately to inquire for some little orphan, to whose support he might devote this sum. He received information of a family of four, left without parents, and entirely destitute. Instead of one of these, he took the whole four; but a pious person having relieved him of the burden of one of them, he found another in its stead. He placed them in pious families, where their morals and habits would be attended to, for which attention he paid a small sum, and caused them to be instructed in his charity school. He had taken this step in reliance upon God, and he now found that He often gives increase of faith and ability to them who trust in him. He had not the means of supporting even one of these children; and yet, says he, "as I had begun, without any other support than *trust in God*, to take charge of these orphans, I now felt encouraged to undertake even more than this." The following day he received two orphans, and shortly afterwards three more. He appointed a superintendent to take charge of them and their affairs, as he was already engaged in so many duties that he could not attend personally to them. The person chosen was George H. Neubauer, who had manifested considerable interest in children, by assisting Francke in catechising the children at Glaucha.

In the meantime, while he was incurring these additional expenses, God did not forsake him, nor suffer his faith to fail. "At this time," says he, "He who is the father of the fatherless, and who is able to do for us far more than we can ask or think, came to my assistance in a manner that my poor reason could never have anticipated. He moved the heart of the person who made me the first large donation which I received, to give me a thousand dollars, for my orphans and my school. Another person sent me three hundred dollars; another a hundred, and many gave me smaller sums." He was enabled now not only to support his children, and to assist many of the indigent students, but to purchase and enlarge the house where his schools had hitherto been taught. In taking this step, he seems to have acted under the conviction that he was laying the foundation of an institution which God would give him the means of supporting, and which would be lasting and important. Having now a house large enough for his schools, and for the accommodation of his orphan children, he brought them all together under the same roof, under the care of Neubauer their superintendent, assisted by such teachers as were necessary. The number of children thus supported soon amounted to eighteen.

The assistance which he had imparted to the indigent students, consisted hitherto of a small sum of money, weekly. He determined now to give them their meals, free of expense, at a public table in the Orphan House. He thought this plan likely to be more advantageous to the students themselves, and it gave him the opportunity of advising them, watching over their department, and correcting what he saw amiss. It also enabled him to learn their characters and attainments so well, as to be able to choose with safety his teachers from among them. These students were, many of them, intending to become teachers, and Francke afterwards formed them into a "teacher's seminary," or school for teachers, in which he trained up instructors for the numerous departments of the Orphan-house schools, and for similar situations throughout Germany.

Not long after this, finding himself again in want of room, for his constantly increasing pupils, he bought the house immediately adjoining his present one, and united the two together. He now divided his school again, into a male and female department, and these again into different classes, each of which had their separate hours of instruction, as well as different teachers. They were all taught gratuitously, except the children of the citizens, who had increased so much as to form a large school of themselves. Some of these last, who were intended to receive a liberal education, were formed into a separate class; and together with some of the orphan boys of superior understanding, were put under the care of distinct teachers, to receive instruction in the sciences and languages. This branch of the school soon increased beyond almost any other, amounting, in about ten years, to above two hundred and fifty scholars, sixty-four of whom were orphans. In 1730, the number belonging to this school was five hundred.

Still the number of his scholars, and of the students whom he gratuitously supplied at the Orphan-house table, increased, until at length his two houses were too small to accommodate them. He began now to think of obtaining a large building; and with a view of securing a good plan, in case he was compelled to erect one, he sent Neubauer to Holland, to visit the celebrated Orphan-houses of that country. In the mean time a large hotel, near one of the gates of the city, was offered for sale; and thinking the house a convenient one for his purpose, Francke bought it for 1950 dollars.\*

But even this building was soon too small for his purpose, the orphan children amounting to a hundred, and the students, who received their food at the public table, to seventy, with numer-

\* We mention the amount, that the reader may contrast the sums which Providence now enabled Francke to expend, with those at the commencement of his undertaking, when the purchase of twenty or thirty little books almost exhausted his resources.

ous teachers, overseers, and servants; and he was compelled to prepare for erecting a still larger building. The ground in the immediate vicinity of the hotel offered a convenient situation, and he purchased it shortly after, as a site for the new Orphan House. It might be supposed that Francke would not venture upon such an undertaking as that he now contemplated, without some amount of funds already provided. The following is his own language on this subject: "Since the work has been thus far carried on without any sum of money, or other means secured beforehand, but by that which the Lord has been pleased to send at the time; so, though at this time I had not the funds necessary for erecting even a very small house, much less such a one as I now thought of, yet God, in his goodness, gave me such a confidence in himself, that I came to the determination to commence the building without delay." Accordingly, Neubauer was recalled from Holland, a plan agreed upon, and the foundation of the new Orphan House laid, with religious exercises, on the 24th of July, 1698.

(To be concluded.)

#### THE MAGNETIC TELEGRAPH.

Concerning this wonderful discovery, Prof. Morse narrates a most interesting fact in a recent speech:—

"The bill for establishing a line, between Washington and Baltimore, in 1843," he says, "was before Congress, had passed the House, and was on the calendar of the Senate, but the evening of the last day had commenced, with more than one hundred bills to be considered before mine could be reached. Wearing with anxiety of suspense, I consulted with one of my senatorial friends; he thought the chance of reaching it so small, that he advised me to consider it as lost. In a state I must leave you to imagine, I returned to my lodgings to make my preparations for returning home the next day. My funds were reduced to a fraction of a dollar.

In the morning, as I was about to sit down to breakfast, the servant announced that a young lady desired to see me in the parlor. It was the daughter of my excellent friend and college classmate, the Commissioner of Patents. She called, she said, by her father's permission, and in the exuberance of her own joy, to announce the passage of the telegraph bill, at midnight, but the moment before the Senate's adjournment.

"This was the turning-point of the telegraph invention in America. As an appropriate acknowledgment for her sympathy and kindness—a sympathy which only a woman can feel and express—I promised that the first despatch by the first line of telegraph from Washington to Baltimore should be indited by her. To which she replied, 'I will hold you to your word.' In

about a year from that time the line was completed, and every thing being prepared, I apprised her of the fact. A note from her enclosed this despatch: 'What hath God wrought!' These were the first words that passed over the electric wires on the first completed line in America. None could have been chosen more in accordance with my own feelings. It baptized the American telegraph with the name of its author. It placed the crown of success and honor where it belonged."—*The Home Circle*.

#### FAITH—AN ANECDOTE.

A few weeks ago, a little boy sailed down the waters of the St. Lawrence. He was but six years old, and images of beauty floated for him on every distant cloud. And as the boat passed in and out among the many thousand islands of the river, he painted to his mother, in glowing colors, all that it would be possible to do, if, thrown adrift upon a spar, he should, by some strange chance, find himself alone upon the pebbly beach. Very charming he thought the fairy-like islands, with their tender screens of birch and maple, veiling just enough from feeble human sight the warm glory of the sun.

The day wore on; the islands were passed, and now the boat began to descend the rapids. A head wind lifted the breakers, the sky was darkened, but the child and mother felt the excitement of the scene. Like a living human creature the strong boat kept its way. It took a manly pride it seemed in mastering the obstacles to its course, and as it rose and fell with heavy swing, a sense of power, filled the hearts and souls of the passengers.

The boy stood still. Tighter and tighter he grasped his mother's hand, and with blue eyes darkened with earnest thought, looked upon the face of the water. Soon the rain began to fall heavily, the water was still more agitated, and the mother felt that when the keel of the boat grated against the rocks, visions of storm and wreck passed through the little one's mind.

She saw that he was frightened, and began to question whether it would not be best to carry him to the cabin, and by song and story beguile his excited mind. Just at this moment he gently pressed her hand, and looking down upon him, she saw the expression of serious thought give way, a sweet smile dawned on his lips as he said softly to himself, rather than to her, the following lines:

"Then the captain's little daughter  
Took her father by the hand,  
And said, "Is God not on the water,  
Just the same as on the land?"

The pleasant poet who wrote these simple lines, of which the above were the child's broken remembrance, is now in a foreign land. The drawing-rooms of the noble open readily to his genial

presence, and the tables of the literati, with their cheer and merriment his joyous tones excite; but no words of courtly compliment, though spoken with royal lips, will fall more sweetly upon his ear than would these words of that trusting child, could he have stood by his side and watched the dawn of faith in his soul as he spoke. O, little children! God teaches us in many ways that to make others happy is one of the truest objects of life. It is better to make others good, but it is the best of all to turn the heart of a little child in trusting love to his heavenly Father. If, like the absent poet, we are ever able to speak or write one word which shall do this, let us bless God for the high privilege.—*Montreal Juvenile Magazine.*

## SIGHT-SEEING IN ROME.

Dr. Nelson, who has just visited Rome, says among other things, "I saw an image of St. Peter, the toe of which had been kissed so much that a part of it was actually worn away. I saw also a flight of stairs, opening on one of the public streets, which was said to have been brought from the palace of Pontius Pilate, and said to have been trod by the feet of Jesus; and now on that account it is regarded as so holy that no one is permitted to pass over it, except on his knees; and the deluded people are taught, that passing over it brings a high religious reward. I saw several ladies, with their long dresses, toiling up the steps on their knees."

This is the stairway that Martin Luther began to climb, when he paid a visit to Rome. It was before he got into the clear light of Bible truth. It was while dragging his body in this uncouth style over these stone stairs, that a verse from the first chapter of Paul's epistle to the Romans came to him like a voice from heaven: "*The just shall live by faith.*" His eyes were opened, and he felt very much ashamed of trying to merit God's favor in this poor foolish way, instead of depending on God's dear Son, who came to take away our sins.

Let us pity those who are still climbing the staircase for salvation, and pray that they may soon have the blessed Bible, which teaches that Christ Jesus came into the world to save sinners, and that there is no other name given under heaven among men, whereby we can be saved.

*Child's Paper.*

## THE LITTLE CANDLE.

Cheerful the little work-girl sat,  
And swift her needle flew,  
While the dark shadows of the night  
Their gloom around her threw.  
A little light alone was hers,  
As there she sat and wrought,  
And well she knew how well to prize  
What her own toil had bought.  
"I must be quick," she musing said,  
"My little candle wanes;  
And swiftly must my task go on,  
While yet its light remains."

And then she plied with rapid skill,  
The little shining steel,  
And every ray of that small light  
Smiled on her patient zeal.

Ere the last glimmer died away,  
Her task was neatly done;  
Sweet was her rest—and joy to her  
Came with the morning sun.

Ah! is not life a little light  
That soon will cease to burn?  
And should not we from that dear girl  
A solemn lesson learn?

While yet that little candle shines,  
Be all our powers employ'd,  
And, while we strive to do our tasks,  
Life shall be best enjoy'd.

But let us ne'er in darkened hours  
Forget what Christ hath done;  
But patient, in sweet hope, await  
The glorious RISING SUN!

## CHILDHOOD.

BY D. BATES.

Childhood, sweet and sunny childhood,  
With its careless, thoughtless air,  
Like the verdant, tangled wildwood,  
Wants the training hand of care.

See it springing all around us—  
Glad to know and quick to learn;  
Asking questions that confound us;  
Teaching lessons in its turn.

Who loves not its joyous revel,  
Leaping lightly on the lawn,  
Up the knoll, along the level,  
Free and graceful as a fawn!

Let it revel; it is nature  
Giving to the little dears  
Strength of limb, and healthful feature,  
For the toil of coming years.

He who checks a child with terror,  
Stops its play, and stills its song,  
Not alone commits an error,  
But a great and moral wrong.

Give it play, and never fear it—  
Active life is no defect;  
Never, never break its spirit—  
Curb it only to direct.

Would you dam the flowing river,  
Thinking it would cease to flow?  
Onward it must go forever—  
Better teach it where to go.

Childhood is a fountain welling—  
Trace its channel in the sand,  
And its currents, spreading, swelling,  
Will revive the withered land.

Childhood is the vernal season;  
Trim and train the tender shoot;  
Love is to the coming reason  
As the blossom to the fruit.

Tender twigs are bent and folded—  
Art to nature beauty lends;  
Childhood easily is moulded;  
Manhood breaks, but seldom bends.

## SUMMARY OF NEWS.

FOREIGN INTELLIGENCE.—Liverpool dates are to the 14th ult.

The unfavorable advices from the United States had caused a great demand for money, and the Bank of England had raised its rate of discount to 7 per cent. The Bank of Ireland had advanced to the same rate, that of France to 6½ per cent., and similar movements were taking place in other continental cities. Trade generally had received a shock, and it was feared that heavy losses would be sustained among those connected with American commerce. Some failures had occurred in this class in Glasgow, London, and elsewhere.

GREAT BRITAIN.—An additional body of 5,000 men is held in readiness to embark for India, and the force expected to be in that country in a few months amounts, it is said to 85,000 men. The 10,000 added to the militia will make the whole force 25,000 men.

Notwithstanding the higher prices paid for labor, emigration from Ireland continues apparently unabated, and in some parts laborers can scarcely be obtained.

FRANCE.—Inundations in some of the south-eastern departments have destroyed the works erected last year to prevent such disasters. In the valley of the Ardeche, a branch of the Rhone, the water rose three feet higher than the previous flood, and the occupants of mills and dwellings near the river were forced to abandon them, and escape for their lives.

SPAIN.—The resignation of the Narvaez Ministry had been accepted by the Queen. At the last accounts, the efforts to form a new Cabinet had been unsuccessful.

Breadstuffs have fallen in the French markets to the price of the most plentiful years. The vintage is generally abundant, and of superior quality.

PORTUGAL.—Fever continued to prevail at Lisbon, but in a mitigated form. During fifteen days, the cases were about three hundred, and the deaths one hundred. The King had visited the fever hospital, to evince his conviction that it was not infectious.

GERMANY.—Subsequently to the meeting of the French and Russian Emperors at Stuttgart, the latter had an interview with the Emperor of Austria at Weimar, which was said to be very friendly, but nothing is certainly known of what transpired. One object of these meetings was supposed to be a reduction in the standing armies, in order to relieve the financial difficulties of the different governments.

RUSSIA.—The Emperor and Empress have made a formal entry into Warsaw, and their reception by the people is said to have been more friendly than any Russian monarch had ever met with in that city.

Negotiations have been opened for a treaty of commerce with Austria.

TURKEY.—The Porte has forwarded a circular on the subject of the Danubian Principalities, to its diplomatic agents in foreign countries, the substance of which is, that no attention can be paid by the Porte to any wish which may be expressed by the Divan *ad hoc* for the union of Moldavia and Wallachia. The financial condition of Turkey continues much embarrassed, and paper money has depreciated twenty per cent.

INDIA.—Accounts from Calcutta are to 9th month 9th. Gen. Havelock was still at Cawnpore, waiting for reinforcements, and Lucknow was still unrelieved. Advices from that place to the 2d, represented the garrison as sufficiently provided with food, and it was hoped they could hold out, if relieved by the middle of the month. Additional troops, to the number of 1,279, were at Allahabad on their way to Cawnpore. Nothing decisive had occurred at Delhi. The English troops there were receiving reinforcements. The

rebels in Oude were menacing Allahabad and Benares, and troops from Calcutta were marching to defend them. Two regiments from England had arrived at Calcutta, and others had passed Ceylon. Several new mutinies had occurred among native troops, but they were promptly suppressed.

CENTRAL AMERICA.—The provisional government of Nicaragua has issued a decree, summarily expelling from the country those Americans who had sided with Walker; but under its operation all Americans, however inoffensive, are said to be driven out. Nicaragua is recovering from the effects of the war. W. C. Jones, a secret agent of the U. S. government, has been expelled from Costa Rica by President Mora, under suspicion of being a spy in the interest of Walker.

MEXICO.—Gov. Vidaurri has contracted for the colonization of 500 Seminole Indians on the vacant lands of Nuevo Leon, with the object of having these Florida savages as a barrier to the roads of the Camanches.

DOMESTIC.—No official returns of the election in Kansas are yet furnished, but private accounts confirm the election of M. J. Parrott, the Free State candidate for Congress, and of a majority of the new legislature of the same party. A large fraudulent vote was polled along the Missouri border, and some of the U. S. soldiers stationed at Kickapoo voted, under the sanction, as is asserted, of Gov. Walker, though in violation both of the organic act and of the territorial enactments. Later dispatches state that several prominent citizens filed a protest on the 15th ult. against the fraudulent returns of Oxford precinct, in Johnson county; and after a personal investigation, Gov. Walker and Secretary Stanton published a proclamation, announcing their determination to reject the vote of that precinct, and give certificates of election to the Free State candidates. The pro-slavery men were greatly excited in consequence. A mass convention, held at Lecompton on the 19th, protested against the reassembling of the Constitutional Convention, which had adjourned to that day.

A confidential agent of the government, recently returned from Salt Lake, reports that the Mormons will refuse to allow the U. S. troops to enter the city, and that Brigham Young publicly declares that he will burn the prairie, so as to deprive the animals belonging to the expedition of their subsistence, and will even burn his own city rather than submit to the government. The expedition was met on the 22d of 9th month, two hundred and thirty miles east of Fort Lawrence. Grass was scarce, cattle were dying, and mules failing, while a heavy snow had fallen on part of the route. Gov. Cummings was ninety miles beyond Fort Kearney on the 8th ult. It is thought the expedition cannot get beyond Fort Laramie before winter.

The superintendent of the expedition to construct a wagon road from Fort Ridgely on the Minnesota river, to the South Pass of the Rocky Mountains, has returned to St. Paul, having surveyed and partially constructed the road as far as the Missouri river. The distance is two hundred and forty miles, and the route selected is nearly a straight line. He reports water plentiful along the road, though it is scarce on each side; that the grade is at no point higher than eighty feet to the mile, this occurring but once, and only two bridges are required, all the other streams being fordable. The road will not be extended beyond the Missouri this season.

Information has been received from South America of the intended shipment to this country, via the Isthmus of Panama, of one hundred and forty or one hundred and fifty llamas, which are extensively used in Peru as beasts of burden, and also for their wool. Being natives of mountainous regions, it is thought they will be found well adapted to our northern climate.

EXTRACTS FROM STEPHEN GRELLET'S LETTERS.

FRANKFORT, 2d Month 18th, 1814.

I have been much discouraged till lately in writing to England, the difficulties were so great; yet I have sent several letters various ways, but I don't know if they have reached. I have not had a line from England since the Eighth month; none from America since that time; thus I am cut off from the comfort I enjoyed among you, in the bosom of my friends, encircled by the gathered church; here a poor lonely pilgrim, and not a companion; but the ways of the Lord are equal, *He* alone did help, does help, and will in his abundant mercy do so. The fields, in many parts I have visited, are white unto harvest, so that I have sometimes wished I might have the life of Methuselah, or that the sun might never go down, that I might do my share of that great work that is to be done in the nations.

There is a most precious seed in various parts; and in places where I have not actually visited I have seen it sparkling about. Oh! if our Society stand faithful, what a blessing would they become; many are ready to gather under the standard of Truth from all the varied ranks and denominations.

I have been with rich and poor, princesses, counts, &c., &c., Protestant ministers and Popish priests, all speaking but one language, not upholding any ways or forms, but Christ and his spirit. I have visited various of those Romish priests in Bavaria, of whom we have heard, whom I found spiritually-minded, and am nearly united to many of them. Some are married; and have so answered the clergy that have come to visit them on that occasion from the Scriptures and practices of the primitive church, that they have

let the subject drop; and they continue Popish priests, much beloved by the people, among whom they have great influence; many of the people desire the Scriptures, which they have it not yet in their power to hand them. Some of those priests told me they believed it their duty to remain in their places, for thereby they are enabled to maintain their testimonies, and to enable others to come to the same spiritual way, also for the sake of the people about them.

My sufferings in some parts of France and Italy were beyond description; and as I left those nations the armies entered them. My conflicts were for a while such as that my outward man was laid down for a few days. The Lord gave me, at different times whilst in France, to proclaim the day of retribution, but little did I think it was so nigh, though I felt at times pressed in my spirit to depart out of it. I most tenderly feel, however, for that people, where there is a precious seed. I had many large meetings in the south of France, and I escaped in a remarkable manner the prison-house, or being led about by the gens d'armes, but they, having come to take me, came to a meeting, at which they stayed as if chained down, and they afterwards told me they had never known such a thing, nor heard such doctrine, and carried themselves very civilly.

Though I am clad with the greatest poverty, and move from place to place under feeling of nothingness, yet I have in many ways to commemorate the help and favor vouchsafed to me. Going about amongst a people of a strange language, and alone, I have not yet been at a loss; whenever the Lord has had a work for me, I have found interpreters ready at hand, and mostly such as did it with feeling. It would be a great encouragement to divers pious women to be visited by some of their own sex; and I do hope that the feet of the Lord's messengers will be turned to these parts of the vineyard. It is a kind of service entirely different from what we are moving about in England. Before the gospel plough can do its office, the rubbish, thorns, briars, and old stumps must be removed out of the way. Thus in places where the way has been closed for meetings, yet in private conversation I have found the evidence that I was doing the Lord's work, and that the Lord was giving entrance and preparing the way.

I expect to reach Pymont towards the last of

this month, and my present prospects are to be back in England timely to reach Dublin Yearly Meeting—my mind feeling drawn once more to enter into feeling with that part of our Society before I resume in New York Mordecai's station, sitting at the king's gate. Yet I am very far from conveying an idea that I am in the king's house, nay, my steppings are in low places; but I feel forewarned, after my return, to look for a succession of baptisms and bitter cups, of which my remains of unsanctified nature stand in need, to bring about the sanctification of soul, body, and spirit: for the kingdom unspotted cannot be entered into but through great tribulation.

NUREMBERG, 4th Month 21st, 1814.

On the last of the year I visited the asylum for the blind at Zürich; they are all young people, kept in good order; they teach them, among other branches, mathematics; a girl can solve the most difficult problem. I visited at St. Gall some to whom I could give the right hand of fellowship. Had they the advantages we enjoy in our Society, some of them, women especially, would be shining lights, but they are such in their sphere. One of them, Ziblin, was my interpreter; it was a precious channel, much awfulness was upon her, and in prayer, of her own feeling she did not interpret, and I believe it was right. I left St. Gall on the 4th inst., expecting to have come direct to Augsburg. I was very agreeably surprised by meeting in the diligence, Geoff of Genoa, a relation of Mallet's, who had recommended me to him, but he was not then at home. Little did I know at first how providentially the Lord had sent him to render me particular services. On our arrival at Lindau, the first large town in Bavaria, the commissary of police refused to let me go on, because my passport had not been received at Berne by their minister, and he ordered me to return to Berne to have it done; but my friend Geoff gave two of his friends security for me, so that I might proceed to Kempton, where possibly a superior officer might give me necessary passports; it was, however, getting out of my way and losing my place in the diligence. My kind friend would not leave me in this situation, but came back with me to Kempton, where I was ordered back to Berne, a distance of above 200 miles; but, by Geoff's influence, some of his friends became security for my coming to Munich, the seat of government, giving me besides letters to his friends here, who went with me to the director-general of the police, who directly said he would remove the difficulty, and was sorry I had been put to any. Had it not been for my thus meeting in the coach that kind person, I should have been sent back all that distance; he came out of his way to oblige me about forty miles, and had a great deal of trouble, yet he seems like the obliged person.

I feel it necessary to use all the diligence I

can to get through, if possible, timely to cross into England for Dublin Yearly Meeting. The last time of my travelling in the night I was much discouraged, but I had, though alone, the most precious season I have had for a long time. Did I say I was alone? no, my gracious Master was with me, leading me anew to Bethel, assuring me that if I continued to offer my feeble efforts to serve him and desire to be his, He will be with me to the end, as He has been eminently thus far in my manifold temptations, redeeming my soul from death, my life from destruction, preserving my feet from falling, or when I have stumbled lifting me up again.

I met in the neighborhood of Bremen with a Popish priest who has been much persecuted, and is so now, but he seems resigned. He is one of those who publicly maintain the testimonies the Lord has given them to bear against Popish superstitions. I had some conversation with him and others like him; the subjects they wished to be informed of, were baptism and the Lord's Supper; the Lord opened my understanding as fully as I ever knew it, showing also what true gospel baptizing ministry is—they acknowledged to the truth of all. Languary, the priest's wife, rejoiced to have these things thus opened, as they coincided with what the Divine light had instructed her. I feel great solicitude that this work, which is but the dawning of the day of reformation, may clear up brighter and brighter. Many minds through these priests are awakened; they leave the shadow and unite with the substance, and give up, amidst many temptations, which causes their roots to spread wider and deeper. Roas, who resides in Austria, has some thousands in his parish, spiritually-minded persons; they are of the sentiment that it is better for them not to withdraw from the station where the Lord calls them to usefulness.—*B. Friend.*

#### THE TRUE SOURCE OF REFORM.

The great element of reform is not born of human wisdom; it does not draw its life from human organizations. I find it only in Christianity. "Thy kingdom come." There is a sublime and pregnant burden in this prayer. It is the aspiration of every soul that goes forth in the spirit of reform. For what is the significance of this prayer? It is a petition that all holy influences would penetrate and subdue and dwell in the heart of man, until he shall think, and speak, and do good, from the very necessity of his being. So would the institutions of error and wrong crumble and pass away. So would sin die out from the earth; and, the human soul living in harmony with the Divine Will, this earth would become like heaven. It is too late for the reformers to sneer at Christianity—it is foolishness for them to reject it. In it are enshrined our faith in human progress—our confidence in reform. It is indissolubly connected

with all that is hopeful, spiritual, capable, in man. That men have misunderstood it, and perverted it, is true. But it is also true that the noblest efforts for human melioration have come out of it—have been based upon it. Is it not so? Come, ye remembered ones, who sleep the sleep of the just—who took your conduct from the line of Christian philosophy—come from your tombs, and answer!

Come, Howard, from the gloom of the prison and the taint of the lazar-house, and show us what philanthropy can do, when imbued with the spirit of Jesus. Come, Eliot, from the thick forest, where the red man listens to the word of life; come, Penn, from thy sweet counsel and weaponless victory—and show us what Christian zeal and Christian love can accomplish with the rudest barbarians or the fiercest hearts. Come, Raikes, from thy labors with the ignorant and poor, and show us with what an eye this Faith regards the lowest and least of our race; and how diligently it labors, not for the body, not for the rank, but for the plastic soul that is to course the ages of immortality. And ye, who are a great number—ye, nameless ones—who have done good in your narrow spheres, content to forego renown on earth, and seeking your reward in the record on High—come and tell us how kindly a spirit, how lofty a purpose, or how strong a courage, the religion ye professed can breathe into the poor, the humble, and the weak. Go forth, then, Spirit of Christianity, to thy great work of Reform! 'The past bears witness to thee in the blood of thy martyrs, and the ashes of thy saints and heroes; the Present is hopeful because of thee; the Future shall acknowledge thy omnipotence.—*E. H. Chapin.*

#### AUGUSTUS HERMANN FRANCKE.

(Concluded from page 126.)

The narrative which Francke gives of his labors, and the many instances of divine interference in his behalf, is truly edifying, displaying in himself, a most surprising confidence in God; and a series of providential assistance which would scarcely be credited, were they not so abundantly confirmed by the testimony of witnesses.

"About the month of April, 1696, our funds were almost exhausted, and I knew not whither to look for the necessary supplies for the next week. This caused me the greater distress, as I was not at that time accustomed to such trials. But it pleased the Lord to send me assistance, and at the very time when it was needed. He inclined the heart of some person, who was, and is, yet unknown to me, to put into my hands, by means of another individual, the sum of one thousand dollars, for the support of the Orphan House. The Lord be praised for his goodness, and reward the giver a thousand fold, with spiritual blessings! At another time, when our stores were exhausted, the steward came to me, and

represented, that it would be necessary soon to procure a considerable amount of provisions. We laid our case before the Lord. Soon an opportunity offered of obtaining the necessary funds for our purpose, from a friend who needed but to know of our wants to offer his aid. But we were unwilling to be burdensome to him, as he had been already liberal in his donations, and we wished to leave ourselves in the hands of God, knowing that He was able, and he had shown himself willing to assist us. We therefore commended ourselves anew to him in prayer, and we had scarcely finished, when there was a knock at my door, and a well-known friend entered bringing me a letter and fifty dollars in gold, from a person in another place. This, together with twenty dollars, which were received soon after, completely supplied our wants, and we were taught that God will often hear prayer, almost before it is offered."

"In the month of October, 1698, I sent a ducat to a poor and afflicted woman, in another place. I received, soon after, a letter from her, saying, that it had come to hand at a time when she greatly needed it; and praying God to return to my poor children a 'heap of ducats' for it. Soon after, I received from a friend twenty-five ducats, from another two, and from two others forty-five. About this time, too, Prince Paul of Wurtemberg died, and left a large purse marked, 'for the Orphan House at Halle,' which I found to contain five hundred ducats in gold. When I saw all this money on the table before me, I could not but think of the prayer of the poor woman, and how literally it had been fulfilled. In February, 1699, I was again in very straitened circumstances, and must enumerate that among my times of trial. I was almost entirely without funds, although much was needed for the supply of the daily wants of the children, and other poor. In this state of difficulty, I comforted myself with the promise of the Lord Jesus, 'seek first the kingdom of God, and his righteousness, and all these things shall be added unto you,' and strove to bring myself to an unwavering confidence in God. When I had given out the last of my money, I prayed to the Lord to look upon my necessities. As I left my room to go into the College, to deliver my usual lecture, I found a student waiting for me below, who put into my hands the sum of seventy dollars, which had been sent me from a distance. Although our expenses were now so great, that this money did not last but two or three days, and I was unable to predict how I should be able to meet them for the future, yet by the good providence of the Lord our difficulties were constantly relieved."

Francke states, that in the midst of all these trials and embarrassments, so precisely was the supply suited to their wants, that in no instance had the children been forced to go without their meals; and no one, except his immediate assistants, was acquainted with their difficulties. This

is not a little surprising, when we remember that *hundreds* depended upon him; and not less so, the fact that his own tranquillity and peace of mind were constantly retained.

"Soon afterwards," he continues, "we were in the greatest want, and the steward came to me, asking for money to meet the expenses of the week. I knew not what to reply to him; for I was without funds, and had no expectation of any supply. But I trusted in the Lord, and determined to go to my closet, and spread my wants before him. As I was engaged, however, in dictating to an amanuensis, I sat down until this piece of work should be finished. When it was ended, I arose to go to my closet, and while on my way, a letter was put into my hands from a merchant, informing me that he had received a check for a thousand dollars, to be paid me for the Orphan House. How forcibly did I feel the meaning of that promise, (Isaiah lxx. 24,) 'Before they call I will answer, and while they are yet speaking, I will hear!' I had now no reason to ask for assistance, but went and praised the Lord for his goodness. I was thus led more and more to place my trust upon God, and give up all dependence upon man."

"At another time, in the same year, when I was in similar circumstances, I walked abroad and meditated upon the glory of nature, the heavens and the earth, and my faith was thereby much strengthened. I said within myself, 'How happy is that man, who, though he is poor, and can lean on nothing here below, can trust in the living God, who made these heavens and this earth, and thus be satisfied and joyful, even though in adversity!' Although I well knew that for this very day I had need of a considerable sum of money, yet my heart was even joyful, for I was strong in faith in God. When I came into the house, the superintendent of the building was there, and desired some money for the payment of the laborers. 'Has any money been received?' said he. I answered, 'No; but I have faith in God.' Scarcely had I uttered these words, when some one was announced at the door; and on going to him, I found he had brought me thirty dollars from some person, whom he would not name. I returned to the study, and asked the superintendent how much money he needed. He replied, 'Thirty dollars.' 'Here they are,' said I. We were both strengthened in our faith, by this happy supply, since we saw therein the hand of God, in giving us what was necessary at the very time when it was needed."

The instances of this kind which occurred were very numerous during the whole progress of the work, and they could be enumerated to almost any extent.

The contributors to it were of every station, and almost of every character. The king of Prussia took a lively interest in its success, presented it with a large quantity of building materials, one thousand dollars in money twice, and

allowed the institution many privileges. Besides him, officers, civil and military, preachers and teachers, citizens, servants, merchants, widows and orphans gave it their support. Many who were not able to give money, gave their labor. An apothecary supplied the Orphan House with medicines for a long time free of expense, and even a chimney-sweeper gave a written obligation to Francke to clean the chimneys gratuitously as long as he lived. We cannot wonder that his efforts proved successful, when the Lord opened the hearts of so many to assist him.

The blessing which Francke seems to have esteemed as highly, if not more so than any other, was, that he had been favored with assistants and laborers who looked upon the work with something of his own feelings. Without such men he would have been unable to carry on this enterprise. In speaking of them he says, that they were men of self-denial, faith and prayer, who did not expend their time and labor merely for the sake of reward, but considered themselves as serving the Lord, and doing good to man.

By such co-operation and under the superintending providence of that God, who provided this and every means employed, the Orphan House was finished. During Francke's life, it continued to increase in extent, and in the number of the children supported and instructed in it, so that in 1727, the year that he died, there were in all the schools *two thousand two hundred* pupils. One hundred and thirty-four orphans lived in the Orphan House, and about a hundred and sixty other children, together with two hundred and fifty indigent students, daily ate at the public tables of the establishment without charge.

The question will be asked by many, "Can such an example be held up as proper for our imitation? Would not the feeling with which one should undertake so extensive a work as the building of the Orphan House, without any funds in hand, or any human source from which to draw, be rather rashness and credulity than faith?"

We should answer,—not in the circumstances of Francke. It is to be carefully noted, that he did not commence this extensive plan at once. Years had elapsed since he had first entered upon his benevolent work, and during that time he had been gradually led forward by a gracious Providence, who supplied the means, and pointed out the path in which he should go, in a way surprising even to himself. These striking and continued expressions of the Divine approbation, each succeeding one more clear than that which preceded, seem to have fixed in the mind of Francke the conviction, that *the work was of God, and would not come to naught*. He was prepared, by this conviction, to take any step which was indicated as the will of that Providence, to whose guidance he committed all his ways; and when he had taken such a step, he *believed* that God would not desert a work which

he had so far evidently approved and blessed. That he acted properly in this case, may be fairly inferred from his success. That he was far from countenancing that rash and enthusiastic calculating upon the assistance of heaven, which some have done, and met thereby a sad overthrow, may be gathered from the advice which he frequently gave his pupils, "never, under the pretext of faith in God, to engage in undertakings, or place themselves in dangers, where there was no clearly marked call of providence: but with 'their loins girt about,' to wait the directions of their Master, both where and how they should labor."

In closing this necessarily limited account of the Orphan House, it may be interesting to the reader to state, that this institution is at this time flourishing, and still doing a great deal of good. It has, in the course of time, accumulated considerable property, by the proceeds of which, and of the mercantile departments, it supports itself without the assistance of individuals. Its schools are still large, and the orphan and widow both find a refuge within its hospitable walls. The founder is not forgotten in the midst of all its usefulness. His birth-day is yearly celebrated at the Orphan House; and on such occasions the excellences of his character are made the subject of eloquent addresses, and thus impressed upon the minds of each succeeding company of youth, who feel the benefits of his benevolence.

"The memory of the just is blessed." Better to have such an eulogy as is contained in the history of the Orphan House, than to be the conqueror of the world! Better to be embalmed, as Francke, in the grateful recollection of thousands, than to sleep under the proudest monument that has ever covered the remains of earthly greatness!

The extraordinary exertions, bodily and mental, which Francke had made in every place in which he lived and labored, began gradually to undermine his excellent constitution, before he had passed the meridian of life.

He died on the 8th of June, 1727, in the 65th year of his age.

The history of the character and labors of Francke is full of instruction; but it is so easy for those who read biography to discover and apply its lessons, that any minute detail of them will be unnecessary.

It is a too general impression, especially with the young, that piety cannot be attended by enjoyment, because it demands such sacrifices of personal feeling. Consideration would show them, however, that so far from being a correct opinion, the very reverse is true. The Christian derives pleasure from self-denial and sacrifices, because by enduring them he honors Him who is dearer to his soul than all things else. And, in addition to this, he has the satisfaction of knowing that they tend to make the world less dear—to deliver him from a slavish dependence upon external objects for consolation—and fit him for

higher and holier enjoyment. This is most clearly illustrated in the life of Francke. There appears never to have been a time after his conversion, though he was frequently in the midst of severe trials, when his peace and happiness were not both more pure and more complete than the highest that the world affords. This is the promise of the Saviour to his followers;—"verily I say unto you, there is no man that hath left house, or parents, or brethren, or wife, or children, for the kingdom of God's sake, who shall not receive manifold more in this present life, and in the world to come life everlasting." May the reader have the happiness to realize in himself the rich blessings of this promise, both here and hereafter!

#### A MODEL FOR MOTHERS.

A few weeks since, I was travelling with a gentleman, on an outside ear, through the County of Wexford. The day was delightful, and the geniality of the weather seemed to have expanded our hearts by its influence; for we soon became as friendly as though we had known each other for years. He was, I think, travelling for some house, and was a thorough Englishman, to judge by his appearance and conversation, though from what he said, thirty years' residence in the Emerald Isle had imbued him with an honest admiration of the Irish character. He was perhaps fifty years of age, was married, and the father of several children. He said he disliked travelling, and avoided it as much as possible. I asked him the reason, and here lay the secret. He possessed in his wife a great treasure—not only because she loved and respected her husband, but chiefly from the exemplary manner in which she brought up her young family. In the course of conversation he said, "My wife, as sure as each evening comes, brings all her little ones around her, and gives them Scripture lessons out of the Old and New Testaments. She shows them, from the Bible, what they ought to believe, what they should do, and what to avoid. They know more of religion and the Holy Scriptures than numbers of grown persons I meet with every day, and they look forward to the regular employment of the evening with the greatest delight. I feel that nothing improves me so much as to sit quietly by and listen to them. She gives them puzzling questions out of the Bible, and it is really astonishing what clever answers they give her. Whenever a good thing comes into my head, I say something myself; but indeed," said he, with charming simplicity, "in general I think it better to say nothing. I feel each evening a better man, and I think it does me as much good as going to hear a sermon from Mr. Gregg. The clergymen very often visit our family, and they say that my children are the best answerers at Sunday School. Ah! Sir, I feel it a great loss being away from my family, even for a few weeks."

Here is a picture of a Christian household. Here is "the husband sanctified by the wife." And will not God rain down abundant blessings on that little circle? Yes, assuredly, he will bless them, both in time and eternity; they will prosper in this life and, I believe, live in the next.

SUGGESTIONS TOWARDS AN ECONOMICAL DISTRIBUTION OF PUBLIC CHARITY.

With the kindest sympathy in the various means of extending relief to the poor, which already exist, (and especially towards the Union Benevolent Association,) we beg to suggest a few considerations bearing on the general subject of public charity.

1. Those who have most means to aid in supplying the wants of the destitute must be very generous. The number who will need and must have food, gratuitously, the coming winter, will be largely increased, and the number and ability of contributors to their supply are both greatly abridged. We speak now simply of food, in such quantities and of such quality as shall barely sustain life, leaving fuel, raiment, lodging, rent and medical attendance to be considered in another connexion.

2. Soup, made of meat and vegetables, distributed once a day—not less than a pint to adults, and half a pint to children—is the cheapest, most nutritious and most easily distributed food that has been provided, so far as we know. There is some difference of opinion, we are aware, as to the expediency of establishing any place of indiscriminate resort for food. But, just now, we must lay aside discussions of theories, and inquire for the best practical mode of keeping thousands of men, women and children from perishing with hunger. The first snow storm will turn out a legion of them. Adopting the experience of those familiar with the use of soup and the expense of supplying it, we would suggest the expediency of increasing the number of these soup houses, so far as to make them easily accessible to those sections of the city where suffering for want of food is most likely to be severe. Perhaps four or five, in addition to those already provided, would suffice.

3. It may be a question whether bread should not be distributed as well as soup. We think not. Whatever may be the price of flour, bread will be a much more expensive article than soup. A thousand persons could be comfortably sustained upon soup for the same money that would support five hundred with soup, and a loaf of bread. Besides, many persons who are well enough off to do without soup, will come to the soup houses for the sake of the bread. We think, therefore, that soup houses should restrict their supplies to soup, and that they should have a full understanding with each other as to the quality, quantity, time and mode of distribution, &c., so as to have uniformity, and avoid all causes of discontent in the recipients of the charity.

Should it be considered necessary to supply some means of subsistence in addition to soup, to be cooked at home, we are quite sure that corn meal will be entitled to the first consideration. Properly prepared, it is a very nutritious and palatable article of food, and by such arrangements as may readily be made for procuring the grain and getting it ground, there is reason to believe that bags containing eight pounds each can be distributed at suitable intervals to needy families, at a price not exceeding ten cents a bag, exclusive of the bag, which would be returned. Quantities of this healthy food might be deposited at the soup houses, and when needful, instruction might be given as to the modes of preparing it for use. We have been informed that in some past time, a large distribution of corn meal has been made to the poor, to be used in mush, and a small bottle of molasses accompanied each bag of meal—a cheaper and more palatable article of food could not be supplied in this form.

4. Besides furnishing subsistence to such individuals and families, it will be both a charity and a safeguard to facilitate the removal of others to parts of the country where food is abundant and labor scarce. It is well understood that the West is one vast storehouse, filled with the products of the earth. In the general prostration of credit and confidence, the usual activities in trade are paralyzed. The western farmer keeps his grain till he knows for what it is to be exchanged, and the eastern purchaser declines buying till he knows what may be his means of payment. Nothing but money or credit will move the western products to eastern consumers, and neither money nor credit is at hand. Hence it has seemed to many that while plenty and a demand for labor are in the ascendant at the West, and while want and the stagnation of business rule at the East, the more families and individuals we can induce to go West the better for them and for those they leave behind. In order to accomplish this desirable end, however, some agency is indispensable, that shall make suitable arrangements for such an exodus—and for their reception at the end of their journey. In this connection it may not be amiss to state, that the supply of grain and flour in store in our large cities is entirely insufficient for the demand which a short time will inevitably produce, and that it is absolutely essential for the well-being of our crowded cities, that the stock should be greatly enlarged before winter interrupts the ordinary means of transportation.

5. The theory on which the Union Benevolent Society is organized is eminently practical and adequate to its proposed end. Two causes have hindered its full success. One is the very limited amount of contributions—so limited that often-times visitors have been obliged to witness extreme destitution which it seemed inhuman in them not to relieve, but from which, for want of means, they were obliged to turn away with a

heavy heart. The other is the difficulty of procuring a sufficient number of competent and faithful visitors. The Society is not properly an almsgiving society. Its primary object is to elevate the poor, and put them in a way to sustain themselves. Much of their success, therefore, depends on a personal influence exerted in and over the family, in counselling, comforting and encouraging them, and supplying such immediate pressing wants as may temporarily burden them. If one or two suitable persons in each block or square would volunteer to execute this most delicate and responsible office for the Association, its usefulness would be greatly increased.

6. We would suggest the expediency of some concurrence or mutual understanding between the various organizations for the relief of the poor, so that the opportunities for abuse and imposition may be diminished, for an absolute prevention of them is probably impracticable. As it is now, some of the most meritorious poor are turned off with a pittance, while the least deserving obtain supplies from half a dozen sources, each acting in ignorance of the other. So skilful and systematic are the arts of deception that a sagacity little short of that of a detective police officer hardly serves to discover them. Without some concurrence of views in the distributing agents of public charity, these evils will be multiplied and aggravated during the ensuing season, far beyond any former experience.

7. We would suggest the avoidance of all measures which are fitted to exasperate popular feeling against any class of our fellow citizens or any of the lawful institutions of the country. Suffering as we now are under a common calamity, it becomes us to be very forbearing and considerate; and when we consider how little a kind act or word, or even a pleasant smile costs, and how deep a wound is inflicted in these sensitive times by a harsh expression or severe exaction, we may well be on our guard. A scrupulous promptness in paying all bills for labor and materials, a little abatement of rent or the extension of time, and a generous remuneration of all services faithfully rendered, would be of inestimable service in alleviating approaching hardships.

We have not even alluded to many considerations which will be pertinent to our subject, but these hints may suffice to keep the attention of our readers awake to the vital importance of wise and reasonable preparation for a winter of unusual suffering and severity among the poor. As we are ready to send this article to press, we hear of an example eminently suggestive, and capable of adaptation to many descriptions of business. Whatever can be done by individuals, thus relieving the pressure on public institutions, and bringing the poor and their friends into immediate personal relations, is of great utility. It is better than the relief of pauperism, being a preventive. A gentleman, who has been in the business of selling wool to the employers of hand-loom

weavers and knitters, deals now directly with the workmen. The stagnation of business, and the scarcity of money, have thrown hundreds out of employment who have heretofore been engaged by factors or agents, and received piece or weekly wages. In Germantown alone two thousand women have found employment in sewing the hose, for which that quarter of our city is celebrated. Their industry, with that of others, is for the present paralyzed. The wool dealer, of whom we are speaking, receives as payment for his raw material completed fabrics, the weaver retaining a portion of the wool, and manufacturing it for himself into articles which he can convert into food, by exchanging them at the stores. Thus the wool dealer sells his stock, not indeed at a profit, for the transaction is a charitable one, but while doing good, he avoids the risk which sale on credit would incur, if indeed he could sell now on any terms.

Another plan worthy of imitation in small towns, or wards of cities, wherever circumstances make it practicable, is to take the money which must be given at any rate for the support of the poor, and pay it in wages. In New York last winter, Wall street was thus cleaned of snow by subscription. In Germantown it is intended at once to mend the public roads and highways. In other rural districts a similar course may be adopted with advantage, and many of our streets and courts, when the snow falls, may be cleaned upon the same charitable plan, and thus the public convenience and private good be at once promoted.—*N. American.*

#### DOMESTIC HAPPINESS BALANCED AGAINST MILITARY GLORY.

“Nineteen long letters from Lord Ellenborough! He has made me Governor of Scinde, with additional pay; and he has ordered the captured guns to be cast into a triumphal column with our names. I wish he would let me go back to my wife and girls,—it would be more to me than pay, glory, and honors; eight months now away from them. This is glory! is it? Yes! Nine princes have surrendered their swords to me on the field of battle, and their kingdoms have been conquered by me and attached to my own country. Well, all the glory that can be desired is mine, and I care so little for it, that the moment I can, I shall be resigned to live quietly with my wife and girls; no honor or riches repay me for absence from them. Otherwise, this sort of life is life to me; is agreeable, as it may enable me to do good to these poor people. Oh! if I can do any good thing to serve them where so much blood has been shed in accursed war, I shall be happy. May I never see another shot fired! Horrid, horrid war! Yet how it wins upon and hardens one when in command! No young man can resist the temptation, I defy him; but thirty and sixty are dif-

ferent."—*The Life and Opinions of General Sir Charles James Napier.*

FRIENDS' REVIEW.

---

---

PHILADELPHIA, ELEVENTH MONTH 7, 1857.

EMANCIPATION.—We give space this week to short sketches, originally published in the *N. Y. Tribune*, of some speeches on the subject of Compensated Emancipation, made at the late Cleveland Convention; with a few introductory remarks by the Editor of the *London Friend*.

It has been with equal surprise and regret that we have seen several professed anti-slavery newspapers and abolitionists raising the most determined opposition, and even directing their ridicule against a plan of emancipation which thousands of true Christian friends of the slave regard as founded in clear principles of justice, and eminently adapted to accomplish the great object in view, with the greatest possible benefit to all concerned. Why should any "abolitionist" anticipate the slave-holders in objections to this plan? If Congress can be prevailed upon to pass such an act as is proposed, and the people of Delaware, Maryland, Kentucky and Missouri, become willing to accept its provisions, and enrol these States upon the list of those which have already abolished slavery, it is difficult to perceive in what respect the principles of justice, humanity or religion will be compromised or sacrificed.

It is remarkable that during the anti-slavery agitation of the last twenty-five years, no peaceable and practicable mode of emancipation has been proposed by those who, as professed abolitionists, have been zealously engaged in denouncing the iniquitous system, and censuring, indiscriminately, the slave-holders, whether the latter occupy their position through choice or by inheritance. The occasional manumission of slaves, and other circumstances, prove the existence of a class of slave-holders who would rejoice at the prospect of some plan being adopted by which they could make freemen of their slaves. "I know something," writes a southern friend who has suffered and sacrificed much, "I know something of the groanings of many *owners*, who are in bonds with their own slaves, and practice rigid self-denial daily, for the benefit and safety of their poor dependants, not knowing that they can emancipate."

If it be true, as some have urged, that the

slave-holders will never be induced to adopt emancipatory measures, though accompanied by compensation for the pecuniary loss which, in numerous cases, would inevitably result, what ground, we would ask, is there to expect the adoption of such measures *without* compensation? It seems to us that if the plan proposed be a *hopeless* one, *the whole case must be hopeless*, and anti-slavery societies should be immediately dissolved, and all agitation of the subject should at once cease.

It is further urged as an objection to this scheme of emancipation that the slave and not the slave-holder is entitled to compensation. True, indeed, it is, that he who has been deeply wronged, whose wages have been kept back by fraud, who is deprived of every right conferred upon man by his Creator, has a valid claim upon our justice and our beneficence. But the great question to be first solved is, how can the slave's condition be so changed, and how shall he be placed in such a position, that he can receive remuneration for past wrongs and provision for the future welfare and improvement of himself and his children? Let our first object, then, be to assist in making him a freeman, and let us do this in a manner that will secure the subsequent co-operation of the emancipator in all that Christian love and duty may require towards the emancipated.

---

"YE HAVE THE POOR WITH YOU ALWAYS."—  
 "Whoso has this world's goods, and seeth his brother have need, and shutteth up his bowels of compassion from him, how dwelleth the love of God in him?"

The attention of our readers is solicited to an article, taken from a daily paper of this city, in reference to the best means for relieving the suffering poor during the approaching winter. Although the suggestions it contains may be considered as mainly applicable in cities, yet they will probably be found useful in many parts of the country.

To the sincerely humble Christian who feels his own unworthiness, his dependence upon the bounty of his heavenly Father, and his accountability for all he possesses, there is, perhaps, no duty which brings greater peace and more unalloyed satisfaction than that of dispensing aid to the suffering. Knowing that "he that oppresseth the poor reproacheth his Maker," he also feels in his own experience, that "he that honoreth

Him hath mercy on the poor," and "he that hath mercy on the poor, happy is he."

Upon this subject, however, in times like the present, we trust that it is needful only to "stir up your pure minds by way of remembrance." It is related of a celebrated but eccentric character of the past century, that, when called upon to preach a "Charity Sermon," he merely recited the proverb of the wise king, "He that hath pity upon the poor lendeth unto the Lord," and added, "they that like the security will contribute their money."

MARRIED, at Friends' Meeting, Friendsville, Blount Co., Tenn., on the 7th ult., SAMUEL H. BEALS, of Green Co., Tenn., to SARAH, daughter of James C. Allen, of the former place.

On the 23d ult., at Friends' Meeting, Macedon, Wayne Co., N. Y. WM. P. MACOMBER, of Farmington, to ESTHER, youngest daughter of Win. and Mary W. Dean, of Macedon.

At Friends' Meeting, Rocky Run, Park Co., Ind., on the 17th of 9th month, URIAH HADLEY, of Montezuma, to MARY JANE DERHAM, a member of Bloomfield Monthly Meeting.

On the 28th inst., at Chester, Wayne Co., Indiana, DR. JESSE M. HARRIS, of White Water, to EMILY JANE HAMPTON, of the former place.

DIED, at her residence, in this city, on 7th day morning, the 24th ult., ANN BUCKLEY, a much valued member of the Western District Monthly Meeting.

Her character was marked by humility and self-distrust, and her circumspect and consistent walk, with her private and social worth, much endeared her to those whose privilege it was to know her intimately. She was concerned to uphold the doctrines and testimonies of our religious Society in their purity. After an illness of several months, during which she was anxiously solicitous to experience full redemption through a Saviour whom she loved, she was enabled to give her friends the consolatory assurance that her condition was "quiet and peaceful"—in which state, as we humbly trust, her redeemed spirit was permitted to enter into its eternal rest.

On the 22d of 19th mo. last. at the residence of her father, James C. Allen, in Friendsville, Blount Co., Tenn., CATHARINE ALLEN, in the 22d year of her age. Though we mourn her loss, we have the consoling belief that our loss is her eternal gain. She had a few times appeared in the ministry, and had been Clerk of the Monthly Meeting of Women Friends for the last year.

In Unity, Maine, at the residence of his son-in-law, Daniel Cook, on the 21st of 7th mo. last, JAMES HUSSEY, in the 79th year of his age, a member of Unity Monthly Meeting of Friends. This dear aged friend expressed, near his close, the clear sense he had of his unworthiness, and the firm hope and confidence he felt in the merits of a Saviour's love. In a resigned state of mind his end was peace. His relatives deeply feel their loss, but they sorrow not as those who have no hope.

A stated meeting of the Female Society of Philadelphia, for the relief and employment of the poor, will be held at the House of Industry, No. 112 North 7th street, on 7th day, the 7th of 11th month.

JULIANNA RANDOLPH, *Clerk.*

## FIRST QUARTO BIBLE IN AMERICA.

In 1779 Isaac Collins projected his great enterprise, the greatest one at that time, in the publishing business, in America; which formed a new era in, and enduringly identified his name with the history of American printing. This was the issue of 5000 copies of a Quarto Family Bible, the first edition of a Quarto Family Bible in the United States, and which for accuracy and superior typography, elicited the admiration of every one who examined it. To insure this accuracy, the proofs were read eleven times, that in spelling and punctuation no error should pass undetected. Such was the accuracy of this edition, that it early became the standard in typography with Bible Societies, and Biblical scholars generally. —*Blake's Biographical Dictionary, Article, Isaac Collins.*

From the London Friend.

## ANTI-SLAVERY CONVENTION AT CLEVELAND.

England gave twenty millions of pounds and expunged slavery from the list of British institutions. There were many cavillers at the thought of *purchased* emancipation; yet there can be no doubt that a sense of indescribable relief pervaded the nation when, at length, and at any cost, the atmosphere of British dominion was purged from the last foul taint of slavery.

If to some minds the act of giving compensation seemed, to some extent, to recognize the right of property in man, this feeling was more than counterbalanced, in general estimation, by the joyful fact that no human being could henceforth suffer the deep wrong of being valued as a chattel beneath the ægis of the British constitution; and we enjoyed the satisfaction of knowing that no British slaveowner could charge upon the humanity of his countrymen, that they were indifferent to even an apparent claim of legal equity.

Our example has hitherto failed to prompt in America the same resolution to terminate the deep crime of slavery, and for the last thirty years the American abolitionists have waged an apparently hopeless struggle with the colossal power of their peculiar institutions against which the brave spirits of the free North have toiled—we will not say in vain, but with little other apparent result than to develop the arrogant dominance of the South, to embitter to the last degree the relations of the two sections of the Republic, and to inflict upon America the chronic danger of imminent civil war.

An effort, however, has at length been made to emulate the example of England, and to render America what her name imports—the *United States*—united in the grandest national effort that has yet fired the heart of the people, viz., the immediate and total abolition of slavery;

and this by giving to the American slaveholder a fair compensation for that which he claims as a legal interest in the bondage of his fellow-men.

This scheme of compensated emancipation has been propounded in America by Elihu Burritt, who, having travelled for two years and lectured very extensively through the Free, and to some extent in the Slave States, developing his plan for compensated emancipation, found sufficient encouragement in the approval bestowed upon the scheme, to warrant him in calling a national convention of his countrymen, which was held in Cleveland, Ohio, on the 25th, 26th, and 27th of Eighth month. The meeting was largely and most respectably attended, and the subject was discussed with great interest and earnestness, the fullest opportunity being afforded for the expression of opinion whether for or against the measure. The proceedings appear to have been very happily free from that spirit of party and personal bitterness which has too often disfigured anti-slavery discussions in America.

The convention resulted in the adoption of resolutions, and in a constitution being proposed and adopted.

The following brief report of three principal speeches delivered during the convention is copied from the *New York Tribune*, the Editor of which, though not prepared fully to support the plan of compensated emancipation, yet speaks very favorably of the proceedings of the convention.

Elihu Burritt advocated the resolution in a long and able speech, of which I can give but a mere synopsis. For fifty years, said he, our most illustrious statesmen have recoiled from grappling with this question, and thousands who revere their memories, now deem it fanaticism to venture an attempt at emancipation. Should slaves increase at the present ratio, in 1950 they would number 38,000,000. The failure of West India emancipation had been adduced as an evidence of the incapacity of the black race for freedom, and the sentiment that it was dangerous to touch slavery where it now exists, was already creeping into professed Anti-Slavery journals in the Free States. But all these obstacles were but as mole-hills to the Andes compared to the deep sectional feeling between the North and South—more bitter and unfriendly than between any two nations. He believed that if these two great sections could be canvassed to-day, three-fourths of the people would be favorable to such a plan of emancipation as may be looked for from this Convention. We have come together in a cordial spirit of fraternal co-operation, and to construct a plan not only to do away with slavery, but to abolish the alienation and distrust which grow out of its existence—a plan which shall make the Union in reality one. The central principle of this plan was compensation to the slaveholder, and in behalf of it both sections were to work, and each State give its aid. The North

has in times past received great profit from the staples of the South, and as a Northern man, in view of the pro-slavery legislation of the country, he would prefer not to go into particulars as to our moral responsibilities in relation to the system. He would rather say to the South, let by-gones be by-gones; we have all of us lived in glass houses too long to be able now to throw stones at one another. Northern action cannot put an end to slavery, and the South cannot and will not do it without indemnification. Rufus King, in 1825, offered in Congress a resolution providing the public lands for such a compensation, and Daniel Webster had advocated the same proposition at a subsequent period. Shall we with miserly weights and measures deal out a small part of our great public domain to the South, and clutch the residue ourselves or squander it upon railroad grants? No—a thousand times, No! Rather let us, in the name of the great Jehovah and the Continental Congress, say to the South, take it all and extinguish this curse of Slavery, and let it be said by our children's children, that these broad acres upon which God hath put his stamp of freedom had purchased liberty for millions of human beings, and had extinguished sectional hatreds and jealousies. The public lands, at 75 cents per acre, would yield 1,200,000,000 dollars. Now, allowing a compensation of 250 dollars for each slave, this sum would suffice to free them all. It is true the *Charleston Courier* thinks this sum too small, and that 500 dollars per head is a more equitable rate. But there is a difference between selling into bondage and into freedom, for in the latter case the land of the slaveholder would greatly increase in value, while in the former it would be decreased. Thus then, putting, as he confidently believed it could be done, the compensation to be paid at 250 dollars per head, the 3,500,000 slaves would require 875,000,000 dollars, still leaving a surplus of 325,000,000 dollars arising from the public lands, to be used in the education or other improvements of the newly-made freemen. Under this plan, the great objection of the North to an extension of territory would be removed, and the day might come when Central America would be added to the Union. But there is still another source of aid in this work, viz., the surplus revenue arising from customs. A large surplus revenue was decreed by commercial men, and was certainly to be avoided. To lessen it, the tariff was reduced, but the consumption of imported articles largely increasing, the revenue was not diminished by the reduction. One year's surplus revenue would make Missouri a free State, and one month's would answer for Delaware, and so on; thus in due time, without increasing taxation one dollar, or imposing upon our citizens a burden that would be felt, and without the proceeds of the public lands, every State in our confederacy might become free. Emancipation thus produced would restore the

good feeling that ought ever to exist between the North and the South. It would expedite the day of the slaves' redemption for fifty or one hundred years, and they would enter upon freedom under auspices peculiarly favorable. That they would be retained by the South, to perform accustomed labor, if thus emancipated, he had no doubt. In the Northern States, the field of labor is filled, and any form of emancipation that should tend to throw 50,000 slaves into each of the Northern States would produce a domestic revolution, and the enactment of Black laws like those of Illinois. Though the funds for emancipation were thus to proceed primarily from the General Government, still no State should receive its portion except upon the solemn action of its Legislature. No attempt would be made to infringe State sovereignty, nor was any compulsion to be used towards the Slave States. Each State was to decide for itself when it would enter upon the work, and in what manner it would carry it forward, and thus all constitutional snags would be avoided, and State sovereignty respected.

Mr. Watkins, (colored man,) of the State of New York, introduced by Gerrit Smith, said the subject was one of the deepest importance. Revolution was the order of the day, and the watchword was Reform. Institutions and systems once regarded as the embodiment of human wisdom were now looked upon as the embodiment of folly. Reason, not custom, was now the sovereign power, and by this standard must all projects stand or fall. This doctrine of Compensated Emancipation demands the closest scrutiny, and, like every movement which has humanity for its basis, must be well defined and understood. In his opinion, it was highly objectionable and ought not to succeed. It recognizes distinctly the right of the slaveholder to property in man. If he has a right to sell, he has a right to hold, and if to hold, to keep as long as he may choose. The slave is a man, in feelings, thoughts, and aspirations, and if a man, he cannot be held as property. In his judgment, those at the head of this movement directly recognized the right of property in men. The South has not intimated any intention to accept compensation and release its bondmen. The call for this Convention should have come from slaveholders and not from abolitionists. This movement would draw aside the country from the true issue now before it, viz., Abolition of Slavery. In Missouri and Kentucky it would retard it. It would crush out the conscience of the North, now so thoroughly aroused against slavery as a heinous sin, a crime against God and humanity. It would stop the awakened slaveholder, and lead him to believe that slavery was after all right, and it would confirm the South in the general opinion that they had a right of property in man. He saw its effects already here in this Convention, where men who had for years battled with this giant crime, were now closing their eyes to its enormities.

Again, if we are to abandon the living issue now before the country and go into a system of compensation, the slave, and not the slaveholder, should be the object of our movement. For years the latter has lived from the sweat and toil of the former: the one is already rich, the other degraded and poor. Fathers and mothers, sons and daughters, have been the victims of every outrage; they have been herded together with sheep and beasts of burden; they have borne the galling yoke upon their necks; and now we are asked to compensate the men who have done all these things. The slave should be compensated; humanity and justice alike demand it. But this plan ignores the claim of the poor slave, and refuses to place him upon a level with man. For one, I put my foot upon such a transaction. At this day, we should not talk of national compensation, but national retribution. God's laws cannot be violated by man or nation with impunity. This Government has departed from justice and truth with full knowledge of the consequences; and unless repentance and good works speedily come, national retribution will inevitably follow.

The speech of Mr. Watkins was one of decided ability—the ablest I ever listened to from a colored man. His language and style would shame many an M. C.

Gerrit Smith, upon rising, was received with great applause. He is a noble specimen of a man, and no one can listen to him with indifference. His style is forcible and concise, his voice deep and impressive, and his delivery at times impassioned. He began by referring to the speeches made in the afternoon by his old fellow-laborers in the Anti-Slavery cause, in opposition to this movement; but upon a full and candid review of his course, he was fully satisfied that he was right and that they were wrong. Indeed, the opposition had tended to attach him more closely to the plan. We this day inaugurate a great movement—a movement full of hope to the slave, to the slaveholder, and to the whole country. We here declare that we of the North will share with the South in the temporary loss which abolition will cause. Slavery is national, not sectional. We of the North have made it national, and its sin lies as emphatically at our doors as at the doors of the South. The commerce of the North, its politicians and its churches, have bowed down and done this monstrous system reverence. Northern help admitted Texas, and Northern votes repealed the Missouri Compromise. But for Northern churches and colleges, there would be no pro-slavery spirit at the North, and comparatively little at the South. It was, therefore, no more than even-handed justice that the North should largely contribute toward a deliverance from this great evil.

But it is said we propose a bribe to the slaveholder to cease from his wrong. It seems to me not. So terrible is the system, so full of misery

to master and slave, and so perilous to the whole country, that he was willing to appeal to the principle of selfishness to bring it to an end. I have a neighbor who is a miserable drunkard. I urge him by every consideration of interest, duty and honor, to abandon his cups, but all to no avail. I then take lower ground, and offer him a cow if he will quit his disgusting habits. Is this a sin, or is it bribery? I cannot so regard it. I thus prove my sincerity and my deep interest in his welfare. If, then, we appeal to the slaveholder upon moral grounds to emancipate his slaves, and he refuses, is it sin or bribery for us to say, If you will do it, we will make good to you a part of the loss occasioned thereby? No. But it is urged that we recognise by such a proposition the right of property in man. But if I say to the rumseller, Throw away your casks of poison, and I will aid you in securing an honest living, do I endorse his right of property therein? Now I recognise no property in man, or in rum when exposed to sale for drink. We hold fast to our faith that no man can possess property in his fellow-man. It is as absurd to claim it in the case of man made in God's own image, as it would be to claim it in God himself. Now we do not intend to buy out the slaveholder, but only to compensate him *after* emancipation.

It is urged again, that the slaveholder would be richer after emancipation than before. This may be true of States, as States, but I think but few of the planters will be richer than now; besides, nearly all of them will be thrown into comparatively helpless situations and into untried circumstances. But it has been urged that such a sum as the South would accept, the North would not agree to pay. To accomplish so glorious a result, the North could well afford to pay a great sum. It has shared in the profits, and can well afford to part with a portion to terminate this horrible system, and put an end gracefully and without bloodshed to the question of slavery. But the sum we offer will be refused indignantly by the South, say some. Well, what then? Does that relieve us from the duty of making the offer? By it we discharge our consciences and acknowledge our willingness to bear our part of the burden of emancipation, as we now confess our portion of the guilt. The South has its responsibility, and we have ours. Let us discharge ours. But can the General Government constitutionally act in this matter? I admit the Constitution never contemplated such a scheme, because in that day it was believed on all hands that slavery would die out in one generation. I put it upon the ground of a great national necessity. Jefferson denied the power to purchase Louisiana, but a great necessity was stronger than the Constitution. By that purchase, slavery was extended, and if, in the face of the Constitution, the Republic was endangered as it has been and con-

tinues to be by that extension, why hesitate to preserve it by the same means? John Quincy Adams believed that Congress could abolish slavery under the war power, with or without the consent of the Constitution. Great and pressing emergencies must override existing laws. This is such a case. The exigencies and necessities of the nation demand imperatively that Congress, reflecting of course the popular will, shall act up to the crisis and relieve the nation from impending calamities. One speaker (Mr. Pryne) likens the South to a band of horse-thieves, and asks if we should buy them off from their career of crime. I reply, if the North has been in partnership with them, *yes*: In this case, the old maxim of "honor among thieves" is clearly applicable. Neither will our plan supersede moral efforts to rid the country of this curse, but they can be put forth far more hopefully than before. As for me, it is said this movement will neutralise all my past labors. I do not so see it. For years I have been laboring to persuade the North to do justice and love mercy in its connection with the South in this matter, and here we have the means for a peaceful and bloodless extinction of slavery. But, says an objector, let the proposition come from the South. Let it repent and take the first step. "When the sky falls, you will catch larks," but you will have a long time to wait. A ruffian is murdering a whole family one by one. If moral suasion will not induce him to desist, may I not offer him a reward to do so, and must I wait, ought I to wait until he repents and offers to stop himself? Long before the slaveholder will repent, hundreds of thousands will have borne the terrible yoke of bondage. I have quite as much regard for the millions of slaves as for a few thousand slaveholders. This movement will have great power if it is inaugurated and carried forward in love. Love is a great remedy for human wrongs within and without the province of statesmanship. Statesmanship has always been a failure where love and humanity have been wanting. A true statesman must have a loving heart, or he cannot succeed. Abolitionists must have a heart for the slaveholder as well as for the slave; and one reason they have no stronger hold upon the Southern conscience is, that this principle of love does not predominate in their actions. The South hates Republicanism as proceeding upon a principle of antagonism and selfishness. Let Republicanism espouse this movement, and it will evince a kind and fraternal spirit that the South will appreciate. We seek the co-operation of all parties in this movement. It is a noble work, worthy the help of all who regard the sufferings of the oppressed and the honor of the nation. Who will not aid in its glorious consummation?

A vindictive temper is not only uneasy to others, but to them that have it.—*Penn.*

## WESTERN TOWNS AND CITIES.

Marvellous as are the growth and prosperity of a thousand places in the "Great West," there are a few—possibly a few hundreds—where the reality does not quite sustain the imagination which has been exercised in relation to them. The Boston *Traveller* says :

A gentleman recently returned from the West relates that in setting out early in the morning from the place where he had passed the night, he consulted the map of the country, and finding that a very considerable town, called Vienna, occupied a point of his road, but some twelve or fifteen miles off, he concluded to journey as far as that place before breakfast. Another equally extensive town, bearing as sounding a name, was laid down at a convenient distance for his afternoon stage, and there he proposed halting for the night. He continued to travel at a good round pace until the sun had risen high in the heavens, and until he computed that he had accomplished more than twice or thrice the distance which he proposed to himself in the outset. Still he saw no town before him, even of the humblest kind, much less such a magnificent one as his map prepared him to look for. At length meeting a solitary wood-chopper emerging from the forest, he accosted him, and inquired how far it was to Vienna. "Vienna!" exclaimed the man, "why you passed it five and twenty miles back. Did you see a stick of timber and a blazed tree beside the road? that was Vienna!" The dismayed traveller then inquired how far it was to the other place, at which he designed passing the night. "Why, you are right on the place now," returned the man; "it begins just on the other side of you ravine, and runs down to a clump of girdled trees which you will see about a mile farther on the road." "And are there no houses built?" faltered out the traveller. "Oh, no! no houses whatsoever," returned the woodsman; "they hewed and hauled the logs for a blacksmith's shop, but before they raised it the town lots were all disposed of to the Eastern States; and everything has been left just as you now see it ever since."

## THE CITY OF CROCODILES.

Such is the meaning of the term Crocodilopolis, the well-known name of a town in Egypt, where Leviathan was worshipped in ancient times. Not far from it is a place formerly called Tentysis, once filled by a busy crowd of Egyptians with long curly hair and black eyebrows, whose chariot horses had feathery plumes on their heads, and who floated their armies over the Nile on skins filled with air or on bundles of light reeds. Many crocodiles still frequent the Nile, basking in the sun on the sand-banks, or prowling by the river's side under the shade of the oozy sedge.

The traveller never meets a crocodile until he

goes as far up the stream as Minyeh, four hundred miles from the mouth of the Nile; but nobody can tell why the animals keep to this boundary. After passing Minyeh, then, in our voyage up the Nile, we were walking in the cool of one evening along the ancient river, as it wound through a beautiful palm grove, when our attention was attracted by a black thing like a sponge, which seemed to float by on the muddy stream. It stopped and quivered, and a jet of white foam gushed from its sides. We soon discovered that it was the nose of a crocodile, a hard black mass, like a lump of coal. In Job xli. 2, this question is asked, when speaking of leviathan (that is, the crocodile): "Canst thou put an hook into his nose?" and a little further on there is allusion to the spurting out of foam from the nose as the animal snorts in seeking his prey: "By his needings a light doth shine," (ver. 18); and again: "Out of his nostrils goeth smoke, as out of a seething pot or caldron," (ver. 20).

The water of the river was so discolored on the occasion referred to, by the melted snow from the Mountains of the Moon in Abyssinia, that the rest of the animal's body was not to be seen; but as we gazed at the strange-looking nose, two grey, sharp-set eyes appeared behind it, staring at the sun through the muddy water. "His eyes are like the eyelids of the morning," (ver. 18). As we lowered ourselves by the reeds to the water, to shoot the dreadful brute with a pistol, the reeds gave way, and our tumble into the river made the crocodile instantly sink into the depths of the stream. The waves were whitened by the swift stroke of his tail, once more reminding us of another part of the accurate description in the same chapter of Job: "He maketh the deep to boil like a pot. He maketh a path to shine after him; one would think the deep to be hoary," (verses 31, 32.) We may be quite sure, that if God's Spirit directs the writing such minute accounts of his creatures on earth, and we see them to be true, the wonderful things he condescends to tell us about the glories of heaven will all be found to be equally correct.

The Egyptians call the crocodile timsah; and there is a wild lake in the desert, called Lake Timsah, where thousands of crocodiles are seen.

A little further up the river we one day saw a boy sitting by the bank and crying piteously, while his flock of goats stood still around him, with their horns showing like points against the sky on the bank overhead. He said that a crocodile, lurking by the place where his goats went to drink, had suddenly opened his fearful jaws and snapped up one of them. In a few days more, the same crocodile took another goat, and the boy ran at once to the nearest town, as he was told to do: (the name of this town is Siout, and it is reputed to be the place where our Saviour was taken by Joseph and Mary, when they fled into Egypt, by the direction of an angel, to save "the young child" from Herod's cruelty.) A

crowd of men, women and children soon turned out to attack the crocodile; but this, as we shall see, is a dangerous thing to do. "None is so fierce that dare stir him up" (ver. 10). Some of the men carried swords, spears and clubs. So had they done in the days of Job; for we read, "The sword of him that layeth at him cannot hold: the spear, the dart, nor the habergeon," (ver. 26). The women and children brought ropes, stones, and all sorts of weapons of a lighter kind; and, when the people came near the river, they beheld the monster, one of the largest crocodiles that had been seen for many years, lying at full length on the upper bank in the sun. He seemed to be asleep, after his dinner on the goat, and part of the goat's skin still hung about his jaws, which bristled with a hundred glittering teeth. "Who can open the doors of his face? His teeth are terrible round about," (ver. 14). The shouting of the men awoke the sleeping leviathan; and, suddenly sweeping round, he knocked a boy into the water with his tail, while some of the men, in trying to get away, fell down the bank, between the crocodile and the Nile. "When he raiseth up himself, the mighty are afraid," (ver. 25). The animal was not slain until four persons had been killed. Ropes were then fastened to his huge carcass, and it was drawn back triumphantly to the town. Here it was suspended over the entrance of the principal gate, where we saw it.

It happened late on a moonlight evening that our boat was gliding slowly up the river with a favoring breeze; and to avoid the stream, the captain directed our course so near the bank that the end of the sail-yard often touched the shore. Suddenly we were aroused from sleep in the cabin by a loud crash, a shriek from the men, and a succession of plunges into the water. Rushing out to see what was the matter, we found that the spar had touched a crocodile sleeping on the bank; and in trying to jump into the water, he had fallen into the boat among the sailors, who instantly leaped one after the other into the river. However, the poor crocodile seemed as anxious to part company as any of us; and after scrambling about the boat a little, and lashing the oars and cordage on all sides with his tail, he slipped over the gunwale, and dived into his deep watery bed without doing us any harm. "Wilt thou play with him as with a bird, or wilt thou bind him for thy maidens?" (ver. 5.) Yes, the crocodile is a monster full of playfulness. "There go the ships: there is that leviathan, whom Thou hast made to play therein," (Psalm civ. 26).

A little black bird is often found hopping about near the crocodile's nose, and it is called the "crocodile bird," as it is alleged that there is a compact between the two animals; the bird with its sharp beak picks the teeth of the monster, and he, as a reward, lets the bird have part of his food. It is probable that the bird comes

near the crocodile to catch the numerous flies which buzz about the eyes and nose of every animal in Egypt; and we recollect seeing a white bird which seemed never absent from one or other of the great black buffaloes near Cairo. These animals, the bird and the buffalo, were a mutual protection, for one kept the other from insects, while the latter restrained the larger enemies from annoying his little friend, the pretty white bird. It is a happy thing when people of different powers can thus be useful to each other, like the bird and the buffalo; but it would not do to trust a crocodile in such near approaches by any bargain or supposed arrangement with him. "Will he make a covenant with thee?" (ver. 4.)

In Isaiah xxvii. 1, it is said: "In that day the Lord with his sore and great and strong sword shall punish leviathan the piercing serpent, even leviathan that crooked serpent; and he shall slay the dragon that is in the sea." This probably signifies Satan, symbolized as a crocodile; for by the words "dragon that is in the sea" may be meant the animal in the Nile, since the words "el bahir," "the sea," are often used to mean "the Nile" at the present day, and it was always so.

Again, by the word leviathan, in Psalm lxxiv. 13, 14, it is probable that Pharaoh is meant as the king of the country where the crocodile abounded: "Thou didst divide the sea by thy strength: thou brakest the heads of the dragons in the waters. Thou brakest the heads of leviathan in pieces, and gavest him to be meat to the people inhabiting the wilderness."

The flesh of the crocodile is not unpalatable as food; but the flavor and smell are very peculiar, quite unlike anything else, and never to be mistaken when known. We once began to take the skin off a crocodile we had killed about twelve hours before, and it was very striking to observe the extraordinary closeness and strength of this outer covering. "His scales are his pride, shut up together as with a close seal. One is so near to another, that no air can come between them. They are joined one to another, they stick together, that they cannot be sundered," (Job xli. 15, 16, 17). The tenacity of these scales makes it very difficult to pierce the crocodile with a knife, and javelins glance off without entering. "Darts are counted as stubble," (ver. 29); and we have repeatedly seen musket balls rebound from the back of the crocodile and fall flattened into the water, even when fired from a short distance. On such occasions, the animal seemed scarcely to feel the impact of the ball, and often turned slowly and lazily round before leaving the place. "The arrow cannot make him flee: sling stones are turned with him into stubble," (ver. 28). Behind the head, however, there is one soft part of the skin, and another behind the fore leg, where a rifle ball will penetrate. We happened to hit

three crocodiles in one or other of these vulnerable points. This was considered to be unusual "luck;" for although eighty boats ascended the Nile with travellers in that year, only five crocodiles were killed altogether. Each of the successful shots was made on a Monday; and as our boat and one other were, alas! the only two which were stopped on the Sunday, according to the Lord's command, there soon sprang up a sort of superstition among the Nile boatmen, that it was because "howaja" (the gentleman) kept his holy day, that the crocodiles were killed. Surely this shows how these poor untaught Mahomedans observe the conduct of professing Christians, even when they cannot understand their foreign tongue. It is very sad to think how many travellers from Christian countries leave, as it were, their religion at home, and carry to distant parts of the earth only the energy, the money, or the luxury of Englishmen, without that knowledge of God's truth which has, more than anything else, made our country great and prosperous.

It is difficult to learn enough of the Egyptian and Syrian tongue to speak at all to the boatmen in their own language the precious truths of the gospel of Christ. Day after day one is kept in close contact with these poor ignorant men, without being able to say one sentence of what might warn, cheer, or comfort them; but this should stimulate us to greater activity amongst those we can speak to; and the benefit of Christian example need never be lessened in any country.

On Christmas day, at Cairo, we met some friends arriving in the town from a long journey, and observing to them how pleasant it was that we could spend Christmas day together, they replied with astonishment: "Christmas day! why, is *this* Christmas day? we thought Christmas was over about a week ago." They had misspent their Sundays, and had thus lost all reckoning of time.

Sometimes we endeavored to tell the Arabs of the desert, all that could be communicated of Scripture anecdotes and truths through a dragoon or interpreter; but we found that these "wild men," accustomed to fairy tales and endless legends, regarded the words we spoke as only a new story to be listened to along with the rest. The mission sent by the Bishop of Jerusalem to those men has been far otherwise received, and we doubt not that many of the sons of Ishmael will be among the true seed of Abraham, and be made free by the knowledge of the Saviour.

(To be concluded.)

#### HOW HE GOT A PLACE—BOYS! READ THIS.

A colporteur in Montgomery county, Indiana, says: "I stopped one morning at a blacksmith shop. The forge was glowing brightly and the anvil ringing merrily. But as soon as I opened my bundle, and showed them the beauti-

ful new books, the men left their work and gathered round me. One was a young man of twenty-five. He told me that when he first left home to earn a living for himself, his mother gave him a Bible. He put it into his pocket and started. He went to shop after shop, but without success; all were full. Not discouraged, he determined to try yet once more; but here came the same cold answer, 'We have enough.' Tired out, and almost disheartened, he sat down upon a block in the shop; and having nothing else to do, pulled out his mother's Bible, and commenced reading. Soon the owner came along, and seeing him reading, asked, 'What book are you reading?' 'The Bible,' was the reply. 'You can go to work,' said the owner; 'I will furnish you employment.'"

Boys! never be ashamed to be seen with your Bible. "They that honor me, I will honor," saith the Lord.—*Christian Herald*.

#### EVENING HOURS.

The human heart has hidden treasures,

In secret kept, in silence sealed;

The thoughts, the hopes, the dreams, the pleasures,

Whose charms were broken, if revealed;

And days may pass in dull confusion,

And nights in noisy routs may fly,

While, lost in fame's or wealth's illusion,

The memory of the past may die.

But there are hours of lonely musing,

Such as in evening silence come,

When, soft as birds their pinions closing,

The heart's best feelings gather home,

Then in our souls there seems to languish

A tender grief that is not woe;

And thoughts that once wrung groans of anguish,

Now cause some mildest tears to flow.

And feelings once as strong as passions,

Float softly back—a faded dream;

Our own sharp griefs and wild sensations,

The taste of other's sufferings seem;

Oh! when the heart is freshly bleeding,

How it longs for that time to be,

When through the mists of years receding,

Its woes but live in reverie.

And it can dwell on moonlight glimmer,

On evening shades and loneliness,

And while the sky grows dim and dimmer,

Can heed no untold woe's distress—

Only a deeper impress given

By lonely hour and darkened room,

To solemn thoughts that soar to heaven,

Seeking a life and world to come.

*Charlotte Brontë.*

#### H Y M N.

When morning pours its golden rays

O'er hill and vale, o'er earth and sea,

My heart unbidden swells in praise,

Father of light and life to Thee.

When night from heaven steals darkly down,

And throws its head o'er lawn and lea,

My saddened spirit seeks thy throne,

And bows in worship still to Thee.

If tempests sweep the angry sky,

Or sunbeams smile on flower and tree,

If joys or sorrows dim the eye,

Father in Heaven I turn to Thee.

## SUMMARY OF NEWS.

**FOREIGN INTELLIGENCE.**—We have Liverpool dates to the 21st ult. The bank of England had raised its rate of discount to 8 per cent., the Bank of France to 7 per cent., while at Hamburg the rate has advanced to 9 per cent.

**AUSTRIA.**—The Austrian government has offered to lay down a telegraph line from Ragusa to Alexandria in Egypt, and it is supposed the attempt will be made within the next six months. If successful, it will connect the latter city with London. The English are also making a movement to connect Alexandria with India.

**PRUSSIA.**—On the recommendation of the Academy of Sciences, the King has granted the sum of 6,000 dollars for the publication of a work on geological formations and new plants, discovered by Dr. Karsten during a residence of twelve years in Venezuela, New Granada and Ecuador. The work is to be published in the course of four years, in folio form. The health of the King was improving.

**RUSSIA.**—Three thousand carpenters are engaged in Finland in building ships of different dimensions for the government. Great activity is also manifested in the marine on the Caspian Sea, where, on account of the presence of the Turcomans on some of its shores, it is thought necessary that merchant vessels should be convoyed by naval steamers; and the rebuilding of the merchant fleet on the Sea of Azof is going on rapidly. The squadron intended for China has quitted Cronstadt.

German colonies have existed in Russia since the last century; but in addition to these, a fresh emigration is now taking place to the southern provinces from all parts of Germany.

The government has decided that in the public school at Irkutsk in Siberia, the English language shall hereafter be taught instead of the German, the increasing trade with America, by way of the Amoor river, rendering the former more necessary. The *Gazette de St. Petersburg*, in promulgating this decree, designates the English language as "the American tongue."

**SWEDEN.**—The cholera was still raging at the last accounts. It had extended as far north as Upsala, but was decreasing there. In Stockholm, of 307 sick, 138 had died.

**TURKEY.**—Omar Pasha has been appointed Governor of Bagdad, with a yearly salary of \$100,000. His special mission is to organize a line of steamers on the Tigris, and to protect commerce against the Arabs. The English have completed their preparations to erect telegraphs along the river, but the Bedouins are said to be ready for their destruction, thus manifesting their sympathy with the Indian revolters.

The disturbances among the Greek Christians in Syria, occasioned by the introduction of the Gregorian calendar, are not yet appeased.

**PORTUGAL.**—Lisbon dates are to the 8th ult. The yellow (or typhus) fever had spread to other parts of the city, and the number of cases had increased to about 150 a day, and the deaths to 35. Letters from Lisbon state that a financial crisis had manifested itself there. The populace were dissatisfied with the sanitary measures of the government, and an outbreak was anticipated. Robberies had already commenced.

**INDIA.**—The Dutch government is endeavoring to extend the culture of cotton in its Indian possessions.

On the night of the 10th of 8th month, a powder magazine at Judpore, belonging to the Rajah, was struck by lightning, causing an explosion which is stated to have destroyed 500 houses and killed upwards of 1000 persons.

**SOUTH AMERICA.**—A treaty of alliance, offensive and defensive, is said to have been concluded between

Paraguay and Buenos Ayres. The Western Railroad was opened, 8th month 29th, from Buenos Ayres to a point seven miles from that city. The impeachment of Rosas, the former President, has commenced, and four months have been allowed to the accused for delivering himself up to imprisonment.

**MEXICO.**—A new cabinet has been formed. Gen. Alvarez has routed the rebels in the south with great slaughter.

**DOMESTIC.**—From Kansas we learn that Judge Cato, of one of the U. S. Courts, issued a writ on the 20th ult., to the Governor and Secretary, commanding them to give the certificates of election, in the district composed of Johnson and Douglass counties, to the proslavery candidates, and to show cause why they had not done so. The writ was served by a deputy of the late Sheriff, but his principal's term of office having expired the previous day, the Governor declined receiving it from any but a legal officer, and declared his intention to disregard it. Fraudulent returns had been received from McGee county, giving 1000 Proslavery majority, but failing to designate the offices for which the several candidates were voted for. A protest was filed by several citizens of the district, stating that there are not 50 adult white male citizens of the United States residing within that county; it being an Indian reservation belonging to the Cherokees, specially reserved out of the Territory by the organic act, and with no white residents but traders and missionaries. It was not doubted that the returns would be rejected.

Serious riots having occurred in Baltimore at the general election a year since, and at the recent municipal election, and a portion of the citizens having expressed to the Governor of the State their apprehensions that similar scenes might be anticipated at the general election to take place on the 4th inst., that functionary issued a proclamation on the 29th ult., placing the city under martial law, and ordering two divisions of the military, consisting of about 7000 men, to report for service by the 1st inst., and to hold themselves in readiness to preserve the peace of the city, particularly on the day of the election. This step was taken in opposition to the wish of the Mayor, who denied the authority of the Governor in the premises, and protested against his interference with the functions of the municipal government. The proclamation produced great excitement. Most of the military companies refused to obey the Governor's orders, some of them temporarily disbanded, and others notified the Mayor of their readiness to obey his directions. After considerable negotiation by committees of citizens, the Governor at length withdrew his proclamation, declaring himself satisfied that the Mayor had made suitable arrangements for preserving the peace and securing to the citizens the unmolested exercise of the right of suffrage.

A company of emigrants from New England, under the auspices of a society for promoting colonies in Virginia, have commenced a settlement on the Ohio river, in Wayne county, near the boundary of Kentucky. The foundation of a town has been laid, to be called Ceredo. Some of the people of the vicinity oppose the enterprise, while others favor it, hoping for benefit to the community.

An earthquake, the most severe ever experienced in that region, was felt in the western part of the State of New York on the 23d ult. The duration of the shock was probably fifteen or twenty seconds. No serious damage was done, but some persons were much alarmed.

Attorney General Black has given an opinion that the Federal Government has ample power, and is bound by the highest treaty stipulations, to redress the wrongs of the Kansas tribe of Indians, sustained from unlawful intrusions upon their reserved lands.

# FRIENDS' REVIEW.

A RELIGIOUS, LITERARY, AND MISCELLANEOUS JOURNAL.

VOL. XI.

PHILADELPHIA, ELEVENTH MONTH 14, 1857.

No. 10.

EDITED BY SAMUEL RHOADS,

TO WHOM ALL COMMUNICATIONS MAY BE ADDRESSED.

PUBLISHED WEEKLY

At No. 50 North Fourth Street,  
PHILADELPHIA.

Postage on this paper, when paid quarterly or yearly in advance, 13 cents per annum in Pennsylvania, and 26 cents per annum in other States.

*Extracts from the Minutes of Indiana Yearly Meeting of Friends, 1857.*

*Sixth day, 10th mo. 2d.*—The meeting proceeded to the consideration of the state of Society, by the reading of the Queries and the answers to them from the several Quarterly Meetings.

In the progress of this engagement, many dear brethren were engaged in lively exhortation, admonition, and doctrine, to stir up the minds of Friends to greater faithfulness in various Christian duties.

We were reminded how it was with the children of Israel when they were brought up out of Egypt, out of the house of bondage, while they cleaved unto the Lord and kept his commandments, he visited them and blessed them; but when they waxed fat and rebelled and forgot God, and went after idols, they were cast off. By this we should be instructed; for the Lord has in his goodness given us a good place in this fruitful and pleasant land, and poured out multiplied blessings upon us—our obligations therefore to humility, obedience and gratitude are very great; and if we perseveringly strive to be truly the servants of the Lord, and believers in his Son, our Lord Jesus Christ, we may have confidence of hope in being partakers of his salvation; but if we slight the gifts of God, spiritual and temporal, and give way to negligence and forgetfulness of God and his well beloved Son, who loved us and gave himself for us, permitting the things of this present world to become the main objects of our attention and pursuit, his mercy cannot be expected to continue forever; but as it was with Israel, so it may be with us, he will forsake us, and give us up to our own ways, the end whereof is destruction: we ought therefore to watch and pray, lest we enter into

temptation. How incumbent, then, it is to be truly devoted to the Lord, whom we ought to love with all our heart and mind.

And what is there left of the "Friend" if there is no love to God, and no Christian love to the brethren, in us? These two important duties are the burden of our first two Queries: and there are many living witnesses of the continued mercy of God in visiting them in their endeavors to serve him in an open and regular attendance upon divine worship, by shedding abroad his love to them, and giving them a heart of penitence, gratefulness and praise.

All were, therefore, affectionately exhorted to maintain love toward God and love toward men, according to our holy Saviour's commandment; and that pure and unfeigned love may more and more abound, and that it may cement us together in one brotherhood, a holy people unto the Lord.

Much sympathy with parents was felt and expressed in regard to the right training of children and youth, by precept and example, in the principles of the Christian religion; and their endeavors to preserve them from evil and lead them to Christ. Parents are the delegated shepherds in the Lord's hand, entrusted with the charge of their dear offspring in the wilderness of this world, in bringing them up under proper discipline and in the nurture and admonition of the Lord. How then shall these great duties be performed when the parents have not themselves submitted to the discipline of Christ? It is a subject of awful consideration—all were earnestly exhorted to come home to Christ, and in honesty and godly sincerity to come to God in prayer, both for the salvation of themselves and their beloved and cherished offspring, whom the Lord in his wisdom and kindness has given to them, and over whom he has made them overseers, holding them responsible to Him for the fulfilment of their interesting trust. We were reminded how the Lord blessed Abraham for his faithfulness; that the secrets of the Lord are with them that fear him and believe in his name; and that where the heart is given up to him, we have the encouraging assurance that he is not only *able*, but also *willing* to supply all our need, if we look unto him for it. Let it not be made appear by our example that the things of this world are the chief objects worthy of our pursuit; but rather let it appear that we seek first the kingdom of God,

and his righteousness, in the hope that all other things necessary to us will be added. "If any of you lack wisdom, let him ask of God that giveth to all men liberally and upbraideth not, and it shall be given unto him."

Friends were admonished, and the youth in particular, to maintain our testimony as to plainness of speech and apparel. "Godliness is profitable unto all things, having promise of the life that now is, and of that which is to come." For as we have no greater joy than to know that our children walk in the truth, so we have no greater sorrow than to know that they depart from the ways of righteousness, and walk in the broad way.

While considering the answers to the fourth Query, the selling of grain into channels by which it will go into the manufacture of spirituous liquors, was brought to the serious attention of this meeting, with a caution in this respect. It was moreover some cause of alarm that the number of cases of the unnecessary use of intoxicating liquors appears to be on the increase. An earnest desire was entertained by the meeting, that Friends throughout our limits may be incited to much care in regard to the manufacture, sale and use of such liquors. Let us endeavor to be truly what we profess to be, a practical temperance people.

Many pertinent remarks were made on various other subjects embraced in the queries, having a tendency, as we believe, to encourage Friends to greater dedication in their various Christian duties.

#### REPORT OF THE CENTRAL BOOK AND TRACT COMMITTEE.

"The Central Book and Tract Committee make their annual report:

Our labors during the year have continued unabated. Our meetings have been held once each three months as usual, and much unity of feeling has prevailed in our proceedings. We proceed to give a brief statement of the reports that have come to us, and of our own proceedings. We have received reports from 36 Monthly Meetings' Committees (about 27 have not reported,) and in regard to *Books*, sixteen state that additions have been made to their Libraries, but generally small. We note that in those meetings where considerable additions have been made, the number of loans have been proportionally increased, showing the value of an annual examination as advised in our Discipline. We believe this branch of the subject in regard to books is too feebly acted upon by many Monthly Meetings, and that benefit would arise from a more lively attention thereto.

We have received an acceptable donation of 186 copies of Dymond's Essays from some Friends of Philadelphia, intended to be placed in Libraries, and in hands of individuals where they may obtain circulation and profitable perusal.

In regard to *Tracts*, the publication thereof has been attended to, and several new ones have been added to our list during the year. The five Tracts mentioned in our last report, from 34 to 38 inclusive, were issued soon afterward. Then the Memorial of Mary S. Watkins, and the "Plea in behalf of liberty of Conscience," as directed by last Yearly Meeting, were added; reprints of several of our earlier Tracts were also ordered; and since that, 3000 copies each, of No. 41, Memoir of Stephen Grellet, and No. 42 on the Mischiefs of Slander, and 1000 of No. 43 on Christian Baptism, have been issued from the press. A German Translation of our Tract on Christian Doctrines has been procured, and an edition of 3000 copies thereof has been issued: making the whole number of issues for the year, 55,000; to which, if we add 6575 Tracts purchased for distribution, we have a total of 61,575.

Portions of these have been sent into nearly, if not quite, every neighborhood of Friends in the limits of our Yearly Meeting, and have received an extensive distribution among them, and to citizens in towns and country, and travellers in various parts. A parcel has also been sent to Maine, Canada, Minnesota and Tennessee. We think we need not dwell on the favorable impression which may be hoped for, with the divine blessing, from the circulation and reading of so great a number of pious, though silent monitors on a great variety of subjects of interest and importance. The labor and care to us has been considerable; yet we can say that a sweetness and comfort have attended it; and Friends in many parts have yielded cheerful and efficient aid in carrying out the object of the concern.

The total distribution of Tracts as noted on the reports, amounts to 23,829; but we are confident that the subject has received attention in many of the Monthly Meetings, from which we have received no report, and that the whole number is much larger. The gratuitous distribution from the depository amounts to 14,884; which makes the entire distribution for the year, so far as reported and ascertained, 43,713."

The Friends appointed at our last Yearly Meeting to consider that portion of our Discipline by which the right of membership is lost by accomplishing marriage contrary to our order, make report as follows, which has been carefully read and considered, and is united with by the meeting, and adopted accordingly; to take effect from and after this date.

The Committee to whom was referred the consideration of a paragraph of our Discipline on Marriages, report:

That we have attended to the appointment, and after a free and friendly conference on the subject referred to us, have come to the judgment to propose to the Yearly Meeting that all the latter part of the first paragraph on page 54, after the word "order," in the thirteenth line from the top, be substituted by the following words, viz:

"They are to be disowned; unless, upon being visited by a committee, they express and manifest a desire to be retained in membership, and are in the practice of attending our religious meetings, and otherwise give evidence of attachment to our religious principles; in which case, if the meeting concur in judgment, they may be retained; but if not, then their right of membership is to cease, and a copy of the Minute in the case, properly signed by the clerk, is to be furnished to them."

*Seventh day morning, Tenth month 3d.*—This Yearly Meeting having come to the judgment, in the year 1855, after much consideration and care, to set up a new Yearly Meeting of Friends at Plainfield, Indiana, to be called Western Yearly Meeting; and the Yearly Meetings of London, Dublin, New England, New York, Baltimore, North Carolina, and Ohio having signified to us their unity and concurrence in this important proceeding, we now appoint the following Friends to attend the opening thereof, at the time fixed upon in the Ninth month next, in conjunction with a like committee of the women's meeting, and report their care therein to next Yearly Meeting. [Names omitted.]

We also appoint Matthew Stanley and Shildes Moore as temporary correspondents, to receive communications for the new Yearly Meeting. Address, *Plainfield, Hendricks County, Indiana.*

(To be continued.)

#### ABRAHAM, THE FRIEND OF GOD.

[Translated from the German for Friends' Review, from "God in History; or the Progress of the Belief in a Moral Order of the World." By CHEVALIER C. C. J. BUNSEN.]\*

The first of the four leading and immortal personalities\* in the history of the religious consciousness of the Hebrews, is the wise, pious, and righteous father of the Hebrew race, Abraham the friend of God. When we strip the narratives of Abram or Abraham of all that is simply impersonal and relating to the history of his race, and retain only the pure family history of Abraham, the spouse of Sarah, and great-grandfather of the Imperial Chancellor, Joseph, a great historical character stands before us. We can first sketch for ourselves an historical picture of his outward life. He appears as a mighty Prince of his tribe in Hebron, after he had wandered out of Mesopotamia and immigrated to Palestine, (which then had no consolidated national existence,) to seek a place for himself and his herds in the crowd of populations of Canaan. But more important is the knowledge of his inner life.

In him we have before us the lofty, noble spirit, which, after long inward struggles, first broke through the slavery and the curse of the bloody man-and-child-murdering service of Moloch, and broke them because he valued God's immediate

voice in the conscience and reason higher than all the traditions of his countrymen. It was by the power of this belief in the unerring inner voice of God in man, that he threw away the bloody custom, and introduced the saving symbol of circumcision.

The sacrificing of men and of the first born, which he in abhorrence threw away and forbade, was, it is true, originally also a symbol, but an immoral, irrational, godless one. Circumcision recognized the ground-idea of that human offering, that the natural should sink in the spiritual, the finite be submersed in the infinite; it may have been a compromise with the sacrifice; but it was turned in an ethical direction, as dedication of the children through the parents to God as His own. It was also a grateful vow of the parents to bring up the children in the law.

This faith, this courage, were counted, doubtless, by some among his tribesmen and neighbors, as godless philosophy, presumptuous "private opinion," yes, as punishable rebellion against Moloch and his priests. But Abraham had this belief and this courage, because he had recognized in his conscience and in his reason the true "Moloch," the true "King" and Lord of the spiritual world, who speaketh to man, his image, in the soul and conscience; the feeling of rational moral freedom was to him a consequence of his inward personal belief in God. This God and Him alone dared he to honor. He, the tried and the childless, held fast to this, that this belief would not perish with himself, but would be preserved in his race and for all nations. The same loyalty to his conviction had he shown already in his wandering. Even on his passage over the Euphrates it was revealed to him in his inmost heart, that this belief in the moral order of the world alone had a future, which was thus expressed, (Gen. xii. 3,) that in him should all nations be blessed, (or have knowledge of their blessing.) In this even his long years of childlessness did not perplex him; and this fixed belief consoled him, or as the narrative has it, (Gen. xv. 6,) it was counted to him for righteousness. But that first prophetic phrase, whose deepest sense Jesus of Nazareth first disclosed, has been, during two milleniums, fulfilled in a grander manner than it had been already fulfilled at the time when it was written down in the records which lie before us. Blessed is mankind in Abraham according to the tradition and the belief of the Jews and all Christian and Mohammedan nations, and according to the testimony of the world's history. The personal knowledge of God, and the aspect in which the world is viewed among Jews, Christians, and Mohammedans, go back alike to the great image of Abraham. His faith is the common historical ground of their religions, as opposed to idolatry. It is Abraham's conscientious belief in the moral order of the universe, and the consciousness of God developed out of it, which new-model the

\* Abraham, Moses, Elijah, and Jeremiah.

world. The nations which have appropriated it rule the world by divine and human right. This great spiritual fact we hold as essentially, purely historical, for it accords with all the features of the history of his life, and all that is historical finds in it its unity. This man's view of the world, freer and more spiritual than that of the Jewish law, found its conscious personal realization and completion first in Jesus of Nazareth, who said of Abraham to the Jews, "He saw my day and rejoiced in it." There is no higher representation of the belief in the progress of humanity than the consciousness of that man, who in hard inward struggles and in conflict with the idolatry of savage Semitism, wins the belief in the truth of the soul in conscience and reason, the belief in the living God, holds it fast, founds it for his people upon holy usage and law, and at the same time hoping, seeing, and seeing, hopes its consummation as the future possession of mankind. Abraham can do all this, because he finds the attestation of his faith, as in reason and conscience, so also in the destinies and experiences of his life, and because he acts in accordance with this faith. This is the significance in the history of the world of Abraham's faith and hope. The oak comes from the acorn, the morals from the character, and so we honor in Abraham a character great, intelligible to us, and honorable, and indeed the oldest in the world's history. With Abraham begins the new history, the history of moral characters and their influences.

On this authentic historicalness of his personal life we can also assume, that the narrative of the vision of Abraham after the sacrifice rests upon an ecstatic fact, to the understanding of which one easily attains, when he considers the outward rite as the custom of the former time, but the vision occasioned or furthered thereby as the important matter, the awakening of his consciousness of God.

To express all in one word: Abraham is the oldest moral personality in the world's history; the revelation given him is like-all true revelation, the inner history of the soul in itself, and believed in by Abraham on account of its moral reasonableness, on account of the sanctifying power of the act of faith, and in the history of the world, in consequence of the humanity of its idea and the continuance of its influences to our own day.

#### MARY WESLEY'S CHARITY.

"The Lord gives me," records Mary Wesley, "to abound in charity as to the outward act, but where is the difficulty of being so, when the Lord hath made my cup to run over? If ever my charity was great, it was when I had little, expecting a prison for myself, while I was helping others. Yet at that time I am not sure it was *cheerfully done*; a necessity seemed laid upon me. But now, though I give much, and am

much employed for the poor, yet I fear I do not save all I might for them, out of what is spent on my worthless self."

In a review of her character it is stated, that on making up the account of her apparel, it was found the whole year's expenditure amounted to nineteen shillings and six pence; this was every penny that had been laid out on her own person for the whole year. The expense was not always so small, but it is believed it never amounted to five pounds. In making up the poor's account, the amount was found to be £181 16s. 1d. Thus liberally had she dispensed abroad. But her desire of communicating comfort to the afflicted was very extensive: whenever she heard of a person in distress, if in her power to do it, she by some means contrived to send relief.

#### *Extracts from Barnes' Discourse on the Virtues and Public Services of William Penn.*

No other country has been settled in the same manner as ours. No other people can look back to such ancestors as we have had. Between the character of the colonies that went out from Phœnicia to people the maritime coasts of the Mediterranean, those which went out from Greece to people Ionia, and those which came to our shores, there is the most marked difference. Between the character which the ancestors of the Romans had when their Republic was founded; which the Germans had, as described by Tacitus; which the Britons had in the times of the Druids, and before the days of Alfred; which France had in the Gallie race, as portrayed by Cæsar; and which the Russians had before Peter the Great aimed to diffuse over the multitudinous hordes under his sceptre the traits of semi-civilization, and that of our own ancestors, there is the widest conceivable difference. And between the manner in which Mexico, Peru and Brazil, and that in which Massachusetts, Pennsylvania and Virginia were settled, there was a difference as great as there is now in the character of these nations and republics. We can never understand the causes of their difference, till we understand the characters and views of their founders.

With these objects in view, I propose to dwell on the early settlement of Pennsylvania. I shall first advert to some of the historical circumstances which gave rise to the denomination of Friends or Quakers, and to the settlement of this Commonwealth by them; and shall then enquire into the bearing of the principles held by Penn and his associates on the institutions of our country.

I need hardly pause to say, that in seeking occasion for gratitude in the character and services of the Founders of the Republic, it is not to be understood that every thing in their character or views is to be approved, or that all the principles which they held are to be regarded as correct. There were doubtless some things to

be lamented in the character of the "Pilgrims," and in the severe statutes which they enacted. Time would have mellowed some of their principles, and in other circumstances they would have been, in important respects, different from what they were. So, if I speak of the Friends to-day, in the language of commendation, as the Founders of this Commonwealth, and so, if, hereafter, I should have occasion to speak of the Roman Catholics in Maryland, and of the early settlers in Virginia, and of the Huguenots in the Carolinas, with the same desire to learn what valuable elements have gone into our institutions, it is not to be inferred that no defects or errors can be seen in the character or principles of either, or that they held the best kind of religion. Differing, as most of us do, in many important respects, from the views entertained by the Founders of Pennsylvania, Maryland, and Virginia, we need not be blind to their virtues, or withhold a tribute for what was truly noble and good.

The settlement of this Commonwealth, [Pennsylvania,] I need not inform you, was under the auspices of William Penn, a leading mind in the denomination of Friends. This denomination of people sprang out of the great Puritan "cauldron;" the effervescence and agitations of the times of the first and second Charles, and of the English "Commonwealth."

Some leading and important questions occur in regard to the occasion which gave occasion to the settlement of this Commonwealth. What gave rise to that denomination? What principles did they hold that could be regarded as an *advance* on those which were before held, and which were to contribute to the progress of society towards the point which it will ultimately reach? And what were the circumstances which led Penn and his associates to seek a place in the Western world where those principles might be developed?

It may be regarded as almost universally true, that every sect in philosophy and religion is raised up under Divine Providence, for the accomplishment of some important purpose. Some error or evil has been suffered long to exist, which it is of importance to remove; or it is desirable that some valuable principle in morals, philosophy, or religion, should be wrought out and established, and the sect is raised up to remove the evil, or to establish the new principle. That done, it often occurs that, having accomplished its work, the sect ceases to be needful in the progress of society; loses its vigor and vitality; and sinks away ultimately into the great mass, or is superseded by another still more in advance in the progress of society. Associations of men are thus like individuals. A period occurs in the progress of society when it is important that some great truth should be struck out, or some happy invention originated, that shall contribute to the permanent progress of the race. Some man, of

richly endowed genius, is raised up, who is to give birth to the single great principle that is to immortalize his name and his times, and then, his name entrusted to society, ever to be accompanied with the honor of being associated with that truth or invention, he, having done his portion of service to the world, sinks into the grave. So Copernicus suggested the system of astronomy which bears his name; so Galileo invented the telescope; so Columbus discovered a new world; so Laurentius of Harlaem invented the art of printing; so Fulton applied steam to navigation; so Whitney invented the cotton gin, and so the magnetic telegraph is given to the world, and marks a new step in the progress of the world. When this is done, the great truth or invention takes its place, marking the permanent advance of society; and, united with the others previously established, contributes to bear society forward to the high condition which it is yet to occupy. The fame of the individual or the association may be permanent; but the one shall be himself in the grave, and the other, dissolved, shall go into the history of extinct philosophical and religious sects or denominations.

Thus it happens, too, that some great *evil* shall have been suffered long in the world. Society had too little strength to allow of its sudden and violent disruption. It was bound to the living mass by so many cords and affiliations, that it was necessary to suffer it to remain long, until society should have a firmer growth, and could bear the process of removal. It was too much interwoven in the interests, the passions, and the affections of men; it had too much strength from its long growth; it enlisted too much public sympathy; it was connected too much with property; or too many of the great and the good were found indulging in it, to permit a violent rupture to be made, and all that could be done was to tolerate it. Polygamy was tolerated among the patriarchs, and slavery among the Hebrews, and war, with its evils, under all former dispensations, not because they were not evils, but because the world was not far enough advanced to permit their removal. The time would come, however, when society would have made progress enough, and would possess established principles enough to permit their removal, and then God would raise up some prophet, or association, or mighty man, to bring the evil to an end.

More of both these kinds of work was done about the period when the Society of Friends had its origin, than had ever been done before, and especially in regard to the *principles* which were to go into the permanent structure of civil society; and the Friends were raised up to perform their share in the work, and to strike out some principles which were to contribute to the permanent advancement of mankind. It was an age of agitation, and ferment, and discussion. The art of printing had been discovered. The Reformation—that great modern advance in the progress of

society—had been effected. Men had begun to breathe freely after the long incubus of the dark ages. It was a time when men began to inquire what constitutes liberty; what is the authority of conscience; what are the rights of kings; what are the rights of the lower classes of people. This was the age in which, whatever there is of liberty in the British constitution was originated; and in such times as those in which Pym, and Hampden, and Milton lived, it could not be but that society should make progress. They set themselves to the work of looking at the true nature of liberty, and the rights of conscience, and the just principles of government. They enquired what evils had remained attached to the state, which ought to be removed. They asked what new principles could be applied to promote the progress of mankind. They resolved to *detach* all these evils from the state; to put society on a new basis; to incorporate a class of new and mighty principles of liberty in the British constitution. It resulted from the nature of the case, that there should be commotion. The head of Charles fell; and the government was overturned; and the Protectorate was established; and the mighty arm of Cromwell ruled the political elements; and the working of the new principles at once made England more feared and honored abroad than she had ever been before. It is true, there was disorder, and true that the state of things in the Protectorate could not always continue. British society was not ripe for it. But there was progress made. Principles of liberty were originated, of which the world was never to lose its hold again, and which were henceforward to go into the permanent fixtures of society. From that point the world was not to go back. The great principles which came out of the agitation that began before the time of James, were to go permanently into the British constitution; were to be embedded in the Puritan mind; were to accompany them to Holland, to Plymouth, and to Jamestown; and were ultimately to spread all over this land, and over the world.

It was during the effervescence consequent on these discussions, that the Quakers had their origin. There were great questions which were agitated, and which were not settled, and which, in their turn, gave birth to others; and a portion of the agitated mass was concentrated under the auspices of George Fox, Robert Barclay, and William Penn, in the denomination of Friends. The equality of man; the evils of hereditary orders; the claims of conscience; the freedom of opinion; the toleration of religion; the nature of true liberty; the work of the Spirit; the evils of priestcraft, and of what James called "kingcraft," were great points which were as yet unsettled, and which gave rise to the peculiarities of this denomination. There were evils of war and slavery, too, still in the world, which were entirely in conflict with many of the principles which had been settled, and against which God

meant that, at some time, men should lift up their voice.

It was a most remarkable and happy circumstance, that the views of the Friends so soon found a convert, a representative, and an advocate in William Penn. Some such mind was needed to defend and illustrate these new principles, and to apply them on some broad field for the good of the race. England was not large enough, and was not ripe for the application of the principles that had grown out of these conflicts. Some broader territory was needed, where the whole of the Puritan principles that were to be permanent, could have expansion and play; and God had reserved this broad land through many generations of the world for this experiment. The application of the principles embraced by this portion of the great Anglo-Saxon family; the conducting of the experiment in this case, was entrusted by the Ruler of Nations to William Penn. It would have been difficult to have found, among all the Anglo-Saxons of his time, a man better endowed by nature for this work, or one who had been so well disciplined for the performance of a great undertaking like this. "He was born to a competent estate, with the advantages of an honorable descent, and the highest political connexions in England. The only son of Admiral Penn, who had added not a little to the naval glory of his country, he was carefully educated at the University of Oxford, and gave promise of an elevated and brilliant uanhood." His contemporaries describe him as possessing "a striking countenance, a fine person, a manly and refined demeanor, a playful wit, an open and ever-joyous disposition." "The son and grandson of naval officers, his thoughts had been, from boyhood, directed to the ocean; the conquest of Jamaica, by his father, had early familiarized his imagination with the New World; and, in Oxford, at the age of seventeen, he indulged in visions of happiness, of which America was the scene. Bred in the school of Independence, he had, while hardly twelve years old, learned to listen to the voice of God in the soul; and, at Oxford, where his excellent genius received the benefits of learning, the words of a Quaker preacher so touched his heart, that he was fined, and afterwards expelled for non-conformity. His father, bent on subduing his enthusiasm, beat him, and turned him into the street, to choose between poverty with a pure conscience, or fortune with obedience. But how could the hot anger of a petulant sailor continue against an only son? It was in the days of the glory of Descartes, that, to complete his education, William Penn received permission of his father to visit the Continent.

"From the excitements and the instruction of travel, for which the passion is sometimes stronger than love or ambition, the young exile turned aside to the cottage of Saumur, where, under the guidance of the gifted and benevolent Amyrault,

his mind was trained in the severities of Calvinism, as tempered by the spirit of universal love. In the next year, Penn, having crossed the Alps, was just entering on the magnificence of Piedmont, when the appointment of his father to the command of a British squadron, in the naval war with Holland, compelled his return to the care and the estates of his family. The discipline of society and travel had given him grace of manners, enhanced by the severe but unpretending purity of his morals; and in London the travelled student of Lincoln's Inn, if diligent in gaining a knowledge of English law, was yet esteemed a most modish fine gentleman. In France, the science of the Huguenots had nourished reflection; in London every sentiment of sympathy was excited by the horrors which he witnessed during the devastations of the plague. Having thus perfected his understanding by the learning of Oxford, the religion and the philosophy of the French Huguenots in France, and the study of the laws of England, in the bloom of youth, the career of wealth and preferment opened before him through the influence of his father and the ready favor of his sovereign."

At this period (1666) he fully embraced the principles which he held in religion during the remainder of his life. For these principles, he was turned, penniless, out of doors; and was consigned to a long and close imprisonment in the Tower, and again, after his return, was consigned to Newgate. Unable to find protection in England; deprived of what was esteemed as the rights of conscience; and suffering under the penal rigors of these who refused to comply with the established religion, Penn, like the Pilgrims before him, sought the enjoyment of religious rights and privileges, in this land, and "accepted a charter of Pennsylvania from Charles II, and invited the persecuted non-conformists, and such as were desirous of change, to accompany him hither, for the enjoyment of more benignant laws amid the solitudes of the trans-atlantic west."

(To be continued.)

#### THE CONTRAST.

In the whole scope of the biography of eminent personages, there is none perhaps, the review of which touches more painfully the Christian heart, than that of the German poet Goethe. That he should have lived so long, even beyond the usually allotted term of human life, and still have failed in the one grand object of existence—that he should have dived so deeply into the very depths of human lore, and passed by, unscanned, that only blessed volume that maketh wise unto salvation—have gathered for more than half a century, in his varied and wondrous attainments, the fairest laurels of worldly applause, yet sought not the praise that cometh from God only—have run the rounds of science and poetry, revelled in the speculations of his own mighty mind, and

enchained thousands in every land by the brilliant flashes of his giant intellect, and yet have groped on through life without the knowledge of God, and come down to its close, exclaiming in agony, at his last hour, as if already realizing the blackness of darkness beyond, "Open the shutters, and let in more light." Alas, for the vanity of human greatness at such an hour.

And how beautifully in contrast appears the language of the poor Indian, who, stretched on a pile of leaves in his forest hut, his poor old body racked with anguish, yet the withered countenance lit up with hope divine, as he exclaims, "Me no have plenty book-learning like white man, me no can read good book like him, but Jesus teach poor Indian—he come in night time when all dark, and then me have light and joy and happiness. And now me go soon to him; he come quickly take poor Indian home, and there be no more dark, no more night there." —*Am. Mes.*

#### PALESTINE.

Dr. Kirk, of Boston, has recently travelled extensively in Europe and Asia, and on returning to his people and addressing them, thus remarked concerning his visit to Palestine:

He had longed to correct by vision his false and imperfect conceptions of the great earthly scenes of redemption. "I longed," said he, "to get amid that natural scenery which surrounded the sacred poets and prophets, to see the skies and the hills, the flowers and the fields, the animal and human life, the customs and costumes of men who formed the outward garb for the Master's sublime instructions. And now I have been there. Now Lebanon and Hermon, Sion and Olivet, are mine, as they never were before. The Bible now speaks a language, even in its very catalogue of names, which has a new familiarity to my ear, and the power of a painting to my imagination. I cannot say that faith in the divine realities is any stronger; but the understanding and the imagination now keep more even pace with it. No stronger proof of the genuineness of sacred history is possible, than is found in the fact that after centuries of waste and war, of political and physical revolutions, after all that could be done to efface landmarks, and confound research, by the imposition of new names, Greek and Roman, after all the lying legends of a corrupt priesthood, there still remains the ineffaceable record on mountain, valley, river, town, and well, which corresponds to the sacred story. Old Arabic names are now superseding those of Greece and Rome, and recalling the familiar sounds of the early Canaanitish and the subsequent Hebrew vocabulary. The journey over the plains of Moreh, and the connected Bible route of Abraham, make to you his whole history as definite, as real, as human, as that of Daniel Boon, Father Sewall, or that of any pat-

riotic founder of one of our States. There is the Jordan that Israel so wonderfully crossed, and there are the foundations of Jericho, probably still remaining to testify their past conquest of Canaan. The life of Samuel, of David, of Elijah, how real; how natural and familiar to the mind when you walk over the same roads that they trod, and look on the same mountains, vales and streams which were so familiar to them. Now, as I read the Bible, I can invest every scene with a human interest."

## FRIENDS' REVIEW.

PHILADELPHIA, ELEVENTH MONTH 14, 1857.

ENDORING.—It is not expected that the remarks of "The Monitor" this week will retrieve lost credit and fortune, or restore tranquillity of mind to those who are unhappily suffering, through a forgetfulness or disregard of Solomon's injunction: "Be not thou one of them that strike hands; or of them that are sureties for debts." But we may hope that some will be led to take a more serious view of the subject, and, in future, adopt his advice, as well as the wise counsel of our excellent Discipline, which, if duly regarded, would have saved many from the severe lessons of experience.

"We warn our members," says a rule of Discipline, "against a pernicious practice amongst the trading part of the community, which has often issued in the ruin of those concerned therein, viz., that of raising and circulating a kind of paper credit, with endorsements, to give it an appearance of value, without an intrinsic reality; a practice which, as it appears to be inconsistent with the truth we profess, we declare our disapprobation of, and entreat every member of our Society to avoid and discourage. We also caution all in membership with us to avoid entering into joint securities with others, under the specious plea of rendering acts of kindness; many, by so doing, having been suddenly ruined, and their innocent wives and children reduced to deplorable circumstances."

North Carolina Yearly Meeting commenced at New Garden the 2d inst. The following ministers were in attendance with certificates from other Yearly Meetings, viz., Robert and Sarah Lindsey, from London Yearly Meeting; Lemuel Gifford and Thomas Grover, from New England; John L. Eddy, from Ohio, and Thomas Frazier and Dorcas Hunt, from Indiana.

Epistles were read from London and Dublin Yearly Meetings, and from all the Yearly Meetings on this continent, except Philadelphia.

On Third day the state of Society was entered into by reading the Queries and Answers.

Many deficiencies were made apparent, which occasioned a deep exercise, and much counsel and admonition were weightily and feelingly given. The Clerks were directed to embody the same in a minute to be sent down to the subordinate meetings.

The subject of changing the time of holding the Yearly Meeting was brought before it, and referred to a committee, which reported a united judgment that no change be made, which report was approved by the meeting.

A meeting for worship was held on 5th day, and largely attended.

Sixth day, Epistles were produced and read, and directed to be forwarded to those meetings from which Epistles had been received. Returning minutes were granted to ministers in attendance from other Yearly Meetings, and under a solemn covering the meeting closed.

Much unity pervaded the meeting during the several sittings.

Robert and Sarah Lindsey proceeded towards the settlements of Friends in Tennessee.

MARRIED, at Friend's Meeting, Concord, Delaware Co., Penna., on the 14th ult., JAMES ELFRETH, of Philadelphia, to ANN, daughter of John Benington, of West-town, Chester Co., Penna.

—, At Friends' Meeting House, China, Maine, on the 15th of 9th mo., 1857, JAMES P., son of Eli and Sibly Jones, to REBECCA M., daughter of Daniel and Mary Runnels.

DIED, on the 14th of 10th mo., 1857, in the 65th year of her age, RACHEL W., wife of Stephen Jones, an esteemed minister of China Monthly Meeting, Maine.

By listening to the manifestations of the Holy Spirit, and experiencing the cleansing and baptizing power thereof in her own heart, she became quite early in life peculiarly qualified as a comforter of those in distress. Many can bear testimony that she was indeed a mother in Israel, and a consoler of those in affliction, with whom they took sweet counsel. Her unfeigned meekness, fervent charity and sincere devotion, induced many to speak well of the truth on her account. Her private walk gave force to her public testimonies, having in all things the glory of her Divine Lord in view, as the great object of her earthly mission.

Her last public labors, accompanied by her dear husband, were performed within the limits of New York Yearly Meeting during the winter of 1855—6. Her health being feeble, she was brought into a great strait in view of the labor before her, but, trusting to the arm of infinite power, she was favored to perform the service and return with a cheerful spirit. From this time forth she believed that the time of her de-

parture was near at hand, and when taken sick she remarked, "This is my last sickness;" and to her dear husband she said, "The Lord has called, and I must go; I am ready; I feel resigned, entirely resigned." Her last sickness, of only ten days' continuance, though exceedingly distressing, was borne with calmness and Christian fortitude. To her numerous family and those who visited her, she imparted much tender counsel; and while all around were bathed in tears she was composed, saying, "Weep not for me, but weep for yourselves."

Thus, with the love of God upon her brow, and a holy sweetness upon her lips, she passed quietly away without a struggle, leaving a strong consolation that her purified spirit had joined the number of those that surround the throne of their glorified Redeemer in songs of triumphant praise.

For Friends' Review.

THE MONITOR—No. X.

### Endorsing.

"He is a good-natured fellow, and cannot say 'No,' and so he has endorsed for his friends, and they have ruined him." Who has not repeatedly received such intelligence as this? Many hundreds who have had young families to support, have had everything swept away by this same good-natured weakness. It is well to ascribe good motives to the actions of others, if in doing so we do not palliate a sin. The reformed drunkard, who rather than say *no* to his importunate comrades, destroys his own happiness and perils that of his family, by drinking poison; and the lad who, to avoid displeasing his playmates, accompanies them on a fruit-stealing expedition, have a greater fear of causing *present pain*, than of bringing upon themselves lasting ruin. *All sin* is committed under the same kind of influence—sacrificing future happiness to present enjoyment. That present enjoyment may be of various kinds, among which is the desire that "all men may speak well of us," a gratification often sought by the sacrifice of duty to God.

A dislike to give pain is not always true humanity. We must often cause *present pain* to prevent future suffering. A parent, rather than refuse the entreaties of a child for some delicious food containing poison, may allow him to eat and become sickened and destroyed by it. Or he may allow a child, through fear of pain by denial, to attend unprofitable parties and places of diversion, until morally and spiritually poisoned. This is a spurious kindness and genuine cruelty. Such a parent resembles Pilate, when he gave sentence against the Saviour rather than say *no* to the Jews. He is not unlike those sensitive people who "cannot bear to see suffering," and accordingly shut their eyes and run away instead of affording relief.

The man, therefore, who, rather than offend an acquaintance, endorses for him to an amount equal to or greater than his own property, that is, places his entire ability to pay his own debts or to support his family in the complete control of another, disregards the injunction of the

apostle to "provide for his own house," without which care he is "worse than an infidel." For there is little difference between neglecting to provide, and voluntarily wasting or periling the provision already made. It is no wonder then, that we should have been cautioned in another place "not to become sureties for debts; for if thou hast nothing to pay, why should he take away thy bed from under thee?" And again, "if thou be surety for thy friend—give not sleep to thine eyes nor slumber to thine eyelids; deliver thyself as a roe from the hand of the hunter, and as a bird from the hand of the fowler."

The sufferings and miseries occasioned by that class of failures which result solely from endorsing, have been great, numerous, and widely spread; and if the whole practice could be at once terminated, or annihilated by law, the community as a whole would no doubt be much better off for it. "But how," exclaim many, "could business be carried on by those who have not capital of their own, without borrowing through the assistance of endorsements?" The answer is as easy as it is simple: Let no one engage in any business which requires heavy capital till he possesses it himself, or can obtain it on his own well established credit—he would find it on the whole more profitable, more in accordance with his duties as a useful citizen, and more conducive to peace of mind, to work only for a salary—or as a manufacturer, mechanic, or cultivator, with his own resources. Let him be in less "haste to be rich." The usages of society are wholly wrong in this respect; and upright-hearted men have been deluded by the general practice to risk more than they possessed, and have been ruined by it and wronged others. No living mortal has a right to borrow capital to an amount many times his own actual possessions, to enable him to accumulate wealth. A few ultimately succeed, but careful estimate shows this successful number to be not one in thirty. Far more result in disaster, ruin, and suffering. And it becomes a question worthy of the consideration of every one, how far he is doing his duty in discouraging or repressing the practice of risking the happiness of so many families in hazardous efforts for rapidly amassing wealth. T.

### THE UNITY AND BROTHERHOOD OF MAN.

I am, says Dr. Upham, in his letters from Europe, Egypt, and Palestine, one of those who are willing to testify, that man in his central nature is the same every where:—in his joys, his griefs, his hopes, his affections, he is one. He may differ in his location, his history, his modes of thought, the form of government under which he lives, his language, his multiplied associations. But his heart, which embodies the secret of universal alliance, is one. He has learned the folly of separation. He sighs for unity. This is the world's hope. And I will add,

that it is this that points to the world's great duty. And that duty is to recognize more and more the idea of central unity; and to believe in and to aim at that unity continually, under the name and form of universal brotherhood, as the great object, and the glorious result of Christian civilization.

The fact that I and my brother man are born in different countries, that we speak different languages, that we live under different governments,—although these things are undoubtedly of the nature of dividing elements and tendencies, —cannot have the effect essentially to separate us while the cords of the heart are united together. To this union—not so much of the intellect as of the affections—all things tend. War and all contention have become *obsolete ideas*. I do not say that they have become obsolete in *practice*. But I will venture to say, that in the estimation of reflecting and enlightened minds, and considered as the means of effectual protection and of real and permanent good, they are rapidly becoming obsolete as ideas or truths. The world, (and by the world I mean particularly the great masses of men who have at last awakened to wider and clearer perceptions,) is beginning to discover, that amid multiplied differences there is a common centre; that the differences among men are incidental and temporary, and that the central element is essential and eternal. The light of Christ in the soul has revealed it as a matter of speculative truth to them; and Christ's bleeding and mediating heart will make it good, as a matter of practical and positive realization. Through the clouds and smoke of the world's long contest the harmonial sky is dawning. I have been at Trafalgar, and have seen the ocean wave that was reddened by the dying blood of Nelson; I saw the lifeless dust of Wellington carried to its grave; I have stood at the tomb of Napoleon.—The day of warriors is over; and I hear once more from the heights of Bethlehem the voice too long disregarded, (the voice uttered in numbers because it is the harmony of the universe, and uttered by angels because it is the announcement of angelic life,) which proclaims good will to men and heavenly peace on earth.

#### INDIVIDUAL RESPONSIBILITY.

We are born alone. God brings us into the world solitary and alone, the creatures of his own omnipotent power. We must go out of the world alone. A few friends may go down with us to the dark valley of the shadow of death, and stand weeping around the stream as our feet enter its waters, but the soul passes forth to stand alone before its God, and answer alone for all the deeds which have been done in the body. And in all that human experience, which intervenes between birth and death, God deals with us as individuals, and only as such. All the blessings of his prov-

idence come to us as individuals. Our food, raiment, social happiness, our internal joys, our crushing sorrows, all are our own. The only principle upon which life can be maintained, upon which a providential government can be upheld, and upon which God can rule the universe, is that of dealing with each creature alone and by itself. And from the archangels that stand before the throne down to the very minutest of microscopic beings, each one is brought into immediate and solitary relations to its Creator, feeds upon his bounty, lives by his power, and dies by his hand. It is equally so in all the experience of man's spiritual being. The exercise and emotions of the heart in relation to eternity, salvation, and God, separate each individual necessarily from all other human beings. We may sit crowded as we are to-day, and hear the Word of God from one voice with our outward ear, but whensoever the Spirit shall be poured out fresh from on high, then commences the process of individual separation, and each soul, that feels the power of truth and the influence of the Spirit of God, sits alone. The heart convicted of sin knoweth its own bitterness, and rejoicing in the hope of pardon through the blood of Christ, no stranger intermeddeth with its joys. Alone with its Saviour, whether it weeps before him like Magdalen, or rejoices in transport of forgiveness, man has disappeared; God and Christ are unveiled, and the soul is in communion with the skies. This is the only principle of God's dealing with us in providence and grace, and therefore, when we say that the Bible is God's revelation to the individual mind, we are but saying that it takes its part and place in the whole system of God's dealings and government, both in the world of nature and grace.

To this let us add the consideration that our responsibility to God is as individuals. We can answer and be judged, be rewarded or punished, in no other way. "Every one must give account of *himself* to God." None can stand with us in that hour, or share our responsibility. None can relieve us of the evil consequences of mistake, or of the guilt of disobedience. We may have been led into error through the influence of others, but, whatever may have been their pretensions on the earth, they cannot screen us then. And therefore, as God will enter into judgment with us individually hereafter, for submission or disobedience to his will, so must He now reveal that will to us as individuals. In hearing as in doing, in learning as in retribution, we must stand alone.

It is related of Daniel Webster, that on one occasion when he was entertaining a party of his friends at the Astor House in this city, while on his way from Washington to Boston, he was observed to be unusually sad and thoughtful. Conversation flagged, and awe of his great spirit, and the solemnity of his countenance, cast a chilling influence over the minds of all, until at last one

of the company ventured to break the silence by inquiring of him: "Mr. Webster, what is the most important thought you ever had in your life?" Looking out of his great cavernous eyes, he replied, "Is there any body here who does not know me?" "No," was the response, "we are all your friends." "Well," said he, "the most important thought I ever had in my life was that of my individual accountability to God," and starting with that text, he preached to them for twenty minutes a sermon upon the subject of man's responsibility to his Maker, and then rose from the table, and withdrew to his rooms, and locked himself in, while the remainder of the company dispersed, glancing in mute wonder at each other, and exclaiming, "Did you ever hear such a thing in your life?" The most important thought of that great man is the most important thought of all men—our individual accountability to God—and because of the individual accountability, therefore an individual revelation.—*Tyng.*

#### THE BULGARIANS AND THE BIBLE.

Their country extends from Servia to the Black Sea on the east, and contains a population of about five millions. The Scriptures were first published in their language about fifteen years ago. The fact which I am about to mention is one which shows how the Scriptures, in all their simplicity, go before the foreign missionary, and prepare the way for him. Among that people, there has been as yet no Protestant mission established, and although efforts have been made for that purpose for twelve or fourteen years, they have thus far proved abortive. I learn with pleasure that one of the missionary societies of this city has designated a man for that interesting field of labor. Within fifteen years about fifteen thousand copies of the New Testament have gone into circulation among the Bulgarians. They are a serious, sober-minded race, and they differ widely from the Greeks in this respect. Often have I seen them go into bookstores, and inquire for the New Testament Gospel, as they called it, and the thought occurred to my mind, when they had secured their prize, that these men would surely be profited, and the seed sown would surely bring forth good fruit. The first edition of five thousand copies of the New Testament required ten years to get it into circulation. There were no missionaries there, and the Agent of the Bible Society authorized no one to circulate it there; but in the course of the ten years these five thousand copies were sold, and another edition of five thousand was published and sold in about three years, at the cost of about thirty-three cents a copy; and the third edition has already gone widely into circulation. A beginning has been made in the preparation and publication of the Old Testament, for circulation among them. The Book of Psalms has also been printed by the Society for distribution among that people. Ap-

prehending lest there should be opposition to any portion of the Old Testament, on account of its being translated from the Hebrew, and not from any other ancient version, the Society printed at first only two thousand copies as an experiment, which in three months' time were all sold, and they regretted that the edition had not been larger. The Society have now authorized an edition of five thousand copies of the Book of Psalms, Genesis, Proverbs, and Ecclesiastes, to be prepared for publication in the Bulgarian language.

Then, to go beyond the Danube, there were the Wallachians, who have been furnished with the New Testament by the British and Foreign Bible Society, and who refused from year to year to permit its introduction among them. I have only the fact to mention in regard to that people, which I do not remember to have seen any where noticed, that 1,800 copies of the New Testament were purchased by the Governor of that province, for use and circulation among their schools, just before the Agent of the Society left that region. Thus is the New Testament working its way among those regions, where the Protestant missionary has not yet borne his testimony.—*Dr. Riggs.*

#### SMOKING AND TIPPLING AMONG MINISTERS.

An English correspondent of the Philadelphia "Christian Observer" says: These practices just now are engrossing some attention among us. At the last Wesleyan Conference, which was held in Liverpool, the tobacco question came up, in the case of the young preachers. Several candidates for holy orders were constrained to plead guilty to the charge of smoking, and they were required by John Wesley's law to abandon the habit. President West also said, in the course of the discussion, that great difficulty had been found in securing accommodation for smoking preachers, from the aversion of respectable householders to the practice, and dread lest their sons should be contaminated by bad example. "No preacher," says the Discipline, "is to use tobacco for smoking, chewing, or snuff, unless it be prescribed by a physician; and all our people are desired not to provide pipes or tobacco for any of our preachers."

Some of our Temperance champions, whose vigilance lets no chance slip, have seized the occasion to remind the Wesleyan Conference that it is as much bound by rule to put down spirit-drinking as smoking. Yet it is notorious that ninety-nine out of every hundred of the itinerants regularly take the alcoholic stimulant, in the form of grog, wine, porter, or beer, without compunction and without shame; and total abstinence by them is regarded as a weakness, if not a shame. How sad, when drunkenness is so rampant in the land, and so many members of the Church are lost annually through the insidious ravages of "strong drink," that self-denial

should be proscribed and ridiculed even by the very authorities of the leading churches in Great Britain.

#### THE CITY OF CROCODILES.

(Concluded from page 143.)

To return to the crocodile, which we mentioned as being flayed after his death. The flesh was very white, hard and extremely tough, formed of parallel flakes, bound together like those of a salmon, but very much stronger. "The flakes of his flesh are joined together: they are firm in themselves; they cannot be moved." (Job xli. 23.) When his stomach was opened, there was found in it about half a tumblerful of pebbles and stones, some of them as large as a boy's marble, and amongst these we noticed a small bullet, evidently belonging to an Arab gun; but how it got into the crocodile's stomach of course cannot be known. "Sharp stones are under him: he spreadeth sharp pointed things upon the mire," (verse 30.) Even when the animal had been disembowelled, and long after death, and when his skin was stripped off down to the tail, the muscular contractions of the limbs were so powerful that we had to put a little boy, called "Aced," to sit upon the tail to keep it steady on the deck. No sooner, however, had he pressed upon it, than the tail whisked to one side, and actually threw the boy overboard into the water. The strength of the crocodile's tail is perhaps alluded to (although another beast is believed to be intended) in Job xl. 17, where we read that "he moveth his tail like a cedar."

The other animal mentioned in the 40th chapter of Job, under the name of "behemoth," probably means the hippopotamus. This huge creature is not now found in the Nile until you ascend a long way into Nubia; and its habits are so different from those of the crocodile, and so shy is it of the approach of man, that it is difficult to catch one. "The shady trees cover him with their shadows; the willows of the brook compass him about; . . . his nose pierceth through snares." (Job xl. 22, 24.)

The first hippopotamus ever brought to this country is now in the Zoological Gardens at the Regent's Park, and we happened to see this animal before he was taken from Egypt. At that time he was about the size of a large pig; but his appetite, and especially his capacity for liquids, was enormous. In the steamer which brought this specimen home, his keepers gave him every day sixteen quarts of milk. How wonderfully exact, then, is the description of Job regarding this particular. "Behold," says the patriarch, "he drinketh up a river, and hasteth not: he trusteth that he can draw up Jordan into his mouth," (verse 23). We happened also to notice a rude picture of the hippopotamus in one of the tombs on the Nile, which is supposed to be the only one of the kind extant, probably because

the animal inhabited only regions far up the river.

We have not much to say about the present site of Crocodilopolis; but there is a curious excavation near the ruins, and this cavern is found to have been used as a mausoleum for thousands of crocodiles, whose bodies, carefully preserved, are there interred, and may be seen at this day. The soil around this crocodile pit is sandy, and all above it is now a bleak, fiery desert. Yet here there were thousands of our fellow-creatures, in days long gone by, who were busy from morning to night, as if nobody had lived before them, and nobody was to live after them. While the bodies of these men and women have all disappeared, and become mere piles of dust, it is wonderful to see how carefully preserved have been the mummied carcasses of the crocodiles worshipped by this ancient race.

It is no easy matter to get down to the cemetery of the crocodiles. Probably there are several entrances to the pit; but that which we chose to descend by was about two feet wide at the mouth, and opened to the surface without anything to mark it on the plain. The entrance was nearly choked up with sand, and looked like the hole a rabbit makes for its burrow. As we cleared out the rubbish with our hands, the black Nubians, who had brought us to the place, stood around, muttering and raising their hands in astonishment at the strange proceedings of the "Inglees," who could take such trouble to go underground. But when we asked one of them to accompany us as a guide, they all shook their heads and laughed at the very idea. Perhaps there is a superstition among them; for the Egyptians of our own times still retain some of the feelings of their ancestors. They still carry their dead across the water to bury them, and look with awe upon the "timsah"—the monster worshipped here two thousand years ago.

Fastening a long rope about our waist, and well provided with wax-tapers and lucifer-matches, we slowly entered the hole, covering our face with a handkerchief, to keep out the dust, as we pushed in feet foremost, lying on our back. It was soon perfectly dark, and there was scarcely room for the body to pass, so narrow was the entrance. The dust was suffocating, and so was the heat; but we glided down the inclined passage until at the bottom our feet rested on a harder substance. This was the head of a crocodile, and lighting a taper, which scarcely burned in the dank air, we discovered an extraordinary scene, which shall be briefly described.

The crocodile-pit is of an oblong shape, perhaps two hundred feet in length, and forty broad, and of a depth not known. The whole had been filled from the bottom to the ceiling, with bodies of crocodiles, preserved by filling them with creosote and spices, and by wrapping large sheets of matting round each carcase separately. These monster mummies had been there piled, one over

another, until their bodies reached the roof; and it is calculated that the pits contain more than thirty thousand carcasses thus entombed.

As the bodies dried, they shrank a little, and thus a space was left between the top of the mass and the roof of the pit. It was into this space that we had come; but it was not high enough to allow us to walk, or even scarcely to creep. As we scrambled over the crocodiles, the whole contents of the pit shook and rose and fell with a springy motion. Often one of our feet, bursting through the covering of matting, went right into a body, which seemed to be full of black dust; and sometimes there were intervals between the carcasses so deep, that the light of our feeble taper could not show us the bottom. Many of the crocodiles were very small, being only a few feet long, while others were of enormous size, with their legs stretched out right and left, and their horny feet still as hard as if they had pressed the sand of the Nile only the day before.

Cats, dogs, cows, and birds innumerable, were buried in a similar manner by the ancient Egyptians, who worshipped all those animals and many more. Even a small beetle, called the "scarabæus," was divinely honored by these poor pagans. This insect is still found in Egypt, and deposits its eggs in a little ball of earth, which the beetle then rolls backwards with its hind feet to its nest. The Egyptians seem to have made this action of the insect a symbol of a god rolling the world into being. Models of this beetle are frequently found round the necks of Egyptian mummies, and some large effigies of it may be seen in the British Museum, one of them being of stone and about four feet long.

It is believed by the best authorities that the Egyptians at first used animals only as symbols of the attributes of God, and that they did not mean to worship a plurality of deities, but to show how many great qualities were in one. Thus, a hawk might indicate conscience, a bull strength, an owl wisdom, and a tree seed denote fruitfulness, and so on; but the common people soon lapsed, and after them the priests even more so, into downright idolatry. It was merciful, then, for God to give so clearly the second commandment to guard mankind on this point. We must be careful *how* we worship, as well as *whom* we worship; and we see in all ages that if man tries to make the spiritual existence of God plain to our *natural sight*, the evil tendency of our hearts soon drags us into absurdity and error. The Mahomedans are strictly forbidden by their Koran to make any image of anything whatever, whether it is to be worshipped or not. Perhaps this direction was given by Mahomet, to prevent his followers from going aside to worship the thousand pictures and statues surrounding them in Egypt. Still this man, by rejecting the revelation of Christ, made his religion utterly hollow. He tried to worship God "in spirit," but he neglected to worship him "in truth;"

and he put in place of the truth of God, an entangled mass of lies and fables, speaking no peace to the heart, and producing no cleansing of the thoughts or life. It is remarkable that a reverence for one of the ancient Egyptian gods, namely, the bull "Apis," seems to have been carried far to the East, and to have survived even to modern times; for it is related that when the English army occupied Egypt, a regiment of sepoy from India fell down on their faces before a sculptured figure of the sacred bull in an Egyptian temple. It is evident, therefore, that man is as idolatrous in his heart as he ever was. The human race has lived thousands of years, but *time* does not teach truth. Nations separate thousands of miles, but *distance* does not free them from error. The Romanists of our day adore images, for *civilization* does not purify worship. Nothing but God's Spirit can enable us to worship God as a spirit; and by his truth alone can we know how to worship him in truth. —*Leisure Hour.*

From the Ohio Farmer.

#### TWENTY RULES FOR FARMERS.

1. Order is heaven's first law. Let all things be done in order.
2. Have a place for every thing, and keep every thing in its allotted place, when not in use.
3. Whatever is worth doing at all, is worth doing well.
4. Keep the farm work always done up. Let it be done rather before, than after the usual season, and never suffer anything that should be done to be neglected till out of season. Hence be not scarce of help, but always keep a sufficient number of hands employed.
5. Let all crops be put in at the proper season and in the best order, and be thoroughly cultivated; as one good crop is more profitable than several poor ones.
6. Keep plenty of good tools and implements, and keep them in good order. Try to avoid borrowing.
7. Calculate well. Know the profit on each crop, and on each kind of stock, and turn the principal attention to those which prove the most profitable for a term of years.
8. By all means use none but good and clean seeds, and keep none but good breeds of animals.
9. Endeavor to plow a little deeper each time, that the quantity and quality of the soil may continue to increase and improve.
10. Keep a daily record of the work done. It will make an important basis to calculate from.
11. A farmer, to succeed well, should endeavor to work along with his hands.
12. Commence the day's work early in the morning and quit early in the evening.
13. Earn before spending.

14. Live economically, both for health and wealth.

15. All stock should be kept in good, strong growing order—neither poor nor fat—as the same amount of feed will produce more when eaten by animals in proper order than when fed to a larger number of poorer animals. Hence keep no more stock than can be well kept.

16. As a general rule, men and animals are kept in the most healthy state by eating the coarsest food which will keep them in proper condition. Hence let hay and fodder be the principal feed for those kinds of stock that eat such food, with just enough grain to keep them in proper condition.

17. Be punctual in all things. Be prompt at all times. Make no positive engagements, but make it a point to rigidly fulfil all expectations that are given, as much so as if they were positive engagements.

18. As a general rule, sell produce and stock when they are paying a good profit, without waiting for higher prices.

19. Never equivocate, or deceive, nor withhold defects when selling, but remember the law of love in all business transactions.

20. Be unselfish as well as selfish; look to the good of the neighborhood as well as that of the family. Hence cultivate those crops that are really useful to mankind. Raise no grain for brewing or distilling; no grapes for wine, and no tobacco; for it surely has a tendency to harden the heart and blunt the finer sensibilities of our nature, to devote our time and our lands to the cultivation of those crops which are not only useless, but tend to destroy human health and happiness.

H.

#### HERR DRIESBACH AND HIS LION.

The Galena (Ill.) Courier publishes a letter from a correspondent in Potosi, Wisconsin, who says:

“About three years since, the Herr took to himself a wife, and removed to this place, where he had purchased a beautiful farm, and where he has retired to cultivate the earth and make for himself a pleasant home.”

Since then the Lion Tamer has visited Du-buque; and the Editor of the *Express* of that city gives the following interesting recognition:

“Last evening, we, with two companions, walked up street with a very worthy farmer, from within one mile of Potosi, Wisconsin, who talked about his pigs, geese and ducks, and with what success he tilled his farm. As an instance of his successful tillage, he stated that he sold the product from fifty feet square of his farm, of which he kept an account, for forty-three dollars. Hence it may be seen that this farmer, Herr Driesbach, has some skill as well as pride in his farming. Our chief object in taking this walk was that the Herr desired us to witness a meet-

ing between himself and old pets of the menagerie, whom he had not seen for more than a year, which of course we were most anxious to witness, to see whether time, travel and change had obliterated from their recollections their old master. On entering the canvas, which was before the audience began to collect, Herr desired us to stand before the cage of the Bengal tiger, he remaining at the door the while. This tiger, for some old score, had just as old a grudge against him, and in days of yore managed to give a marked demonstration of the fact. This cage, was selected for the first test of recognition. While we were stationed immediately in front, Herr came sauntering along carelessly, habited in a farmer's costume, and as he neared the cage, the tiger's eyes began to glisten with great brilliancy, as they bore directly upon him, and at the same time, a low guttural growl began to rise in his throat, which burst out into a ferocious howl as he leaped at the bars to get at him when he passed by. This experiment was tried several times with the same result, and when at length Herr spoke to him, his rage knew no bounds; leaping at the bars, he dashed his paws out to tear him, and only ceased when his old master walked out of his sight.

The next place we were desired to remove to was the large cage containing a large lion, two leopards, and a lioness. We mention them thus as it is the order they stand in the cage, it being divided into apartments. As Herr approached this cage the lioness caught sight of him, and her eyes beamed with pleasure, while her tail wagged a glad recognition. On his coming up to her, she appeared frantic with joy, and when he spoke to her and presented his face to the cage, she kissed him, and placed her paw in his hand with all the air of an intense affection.

Indeed, while he was in her presence, she did not know how to control herself, but would lick his hands while he attempted to pat her, roll over, reach out her paws to him, and then press her nose between the bars as though she would like to have had a closer presence. While Herr was talking to the lioness, the old lion in the other end of the cage began to get jealous and grumbled, for he, too, had recognized his old friend. Herr said to him, “Billy getting jealous?” and then walked up to him, when the creature crowded against the bars to get closer to him if it were possible, and kissed his face and licked his hands with as great demonstrations of delight as the other. The leopards, too, in the same cage, knew their old master, and watched him as they lay with their noses close to the bars, with evident pleasure, and seemed highly pleased as he spoke to them. In all our days we do not recollect any exhibition that gave us so much satisfaction as did this meeting of old friends, and while we watched them in their congratulations, we could not make up our mind which was the most delighted, Driesbach, to know that he was

not forgotten by those affectionate creatures, or they that they were once more in his presence. While we were watching Herr and his old companions, the crowd began to gather in, and our companions and self departed highly gratified at the result."

#### THE EXTENT OF TELEGRAPH LINES.

A calculation has been made, by which it appears that, of overland and submarine telegraphs, there are completed and in progress of construction at the present time, the following lengths:—United States, 33,000 miles, overland; South America, 1500 miles, overland; Europe, 37,900 miles, overland; India, 5000 miles, overland. Submarine, Europe and America, 900 miles. Total, 78,350 miles. This aggregate will be increased 1700 miles by the completion of the Atlantic telegraph. Of the European and Indian telegraphs, not more than from six to seven thousand miles of the lines commenced are finished, and the next six months will probably see them all in operation.

Growth in grace will destroy the accusing spirit in man: there will be more usefulness and less noise: more tenderness of conscience and less scrupulosity: there will be more peace, more humility: when the full corn is in the ear, it bends down because it is full.—*Cecil*.

Gratitude is the homage the heart renders to God for his goodness; cheerfulness is the external manifestation of that homage.

#### CHILDISH WISDOM.

BY JAMES W. WARD.

'Twas the hour of prayer, and the farmer stood,  
With a thankful heart and a lowly mind,  
And prayed to the Author of every good,  
That the Father of all would be very kind,  
And bless his creatures with raiment and food;  
That the blessings each day might be renewed,  
That every man might find relief,  
And plenty for hunger, joy for grief,  
Be measured by the Merciful One,  
To all who suffered beneath the sun.

The prayer concluded, the godly man  
Went forth in peace to inspect his farm;  
And by his side delighted ran,  
Glowing with every healthful charm,  
His little son, a sprightly boy,  
Whose home was love, and whose life was joy;  
And the father said, "The harvest yields  
A plentiful crop, my son, this year;  
My barns are too small for my grain, I fear."

And they wandered on through row upon row  
Of plummy sheaves; and at length the child,  
With earnest look and a rosy glow  
On his shining cheek, looked up and smiled,  
And said, "My father, do you not pray  
For the poor and needy, day by day—  
That God the good would the hungry feed?"  
"I do my son." "Well, I think, as you plead"—  
His eye waxed bright, for his soul shone through it—  
"That God, if he had your wheat, would do it."

#### PERSEVERANCE IN WELL-DOING.

A swallow in the spring  
Came to our granary, and 'neath the eaves  
Essayed to make a nest, and there did bring  
Wet earth, and straw, and leaves.  
Day after day she toiled  
With patient heart; but ere her work was crowned,  
Some sad mishap the tiny fabric spoiled,  
And dashed it to the ground.  
She found the ruin wrought,  
But, not cast down, forth from the place she flew,  
And with her mate fresh earth and grasses brought,  
And built her nest anew.  
But scarcely had she placed  
The last soft feather on its ample floor,  
When wicked hand, or chance, again laid waste,  
And wrought the ruin o'er.  
But still her heart she kept,  
And toiled again; and last night, hearing calls,  
I looked, and lo! three little swallows slept  
Within the earth-made walls.  
What truth is here, O man!  
Hath hope been smitten in its early dawn?  
Have clouds o'ercast thy purpose, trust, or plan?  
Have faith and struggle on.

*Vanderkiste.*

#### SUMMARY OF NEWS.

FOREIGN INTELLIGENCE.—Liverpool dates to the 24th ult. have been received.

ENGLAND.—The advance in the rate of discount made by the Bank of England, had checked the exportation of specie to New York, which had previously been going on actively. The Canada brought \$1,000,000. Only £8,200 were shipped by the City of Baltimore, instead of £20,000, as had been intended. The quantity of goods forwarded was also small. No additional important failures had taken place. Breadstuffs were declining in price.

A National Association for the promotion of Social Science, was organized and commenced its first session at Birmingham on the 12th ult., under the presidency of Lord Brougham. It is divided, like the British Scientific Association, into sections, for considering respectively the subjects of Jurisprudence and amendment of the law, Education, Public Health, Social Economy, and Punishment and Reformation of criminals; on each of which papers were produced at the meeting. The future meetings are to be held annually.

FRANCE.—The bullion in the Bank of France was stated, upon good authority, to have decreased 30,000,000 francs since the last monthly returns. Gold has been taken from the Bank for export to America, nearly \$150,000 having been sent in one vessel. The Governor of the Bank was said to be about to apply to the Emperor for a decree giving forced currency to bank notes, but it was doubted whether the request would be granted.

The London *Daily News* states that the French government has decided to rescind the prohibition against exporting grain and flour from France, but no such decree had been issued at our last dates. One effect of this measure would be to produce a still greater fall in the English corn market.

SPAIN.—The new cabinet was still unorganized; but Gen. Armero continued to occupy his post as its head.

AUSTRIA.—The financial pressure at Vienna, though temporarily lightened, was believed not to have attained its greatest severity. It was not improbable that the other Italian States would follow the example

Of Parma, in withdrawing from the Austrian Customs Union.

**SWITZERLAND.**—Thirty commercial houses at Zurich, principally engaged in the silk and ribbon trade, had failed.

**PRUSSIA.**—The King was improving in health so very slowly, that it was thought a regency would be necessary.

**TURKEY.**—A change of ministry had taken place, and Redschid Paeha had been appointed Grand Vizier. Financial difficulties are said to have been the cause of the overthrow of the old cabinet, but the appointment of the new one was considered as a triumph of the opponents of the Danubian Principalities. The Porte was said to consider the recent appearance of a Russian ship of war at Rustchuk as a violation of treaties, and to have demanded an explanation from the Russian Ambassador.

**THE PRINCIPALITIES.**—The Divans both of Moldavia and Wallachia had come to a resolution to recognize the rights of the Porte, and in favor of a union of the Principalities under a constitutional sovereign, to be chosen from one of the dynasties of the Western powers, a representative form of government and a neutrality of the States. A brother of the King of Portugal was spoken of as a probable candidate for the sovereignty. Turkey opposes the union, and is said to be supported in this policy by England and Austria.

**MADAGASCAR.**—The Queen has expelled all the French and English residents from her dominions. The reason assigned is that the Europeans entertained the project of dethroning her, and placing her son on the throne.

**SOUTH AMERICA.**—Attempts to bring about a pacific termination of the civil war in Peru have failed. Some skirmishes have taken place between the armies, without much advantage on either side. Various attempts to subvert the government have been made in Bolivia, but without success, the people generally adhering to the present authorities. The value of the exports from Chili for the first six months of the year, amounts to \$3,813,473. More than \$2,000,000 in gold and silver were exported in eight months. The wires of the Santiago and Talca telegraph are being laid.

**CENTRAL AMERICA.**—Costa Rica, it is said, has seized and blockaded the San Juan river, and prohibits Nicaraguan vessels from passing up or down. Five hundred Costa Rican troops have been sent to take possession of Castillo. A government decree has been issued, prohibiting the sale of wine or spirits by retail in hotels or stores. No smaller quantity than a sealed bottle can be sold at the stores licensed for the purpose by the government. The authorities of Nicaragua express a desire for the immigration of moral, industrious and peaceful artisans and agriculturists as permanent settlers.

**DOMESTIC.**—Accounts from California are to the 11th ult. Gov. Johnson had issued a proclamation stating that the requisite number of votes having been cast, the people are under obligation to pay the State debt. The Grand Jury had found true bills of indictment against two of the late officers of the Mint, for embezzlement, and against two others for perjury. The artesian well at Stockton had been bored to a depth of 923 feet. A considerable stream was rising to the surface, but the work was to be continued. The rains had commenced. The State Agricultural Exhibition opened at Stockton on the 29th of 9th month. It comprised not only agricultural products, but every department of home industry, and the collection was very good. The display at the Mechanics' Fair, previously held, was also highly creditable.

The Constitutional Convention of Oregon closed its sessions on the 18th of 9th month. The question of

slavery is to be submitted separately to a vote of the people, as well as the question of permitting free colored persons and Chinese to enter and reside in the State. The constitution limits the total yearly expenses of the government to \$17,000. The Governor is to hold office four years, and to be also Superintendent of Public Instruction, with a salary of \$1500 a year. The sessions of the Legislature are to be biennial, and limited to forty days; but the Governor may call extra sessions, not exceeding twenty days. The popular vote on the Constitution was to be taken on the 9th inst.

The Mormons residing in Carson Valley, on the borders of California and Utah, have been ordered by Brigham Young to leave that place. They accordingly set out on the 26th of 9th month, the company numbering 985 persons, with their live stock, wagons, and other property. Their destination is said to be Salmon river, in Oregon. Before their departure, their leaders required them to make satisfactory settlements of all debts owing to their neighbors. Their places are said to be already filling up with settlers both from California and the East.

The members of the Kansas Constitutional Convention have held a caucus in which the majority resolved to submit the Constitution to a popular vote, with two clauses to be separately voted upon, for and against slavery. The ultra pro-slavery members were so indignant at this, that they have threatened to withdraw and leave the Convention without a quorum. The official certificates issued to the members elect for the new Legislature, show that the House will have 24 Free State to 15 Democratic, and the Council 9 Free State to 4 Democratic members. The returns of McGee county were rejected. All the county and township officers chosen at the recent election have assumed their duties.

Both Houses of the Missouri Legislature have passed an act legalizing the suspension of specie payments by the banks.

The *N. Y. Journal of Commerce* states, on the authority of a private letter, that Sir Wm. G. Ouseley has been appointed a special Minister from Great Britain to this country, to settle the Central American controversy. This will not interfere with the functions of Lord Napier as resident Minister.

The financial difficulties are affecting the demand for labor at the West as well as the East. In the northern part of Wisconsin many of the saw mills have been suddenly closed, and great distress is already experienced, both money and provisions being scarce. In Stearns county, Minnesota, there is considerable suffering for want of food, the crops having been destroyed by grasshoppers.

The stagnation of business continues general, and very large numbers of persons are thrown out of employment in consequence. Efforts are being made in most places to alleviate the distress which must necessarily result, organizations for that object being formed in addition to those usually in operation. In Philadelphia and New York, large meetings of unemployed laborers have been held, to consider their condition, and endeavor to devise means of relief. In the latter city, some threatening demonstrations were made, which induced the Mayor, on the 10th inst., to call out additional police force, with some troops, and the Federal officers to take measures to protect the Sub-treasury from apprehended attack. No serious difficulty, however, occurred on that day. The City Council appropriated \$250,000 for some improvements, designed to give immediate employment to a number of men. It is asserted that many of the leaders and active participants in the riotous proceedings are not, apparently, either sufferers or men willing to work. Some of the New England manufactories are resuming business.

*Memorial of Whitewater Monthly Meeting of Friends, Indiana, concerning NATHAN C. HOAG, a Minister, who departed this life on the 26th of the Eleventh month, 1854, aged 69 years.*

It is pleasant to us to dwell upon the memory of this beloved Friend, he having been a member of our meeting for more than two years previously to his decease. The substance of the following Memorial up to the time of his removal and settlement here, has been furnished by some Friends in New England, and the rest is supplied by us.

He was the eldest son of Joseph and Huldah Hoag, and was born in Duchess County in the State of New York, on the 13th of the Tenth month, 1785. When he was between five and six years of age, his parents removed with their family into the newly settled part of Vermont, which was subsequently included within the limits of Ferrisburgh Monthly and Quarterly meetings.

Here, with few of the advantages of the present day, and amid the trials and hardships incident to such settlements, there were opened and impressed upon his mind many of those lessons which conspicuously marked his character in later life.

Many and various were the cares of home, that rested upon him and an elder sister during the frequent and extensive religious labors of their parents abroad; and the duties thus devolving upon him, (and which required more responsibility and labor than is often expected of one of his years,) were, it is believed, carefully and scrupulously discharged; believing as he did, that his dear parents were called into the service of their Lord and Saviour, he felt bound to do all that he could to promote the same cause. In

after years, when referring to this period, he remarked, that our duties are so interwoven with each other, that deeds of true filial love and obedience toward our earthly parents are often as duties toward our Father in Heaven. In a short memorandum kept by himself in reference to his early life, he says: "I am not able to date the precise time of the first perceptible influence of the Holy Spirit upon my mind, but it was when I was very young; and I was strongly influenced by a desire to live in the fear of the Lord, and in nothing to offend my Maker, attended with a clear sense of right and wrong." And he further remarks that he early saw what would be required of him in obedience to his Lord and Saviour, in his allotment in the Church, if he were faithful to the divine will concerning him, and that a blessing would attend his faithfulness therein; and with this view, he was ready to plead his great unworthiness, in the language of the prophet: "Lord, I cannot speak, I am a child."

To the watchful care of his devoted parents, he adds this testimony: "None but useful books were allowed in my father's family, and therefore I was not exposed to the corrupting influence of hurtful reading. It was from the frequent reading of the Holy Bible, and its daily use in our schools, that I acquired a love for the sacred Scriptures, and became acquainted with much of their invaluable contents;" and then adds, that the influence of these exercises had been a blessing to him through the efficacy of divine grace, which he desired might remain with him through life.

About the 14th year of his age, it pleased the Lord powerfully to renew the visitation of his love, to the tendering and contriting of his heart. That perfect redemption, which is only through the Lord Jesus Christ, was mercifully opened upon his mind; that through "repentance toward God, and faith in our Lord Jesus Christ," the remission of sins is witnessed through his blood, "by the washing of regeneration, and the renewing of the Holy Ghost." Here our dear friend, thus early in life, was brought low before the Lord, earnestly pleading mercy and forgiveness as at the feet of our adorable Saviour. Many were his days of distress and sorrow, as the sense of his transgressions rested upon him, while his soul longed for a hope in Christ. And we reverently believe, that under His forming hand, he

was mercifully favored to experience a *change of heart*; his sins being forgiven him, through the atoning blood of the Lamb, and his heart made to rejoice in hope. After this his desires were strong that others might be made partakers of the same blessed enjoyment.

He now believed that the word of his Lord and Master to him was, "go and tell others what the Lord has done for thee." And being made willing in the day of his power, a gift in the ministry of the Gospel of Christ was bestowed upon him; and in the exercise of his high calling, his lips were opened in the assemblies of the people, to the comfort of his friends, and much to the peace of his own mind.

In the year 1809, he was united in marriage with Abigail Robinson, who was not only an affectionate wife, but also a true helper in the fellowship of the Gospel, a laborer with him in word and doctrine. She survived him but a few months.

In 1814, in his twenty-ninth year, he was acknowledged a minister of the Gospel by the Monthly and Quarterly meetings of which he was a member.

Many and varied were the conflicts and baptisms that he passed through; and being thus prepared for the important service unto which he was called, it was the burden of his exercise to preach Jesus Christ in all his blessed and holy offices, so that it might be said, that with him the Lord Jesus Christ was all; the beginning of the new creation of God, and the end of our faith, the salvation of our souls. His ministry was sound and edifying; and when he was engaged in vocal prayer, his mind appeared to be clothed with a deep sense of the solemnity of such an engagement, and his supplications were attended with an evidence that he was favored with the attending help of the Spirit.

He was an affectionate husband, a kind father and a beloved and honored brother; and in all the relations of life he manifested a true Christian spirit, in tenderness and love.

He was the colored man's unfailing friend, doing what he could to break every yoke, and let the oppressed go free; and from conscientious motives he abstained for many years from the use of the products of slave labor.

In the year 1814, with the unity of his friends, he visited some of the meetings of Friends within the limits of New England Yearly Meeting; after which he went but little from home for several years. He was naturally of a diffident disposition, and appeared to labor under discouragements, in view of his outward circumstances; but being closely met with in 1818 by an accident in which his life was imminently in danger, (yet in the night following being somewhat relieved,) he remarked to an intimate friend, that as death seemed to stare him in the face, he felt concerned to covenant with his Maker, if his life was spared, he would be more faithful in his

religious duty. He was restored to comparatively comfortable health, and ever after appeared more ready to leave all and go forth in the service of his Divine Master; and with a certificate of the unity of his Friends, he was soon engaged in visiting the meetings in some parts of New York Yearly Meeting, of which he was a member. In 1821 he was again engaged in religious service in New England Yearly Meeting. And in 1831, and again in 1835, he visited the southern parts of New York Yearly Meeting; and the more western parts of the same in 1836, and 1840, and again in 1842. In 1844 he travelled in the exercise of his gift in Canada West; and in the year 1846 was engaged more extensively within the limits of Ohio and Indiana Yearly Meetings.

In 1837 he attended the Yearly Meetings of Philadelphia, Baltimore and North Carolina; and in 1850 he made a general visit to the meetings composing Indiana Yearly Meeting, which embraces a large territory. In all these visits, he had the unity of Friends, as expressed in their certificates granted him; and by the returning certificates from the meetings which he visited, it appeared that his religious services were very acceptable and satisfactory to the Church. In 1852, he, with the unity of Friends, removed with his family to reside within the limits of this Monthly Meeting, and in the Tenth month of that year, received a minute of unity with a concern to appoint meetings while engaged with a Committee of Indiana Yearly Meeting in visiting subordinate meetings.

In the Tenth month, 1853, he was again set at liberty for a visit in the limits of New Garden and Northern Quarterly Meetings, and to the meetings in the western part of the State, which he performed, we believe, to the comfort of Friends; then in the next year (1854,) he undertook an extensive visit through New York and New England, in which his wife accompanied him and took a part. His health during this visit failed; and he was detained in his travels by indisposition, but was enabled ultimately to accomplish it to the peace of his mind and the satisfaction of those whom he visited. After his return home he became more feeble, and toward the last of the Tenth month, 1854, his health so failed that he was confined pretty much at home, (he and his wife having gone to reside temporarily with their son-in-law and daughter, near Carthage, in Rush County, Indiana,) and on the 10th of Eleventh month a physician was called. From this illness he seemed sure that he would not recover, and gave directions respecting his funeral, and attended to such other matters as required his attention; after which he did not appear to feel any anxiety on any subject whatever, remarking at one time that "his work was done, and that he felt nothing but peace."

Suffering much from his complaint, he conversed but little; but the few sentences which fell from his lips, were all indicative of an entire

preparation for the great change which seemed evidently hastening.

He said one day to a dear friend that "it had been his chief desire from very early life to have his work done in the day-time, that nothing should be left for such a time as this; and that now he was enabled to feel that his work was finished, and that he had nothing to do." He further said, that he "did not consider the question, whether he should recover or not, worth an hour's anxiety."

On one occasion, while suffering great bodily pain, he said:

"How glorious a legacy was that which the Saviour left us when he said, 'Peace I leave with you; my peace I give unto you.' But although we may often read and admire the passage, we can never fully understand it until we come to be based upon it."

On the 22d, the symptoms grew worse; the vomiting, which had before distressed him, returned with increased violence, and continued at intervals until within a few hours of his decease. From this time he failed rapidly, but was preserved in the same calmness and peacefulness.

On the 24th, a Friend near him, believing that he might not survive through the night, asked him if he was ready to go. He answered, "quite ready." "Not a cloud in the way."

His mind appeared to be perfectly clear and unclouded to the end, which occurred on First-day afternoon, the 26th. Some hours before his close, one thinking there might be too much fresh air upon him, inquired if he felt cold. He replied: "No, all right; all sweet peace." A little afterward, on attempting to do something for him, he said: "Let me be, I am almost gone." "Thou wilt soon be released," said she. He answered cheerfully, "Yes." Shortly after the hue of death came over his face, and he quietly ceased to breathe. He was interred at Carthage on the 28th.

We believe it may be truly said that he died in the faith and hope of the gospel, in the promulgation of which he had labored so extensively, and that his end was truly peaceful in the Lord.

That precious Saviour in whom he had believed, and whom he loved, and whose name was dear to him, did not forsake him at the last, but was present by his spirit to comfort him and give him confidence in the dying hour. In this name he had given his heart to believe, and to him he looked as his holy sacrifice and Redeemer from sin, death, and the wrath to come. His faith was also firm in the freedom and fulness of the gospel of Christ, and in its message of salvation to a lost world, also in the gift of the Holy Spirit as the reprover of sin and the Leader and Sanctifier of his people.

He was a firm and consistent believer in the truthfulness and divine inspiration of the Holy Scriptures, and held in reverent acceptance the message, as therein recorded, in the simplicity of

faith, in all its parts. And these precious truths he had been engaged to maintain and advocate, according to ability afforded, through a long course of years, much to the edification of the Church. And now, his course on earth being finished, he has come to his end in peace through grace; and we have no doubt that a crown of righteousness which does not fade, and such as is prepared for all those who love the appearing of the Lord Jesus, is his exceeding great reward.

Signed by direction and on behalf of White-water Monthly Meeting of Friends, held Fourth month 22d, 1857.

CHARLES F. COFFIN, } Clerks.  
ALIDA CLARK, }

*Extracts from the Minutes of Indiana Yearly Meeting of Friends, 1857.*

(Concluded from page 147.)

The Friends appointed at the last Yearly Meeting to visit Salem Quarterly Meeting, Iowa, and all the Monthly Meetings belonging thereto, on the request of Red Cedar, Winnesheik and Bloomington Monthly Meetings, to hold a Quarterly Meeting, to be called RED CEDAR, made a report that they believed it would be right to grant the request. The report was united with by the Yearly Meeting and committees of men and women were appointed to attend the opening of the new Quarterly Meeting.

A Committee appointed to visit Pleasant Plain Quarterly Meeting, Iowa, and its Monthly Meetings, on the request for a new Quarterly Meeting by the Monthly Meetings of Western Plain and Westland, made a similar report, which was adopted, and committees were appointed to attend the opening in the Sixth month next.

Another Committee was appointed, in conjunction with a like Committee of Women's Meeting, to visit in the love of the truth the Quarterly Meetings of Salem and Pleasant Plain, for their help and encouragement, and also their subordinate meetings, as way may open for it.

From the report of the General Committee on Education it appears that the number of children belonging to the Yearly Meeting, between the ages of 5 and 15, is 5825; between 15 and 20, 2869; total 8694. Of these, 3752 have been taught in schools under the superintendence of Monthly Meetings' Committees; 3365 in schools not under such superintendence, and two children are reported as growing up without school education. There were 115 Friends' Schools and 197 Schools taught by Friends, but not under the superintendence of Monthly Meetings. One hundred and thirty-eight First day Scripture Schools have been held under the superintendence of Committees, and twenty-three meetings have been without such schools.

"Report of the Committee on the Concerns of the People of Color.

To the Yearly Meeting:

DEAR FRIENDS:—Reports have been received

from all the branches of this Committee, exhibiting a summary account of their labors during the past year, for the benefit of the People of Color within their respective limits, from which it appears that they have been engaged in visiting, advising and assisting them, as their necessities seemed to require.

They have had schools taught the past year, in most of the settlements within our limits where their number is sufficiently large to support a school, and in several instances, they have availed themselves of the privilege of attending Friends' schools.

The whole number of children reported as having attended school is about 700. Yet it is believed, from the indefinite form of some of the reports, that the above number might be enlarged.

Schools among them appear to have mostly been taught by persons of color, and to have been pretty well conducted. The progress of the children in learning is said to have been good. They have also had nine First-day schools among them, for scriptural instruction, in which they have manifested a becoming interest, both children and adults.

Friends have expended since our last report in assisting those in indigent circumstances, in paying for tuition, clothing, schools, books, etc., \$280 84. They have also gratuitously furnished them with a considerable number of Bibles, Testaments, Question Books on the Scriptures, etc., which are said to have been gratefully received. Two of the branches, in the State of Ohio, inform that there have been several schools taught among them, the tuition of which has been paid out of the public school fund, except \$34 71, which has been paid out of a legacy left by a benevolent Friend for the benefit of colored persons.

We may further add, that from the tone of the reports received from the branches, we are still encouraged to persevere in our efforts for their welfare.

Signed, on behalf of the Committee,

LUKE THOMAS, *Clerk.*"

*Tenth Month 4th, 1857.*

The Trustees of the *White's Indiana Manual Labor Institute* reported that since their last report they had placed under contract the clearing up and fencing of about one hundred and forty-three acres of land, the work of which is progressing. The value of the fund now in the hand of the Treasurer is \$16,803 33.

The Trustees of *White's Iowa Manual Labor Institute* have confined their operations since last year to completing the improvement and repairs referred to in their last report, with such additional repairs as were necessary, and now have the farm permanently rented for the present and ensuing year. The fund at interest is \$11,847.

The report of the Committee on Indian concerns being similar to that recently published in

the *Review*, with the extracts from the Minutes of Baltimore Yearly Meeting, is omitted. The Yearly Meeting agreed to raise \$1000 for the use of the Committee.

"A report and statement is received from Shildes Moore, as directed at last Yearly Meeting, concerning the funds raised to assist Friends in building a meeting house for the Western Yearly Meeting, which is entered below, and is satisfactory.

'To the Yearly Meeting now sitting:

DEAR FRIENDS:—The Committee appointed by Blue River, White Lick, Western, Union, and Concord Quarterly Meetings to superintend the erection, etc., of a house to accommodate Western Yearly Meeting, have purchased twelve acres of ground adjoining the town of Plainfield, and have contracted for the erection and completion of a brick house seventy feet wide and one hundred and twenty feet long, and twenty-four feet high between floor and ceiling. The seating is all to be upon one floor, and arranged in amphitheater form. The work has so far progressed to the satisfaction of the committee. The brick work is nearly finished, the carpentry in a state of forwardness, and it is contemplated to have the roof on and the building inclosed by the 1st of Twelfth month next, and the whole of the work completed by the 1st of Sixth month next year."

"A Memorial of Whitewater Monthly Meeting concerning Nathan C. Hoag, deceased, is received from our Meeting for Sufferings, and read, renewing in our minds the remembrance of this dear friend, and of our fellowship with him in the gospel. The Memorial is approved, and the meeting directs that it be printed uniform with our minutes, and attached at the close; and that 500 extra copies be printed for circulation in separate form."

"*Third-day morning, Tenth month 6th.*—The Friends to whom was referred the Report of the Boarding-School Committee and all matters connected therewith, now make report as below, which has been read, considered, and approved, and the propositions, therein contained, are adopted by the meeting. The subordinate meetings are desired to give early attention thereto, and forward the money to the Boarding-School Treasurer, Levi Jessup; and the Trustees will be expected to attend to making sale of the real estate with as much promptitude as the nature of the case will permit; and the Boarding-School Committee are instructed to give attention to that part of the Report which relates to their administration."

#### *Report.*

"The Committee appointed on the subject of the Boarding-School, have attended to the appointment. Having examined the report of the committee, read to the meeting, we find, that the school is, at this time, about \$17,000 in debt; we

also find, that there are assets, consisting of cattle, produce of farm, garden, wood, etc., amounting to \$3000; which we have not considered available toward diminishing the debts. To meet this \$17,000, and which we are united in judgment should be paid, we propose, 1. That the Quarterly Meetings severally raise and pay over the sum directed at last Yearly Meeting or the balance, if any, not forwarded the present year. 2. That the land on the north side of the road be sold by the Trustees, (reserving the dwelling and lot on which it stands,) toward the payment of the debt; and if this is found insufficient, then such other parts of the land to be sold as will subject the school to the least inconvenience, until the entire debt shall have been paid: and, 3. The school to be placed on a basis by the Boarding-School Committee, which shall enable it to support itself in future.

We have also considered the proposition advanced by the Committee of admitting children into the school, who are not members, but one or both of whose parents are; and after a free interchange of sentiment, we are willing to propose to the Yearly Meeting that it be acceded to: all of which we submit to the Meeting.

On behalf of the committee,

WILLIAM HAUGHTON,  
NAOMI COFFIN."

"The Friends appointed by our Meeting for Sufferings, to make arrangements for holding meetings for worship outside the Yearly Meeting-house, have sent in report as below, which is approved by this meeting.

'To the Yearly Meeting.

The Committee charged with making accommodations and giving attention to the holding of meetings for divine worship outside the meeting-house on First-day, in anticipation of the large number of persons who would probably be on the grounds on that day, have attended thereto, and can thankfully acknowledge that the meetings were held, and attended by a large number of our members and others to good satisfaction.

In view of the duty of the Yearly Meeting, in continuing to make preparations for holding such meetings in future, we would suggest that the Meeting for Sufferings be directed to make the necessary preparations therefor, until otherwise directed by the Yearly Meeting.

Signed, on behalf of the committee,

GEORGE EVANS,  
SARAH SMITH."

"The meeting now having finished its business, comes to a solemn close. We acknowledge that the Lord has again blessed us together. Our hearts have been melted together by the power of His love. We desire to bless His ever worthy and good name. Our business has been conducted, by His favor, in a good degree of harmony. And now we part, in the fellowship of brethren, to meet again, a part of us, at this

place, and a part at another, in the capacity of a Yearly Meeting, next year, if consistent with the Divine will.

ELIJAH COFFIN, *Clerk.*"

#### REVIVAL OF THE SLAVE TRADE.

The Manchester *Guardian* says:—We have on a former occasion expressed strong objections to the plan of the French government for what they call promoting emigration from the West Coast of Africa to the French West India Islands, but what we could consider in no other light than as a renewal of the slave trade, with all its injurious consequences to the people of Africa. The apprehensions which were very generally entertained on this score in England, appear likely to be fully realized, as will be shown by the following extract of a letter from Mr. Campbell, the British consul at Lagos, to a gentleman resident in Manchester:—

"LAGOS, Sept. 3, 1857.—His Imperial Majesty of France having taken to purchase slaves in this quarter, a whole host of unwashed, bearded-faced Spaniards, Portuguese, and Americans have followed his example; and if his Imperial Majesty persists in continuing to purchase slaves at Whydah, I fear we must say good bye to cotton from this part of Africa. Already the Abeokutans have gone to hunt for slaves. The Ibaddans, a more numerous and warlike people than the Abeokutans, are preparing to do the same in the Jaboo county, near to Lagos.

"To give you an idea of the influence created by nearly three years of peace and the pursuit of legitimate commerce on the minds of the mass of the population of Abeokuta, heretofore so ready to engage in war, I send you a copy of a letter containing the proclamation of the chiefs of Abeokuta, who found the greatest unwillingness on the part of the population to follow them in this war, now they have felt what it is to earn a livelihood by peaceful trade and the cultivation of cotton, getting the whole benefit themselves; whereas when they follow the chiefs to war, they run all the risks of the musket balls and poisoned arrows, and the chiefs take more than the lion's share of the slaves captured and plunder taken."

*Extracts from Barnes' Discourse on the Virtues and Public Services of William Penn.*

(Continued from page 151.)

It is not my purpose to go into any further historical details in regard to the settlement of Pennsylvania, nor to dwell on the character of the civil institutions which Penn proposed to establish here. These things belong more appropriately to other places and other times. We have seen some of the causes which produced the settlement of this Commonwealth, and some of the events which led its eminent Founder to seek an asylum on these western shores. The remarks made will also, I trust, do something to

enable you to appreciate the kind of influence which has gone into our institutions, and to understand what constituted the original elements, out of which what there is now peculiar in our country has grown.

I proceed, therefore, as was proposed, to notice the bearing of the principles held by the Founder of this Commonwealth, and those who acted with him, on the institutions of our country. Under this head, I propose to notice the principles which he held in common with others of that age, which have gone into our institutions; and then some peculiar principles in which he was in advance of that age, or which contributed to the progress of society towards the point of perfection which we may hope it will ultimately reach; principles which are destined to take their place among the settled social maxims of mankind.

I. Under the first of these heads I notice the following things:

(1.) The sacred right of conscience, and the value of religious liberty. I am very willing to admit that Penn had some views on this subject which were in advance of those who came first to this country. Sixty years of conflict and of discussion on these points had done something to modify the views which had been entertained in 1620, on the enquiries raised by the general spirit of Puritanism; and at the period when he arrived here, his views were more large and liberal in many respects than were those of the earlier colonists. But still, there were substantially the same views in all the branches of that great Puritan family. By the Puritans that refused conformity in the days of Elizabeth, as well as by those who broke with the reigning power in the times of James, and of the first and second Charles, the great doctrine began to be held and understood that God alone is Lord of the conscience; that man is to be free in the formation of his opinions, and in the exercise of worship according to what he judges to be demanded by the word of God. This opinion they all held in opposition to that which gave origin to the Inquisition; to that which led to the scenes at Smithfield; to all the Acts of Uniformity; to all the sentiments of the Sharps and the Lauds of these times. It was the common sentiment of the Presbyterian, the Independent, and the Quaker; of the Pilgrims in Holland, and on the rock of Plymouth; and of Penn, when he laid the foundation of this city and Commonwealth. No sentiment has gone deeper, or with more salutary influence, into the institutions of the Republic;—and to no other one do we owe so much in the enjoyment of the peculiar blessings for which we should express thanksgiving to-day. In the expressive language which our fathers loved so much, “we may sit under our own vine and fig tree, with none to molest us, or to make us afraid.” We have all grown up under the influence of this opinion, that every man is to be left free to worship God according to his belief of what is

right and true; that he is to be unmolested in this, provided he does not disturb the peace of the community; that he is to be allowed to investigate the subject of religion at pleasure, and to come to such results as he finds himself conducted, responsible only to God; that he is to be subject to no civil disabilities for his religious opinions; that for these opinions he is to be excluded from no office, and held up to no reproach by authority of law; and that he is to be required to submit to no external forms of religion as a qualification for any office whatever. To this great principle we owe it, under God, more than to any other one thing, that we are this day what we are.

(2.) A second principle which Penn held in common with the others of that age—or a point which had been reached, not by him alone, but by society in its onward progress, was the evil of formalism in religion; or the value of that religion only which does not depend on outward forms and ceremonies. \* \* \* There was a great principle involved in the discussions of that age—a principle that was worth discussion; and though one portion may have taken positions which society in its onward progress will not sustain, yet still the principle will be adhered to. It was one that society in its progress had come up to, and from which it could not go back; and though it was true that the conflict might still be waged, and there might be zealous efforts to subject the race to a religion of forms, yet the world had come to feel the demand of a religion of intelligence; a religion that changed the affections, not the outer dress; that bowed the will, and not the knee; and that consisted in internal purity, rather than in the whiteness of the lawn. This deep internal religion—the work of truth under the divine Spirit on the soul—affecting the conscience, the heart, the life, was what the world had come to see it needed: and though the earlier Puritans were reproached and ridiculed for it, as canting hypocrites, yet the Christian world had reached a period when this was demanded, and when all civil institutions were to take a new start from infusing this element into them.

These and some kindred principles which had been reached in common by those who founded the institutions this side the waters, became elementary principles; and, with some modifications, were inwrought into all the prevailing views of religion and liberty in the new world. The right of conscience; a free religion; a religion of the heart and not a religion of forms; dependence on the principles of a voluntary religion to work out great results; a hatred of oppression and wrong; a dread of formalism; a religion of the Spirit, instead of a religion of mechanism; these things characterized our fathers; and these principles, flowing in the Anglo-Saxon blood—the noblest blood on the earth—have made us what we are; and more than our skies, our climate, our rivers, our fertile

soil, have laid the foundation for the gratitude which, as a part of the great American people, we should feel this day.

II. But, I remarked that there were some views and principles held by Penn and his fellow-laborers, which were *in advance* of those which were commonly held in his age; which struck further onward into the progress of the world, and which are destined to become permanent and fixed maxims in society in its advances towards that degree of perfection which it is yet to reach. The time will not permit me to go so fully into a statement of them as justice to the subject might seem to demand, but some of the points may be briefly referred to.

(1.) Among the first of these principles, were the views held by Penn on the subject of *toleration* in religion. All the Puritan family entertained *principles* which would have led to this, but it must be admitted that they had not been fully wrought out and developed among the first colonists that settled this country, as they were in the mind of Penn. It is also to be admitted that the same principle found a home in the heart of Lord Baltimore, and entered into the views which prevailed in the settlement of Maryland—from what cause, and with what degree of consistency with the religion which was held by Lord Baltimore, we may perhaps consider if there is another opportunity to preach a thanksgiving sermon. In the North, these principles, though recognized in the paper drawn up on board the Mayflower, found their full development only in the time of Roger Williams, and the founding of Rhode Island. In our own State, they began with the beginning. The principle of the universal toleration of religious opinions was the corner-stone of the commonwealth. The word *toleration*, however, does not exactly express the full idea, since even *that* word implies that the magistrate has a right to some kind of jurisdiction in the case. The true expression is *equality*—*liberty*—for the magistrate has no more right to tolerate *me* than I have *him*—since I am as free as he is, and neither of us has any jurisdiction whatever in the premisses. The great and cardinal truth, for which we can never be too grateful to God, or cherish too profound a regard for the services of Penn, which was laid at the foundation of this commonwealth, was, *that every man has an inherent right to worship God according to the dictates of conscience*. This position he had defended in England; this he sought to make inviolable by positive law. He therefore at first declared it essential and fundamental; it was afterwards incorporated into the Great Law of 1682; and finally became a part of the perpetual laws and the constitution of the Province. He came, to use his own language, to establish “a free colony for all mankind.” “In an age which had seen a popular revolution shipwreck popular liberty among selfish factions; which had seen Hugh Peters and Henry Vane perish by the

hangman's cord and the axe; in an age when Sydney nourished the pride of patriotism rather than the sentiment of philanthropy: when Russell stood for the liberties of his order, and not for new enfranchisements; when Harrington, and Shaftesbury, and Locke, thought government should rest on property, Penn did not despair of humanity.” He resolved to set up a government which should cherish at once the idea of entire religious freedom, and of the ability of the people for self-government;—and came to make trial of his great experiment on the shores of the Delaware.

I need not say to you that this has been in our world a principle of slow growth. It was unknown in Greece—for Socrates died because it was not understood; it was unknown in Rome—for the State there claimed the power to recognize the gods which should be worshipped in the Pantheon; it was unknown even in Judea—for a national or State religion was established there; it was unknown in Europe in the middle ages—for all the horrors of the inquisition grew out of the fact that it was unknown; it is unknown in Turkey, and in China, and in Persia, and Arabia—for the State regards religion as under its auspices; it was unknown in England up to the days of the Puritans—for all the sufferings of the non-conformists, and all the persecutions in the time of Mary, were originated by the fact that this was unknown. The sentiment of entire freedom in religion; of perfect liberty to worship God according to our own views of right; of universal toleration, or rather of entire *equality* in this respect—for the word *tolerate* does not meet the idea; the belief that religion is to be kept separate from the State, and is safe when the State shall in no way attempt to regulate its movements—is the *last point* which society is to reach *in this direction*—THE ULTIMA THULE—in its progress. It is impossible to conceive that there is to be any thing *beyond* this which mankind are to desire in their progress toward perfectness—and when this shall be every where reached, the affairs of the world will be put on a new footing. Ten thousand evils will at once flee away, and universal praise ascend before God.

(2.) A second principle in which the founder of this Commonwealth, and the denomination with which he acted, was in advance of his age—perhaps many generations in advance—was in regard to the evils and wrongs of war, and to the value of the blessings of peace. I will not say that *all* their sentiments on this subject were absolutely correct, nor will I say that a strictly defensive war is never right. But even in regard to those wars, so called, of *defence*, it might be found that there has been but a small portion of them that might not have been avoided if there had been no preparation for war in time of peace, and no holding forth those preparations in insulting language to “bully” other nations; if there had

been no unjust provocations on their part; if there had been timely remonstrance and appeals to the reason, the conscience, and the sense of right of those who had injured them; if there had been a little longer patience under their provocations; if there had been more readiness on *their* part for patient negotiation; and if there had been a willingness to rely on the mediation of friendly powers. It is even a great question which is not *yet* wrought out, whether the war of our own Revolution—which we are accustomed to regard as the most honorable of all wars—*might* not have been avoided, and the nation this day as independent and prosperous as now, if not a blow had been struck in return when we had been so much wronged. But, however this may be, no one can doubt that the community which settled this Commonwealth was immeasurably in advance of *that* age, and even of *this* age, in the principles which were held on war; and as little can it be doubted that society will yet in its progress *come up* to those principles, and that they will enter into the permanent maxims of the nations of the earth. No man that believes the Bible can doubt that the period is coming when the “sword shall be beat into a ploughshare, and the spear into a pruning-hook,” and when “nations will learn war no more.” And no man who takes a philosophic view of things, can fail to see that there are deep causes in operation now in society which will inevitably work out this result; that there are *principles* and *maxims* beginning to be universally admitted, which can never be fully expanded without putting an end to war.

[To be concluded.]

---

## FRIENDS' REVIEW.

PHILADELPHIA, ELEVENTH MONTH 21, 1857.

---

PHILADELPHIA YEARLY MEETING AND FRIENDS IN OHIO.—It is always with reluctance that we advert to circumstances and proceedings connected with separations from our Religious Society, or with the present anomalous and unsettled position of Philadelphia Yearly Meeting. Bearing in mind, however, that the condition of the Society, when this periodical commenced, was one of the causes which led to its establishment, and that the unity and harmony and general welfare of the body at large, which have ever been kept in view, require the exposure, painful and mortifying as it may be, of acts disorganizing and separating in their character, we have no alternative other than a neglect of duty. This we must endeavor to avoid.

It is well known that all the Yearly Meetings of the Society of Friends, except that of Phila-

delphia, have recognised, as Ohio Yearly Meeting, a body of Friends of which Jonathan Binns is Clerk, and have declined any correspondence or fellowship with another body, claiming to be Ohio Yearly Meeting, of which Benjamin Hoyle is Clerk. On the other hand, a large portion of the members of Philadelphia Yearly Meeting, acting in its name through the co-operation of the Clerk who had identified himself with the “Hoyle meeting,” by attending it in the character of a Minister, have acknowledged this body as Ohio Yearly Meeting, and refused correspondence with the body which is in unity and fellowship with all the other Yearly Meetings. Philadelphia Yearly Meeting has thus become alienated from them, and, excepting Dublin, they have all ceased to correspond with it by Epistles. It is manifest, too, that unless Philadelphia Yearly Meeting returns to its proper position in the Society, the interchange of certificates of membership and for religious service in the Ministry, must also be suspended.

But at the last Yearly Meeting in Philadelphia, when it was found that a correspondence with the body represented by Benjamin Hoyle would no longer be submitted to by those members who wished to retain their connection and membership in the Society of Friends, the point was so far yielded that no Epistle was sent to that body, and the subject of epistolary correspondence, generally, was referred to the consideration of the Representatives from the respective Quarterly Meetings; report to be made next year. It is true that they are prohibited, by the minute of reference, from *interfering with or unsettling any previous decision of the Yearly Meeting*—a prohibition apparently intended to prevent them from proposing the adoption of a measure which is necessary in order to restore the Yearly Meeting into harmony with the Society, viz., a disconnection from the meeting of which Benjamin Hoyle is Clerk. Still, the subject of correspondence is again open for the consideration and decision of the Yearly Meeting: hence the special importance of its members becoming thoroughly acquainted with the proceedings of the “Hoyle meeting,” and its branches; for so far as those proceedings indicate unity and fellowship with the “smaller bodies” of Newport, Poplar Ridge and Nottingham, they increase the impropriety of a further correspondence with that meeting on the part of Philadelphia Yearly Meeting.

During the discussion of the subject in this Yearly Meeting last spring, the question was asked with strong emphasis—What have our Friends in Ohio (meaning the members of the “Hoyle meeting,”) done since last year, that we must now cast them off and refuse to receive their Epistle? This question will be an appropriate one at the next Philadelphia Yearly Meeting; and with the view of aiding the members in giving an intelligent and decisive answer, we have already furnished a statement, which we believe to be substantially correct, of the action of the “Hoyle meeting” in reference to a Minister in attendance with a certificate issued under the authority of those who have separated from New York Yearly Meeting, and assemble annually at Poplar Ridge in that State. It has been shown that while the mere form of reading his certificate was not complied with, he was cordially received and recognised as a Minister in full unity and perfect membership; that a meeting was appointed for him, as such; and that he, in the same capacity, was encouraged to visit the subordinate meetings.

We may now further state that we have heard from a source which appears to be entirely reliable, that, in the progress of his visit, he was heartily welcomed at many meetings, and that in several Monthly Meetings his certificate was read, and in at least one, he was to be furnished with a returning minute.

The important bearing which the course thus pursued should have upon the future action of Philadelphia Yearly Meeting seems too evident to need additional remark. If any justification of the decision of the other Yearly Meetings in reference to the identity of Ohio Yearly Meeting were needed, it might clearly be found in the acts and condition of the separate body and its constituent meetings.

**NORTH CAROLINA YEARLY MEETING.**—A valued correspondent in North Carolina, writing under date of the 9th inst., gives the following welcome and encouraging information:—

“Our Yearly Meeting came to a satisfactory and solemn close on the 6th inst. We had seven Ministers in attendance beside our own. Robert and Sarah Lindsey and John L. Eddy are gone to Tennessee, expecting to return and visit our meetings in North Carolina.

Considering the situation of our members,

scattered over a space of 100 miles or more, from north to south, and 500 or 600 from east to west, I think our meeting was well attended; but the vacant places of a number of our most useful and promising members, who have emigrated West in the past few years, were plainly and painfully visible; yet it was indeed a sweet, refreshing season.”

#### HOME FOR DESTITUTE COLORED CHILDREN.

—We are reminded of this unpretending but useful institution by the reception of the Second Annual Report of the Managers. The small house first taken, on Girard Avenue west of 19th, is still occupied, sufficient funds to build on a lot contiguous to the House of Refuge not yet having been obtained. Since the first Report, 15 children have been placed in families; 4 returned to parents; 3 placed in the House of Refuge, while 14 remain in the Home.

“We feel,” say the Managers, “that in our endeavors to raise from degradation these much neglected children, we have not been without the aid of Him whose mercies are over all His works; and in the affectionate and grateful conduct of some of these little ones, we have not only found an abundant reward, but have been cheered and encouraged to persevere in our labors.

The improvement of most of the children in correct conduct, the reformation of several from evil propensities and uncouth habits, and their orderly and systematic attention to the duties required of them, have been gratifying, while at the same time their progress in learning has given assurance that they may be fitted to become useful and happy members of society, instead of idle and vicious, a trouble to themselves and an annually increasing expense to the community.”

The success attending the labors and efforts of the Managers to ameliorate the condition of destitute colored children has been unexpected and highly satisfactory, and it is earnestly to be hoped that in the present gloomy prospect for the poor, further aid may be extended to this charitable institution. It is not a benefit to children only. “Mothers, grandmothers, aunts and friendly guardians have availed themselves of the advantages offered for the better physical and moral training of their children, while at the same time the release thus obtained has enabled them to continue in families, or apply for places suited to their ability, and thus earn their regular wages, where before they were only able to obtain a precarious livelihood, which had

often to be eked out by the contributions of charity."

Donations in goods, produce, &c., will be gratefully received at the Home, and contributions of money may be sent to Susanna M. Parrish, Treasurer.

#### OBITUARY.

DIED,—On the 12th inst., JOSEPH G. HARLAN, Principal of Haverford College, aged 32 years.

It has been the lot of few men more uniformly to win the love and respect of those who knew him, than the subject of this notice. This was owing, in part, to the native gentleness and simplicity of his character; but it was far more the result of the habitual performance of duty under the influence of religious sensibility. His early advantages were not many. When very young, his desire for self-improvement was so strong that he voluntarily sought employment at manual labor in order to obtain the means of education. As a pupil, an assistant, and a teacher at Westtown boarding school, he was diligent in the acquisition of knowledge, careful in the application of it, and successful in imparting it. Young as he then was, he won the respect of his associates and pupils, not by encouraging or overlooking their faults, but by sympathy with them in their trials, and patient and loving efforts to recall them to the path of duty. Modest and unobtrusive, he was always an earnest man. As his sphere of usefulness enlarged, so, happily, did the sense of his responsibilities deepen. As a teacher, and subsequently as Principal, of Haverford College, he united accuracy in instruction, and firmness in government with a patience that nothing could tire. His gentleness assured the timid, as his quiet dignity abashed the negligent and rebuked the presumptuous. In the class room his eminent qualities as a teacher were conspicuous; but it was in the privacy of the chamber, and alone with individual students, that the traits which so admirably fitted him to influence the young were fully known. It was on such occasions that his loving spirit gave expression to heartfelt sympathy, tender exhortation, or earnest remonstrance. So consistent had been his own course, so obviously were love and duty the motives which prompted him, that few were so hardened as to remain unmoved, and by all he was increasingly beloved and honored. His students were so sure of his sympathy, and so trusted in his discretion, that they habitually resorted to him for advice and consolation as to a cherished father or elder brother.

But while our beloved friend thus grew in the esteem of others, his modest estimate of himself was obvious to all. He was always a laborious student, and the range of his scientific attainments was large; but as it widened, he increasingly realized how much was yet to be learned. His mind became more comprehensive, and he diligently sought

and carefully stored information upon a great variety of topics. How much this varied knowledge added to his usefulness in the class room and in the social circle, need scarcely be remarked; but it is fitting to record, that a sense of duty, not the mere desire for information, and far less the love of displaying it, influenced him in its pursuit. Highly as he estimated learning, he had been taught the incalculably higher value of that knowledge which is not attained by the efforts of the human intellect, but is freely dispensed to the humble and contrite believer, and in the light of this knowledge he had become truly modest and distrustful of himself.

Of his own religious experience he seldom spoke. But during a large portion of his short life he evinced that watchfulness, and that true love for others, which are the certain evidences of having yielded to religious convictions. Of latter years he had been frequently threatened with pulmonary disease. Exercise and occasional excursions seemed for a time to check this tendency; but for some months past there was unmistakable evidence that he was wasting under it. With his habitual calmness he watched the progress of his disorder, and was often deeply impressed with the sense of the probable result. At such times he would express his quiet assurance that all the dispensations of his Heavenly Father were rightly ordered. As his sickness increased, he seemed to yield in some measure to the delusive influence peculiar to his disease, and would at times indulge the hope of partial recovery. A few days before his death, conversing with a friend who justly felt the true kindness of removing these expectations, after alluding to the defects of his past life, and to his earnest striving after entire resignation, which he trusted he had in some measure attained to, he feelingly added, "I have left it all with my Saviour." He spoke of the fluctuations of the disease, and remarked, when prostrated after apparent improvement, how hard it was again to get into that state in which he could say, "Not my will but thine be done." His friend then gently apprized him of the opinion of his physician that his case was a hopeless one. He seemed somewhat surprised, but warmly expressed his sense of the true kindness which prompted the statement. After a pause, he alluded with emotion to his family, but was soon enabled to commit them wholly to his Heavenly Father, saying, "If it is My master's will that I should be taken, He will be a Father to my family;" adding, "therefore I can dismiss this subject almost without a second thought." For a time he was absorbed in reflection, and then said, "Did I feel entirely prepared to die, I would most willingly go, but there is much yet to be done. Yet I feel a hope that through grace I shall be redeemed by the blood of Him who died for us." From this time his decline was rapid. On the morning of his departure, his mind having throughout been pre-

served unclouded, he offered a feeling prayer for the Divine presence in the dark hour. Then spoke affectionately to his little family, giving them his parting advice. He had previously expressed his thankfulness that he had not put off the work of preparation to a dying day, and now while his friends stood weeping around him he calmly said, "Weep not for the dead, but for those who are not prepared to die."

To a friend who was with him just before he passed away, and when articulation was difficult, he said there was nothing in his way, all was peace, and not long after quietly breathed his last.

The example of a life so fruitful of good to others and so marked by calmness and peace at its early close, is of deep interest for all. But especially does it address itself to those who are engaged in teaching. Truly will they magnify their office who fill it in the spirit of our departed friend.

MARRIED, on the 4th inst., at Friends' Meeting House, North Blackstone, Mass., ELY B. HAYWARD, of Baltimore, Md., and SARAH W. KELLY, of the former place, daughter of Eli and Lydia R. Kelly.

At Friends' Meeting, Rocksylvania, Hardin County, Iowa, on the 29th of 10th mo., JOSEPH COFFIN, son of Albert M. and Hannah Coffin, of Pleasant Plain, to LYDIA AIRY, daughter of John and Kezia Airy, of Rocksylvania.

At Friends' Meeting House, Richland, Ind., on 4th day, the 11th inst., SAMUEL B. WELLS, of Westfield Monthly Meeting, to LIZZIE, daughter of Eli Johnson, of the former place.

At Friends' Meeting, China, Maine, on the 7th ult., AUGUSTINE JONES, of South China, to MERTHABLE P. CLAPPERCLAW, daughter of Joseph G. Clapperclaw, of the former place.

At Friends' Meeting, Rush Creek, Parke County, Ind., on the 5th inst., DAVID T. LINDLEY to SALLY, daughter of Achilles Dix, both of Rush Creek Monthly Meeting.

On the 22d of 10th mo., at Deep Creek Meeting of Friends, Yadkin Co., North Carolina, EDWIN G. COPELAND, of Northampton Co., to MARY J. HOBSON, daughter of Stephen Hobson, of the former place.

DIED, on the 27th of 8th month last, at the residence of his uncle, Joseph Stout, in Randolph County, N. C., in the 23d year of his age, BENONI J. PIGGOTT, son of Jeremiah and Hannah Piggott, of Alamance County, and members of Cane Creek Monthly Meeting.

At China, Maine, on the 6th inst., JOHN, aged 14, and GEORGE, aged 12 years, sons of James and Mary W. McLaughlin. They expired within fifteen minutes of each other. This sudden and very afflictive bereavement occurred while their father was absent on a religious visit in the western part of New England Yearly Meeting. The sad intelligence reached him by telegraph, and he was enabled to reach home in time for the funeral, which was large and solemn. "Surely all flesh is grass; the grass withereth, and the flower fadeth."

On the 8th of 10th month last, at the residence of his son, Wm Price, near Smithfield, Ohio, WARRICK PRICE, in the 89th year of his age, a member of Smithfield Monthly Meeting.

Through his confinement and illness he exhibited great patience and resignation, and remarked, a short

time before his decease, that the prospect of death was not unpleasant to him.

DIED, At Waterville, Maine, on the 30th of 10th mo., after great suffering for two weeks, EDWARD G. HOAG, about 37 years of age.

He was favorably known for some years as a faithful teacher in Friends' Yearly Meeting Boarding School at Providence, R. I., and many who formed an acquaintance with him there, will feel an interest in hearing of his peaceful close. He was early impressed with a belief that he should not recover from his disease, and as it progressed, he assured his friends of his confident hope and full assurance of a happy immortality through the love of a blessed Redeemer. On one occasion, when his wife asked him if he had been sleeping, he replied, "no, I have been holding sweet communion with my God. Oh, how sweet his presence is to me." As the time of his death approached, he gave tender and affectionate counsel to his wife for herself and infant child, and a few hours before his departure directed some messages of kind remembrance to his distant friends, and finally closed his mortal existence calmly, quietly, and with that peace which the world cannot give.

On the 16th of 10th month last, near Salem, Columbiana Co., Ohio, MARY STANLEY, widow of the late Jonathan Stanley, and a beloved Elder of Salem Monthly Meeting of Friends, in the 77th year of her age.

This dear friend was enabled in early life to embrace from conviction the principles of the religious Society of Friends, in which she had a birthright, and through life remained firmly attached to its doctrines and testimonies.

She was endeared to a large circle of friends by a life of unostentatious piety and usefulness, a character marked with candor and uprightness, a disposition amiable and forbearing, a manner and conversation free from guile, a judgment sound and discriminating, wont to be expressed with meekness and submission, yet without the fear of man, evincing that she mainly sought secretly to feel the Divine approval. She was faithful to administer needed reproof or encouragement, or to observe silence, as the way of duty was made known to her.

In the latter part of her life it was her lot to experience severe bodily and family afflictions. An injury, occasioned by a fall, confined her to the bed for a time, while her husband lay nearly helpless from paralysis. Her situation was thus rendered peculiarly trying, being obliged to resign to others the care and attentions she had been wont to extend to him; yet this affecting circumstance, together with extreme physical suffering, was borne with becoming patience. From this illness she so far recovered as to be able to walk by the aid of crutches, during most of the last five years of her life; and she was diligent, when not unusually feeble, in the attendance of meetings, until within two weeks of her decease.

As trials of various kinds were meted out to her, they seemed to deepen and strengthen her reliance on Him who was her support through life, and enabled her to look with calmness towards the final change. Her last illness was a painful one, yet borne with quiet resignation. On being inquired of, a few days previous to the solemn close, how she thought the disease would terminate, she replied, it was not given her to see; and after mentioning some circumstances which seemed to indicate that she would not recover, remarked, "I have no anxiety, my mind is peaceful; I have endeavored to look over, and I see nothing in my way."

Rarely promise; but, if lawful constantly perform.

"A double minded man is unstable in all his ways." James 1 : 8.

Those hearers are to blame, and do prejudice themselves, who are attentive only to such words and discourses as stir up the affections for the present, and find no relish in the doctrine of faith, and the unfolding of those mysteries that bear the whole weight of religion; being the ground both of all Christian obedience, and all exhortations and persuasions to it. Those temporary sudden stirrings of the affections, without a rightly informed mind, and some measure of due knowledge of God in Christ, do no good. It is the wind of a word of exhortation, that stirs them for the time against their lusts, but the first wind of temptation that comes carries them away; and thus the mind is but tossed to and fro, like a wave of the sea, with all kinds of winds, not being rooted and grounded in the faith of Christ, and so not rooted in the love of Christ, which are the conquering graces that subdue unto a Christian his lusts and the world. Love makes a man to be dead to himself and to the world, and to live to Christ who died for him. On the other part, they are no less, yea, more to blame, who are glad to have their minds instructed in the mysteries of the Christian faith, and out of a natural desire to know, are curious to hear such things as inform them; but when it comes to the urging of holiness and mortifying their lusts, these are hard sayings; they had rather there was some way to receive Christ and retain their lusts too, and to bring them to agreement. To hear of the mercies of God, and the dignities of his people in Christ, is very pleasing, but to have this follow upon it, "abstain from fleshly lusts," this is an importune troublesome discourse. But it must be so for all that: those who will share in that mercy and happiness must abstain from fleshly lusts.—*Leighton.*

For Friends' Review.

THE MONITOR—NO. XI.

*Posthumous Charities.*

A certain rich man, in one of the eastern States, boasted near the close of his life that he had never paid a dollar to lawyers. His estate is now, after his decease, in the hands of lawyers, who seem to have grown hungry by their long exclusion, and are consuming it rapidly by thousands. Could he not have made a better use of it for public or private charities in his life time? A wealthy citizen of New Orleans left some years since over a million for public benefit. Already the costs of litigation connected with the disposition of the property, and the charges for agency, have reduced it two or three hundred thousand dollars, with little prospect that much will be left when contention shall have ceased. These and many other like cases teach the lesson that *rich men who desire to benefit their race, should be their own executors while living.*

A large number of energetic business men have toiled and saved during a long life, and laid up large estates in the face of great privations, and the result has been contention among the heirs, and extravagance, till all was gone.

The prospect of large estates, in nearly every instance, exerts an injurious influence on children, by destroying their energy and self-reliance, teaching waste, and often leading to a contempt of the economy so worthy of imitation in their poorer neighbors. In other words, many parents are toiling and engrossing their whole thoughts with business, to the injury if not ruin of their children.

The best and most valuable legacy that parents can leave their children, so far as prosperity and usefulness in this world are concerned, is *the ability to take care of themselves.* This may be accomplished by giving them, in the first place, a *practical*, not merely theoretical, school education; and placing them as early as possible in a position to act for themselves, and to feel the necessity of their own exertions. Nothing can more effectually deaden this enterprising disposition than the consciousness that parents are "rich," and that plenty will be left for them to live on and squander.

Why then should parents labor so assiduously to hoard up evil for their offspring? They cannot be expected to do otherwise who worship no other God than Mammon; but for members of the Society of Friends, who profess simplicity, self-denial, and benevolence, whose aspirations are for a heavenly country, and whose aim should be to relieve suffering humanity and to make the world better as they pass through it, to reject all these things, and by their example to bury the minds of their children wholly in the earth, appears singularly inexcusable.

It is not wrong to be engaged in active business and to make money, but the truth is not sufficiently felt that wealth is not our own. How few, among those who possess a hundred thousand dollars, have ever expended half that amount under their own careful direction! Which would afford the most satisfaction on a dying bed, the reflection that "I have saved and pinched, and denied every call of charity and benevolence, that I might leave a hundred thousand to my extravagant and spoiled children;" or, "I have endeavored to be a faithful steward in promoting happiness among others; although I leave but fifty thousand to my children, what I have expended under my own direction I know has been usefully applied—what I leave, I must entrust to others."

William Allen, so well known for his life of eminent usefulness, although successful in amassing wealth, devoted nearly his whole estate to benevolent objects; yet how few are such examples in a society whose distinguishing principle is Christian love! But if more of those who are unwilling to loosen their grasp on wealth during

their life time, would devote portions of their property to usefulness after death, the benefit might often be great. Why should not the duty be felt generally, not only by the rich, but by those of medium means, to leave a large share of their estates for the relief of suffering humanity, and for the pressing wants of proper education? Permanent funds for these purposes, left by some of our members, have already proved a blessing to many, and may yet continue to do so for generations to come; while the larger amounts left by the common disposition, are often soon scattered and gone, and leave no beneficial trace behind.

T.

#### VULCANISED INDIA-RUBBER SHOES.

The manufacturing spirit of the present age seems to have formed an extraordinary alliance with chemistry. A plain man who tries to keep abreast of this branch of the national progress, must find amazing difficulty with the mere technology of the subject. For example, our genuine old Windsor soap is now changed into a substance called glycerine; wax-candles are utterly extinguished in the market by another substance called paraffine; and soda is fast being superseded by the crystals of hydrochlorate of lime. In fact, there is no limit to the singular catalogue of compounds which the manufacturer and the chemist between them have contrived to form out of the constituents of this unhappy world.

The ancient Romans, we are told, who aspired to the great dignities of the republic, kept a slave or two in their families, whose sole business it was to learn the name and know the person of every citizen, in order that their masters might salute their constituents with the proper degree of familiarity, and shake hands with them as particular acquaintances. Something of this kind, we think, might be done with advantage in modern society. Our great merchants and manufacturers might retain a person in their employment versed in the mysteries of chemistry applied to the arts, whose duties should consist in watching the patent-roll and the scientific journals, and who should be able to distinguish from the mass of unpronounceable names those inventions which are the most suitable to the public taste, and the most likely to turn out a profitable speculation.

These reflections have arisen from a visit we paid the other day to a new manufactory in the neighborhood of Edinburgh, the staple article of which is vulcanised India-rubber. A company of American capitalists, from the regions of New York, have actually invaded the classical metropolis of the north, and in less than a year have raised up a concern of great magnitude—the largest of its kind, indeed, in Europe—upon the strength of the growing demand for this vegetable substance, particularly when fabricated into waterproof goloshes. The thing strikes us as being so curious, and so important in a social point of view, that we have taken some trouble

to inquire into the whole subject; and we propose in this article to give our readers an account of the introduction of the India-rubber manufacture into Scotland, together with a short description of the process of making India-rubber shoes.

With regard to the material itself, we shall just state that it was first seen in Europe about the middle of last century; that it was soon afterwards discovered to be the gum, or, more properly, the coagulated juice of certain tropical trees, the chief of which is the celebrated *Siphonia elastica* of the Brazilian forests; that by the natives it was called caoutchouc; by the chemists, from its singular elasticity, gum-elastic; and by the common people, from its valuable property of cleaning paper, India-rubber. Its physical properties, indeed, as a whole, are perfectly unique. By far the most elastic substance in nature, it is insoluble in water, in alcohol, or in any of the mineral acids, but it dissolves readily in ether or naphtha; and, above all, it possesses the power of agglomerating, or, in plain language, of adhering again when cut, if the separate pieces are brought together. No other substance, we may add, is so valuable to the analytical chemist. We have the high authority of the Baron Justus von Liebig for stating, that to the increased facilities which the flexible tubes and sheets of India-rubber have given in the laboratory, we owe many of the brightest discoveries in organic chemistry.

Now, it happened about twenty-five years ago, that the method of producing thin sheets of India-rubber was applied to the invention of waterproof cloth garments; and large manufactories for this purpose were established both in England and in the United States. The celebrated Macintosh fabrics, so popular in the days of stage-coach travelling, belong to this era of the trade. But unfortunately, one or two awkward circumstances connected with the material, which had hitherto almost escaped notice, began to appear in the most unmistakable manner. India-rubber, it was found, like all other vegetable substances, had a tendency to unite with the oxygen of the atmosphere, and decompose; and while perfectly elastic at all ordinary temperatures, it had the fatal peculiarity of becoming soft with heat and hard with cold. It was related in South Carolina, that a stout gentleman, travelling one day under a hot sun with a waterproof coat on, became glued up into an outer integument, from which no skill could extricate him. Another unfortunate man in Michigan, who wore a full suit of the treacherous fabric, was seen to leave a hot room on a cold winter evening, his clothes to all appearance quite soft and pliable. Next morning, he was found among the snow on the high road frozen to death, with the fatal garments around him as stiff as buckram, and as hard as iron.

From these causes, among others we need not stay to mention, the original India-rubber manufacture gradually sunk in importance, and indeed

soon became extinct. But in a few years it was destined to rise from its ashes. An ingenious shipwright of Rhode Island, Charles Goodyear, who had a strong turn for invention, bethought him of using India-rubber sheets over a skeleton of timber planks for a life-boat. The idea was excellent; but the same physical quality just mentioned operated much against his success in a practical point of view. The India-rubber life-boats were all very well in the water; but they did not answer to be pulled up high and dry on shore, as in that case the sheets gradually melted into a volatile essential oil, and disappeared. This circumstance was very discouraging, and might have induced any one of a less enthusiastic turn of mind to abandon the India-rubber sheets altogether, and substitute tarred canvas, or something of that kind. But Goodyear, it would seem, was no common-place inventor. With astonishing perseverance, he set about acquiring the chemistry of the subject; and it is pleasing to relate that in this direction his efforts were at length crowned with success. He discovered that if India-rubber were combined at a high temperature with certain proportions of sulphur and the oxide of lead, its whole physical nature was changed, that it was now proof against the process of vegetable decay, and that it remained uniformly elastic under the most considerable variations of temperature. This singular compound he ushered into the world in due time under the high-sounding title of Vulcanised India-rubber.

The importance of this invention was very great, if we may judge by its results. Vulcanised India-rubber at once became the rage; all sorts of things were made from it—railway springs and buffers, machinery belts, elastic bands and air-cushions, waterproof garments of every description, all kinds of bandages, and a number of surgical instruments. These things all created a large demand for the material; but it was soon found that the article which consumed most and sold best was the waterproof goloshes; and in a few years after the invention was made public, there sprang up, and still continue to flourish, several large establishments in Connecticut, in Rhode Island, in New Jersey, and in Massachusetts, which manufacture about five million pair every year, and give employment to upwards of five thousand people.

The 'North British Rubber Company' is an offspring of this family. Since the manufacture had proved successful in America, it was thought, shrewdly enough, that it might pay in Europe also. Accordingly, a company having been formed on the limited liability principle, the present managers, H. L. Norris and S. T. Parmelee, who are also large proprietors, were instructed to cross the Atlantic, and fix on a location for the projected colony. To show their capacity for this important mission, we may relate, that the commercial man, Mr. Norris, had been, during

thirty years, engaged in the India-rubber trade; that he had resided fourteen years in South America, where he had experimented upon the juice of the great India-rubber trees in the boundless forests of the Amazon. The other was a practical man, skilled in chemistry and mechanics, acquainted with the law of patents, and accustomed to manage working-men. It is not often, we think, that the great elements of success in commercial enterprise are so fairly blended. We do not know for what reason, but they selected Scotland as the field of their industry, and they first thought of making Glasgow their headquarters. They were seen, like the two mysterious travellers in Washington Irving, exploring the smoky regions of the Gorbals and Port Dundas, talking vaguely of purchasing land, and of building property, of burgage tenures and feudal superiorities; but, either from the difficulty of procuring a suitable place, or from the prospect of delay, they left the seat of our manufactures and commerce, and finally cast anchor in the seat of our literature and philosophy. One circumstance, indeed, guided their choice: they discovered in Edinburgh one of the finest models of a manufactory which can be found in this or any other country, unoccupied, and ready to receive them.

In the south-western suburbs of the city, at a place called Fountain Bridge, near the deserted basin of the Edinburgh and Glasgow Canal, there stands a large and stately pile of buildings, which is known to the inhabitants by the name of "The Castle Silk-mills." Those buildings were erected some five-and-twenty years ago by a company of adventurers, who proposed to make Edinburgh a seat of the silk-manufacture. No expense was spared on their erection. The large quadrangle, the excellent masonry, the magnificent steam-engine, the symmetrical chimney, as well as the whole plan of the works, still attest the fine taste and boundless liberality of the projectors. Whether it arose from misdirected enterprise, or from want of capital, we do not know; but, at any rate, the speculation proved unsuccessful, and the silk-mills were abandoned. For the long period of twenty years, this splendid building remained as silent, and almost as deserted, as if it had been dug out at Pompeii. It was tried for a poor-house; it was tried for a carpet-manufactory; but it would not do; nothing could rouse the slumbering spirits of that silent mansion. At length, one morning, our two Americans appeared in the court-yard, examining the premises with an acute and practised eye. The result of their visit was soon made plain. The property was at once occupied, and in less than three months it was purchased by the North British Rubber Company; and the Castle-mills were applied to the manufacture of another kind of fabric, not, indeed, so fine or so costly as silk, but apparently of more popular use, and of far greater consumption.

It is proper to state that the managers were also guided in their choice of Edinburgh as a site for their manufacture, by the following considerations: In the first place, because they conceived it to possess a superabundant female population; secondly, because from the comparative absence of other manufactures, there was a probability of procuring cheap labor; lastly, because it possessed an easy access, by way of Leith, to the markets of the continent.

(To be concluded.)

#### NIGER EXPEDITION.

Advices from Africa state that the expedition fitted out in England for the purpose of exploring both branches of the Niger, by the steam propeller "Dayspring," in charge of Dr. Baikie R. N., left the Brass or Kowara River for the Niger on the 10th of July, all well. The expedition is composed of fifty Kroomen, twenty-five natives of the countries bordering on the Niger, and fourteen Europeans, including Dr. Baikie, Lieutenant Glover, Mr. May and Dr. Davis, of the Royal Navy, a naturalist and botanist, with Captain Grant and engineers. It is the intention of Mr. Laird to form trading posts on the banks of the river at the most eligible situations for the collection of cotton, shea, butter, and other productions of the interior, provided the climate offers no insuperable obstacles. As by his contract with the Admiralty he is bound to convey deck passengers of the African race who can read and write English, from Fernando Po to all parts below the Niger and Chadda, a new element of civilization will be introduced into the interior by the return of liberated Africans to their native country in considerable numbers.

Another expedition is now exploring the Congo river. It is commanded by Ladislaus Magyar, of the Portuguese army, accompanied by men of science. His orders are to make a full survey of that stream. It is interesting to observe how European powers, of all ranks, are now engaged in attempting to open connections with the interior of Africa. No doubt that these explorations will open the way for general missionary and commercial operations in the central regions of this long unknown continent.—*Philada. Col. Herald.*

Gentleness is a sort of mild atmosphere, and it enters into a child's soul like the sunbeam into a rose-bud—slowly but surely—expanding it into beauty and vigor.

#### ZEROTES.

Zerotes is a man of stone,  
He lives but for himself alone;  
No wife's endearments soothe his cares,  
Nor sweet small footsteps on the stairs;  
Nephew or niece, he hates the name,  
No place in hall or heart for them:  
For no one in the world cares he,  
And yet he fain beloved would be.

Grave views of life Zerotes takes,  
He shuns all holidays and wakes;  
A merry laugh provokes his frown,  
He sternly puts all nonsense down,  
When through the village runs the jest,  
He stands unmoved amidst the rest.

A kill-joy hated much is he,  
And yet he fain beloved would be.

Of noble, thoughtful, generous, bold,  
Zerotes lists not to be told;  
Tell him of those who do amiss,  
And suffer for 't, you give him bliss.  
Speak of the reckless and absurd,  
He echoes each detractive word.

No gentle commentator he,  
And yet he fain beloved would be.

Cold, timid, buttoned up, and grim,  
Few e'er have been obliged by him;  
Yet while he does so little good,  
He talks of men's ingratitude—  
Ungrateful, you may well believe,  
For favors that they ne'er receive—  
Yet though a misanthrope is he,  
Zerotes fain beloved would be.

Self-love, oh what a witch thou art,  
What tricks thou playest with the heart!  
To keep this wisest of mankind  
To one small piece of wisdom blind;  
In cheerless life, day after day,  
To make him waste himself away,  
Seeing not what a child can see,  
The unloving ne'er beloved can be!

*Poetic Trifles by T. E. Hickey.*

#### SUMMARY OF NEWS.

FOREIGN INTELLIGENCE.—Accounts from England are to the 4th inst. The European news is of little importance. The steamer Arabia from Liverpool, brought \$1,000,000, and the Ariel from Southampton \$400,000 in specie, consigned to this country. The newly appointed special minister to Central America arrived in the Arabia. It is understood that after transacting his business at Washington he is to proceed at once to Central America, to arrange matters with the governments there.

ENGLAND.—The Borough Bank of Liverpool had suspended, with liabilities estimated at about £1,500,000, mostly well secured. The Western Bank of Scotland was also in difficulties, but its affairs were likely to be satisfactorily adjusted. Several firms at Liverpool and Manchester had failed; but on the whole, the aspect of commercial affairs was said to be more favorable than might have been anticipated, and it was hoped no further material trouble would result from the American panic. The East India Company had obtained another loan of £1,000,000 upon their own bonds, half from the Bank of England, and half from a London Joint Stock Bank. Recruiting for India was still going on, and the standard of height for the army had been reduced.

An attempt to launch the steamship Great Eastern on the appointed day failed, and the second trial was postponed for a month. Several persons were injured, two of them seriously.

FRANCE.—Gen. Cavaignac, military dictator during the Provisional Government of 1848, died suddenly on the 29th ult., of disease of the heart.

SPAIN.—The new ministry had been organized, with Gen. Armero as President of Council.

PRUSSIA.—The Prince of Prussia had assumed the management of public affairs, by a royal mandate, though the King's health was still improving.

**AUSTRIA.**—More failures had occurred at Vienna, but the worst of the crisis was thought to be over.

**ITALY.**—The King of Sardinia had subscribed 10,000 francs to the fund for the relief of sufferers by the East India mutiny.

The telegraph between Bona and Cape Spartivento, connecting Europe and Africa, is completed.

**DENMARK.**—The Holstein dispute has been referred to a commission. Hanover has demanded that the provisions of the constitution of Holstein, in so far as they may be opposed to the Federal law, shall be declared not obligatory, if Denmark persist in supporting them. This demand has also been referred to the commission.

**INDIA.**—The British troops at Delhi made an assault on the 14th of 9th month, and effected a lodgement, and after an obstinate conflict of six days, in which their loss is stated at 600 men, they obtained possession of the whole city on the 20th. Great numbers of the rebels escaped, including the King of Delhi and his two sons. Gen. Wilson, the British commander, in his order for the assault, directed that no quarter should be given to the mutineers, but that the women and children should be spared. A French paper states that the British forces, on taking possession of the city, found it destitute of provisions, and that the insurgents had cut off their communications, so that the situation of the conquerors was critical. Gen. Outram had reinforced Gen. Havelock at Cawnpore, and the latter had set out for Lucknow, the garrison of which still held out. Considerable reinforcements had arrived at Calcutta. The news from the Bombay Presidency was generally favorable to the English, though a few instances of disaffection had occurred.

**CHINA.**—The blockade of Canton river was strictly maintained.

**AUSTRALIA.**—Advices from Sydney to 8th mo. 12th, have been received. The Parliament of New South Wales was in session. The Governor's address represented the financial condition of the colony as highly satisfactory. It was proposed to improve the efficiency of the railway department, to increase the facilities by common roads, to provide for the development of public lands, and render them available for public improvement; and also to make the navigation of the Murray river serviceable to the different colonies. Preliminary arrangements were announced for a monthly postal communication from London to Sydney and New Zealand via Panama.

**SOUTH AMERICA.**—The revolutionary movements in Bolivia have become more general. Dr. Linares has assumed the title of Provisional President, in opposition to Gen. Cordova, the constitutional President. The cities of La Paz, Oruro, Cochabamba and Chuquisaca have pronounced for the former.

**CENTRAL AMERICA.**—Great Britain has not recognized the jurisdiction of Costa Rica over the San Juan river and the Transit route, nor sanctioned any of the grants or contracts respecting it, made by that government.

**MEXICO.**—The Indian war in Yucatan continues. The Indians have even threatened the capital, Merida, the inhabitants of which have organized for their own defence. The Governor has expressed the determination to make the war one of extermination against the savages. The civil war in that State remains undecided, though the revolutionary forces appear to have been forced to retire to Campeachy, which is reported to have surrendered to the government troops.

The building, books, and other property of the University of Mexico, recently suppressed by the government, have been set apart for the formation of a national library. The clergy continue to show hostility to the government in various ways.

**DOMESTIC.**—The Kansas Constitutional Convention has adopted a report which provides that the slave article of the Constitution, alone, shall be submitted to a popular vote, the ballots used to have the words, "Constitution with the slave article," or "Constitution without the slave article;" thus compelling the voters, in either case, to vote for the Constitution. This slave article is merely a regulation prohibiting the emancipation of slaves without the consent of their masters, requiring them to be treated with humanity, &c. Its rejection, it is asserted, would make no practical difference, as slavery will be claimed to exist by virtue of the Federal Constitution. The convention also adopted a report providing that no change shall be made in the Constitution for a long term of years, nor without the assent of two-thirds of all the legal voters; and superseding the newly elected territorial Legislature by a provisional government, with Gen. Calhoun as Governor, investing him with authority to appoint the times and officers for holding a State election, counting the votes and convening the State Legislature.

The Vigilance Committee of San Francisco have revoked the penalties attached to their sentence of banishment, thus permitting the exiles to return without molestation. The California papers report the massacre of an overland emigrant train, consisting of one hundred persons, by the Indians on the plains. A few children were spared, and were sold to the Mormons.

Dispatches have been received by the Secretary of State, announcing that three supply trains, containing 78 wagons, belonging to the military expedition intended for Utah, had been taken by the Mormons on the 5th ult., near Green river, a branch of the Colorado, west of the Rocky Mountains. No resistance was made, and no one killed. The vanguard of the expedition was thirty miles in advance of the first train destroyed, while the main body was a considerable distance in the rear. The Mormons are reported to be burning the grass on the route. The troops accompanying the commander, Col. Johnson, encountered snow seven inches deep, 230 miles beyond Fort Laramie.

Walker, the leader of the former invasion of Nicaragua, was arrested in New Orleans on the 10th inst., on an affidavit made by Custom House officers relative to his preparations for a second attempt of the same kind. He gave bail in \$2,000 for his appearance in court, and on the afternoon of the 11th, he embarked on a Mobile boat, from which he was transferred to another steamer and sailed for Nicaragua, with about 400 men, and a quantity of arms and ammunition. Revenue cutters have been ordered to pursue him.

Three slaves whom their master was transporting from St. Louis to Parkersburg, Va., were recently taken from a steamboat lying at the wharf in Cincinnati, on a writ of *habeas corpus*, issued by Judge Burgoyne. The master took out another writ of the same kind before Judge Carter, claiming that the slaves were illegally restrained of their liberty, and that they owed him service in Virginia, whither he was taking them when they were wrested from him. The trial resulted in their being delivered to the claimant by Judge Carter.

Official dispatches received at Washington announce that Brigham Young has declared martial law in Utah, by virtue of his authority as Governor, which has not yet been superseded. He forbids the U. S. troops to enter the Territory without his permission. He has forwarded a copy of this proclamation to the commander of the advanced guard of the expedition, with a letter, warning his troops to leave the Territory, but saying that they may remain till spring if they desire, provided they give up their arms and ammunition.

# FRIENDS' REVIEW.

A RELIGIOUS, LITERARY, AND MISCELLANEOUS JOURNAL.

VOL. XI.

PHILADELPHIA, ELEVENTH MONTH 28, 1857.

*An Epistle from the national Half-year's Meeting, held in Dublin, by adjournments, from the 3d of the Fifth month, 1778, to the 7th of the same inclusive.*

To the Monthly and Quarterly Meetings, and other Meetings of Discipline of Friends in Ireland.

DEAR FRIENDS AND BRETHREN,—We have, in this our general assembly, been deeply affected and humbled under the sorrowful view and feeling of the declined state of many in our Society from the life and power of pure religion; and that humble, self-denying conversation which it leads into; and under this concern we have been afresh made feelingly sensible of the great loss and hurt that both individuals, and the Society in general, have sustained in letting out the mind and affections after great things in this life; many of the professors of Truth, as it is in Jesus, departing from under the discipline of his holy cross, have let up an high and aspiring mind, that affects ostentation and show, and seeks after many superfluities, to gratify the vain and ambitious cravings of the unmortified part in them; the noble simplicity of manners, habit, and deportment, which Truth led, and still leads into, hath been much departed from; the plainness of apparel which distinguished our religious profession is by too many despised, and the testimony which we have been called to bear against the unstable, foolish fashions of the world, has been trampled as under foot; the mind, not limited by the girdle of truth, hath coveted an evil covetousness, the wedge of gold and the Babylonish garment have been the objects of its inordinate desire. And one exempling another, and the lesser fondly copying after the greater, an evil emulation hath gotten in, not provoking one another to love and good works, but vying with each other in the grandeur of their houses,

the order and provision of their tables, the richness of their furniture, and the gaiety of their own dress, and that of their children, contrary to the self-denial, the humility and meekness prescribed by the gospel of Christ, in which they profess to believe, and the constant tenor of the salutary advices of the Society they profess themselves members of, from the beginning to this very day.

Every superfluous thing occasions a superfluity of expense; and superfluity of expense requires extensive, and frequently exorbitant and precarious engagements in trade, beyond the capital and abilities of the managers to support it. And when their own fails, many too frequently keep up dishonorable state on the property of other men, till insolvency fatally ensues to the ruin of themselves and families, the loss and damage of their creditors, the reproach of the truth, and the great trouble of Friends who are concerned to keep good order amongst us.

It is an undoubted truth, that the Society which doth not frequently recur to its first principles will go to decay; if, then, we look back to our beginning, we shall find that from the beginning it was not so. In a postscript to an early epistle from the province-meeting at Castledermot, we have this lively description of the effect which Truth had in that day. "Then (say they) great trade was a great burden, and great concerns a great trouble; all needless things, fine houses, rich furniture, gaudy apparel, were an eye-sore; our eye being single to the Lord, and the inshining of his light in our hearts, which gave us the sight of the knowledge of the glory of God; this so affected our minds, that it stained the glory of all earthly things, and they bore no mastery with us." The Divine principle of Light and Grace remains still the same, and would work the same effect in us, if we were obedient thereto; would even introduce gradually, by the operation of its Divine power, the new creation in Christ Jesus, whereby man, returning from the fall, would be placed in dominion over all the creatures.

We are, therefore, dear Friends, impressed with a zealous concern of mind, in this day of trial, when "the judgments of the Lord are in the earth, that the inhabitants thereof may learn righteousness," (Isaiah xxvi. 9). As this is a time of danger, uncertainty, and distrust, we most earnestly desire that Friends may let their

moderation in all things appear, that those who have launched out extensively in trade, with as little delay as possible set about contracting their engagements therein into a moderate compass, and instead of risking the reputation of Truth, the peace of their own minds, and the welfare of their immortal souls, in grasping at things beyond their reach, in order to provide for superfluous expense, reduce their wants and expenses within the limits and bounds of Truth, and then a little trade with frugality and industry will be found sufficient.

The love of money is a sore evil, "which, while some have coveted after, they have erred from the faith, and pierced themselves through with many sorrows," (1 Tim. vi. 10). Let the Truth itself, therefore, dear Friends, moderate and limit us in our pursuits: "A man's life consisteth not in the abundance of the things which he possesseth," (Luke xxii. 15). And the limitation and order prescribed by Him who is the Truth, the Way, and the Life, is this:—"Seek ye first the kingdom of God and his righteousness, and all these things shall be added unto you," (Matt. vi. 33). Many, who have transgressed this holy boundary, and reversed this heavenly order, in giving the preference to the pursuit of earthly possessions, have in themselves, or their offspring, furnished a verifying proof of the declaration of the Almighty by his prophet, viz.:—"Ye looked for much, and lo, it came to little; and when ye brought it home, I did blow upon it: Why! saith the Lord of hosts, because of mine house that is waste, and ye run every man to his own house," (Hag. i. 9).

And let those, whom Divine Providence hath prospered and blessed with abundance of the good things of this life, ever bear in remembrance, that "the earth is the Lord's and the fulness thereof," (Psal. xxiv. 1); and that we are accountable stewards, each for his share of the manifold mercies we receive at His hand. Let them, then, as good stewards, use the same with a due regard to the pointings and limitations of Truth, not indulging themselves in anything wherein is excess; and thereby setting an evil example to others, whose abilities cannot well bear the expense, and yet from the depravity of human nature may be tempted to copy after them. For those of the foremost rank in Society, by the assistance of Divine grace, may do much good; or neglecting it, by the influence of their example, occasion much evil therein. We therefore earnestly desire, that those who are thus favored may seriously co-operate with our concern in setting a good example; and we hope it will have a happy influence on others, who may be discouraged from aiming at expense unbecoming their circumstances, when they behold those who have it in their power, decline it through their regard to Truth, and for preserving inviolate the testimony of a good conscience toward God. The experienced apostle very

pathetically, in his direction to Timothy, points out the particular duty of this class of Christians:—"Charge them that are rich in this world, that they be not high-minded, nor trust in uncertain riches, but in the living God, who giveth us richly all things to enjoy; that they do good, that they be rich in good works, ready to distribute, willing to communicate; laying up in store for themselves a good foundation against the time to come, that they may lay hold on eternal life," (1 Tim. vi. 17, 18, 19).

Finally, brethren and sisters, as example must accompany precept, if we be sincere toward God, we desire especially that ministers, elders, overseers, and other active members in the Society, may seriously, in the first place, set about this necessary work of retrenching and reformation where needful: that their nearest connections, their children and families, in regard to the point of view in which their partners in life and parents are placed, may lay to heart the evil consequences of their deviating from the simplicity of Truth, and the pernicious influence of their evil example: that these, and the children the Lord hath given them, being as signs and good examples from the Lord of hosts, they may go forth strengthened by the cleansing of their own hands and those of their families, and so be enabled to say to the flock, "Follow us as we follow Christ." And that parents, heads of families, and all, be engaged to wash their hands in innocency, and be qualified to encompass the Lord's holy altar, that the "Offerings of Judah and Jerusalem may be pleasant to the Lord, as in days of old, and as in former years," (Mal. iii. 4).

In the extendings of that real affection, which desires your present and everlasting well-being, we salute you, and conclude,—Your friends and brethren.

Signed on behalf of our said meeting, by  
JOHN GOUGH, *Clerk.*

*"I have planted, Apollos watered, but God gave the increase." 1 Cor. 3: 6.*

The preacher of the word, be he never so powerful, can cast this seed only into the ear; his hand reaches no farther; and the hearer, by his attention, may convey it into his head; but it is the supreme Father and Teacher above, who carries it into the heart, the only soil wherein it proves lively and fruitful.

The word, as a heavenly dew, not falling beside, but dropped into the heart by the hand of God's own Spirit, makes it all become spiritual and heavenly, and turns it into one of those drops of dew that the children of God are compared to, Psalm cx. 3. "Thou hast the dew of thy youth." The word brought within the soul by the Spirit, lets it see its own necessity, and Christ's suffering convinceth it thoroughly, and causeth it to cast over itself upon him for

life; and this is the very begetting of it again to eternal life.

So that the efficacy of the word to prove successful seed doth not hang upon the different abilities of the preachers, their having more or less rhetoric or learning. It is true, eloquence hath a great advantage in civil and moral things to persuade, and to draw the hearers by the ears almost which way it will; but in this spiritual work, to revive a soul, to beget it anew, the influence of heaven is the main thing requisite. There is no way so common and plain (being warranted by God in the delivery of saving truth,) but the Spirit of God can revive the soul by it; and the most skilful and authoritative way, yea withal, being very spiritual, yet may effect nothing, because left alone to itself. One word of holy scripture, or of truth conformable to it, may be the principle of regeneration to him that hath heard multitudes of excellent sermons, and hath often read the whole Bible, and hath still continued unchanged. Thus may that word prove this immortal seed which though very often read and heard before, was but a dead letter. One word spoken by the Lord to the heart is all spirit, and doth that which whole streams of man's eloquence could never effect.—*Leighton.*

From the York Herald of the 17th of 10th mo.

#### THE LATE SAMUEL TUKE, OF YORK.

Our obituary of this day will recall a name, fraught with no common interest, to many of our citizens. Recollections worthy of being retraced will be aroused in some minds—a sympathetic feeling in many—a respectful recognition of departed worth, perhaps we may say, in all.

It is one of the most interesting features of the social framework of Britain, that while it recognizes the distinctions of feudal rank, and records the exit of each worthy head of a time-honored house, as in some sort the property of the nation, not the less through the various gradations of the scale does it appreciate the successful citizen, the independent yeoman, or even the lowly mechanic, if such an one, filling worthily his station, or rising to a higher sphere, has left to his successors incentives to the like honorable course—"footprints on the sands of time."

Of the burgher or citizen class was the immediate family of Samuel Tuke. The name of Tuke, early scattered in the counties of Nottingham and South Yorkshire, appears in the seventeenth century in the city of York, where the ancestor of the subject of this sketch, having embraced the principles of the Quakers, suffered imprisonment in consequence, in "Ouse Bridge Prison," in the year 1660.

Samuel Tuke was the eldest grandson of William Tuke, who died in 1822, at the patriarchal age of 90, and whose name is so well known as the founder of the Friends' Retreat, near York, in 1792, and as the originator in this country of

those principles in the treatment of insanity, which, in their progress, have so much contributed to the alleviation of human suffering.

William Tuke's eldest son, Henry Tuke, died at the comparatively early age of 58, not less honored and beloved than his father.

Samuel Tuke, the only son of Henry who lived to maturity, was born 31st of July, 1784. He early co-operated with his grandfather and father in their philanthropic labors. To the subject of insanity especially, as is well known, he devoted a large portion of his time, and in the course of his life was the author of several works which are well known on the continent and in America, as well as in this country. His *Description of the Retreat* was published in 1813, and led to very remarkable consequences—consequences which the author himself had never ventured to anticipate. Steadily did he pursue his labors in the great work of bettering the condition of the insane, not only by his writings but by the unremitting attention which he paid to the welfare of the Retreat, of which he was the treasurer for thirty years. Not inaptly has he been called "the friend of the insane."

In 1840, he edited the work of a German physician, Dr. Jacobi; in the introduction to which he fully expresses his views in regard to the provision for the insane, and their moral management, with many practical directions regarding the construction of asylums.

But to many of the readers of this memoir it is as the public man and the active citizen that Samuel Tuke will be chiefly remembered. To some, as the man of warm, deep, and abiding sympathies, in private life; to not a few by the earnestness, the deeply devotional spirit, the catholicity of feeling, yet lofty standard of Christian obligation, which marked his religious character.

He was never a party man. His mind was simply incapable of being so moulded. Every line of action which he adopted, however much it might provoke hostility in those who honestly took a different view, was simply the result of some great principle, firmly grasped and rigidly carried out. Thus, he early supported the concession of political privileges to the Roman Catholics, when a different view might have been expected from association and training. Yet his mind was essentially conservative, in the sense of a deep feeling of the *venerable*—intense in proportion to the moral worth associated with it. Equally strong was his love of social order—his idea of government as the embodiment of a governing moral force.

The period of his life comprised events of no ordinary political interest and importance—the contested election for the county of York in 1807; the abolition of the slave trade, and the struggle for the extinction of the system of slavery; the Reform Bill of 1832, and the carrying out of its spirit and principles, may be men-

tioned as subjects in which he felt and manifested a warm interest.

There was, we believe, only one occasion on which he appeared before the public in any sense as a political partisan. In the year 1833, on the election of the Hon. Thomas Dundas, to fill a vacancy in the representation of the city of York, having been himself solicited to stand, he gave the full weight of his influence in support of that gentleman. This was very much prompted by an ardent wish to carry out those principles to which we have already alluded, and which, in his mind, were inseparably connected with the idea of a true reform in the representation.

It was, however, in support of the claims of the British and Foreign Bible Society—in anti-slavery efforts—the cause of scriptural education of the poor—and various movements of a philanthropic or religious character, that his influence and his voice were most frequently exerted.

We might, were it needful, enumerate the various charitable institutions of the city as partakers of his pecuniary or active personal assistance. Judicious benefit societies for the working classes—sanatory reform—his active and unremitting exertions when guardian of the poor—will naturally be suggested to the minds of those who may have watched his public life, or shared his labors. In this last named capacity, his sympathy with suffering and intense aversion to anything bordering upon oppression, were obvious features of his character.

Samuel Tuke's mind was a rare combination, comprising a sound judgment, with no small measure of more shining qualities. To a vigorous and perceptive intellect, he united a vivid imagination, and a strong sense of the beautiful. He was, therefore, a man of taste—rigidly correct *taste*. His eloquence, though somewhat unequal, was of a striking and often lofty character. There was a masterly comprehension of an idea—forceful, clear, and well enunciated expression. On certain occasions, the clear summing up of conflicting arguments, and the delivery of a lucid judgment with calm precision, yet always with a certain warmth of feeling, elicited a display of mental power not easily forgotten.

The preceding slight outlines will be readily filled up by those who knew the man—not less readily when we allude to him as the kind neighbor, the unwearied benefactor to the poor, or the fellow citizen, sharing in

———"the talk

Man holds with week-day man in the hourly walk  
Of the mind's business."

We must not omit to say that Samuel Tuke was a *man of business*. He was long the head of a prosperous firm, succeeding to the concern founded by his grandfather, now about a century ago. The unflagging energy and varied talents of a mind at home in far higher pursuits, precluding him from being less than the presiding mind of the whole—these were best understood

by persons brought into intimate association with him in this character.

The sanctuary of the domestic hearth with such a mind was indeed a sanctuary; and only the large and happy family who revered him as a parent, can fully understand the associations which this allusion may call forth. After eighteen years of married life, he was called upon to endure the severest trial which human affection can undergo. But the man, or rather the Christian, though "cast down, was not destroyed;" and soon was he again active in the field of duty, with energies only deepened by the shade of sorrow. His active intellect hardly seemed to admit of repose. It had been well, indeed, if such a mind had more of the disposition to relax. Playfulness was not an element in his character, which was naturally stern, but not the less was there the flow of natural wit, and at times a chastened humor, more delightful still. His religious character may be touched upon—briefly, because of the sacredness of the subject—confidently, because it was the substratum of his moral being—at once the spring and the regulator of his energies. We would fain appeal to those, who, alas! are no more household names in our city—the names, well recognized in their day, of William Gray, John Graham, Anthony Thorp, Thomas Wemyss—as members of a vanished circle, (as we can confidently to not a few still living,) who would instantly appreciate the soundness and stability of his Christian character.

As a member of the religious Society of Friends, by conviction as well as by birth, he was, as in everything else, the active exemplar of the principles he adopted. He carried them out for himself, even in their remoter bearings; but, surely, we need not again say that Samuel Tuke belonged less to a sect, than to the universal Christian church. As a minister of the gospel in his own Society, he will long be remembered. It may be sufficient to say that here there was evidence of the same characteristic power. With a deep and reverend appreciation of the sacred truths he had to deliver, there was a clear and sound expression. In his ministry, as in his life, there was the evidence of talents consecrated to the service of Christ. In the reception of that Saviour as his Redeemer, lay the secret of his spiritual strength. A life of activity and of power, but how far removed from the self-activity of the worldling! Though by nature he was no common man, "by the grace of God he was what he was."

Samuel Tuke retired almost entirely from public life in the winter of 1848, in consequence of a slight paralytic seizure. This was followed by greatly enfeebled health, and subsequently by renewed attacks of paralysis, which, for the last few years of his life, confined him to his bed-chamber. A severe attack on the 12th instant, producing a state of entire unconsciousness, was the cause of his decease two days afterwards.

## BUNYAN'S TOMB.

In a quiet and secluded cemetery of the metropolis of England, lie the ashes of one of the best and noblest of men, who as an author has made himself famous by an allegory—charming and fascinating, both to youth and age—filled with striking illustrations of Christian character and experience, and showing the influence of reason and religion on the human mind. It seems somewhat natural to man to visit the sepulchres of those who have distinguished themselves in the pages of human history—or of one who has charmed us by the sweetness of his song, or by the magic of his pen, or by pure acts of self-denying and unusual philanthropy has endeared himself in the memories of his race.

Under the influence of this feeling—such a feeling as influenced the women at the sepulchre of the Redeemer, where they went “to see the place where the Lord lay,” and were shown the spot by the angel of the Lord—did we visit the city of the dead, and especially the tomb of a most distinguished, excellent and useful servant of our Divine Master—the grave of John Bunyan! surrounded by the dust of thousands of the noblest and best of men. In the plain, neglected and disused burial ground of Bunhill Fields, City Road, London, are deposited his mortal remains. Close by are also those of the sweet singers of Israel, Dr. Isaac Watts and Dr. Ryland. In the yard of the City Road Chapel opposite rest the remains of the excellent, and pious, and exemplary John Wesley.

It is interesting to visit such a place of memorial, and refresh our minds with the history of early Nonconformity in England; and we cannot but with pleasure and satisfaction remember those who entertained and advocated, at an early period, “Liberty of Conscience,” and man’s political rights, and who left, some of them, their fatherland and their homes, to secure to themselves, and others, this inestimable boon, and whose example and influence have greatly contributed to the prosperity and progress of this mighty Republic.

The tomb of Bunyan lies crumbling to dust. It has been neat, plain and unassuming. Its inscription, time has almost obliterated, and it can scarcely be read. Some kind and friendly hand has had re-cut on the side of the tomb the name of its illustrious tenant. Here lies one whose “little book” held us spell-bound when our imagination loved to roam in the regions of fancy, and still instructs us in our riper years—a man whose eloquence of speech commanded immense assemblies at unusual hours, and whose inimitable genius, and powerful and beautiful and pure Saxon writing has placed him in statue in the magnificent assembly house of the Parliament of England. What a change! Bunyan, the tinker, the schismatic, the dissenter, the imprisoned for conscience sake, occupying a place amongst statesmen and poets, historians and heroes!

*Extracts from Barnes' Discourse on the Virtues and Public Services of William Penn.*

(Concluded from page 168.)

There is no one subject on which men have been more wicked than in regard to war. There has been no one subject on which they have been, and are, more befooled. There is no one thing on which the sentiments of the world are more certainly destined to a change. There is no one thing on which so much reputation has been gained, in reference to which the estimate of the world is to be reversed. There is no one thing in which praises are so certainly to be changed to execrations. There is no one thing in which the opinions which history records are so certainly destined to be set aside. There is no one thing in which there is to be such a revolution in the whole nomenclature, as that which is to be applied to the names *glory*, and *fame*, and *military renown*. The man who dies, or has died, or shall hereafter die, with only a *military reputation*, is destined either to be ultimately forgotten, or to be remembered with dishonor. The reputation which has been founded on legislative wisdom; on discoveries in the sciences, and inventions in the arts; on having evolved some new principle of liberty; on making an elementary spelling book, or a new geography, or arithmetic; on devising some plan for alleviating the miseries of the prisoner, and setting at liberty those who are bound, is to grow brighter and brighter by increasing years, till the full splendor of these collected lights shall constitute the glory of the earth's Millennium. The man that invented the Greek fire, or that taught to temper better the Damascus blade, or that found out a more destructive spear, or that first concentrated poison in which to dip his arrow of death, or that discovered gunpowder, or that invented the rifle or the Paixhan gun, it will be well for him, that his name shall be forgotten in the advancing light of the world, or he will be remembered only with that immortal band of apostate angels, described by the great poet, to whom the most terrific portion of this invention is traced:

“On war and mutual slaughter bent.”

—“In a moment up they turned  
Wide the celestial soil, and saw beneath  
The originals of nature in their crude  
Conception; sulphurous and nitrous foam  
They found, they mingled, and, with subtle art,  
Concocted and adjusted, they reduced  
To blackest grain, and into store conveyed;”

the invention of

—“those deep-throated engines,  
Disgorging foul  
Their dev'lish glut, chained thunderbolts and hail  
Of iron globes.”

PAR. LOST, B. vi.

Who has ever told the evils, and the curses and the crimes of war? Who can describe the horrors of the carnage of battle? Who can portray the fiendish passions which reign there?

Who can tell the amount of the treasures wasted, and of the blood that has flowed, and of the tears that have been shed over the slain? Who can register the crimes which war has originated and sustained? If there is any thing in which earth, more than in any other, resembles *hell*, it is in its wars. And who, with the heart of a man—of a lover of human happiness—of a hater of carnage and crime—can look but with pity; who can repress his *contempt* in looking on all the trappings of war—the tinsel, the nodding plumes, even the animating music—designed to cover over the reality of the contemplated murder of fathers, and husbands, and sons?

And yet *we*, a Christian people; brothers of Christian nations; associates with Christian people abroad in purposes of philanthropy, talk coolly of going again to war; and are ready to send forth our sons to fight, and kill, and die, on the slightest pretext of quarrel with a Christian nation—a nation with whom are all our fathers' sepulchres. We talk of it as a matter of cool arithmetic; as affecting the price of flour, and pork, and cotton; as a question of close calculation between the North and the South; as likely to affect stocks and securities; and hardly dare to lisp a word of the enormous *wrong* in the face of Heaven in arming ourselves to imbrue our hands in the blood of brothers. This day, amidst our thanksgivings, our prayers should go up to Heaven for peace—universal peace—that *we* may do right, and that *others* may do right, and that the blood of carnage may never again stain our soil, or be shed on the deck of a man-of-war. There have been wars enough in this land. If it were desirable to show that, as a nation, *we have* prowess, and *can* fight well, it has been done. Let it be enough for this, that we can point the nations, if we are called on to do it, to Lake Erie, and to the Ocean; to Bunker Hill, and Trenton, and Yorktown. That is enough in *our* military glory. We are called into being, as a nation, for higher and nobler ends; and it is our vocation—and especially the vocation of the people of this Commonwealth of Penn—to show to the world the blessings of the principles of peace. When the world's history shall all be written, let not the first pages of our own story be blackened like those of Assyria and of Rome. Let there be so much light, and so much true glory evolved from the arts of peace, that the few dark spots which war has already made—for war always does it—may be covered over with the living splendor that shall have accumulated in a long career of true glory.

In illustration of these sentiments, and to show the power and efficacy of the principles of peace, I do not know that the world has furnished a better instance than occurred in the well-known event in the life of the Founder of this Commonwealth. Penn met a race of men here—the inhabitants of the forest—who had been regarded as bloody, and cruel, and unfaithful, and always

disposed to war. With portions of that race there had been long and fierce conflicts, and every colony had been made to feel the cruelties of the tomahawk and scalping knife. Penn was on principle opposed to war, and meant to live with all mankind on terms of peace. He came unarmed—with neither battle-axe, nor buckler, nor sword, nor shield, nor cannon. "We meet," said he to them, "on the broad pathway of good faith and good will; no advantage shall be taken on either side, but all shall be openness and love. I will not call you children, for parents sometimes chide their children too severely; nor brothers, for brothers differ. The friendship between me and you, I will not compare to a chain; for that the rains might rust, or the falling tree break. We are the same as if one man's body were divided into two parts; we are all one flesh and blood."

"The children of the forest were touched by the sacred doctrine," says the historian, "and renounced their guile and their revenge. 'We will live,' said they, 'in love with William Penn and his children, as long as the moon and the sun shall endure.'"

The treaty of peace and friendship made between him and them under the old elm on the banks of the Delaware, was one of the most remarkable transactions in history; one of the finest conceivable triumphs of the spirit of peace; one of the most signal rebukes of the spirit of war, and of the necessity for war. "It was not confirmed by an oath; it was not ratified by signatures and seals; no written record of the conference can be found; and its terms and conditions had no abiding monument but on the heart. There they were written like the law of God, and there they were never forgotten. The simple sons of the wilderness, returning to their wigwams, kept the history of the covenant by strings of wampum, and long afterwards, in their cabins, would count over the shells on a clean piece of bark, and recall to their own memory, and repeat to their children or the stranger, the words of William Penn. He had come without arms; he declared his purpose to abstain from violence; he had no message but peace; and not a drop of Quaker blood was ever shed by an Indian." Who can tell how much the same spirit would have done to disarm all hostile tribes; and who can fail to see here a sublimer victory than was ever achieved on a field of blood, and brighter and more enduring laurels than were ever gained in the carnage of battle?

(3.) There was one other point on which the denomination to which Penn belonged have been in advance of their contemporaries, to which society is slow in coming up, but which it will ultimately reach. It is in regard to human rights—to the evils and wrongs of slavery. They have been the first to urge, and to act on, the great principles on this subject in which, beyond all question, the world is yet to unite. It is

true that there were principles held by the whole Puritan family which were inconsistent with holding a fellow being in bondage when he had been guilty of no crime, and with supposing that there could be a right of property in man. It is true, also, that Penn himself, and his immediate associates, did not see the result to which their own principles would fairly conduct them on this subject, and that Penn himself "employed blacks without scruple, and he himself died a slaveholder."\* But the following things are *also* true in regard to the denomination of Friends.

First, that they held principles which were at war with the system; which must of necessity soon open their eyes on its evils; and which must in the end detach them for ever from it. Penn himself soon saw the evils of slavery, though he did not provide a full remedy for them. His first public act in regard to this subject, substituted, after fourteen years' service, the condition of adscriptis to the soil, for that of slaves. But in common with others at that time, he held principles which must either be abandoned, or slavery must be abolished. The rights of man; the rights of conscience; the right to the avails of labor; the hatred of oppression—sentiments with which the whole Puritan family were imbued, can never be reconciled with the system of slavery; and though Penn, and the Mathers, and President Stiles, and perhaps the elder Edwards, held slaves, yet they all held at the same time principles which were utterly at variance with the system; which have led to the extinction of slavery at the North, and which need only to be acted out to bring the system every where to an end.

Secondly, it is true that the Friends have been the first, as a body, to perceive the bearing of these principles, and to act on them. The history of emancipation among the Quakers, is an exceedingly interesting and instructive portion of the history of our country, and in the calm, and prudent, and persevering measures which they have adopted, is probably to be found the true way in which our country can be, and is to be, freed from this great evil. They have aimed at two things—and two only—both of them legitimate, both of them prudent and wise—*first* to remove slavery from their own body, and *then* to bear their solemn testimony, in regard to the evil, to the world. The first object was pursued year after year by patient and manly discussion, and by faithful and affectionate dealing with their brethren—not to *exclude* them but to *convince* them of the wrong—and the period at last arrived—a most triumphant period in the history of their body—when they could announce to the world that the evil of slavery was not attached to any portion of their denomi-

nation; when there was not a "Friend" who claimed a right of property in his fellow man. The other object they have as steadily pursued. They have borne, without ambiguity, and without hesitancy, and with nothing of a spirit of denunciation, their 'testimony' in regard to the evil of the system before the world. They offer no forced interference. They use no harsh words. They impugn no man's motives. They interfere with no rights protected by law. But they are a plain-spoken people. They use intelligent language. They do not attempt to blink the subject, or to cover up the evil. They make no apology for slavery; they never speak of it as right; they never speak of it as sanctioned by the Bible; they use no metaphysical distinctions on the question whether it is a moral or a political or a social wrong, or on the question whether it is in all cases a sin. They leave the impression that *they* regard it as a wrong in every sense of the word, and that they themselves deemed it *so great* a wrong that they were willing to make great sacrifices that their own denomination might be freed from it totally and forever; and they leave this solemn testimony to go forth to the world for what it is worth.

Now here, I am persuaded, is a wise model for all other denominations of Christian men, and the true idea of all successful efforts for the removal of this great evil from the land. Let all the evangelical denominations but follow the simple example of the Quakers in this country, and slavery would soon come to an end. There is not vital energy enough; there is not power of numbers and influence enough out of the church, to sustain it. Let every religious denomination in the land *detach itself* from all connection with slavery, without saying a word against others; let the time come when in all the mighty denominations of Christians, it can be announced that the evil has ceased *with them* FOR EVER; and let the voice from each denomination be lifted up in kind, but firm and solemn testimony against the system—with no "mealy" words; with no attempt at apology; with no wish to blink it; with no effort to throw the sacred shield of religion over so great an evil, and the work is done. There is no public sentiment in this land—there could be none created, that would resist the power of such a testimony; there is no power *out* of the church that could sustain slavery an hour if it were not sustained *in* it. Not a blow need be struck. Not an unkind word need be uttered. No man's motive need be impugned. No man's proper rights invaded. All that is needful is, for each Christian man, and for each Christian people, to stand up in the sacred majesty of such a solemn testimony: to free themselves from all connection with the evil, and utter a calm and deliberate voice to the world, and the work will be done.

We have much this day, and the subject requires me to say this in connection with our

\* The assertion of Bancroft that Wm. Penn "died a slaveholder," has been satisfactorily proved to be incorrect.—Ed. F. R.

residence in this Commonwealth, for which to render praise to God. Our benignant climate; our teeming soil; our agricultural and mineral wealth; our pleasant abode in this city of Penn—a city which he said, in its situation, was “not surpassed by one among all the many places he had seen in the world,” and he had seen the cities of Europe from Bremen to Turin—a city where the productions of all lands are laid at our feet; our public schools; our peace, and health, and opportunities for doing good; our holy religion—diffusing innumerable blessings over us pertaining to this life, and imparting the hope of the life to come—all these lay the foundation for gratitude and praise. “The lines have fallen to us in pleasant places, and we have a goodly heritage.” But among the mercies which this day appeal to our hearts, not the least cause for thanksgiving is found in the fact that this is a Commonwealth of freedom—that in this large, and rich, and beautiful domain, the soil is not cursed with the foot-tread of slavery; and that in all our borders, there is no one who can be deprived of the avails of his labor, or be held as property, or be sold as a slave. There is no one here who is now a slave. There is no one born, or to be born, who is ever to be. No one can be sold; no one can be willed away; no one can be separated from wife, and children, and home, but for crime, or by God when he summons man to another sphere of existence. O, that it were thus to-day in all our land; and that all over this nation there might be to-day such a jubilee of praise as may go up from the hearts of the people in the Commonwealth which owes so much to the political sagacity, the public beneficence, and the private virtues of William Penn.

## FRIENDS' REVIEW.

PHILADELPHIA, ELEVENTH MONTH 23, 1857.

---

DISSOLUTION OF “INDIANA YEARLY MEETING OF ANTI-SLAVERY FRIENDS.”—Nearly fifteen years have elapsed since the secession from Indiana Yearly Meeting occurred, resulting in the holding of an annual meeting under the title of “Indiana Yearly Meeting of Anti-Slavery Friends,” and the establishment of many constituent meetings, with several hundred members, not a few of them ministers, and others who had been highly useful and prominent in the Society. At the first assembly, Epistles were addressed to the other Yearly Meetings with the view of receiving their countenance and encouragement, but the appeal was, of course, unsuccessful. It will be remembered, however, that London Yearly Meeting, in 1845, prepared an

Address “To those who have recently withdrawn from Indiana Yearly Meeting of Friends,” and sent a Committee with it to this country. It is not our purpose now to speak of the arduous labors of that Committee, but an extract from the Address will show the nature of their mission, and the Christian feeling which prompted the action of London Yearly Meeting:—

“Trusting that on the fundamental doctrines of the Gospel and on the spirituality of divine worship, there exists no essential difference between you and the body from which you have withdrawn, we have felt much concern and sorrow on hearing that you have discontinued assembling with them to present yourselves before the Lord. Accept, we beseech you, our earnest and affectionate entreaty, that you will relinquish your separate meetings for this purpose—will wholly discontinue them, and again assemble for the public worship of Almighty God with those with whom you have been accustomed thus to meet.

“In extending this invitation, we are not insensible to those humiliations by which the accepting of it may be accompanied. We feel tenderly for you in thinking of your present circumstances. But, whatever may be the sacrifices which attend such a course of conduct as that which we thus venture to recommend, we believe that were it taken in the reverent fear and love of God, with a single eye to his honor and to the service of our Lord and Redeemer, it would bring that peace to the soul which passeth understanding; that the blessing of the Most High would rest upon it, both as it respects you and your beloved offspring; and that in your latter days, a retrospect on this course would bring a comfort to the soul which would amply compensate for all that you may have to do, or to endure in connection therewith.”

It soon became apparent that many individuals were prepared to adopt the advice thus offered, and a letter received a few days since from a venerable member announces the formal dissolution of the “Yearly Meeting of Anti-Slavery Friends.” He briefly says—“Our Yearly Meeting disorganized itself this Fall, and laid all its meetings down; and gave what it had left, after all its debts were paid, to the Manual Labor School, the interest to be used in paying the school bills of poor children.”

This subject involves considerations of great

interest and deep instruction, and we will probably find occasion to recur to it in a future number. We earnestly hope that the measure, though too long delayed, will prove a blessing to those immediately concerned, and that many, like our respected correspondent, will seek and find shelter in the bosom of the Society from which they have so long been separated.

THE KANZAS INDIANS. LETTER FROM THOMAS H. STANLEY.—In the accounts, published a few months since, of the proceedings of the Yearly Meetings of New York and New England, it was stated that voluntary subscriptions were recommended among the members, to aid Thomas H. Stanley in his efforts to improve the condition of the Kansas tribe of Indians. He had felt a religious concern for several years, to remove with his family and reside among them, and had been liberated for this purpose by his Monthly Meeting; having, also, the approbation of the acting Committee of Indiana Yearly Meeting on Indian Affairs. In the *Review*, dated 20th of 6th month last, we gave some extracts from a Report of the Commissioner of Indian Affairs, showing the suffering condition of those Indians, and their patient submission to many wrongs.

Within a few days we have received a letter from our friend Thomas H. Stanley, dated at Kansas City, Mo., the 10th inst., in which he states that he and his family arrived at the south side of the Kansas Indians' Reservation on the 2d of last month. They had a tedious journey of about 400 miles from Salem, Iowa, performed with an ox team at the rate of about 15 miles per day. A part of the travelling was extremely rough, and near Kansas City their wagon was overturned, and one of the children was thought to be killed, but was mercifully restored to his thankful parents. At the same place, seven of their cattle were lost. "After spending several days in search of them," says T. H. S., "I concluded we had better go on to our journey's end, and prepare for winter, which we did. I have cut and put up in stack near 12 tons of prairie grass hay, and have built a temporary plank house, 12½ feet by 15, and one story high. I have now returned to Kansas City, to make further search for the lost cattle, but have not yet found them.

"I had some talk with several of the Kansas

Indians on the subject of my settling adjacent to their Reserve, to instruct them in farming, etc., and they appeared pleased with the prospect, and approved of my views. I am sorry to see their present situation. Settlers have located on most of their timber land, and are anxiously waiting for a treaty to be made with them, before making much more improvements. The Indians feel uneasy at seeing so many whites settling on their Reserve, and are fearful they will not be able to keep it. They do not wish to remove. It is thought the present is a favorable time to induce them to change their manner of living, and go to farming, if they could be assured that they would be allowed to remain on their lands, and enjoy their improvements.

"Last First day I was at Friends' School among the Shawnees. I found them all well, with an addition of two young women, and one young man to their number, to assist in carrying on the concerns of the school. They have from 20 to 30 scholars."

Such of our readers as are disposed to contribute towards the improvement of the Kansas Indians, can do so by sending money to William Crossman, Cincinnati, Ohio. The address of Thomas H. Stanley is Orleans P. O., Breckenridge County, Kansas Territory.

DECEASE OF SAMUEL TUKE.—The name and character of Samuel Tuke have long been familiar to many Friends in this country, who will read with interest the sketch of his life and the account of his death copied this week from a newspaper published in his native city. At a meeting for worship immediately succeeding the funeral, our beloved friend John Pease said, "they were assembled after seeing the dust of their friend and brother deposited in the grave, under a deep sense that the spirit had gone to God who gave it, and rejoicing in the hope of his salvation. Large was the circle in which the deceased moved, civilly, socially, and religiously; and large was the vacant place caused by his death. By birth and training, he was well fitted for the position he held; but while the powers of his mind seemed so well adapted for discharging the duties of that position with propriety and acceptance, it was the riches of Divine Grace which prepared and enabled him to accomplish his work. It was this which made the wide variance between persons similarly circumstanced

in life; for, on the one hand, many, alas, wasted their patrimony and became lost to society, whilst on the other hand, they saw the blessedness of that man who, with even fewer earthly advantages than his neighbor, was supported, although unseen, by a Divine hand, and guided to a position never sought and never expected. They should not dwell so much on that which they had lost, but should tread in his footsteps, even trying to approach nearer to Him who had redeemed them with his blood. And while many of them would wisely consider the traits in the character of their deceased friend—those features which shone so brightly—they would be prepared to acknowledge that by the grace of God he was what he was."

The Editor of *Friends' Review* gratefully numbers among his blessings, the privilege of having enjoyed, on several occasions, the kind hospitality and instructive conversation of the dear friend whose life and example were thus impressively portrayed.

CORRECTION.—On page 148 of our 10th number, *Mary Wesley* should be *Mary Fletcher*.

#### TWO STATESMEN EQUALLY ASTONISHED.

In his New Haven reply, President Buchanan thus expressed himself:

"Slavery existed at that period, and still exists, in Kansas, under the Constitution of the United States. This point has been at last finally settled by the highest tribunal known to our laws. How it could ever have been seriously doubted is a mystery."

Henry Clay, who, in his day, was thought to have some political knowledge and mental acumen, thus expressed an astonishment which he felt on the 22d of July, 1850:

"I am aware that there are gentlemen who maintain that, *in virtue of the Constitution*, the right to carry slaves south of that line (36° 30') already exists, and that, of course, those who maintain that opinion want no other security for the transportation of their slaves south of that line than the Constitution. If I had not heard that opinion avowed, I should have regarded it as one of the most extraordinary assumptions and the most indefensible position that was ever taken by man."

So it will be seen that these two eminent statesmen encountered each a great mystery in the examination of the same subject. Mr. Buchanan thought it a mystery how any one could have doubted that the Constitution carries slavery with it. Mr. Clay, on the other hand, regarded that doctrine as the most extraordinary assump-

tion he had ever heard, and the most indefensible position ever taken by man.—*Tribune*.

For Friends' Review.

#### AN APPEAL TO THE WEST.

Can nothing be done to arouse the people in the bounteous West, to forward a tithe from their overflowing granaries to our cities, for the relief of the suffering? Can it be, that with our late bountiful harvest, we shall be so dead, as to permit famine to claim its wretched victims in our very midst?

Travelling this summer to the Falls of St. Anthony, I was amazed at the prospect of a superabundant crop of wheat and corn, looking like seven years of plenty crowded into one, and wondered what could be done with *so much* bread.

I see with deep interest and sympathy your efforts in the cities—but soup is not *bread*—something must be done in the West, and must be done before transportation is hindered by ice and snow; and the transportation ought to be a free-will offering, and doubtless would be, if properly conducted by suitable agents, who should go forth relying on Him who hath promised that "The needy shall not always be forgotten: the expectation of the poor shall not perish forever."

"Thou, O God, hast prepared of Thy goodness for the poor." "I will satisfy her poor with bread."

Are there no laborers to go forth, to persuade our western brethren and sisters of every Christian denomination to remember that "Blessed is he that considereth the poor; the Lord will deliver him in time of trouble. The Lord will strengthen him upon the bed of languishing; thou wilt make all his bed in sickness?" "The liberal deviseth liberal things, and by liberal things shall he stand." The fast that He hath chosen, "Is it not to deal thy bread to the hungry, and that thou bring the poor that are cast out to thy house? when thou seest the naked, that thou cover him; and that thou hide not thyself from thy own flesh? Then shall thy light break forth as the morning, and thy health shall spring forth speedily; and thy righteousness shall go before thee: the glory of the Lord shall be thy rearward. If thou draw out thy soul to the hungry, and satisfy the afflicted soul, then shall thy light rise in obscurity, and thy darkness be as the noonday. And the Lord shall guide thee continually, to satisfy thy soul in drought, and make fat thy bones; and thou shalt be like a watered garden, and like a spring of water whose waters fail not."

"Then shall the King say unto them on his right hand, Come, ye blessed of my Father, inherit the kingdom prepared for you from the foundation of the world: for I was an hungered, and ye gave me meat; I was thirsty, and ye gave me drink; I was a stranger, and ye took me in; naked, and ye clothed me; I was sick, and ye

visited me; I was in prison, and ye came unto me. Verily, I say unto you, inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me."

I have remembered, since I commenced writing on this subject, the time our people contributed of their abundance to the relief of Ireland during the famine. The following year we had in this country, and I think generally throughout the Union, the most bountiful crop I remember to have seen. It seemed an immediate reward, a direct blessing in return for the alms bestowed on that suffering nation.

Surely there is no need that even one poor child shall perish. Send out appeals to the great harvest-field of the West, and the generous hearts there will nobly respond. M.

From the Bible Society Record.

A LETTER FROM EGYPT.

*Cairo, February 8, 1856.*

MY DEAR FRIEND:—My first Sabbath upon the Nile I read the prophecies of the Bible in Isaiah, Jeremiah, and Ezekiel, pronounced more than two thousand years ago against Egypt, then in all her pride and power.

How literally are these prophecies fulfilled before the eyes of the traveller through this land! Her cities are destroyed, "waste and desolate," her temples overthrown, her idols cast down. Egypt is the "basest of kingdoms." She has been spoiled by "the hand of strangers," and there is no more "a prince of the land."

On arriving at Thebes I visited the great temple of Karnak, built in part by Thothmes III, the Pharaoh of the Exodus. There, upon the outer wall of the grand hall, we found a record of the invasion and conquest of Judea and Jerusalem, by Sheshouk, or Shishak, king of Egypt, as it is written in 1st Kings 14: 25, 26.

"And it came to pass in the fifth year of king Rehoboam, that Shishak king of Egypt came up against Jerusalem: And he took away the treasures of the house of the Lord, and the treasures of the king's house; he even took away all: and he took away all the shields of gold which Solomon had made."

This king Shishak, whose name we read from his cartouch or imperial signet, is represented in his chariot leading captive Israelites in triumph to Thebes. Their beards and features stamp them unquestionably Jews, as distinctly as the Jewish face can now be recognised in Jerusalem, Constantinople, or New York. Their hands are bound with a rope, and their eyes upraised, as if imploring mercy from their conqueror.

The names of the conquered towns and districts taken in this expedition are also recorded in the hieroglyphics. Among these, Champollion has deciphered "the kingdom of Judah, and also the Scripture names of Megiddo, Hebron, Beth-shan, Taanac, all cities of Palestine, and also the valley of Hinnom, and the great place, or Jerusalem."

Here we indeed read the confirmation of Scripture history on the temples of Thebes, preserved almost three thousand years, to bear their silent testimony to the truth of the Bible.

I also found many verifications of the Scripture history represented upon the tombs of Egypt, cut in the solid rock. In the tomb of Roschere, the overseer of public buildings under Thothmes III, probably the Pharaoh of the Exodus, we saw the whole process of brickmaking depicted. Some are digging and mixing the clay, others shaping it in the mould, others are taking the bricks from the form, and placing them in rows, and others carrying them away to be dried. There also is the taskmaster with his rod in hand overlooking the slaves at their work. I also found another most interesting incidental confirmation.

"And Pharaoh commanded the same day the taskmasters of the people, and their officers, saying, Ye shall no more give the people straw to make brick, as heretofore: let them go and gather straw for themselves. And the tale of the bricks, which they did make heretofore, ye shall lay upon them; ye shall not diminish aught thereof."

Now on one of the tombs of Thebes, the mode of reaping grain is illustrated. It was cut a little below the ear, and the straw left standing in the field. Thus the Israelites were ordered to go into the fields, and gather straw for themselves, instead of having it brought to them by others as before, and yet were compelled to render the same number of brick through the day. Such was their additional burden of oppression. In fact we see almost the entire history of Joseph and the Israelites pictured upon the tombs and sculptured upon the monuments of ancient Egypt. The steward with his books, taking estimate of his master's goods. The storehouses that were built for the grain of Egypt. The making of bricks with chopped straw, which is still found in the ruins. The Israelites were pursued with horses and chariots. These were represented in every battle scene. Joseph was made overseer of Pharaoh's house. The monuments furnish many evidences of this custom. Pharaoh put a gold chain about his neck. The ceremony of decorating persons of rank with a necklace of gold is often seen. Jacob dies, and was embalmed by the Egyptians. To embalm the dead was customary in those days. And they mourned for him threescore and ten days. Funeral processions and mourning for the dead are frequently represented; indeed this habit continues in the land until the present day.

All abundantly prove that the author of the books of Moses had lived in Egypt, and was "learned in all the wisdom of the Egyptians."

During my visit at Thebes I had the pleasure of meeting with Sir Gardiner Wilkinson, the veteran authority in relation to Egyptian antiquities. I inquired what was his view with re-

gard to the confirmation of Scripture history from the monuments. He replied: "We find that every thing confirms the Bible. In fact, the taking of the Jews captive by Shishak, which you saw sculptured at Karnak, is our first determined point in chronology. Before that period all is uncertain. But this date is certain, since the Bible and the record upon the temple entirely agree, and we can therefore trace the subsequent kings in their proper order." He remarked also, "that in his opinion, the explorations and discoveries were still in their infancy." It was most gratifying to receive this unqualified testimony from one who has spent years in carefully studying the monuments and hieroglyphics, and comparing them with history and the Bible.

On our return voyage, I visited the ruins of ancient Memphis, the capitol of the Pharaohs at the time of the Exodus. Here were wrought the seven plagues, and all the wonders of the Lord in Egypt, by the hand of Moses. Only a fallen obelisk and a few broken statues remain to tell of its former grandeur. So also Heliopolis, the "On" of the Scriptures, has but a single obelisk still standing of all the massive temples and monuments that once adorned the princely city. Thus is the Scripture literally fulfilled. Egypt has become "waste and desolate, the basest of kingdoms."

Since my arrival from Upper Egypt, I have been occupied in giving information with regard to the Bible Cause, and becoming acquainted with the missionaries and their labors in this city. Cairo is said to contain a population of 240,000, as follows: Egyptian Moslems, 190,000; Copts, 10,000; Jews, 5,000; Greeks, 2,000; Armenians, 2,000; and 30,000 various Europeans. There are at present six missionaries stationed here. Mr. Leider of the English Church Missionary Society, and Mr. Reichard, of the London Jews' Society; J. Barnett and T. McCague, American missionaries of the Associate Reformed Presbyterian Church; and C. W. Martin, and Mr. Murad (native assistant) of the American Missionary Association, designated especially to the Copts. They are all more or less engaged in circulating the Scriptures.

Mr. Leider has been twenty-eight years in the field, and distributed eight or ten thousand Bibles and Testaments among the Copts. Mr. Barnett has been stationed at Cairo but one year, and during that time has sold Scriptures to the amount of \$50 in the different languages, Arabic, Italian, French, English, Armenian, Coptic, and Greek. He keeps a depot at his own house, and these Scriptures have all been sought from thence.

Mr. Martin and Mr. Murad have recently returned from a missionary tour up the Nile. They found a great desire to receive the Scriptures, and a willingness on the part of the people to purchase them at a moderate price. They sold about 100 copies of Bibles, Testaments, and Psalms, in Coptic and Arabic, and could readily

have disposed of twice that number if they had taken a full supply. The bishops and priests were entirely favorable to the circulation of the Scriptures among their people.

I have also visited the various schools of the city, for the purpose of introducing the Scriptures into them as far as possible. The Greeks have a large school numbering 100 pupils. They teach the New Testament and parts of the Bible every day. It is under the direction of a liberal and intelligent priest. I informed him of the modern Greek New Testament, recently published at Athens, and of its introduction into the government schools, and he immediately ordered fifty copies for his school.

I likewise called upon the Greek Patriarch, who received me with much politeness. I said to him that "I had come on the part of the American Bible Society to supply the Scriptures to those who wished them, in the East." He replied, "It is a very good work." I also told him that we had lately published a new edition of the Modern Greek Testament, in Athens, for the benefit of the Greeks. He inquired, "Is it sanctioned by the Patriarch of Constantinople or Athens? if it be not thus written, I cannot receive it." I replied, "It has been introduced into all the government schools, by official sanction of the director. He then said, "I would also wish some copies for my school." These I promised to furnish him, and he gave me his friendly benediction at parting. He is a venerable old man, with a flowing white beard, and has held his patriarchate a quarter of a century.

I was also much interested in a visit made to the Armenian Patriarch. He wished a supply of Scriptures for his school and people, and will himself pay for them. I remarked at parting, "If we never meet again in this world, I trust we shall meet in heaven." He presses me warmly with both hands, and says, "Your heart is my heart. God is gracious and abundant in mercy."

There are also two schools for Jews in the city, where the Bible is taught. One is in charge of Mr. Reichard, of the London Jews' Society; the other is under the direction of an Italian Jew, from Modena. He teaches the Bible in Hebrew, French, and Italian, and has given me an order for thirty copies of the New Testament in Hebrew, that his scholars may be enlightened with regard to its teachings.

There is also an excellent school for girls, under the direction of Mrs. Leider, numbering from eighty to one hundred and fifty, including Copts, Mussulmans, Greeks, and Syrians. She teaches them all the pure Bible and Gospel; and when they go to their harems, they take the Bible with them, and teach it also to their children. This is an agency of special importance, because of the ignorance and bigotry of the females, resulting from the seclusion in which they are kept in the East.

I next made a visit to the school of the Coptic

Patriarch. The establishment is located in a part of the patriarchal palace, is admirably organized, and numbers one hundred and fifty pupils. The Psalms and Gospel in Coptic and Arabic are taught and explained every day. There is also an English department, where portions of the Old and New Testaments are daily studied. I was much interested to hear a little Copt boy, ten years of age, when called upon, read fluently from our English Testament, in Matthew: "Repent ye: for the kingdom of heaven is at hand. Prepare the way of the Lord, make his paths straight." They use the pure Scriptures, without note or comment.

I afterwards called upon the Patriarch, and explained to him the object of my mission in behalf of the Bible Cause, and what I had already done for the Copts in upper Egypt. He thanked me very cordially, and replied, "We love the same Bible and Gospel. But," he adds, "I know not that the Copts will need many more of the Scriptures. We have been oppressed 600 years by the Romans, and 1,200 years by the Moslems, and now the present Pasha is impressing all our sons for soldiers in his army. When I walk out into the streets, the fathers and mothers pull my garments, and say 'You are our Patriarch, our father; you must save our children.' And I can do nothing for them. You in America can place your feet down, and say you are free, but we are under the heel of our oppressors." And the old man drew his cloak before his face, in token of deep grief. I replied, "We hope the time of deliverance of Christians from Moslem tyranny is drawing nigh. Even Mussulmans are now buying many copies of the Bible at Constantinople." He exclaims "Inshallah!" (God be praised). His countenance kindles with joy, and he asks, "Shall these eyes be privileged to see the day? would it were bookrah!" (tomorrow). He then ordered one hundred copies of the Scriptures for his school and people, and commended me to God at parting.

He is a man of superior mind and ability, and is doing much to elevate the condition of the Copts. They are the only intelligent and progressive race in Egypt. In the midst of all the errors and corruptions of their church, they have retained a great love for the Bible in its purity and simplicity; and in this, under the providence of God, is our hope.

Most sincerely your brother,

C. N. RIGHTER.

#### WEST INDIA EMANCIPATION.

At a recent meeting in London, to take measures to present an appropriate testimonial to Dr. Livingston, the African traveller, Mr. Montgomery Martin said he had recently visited the West Indies to ascertain if the emancipation of slaves had produced ruin there. He found there a free, happy, and prosperous population, and,

speaking commercially, the West Indies now yield more produce than they had ever done during the existence of Slavery. Since the abolition of Slavery in the West Indies, not a drop of blood was shed by a popular disturbance, nor a single crime by mobs was committed, nor was there any destruction of property throughout the whole of the West Indies. A letter received in New York, dated Spanish Town, Jamaica, March 16, 1857, says: "Let it suffice that, with the high price of sugar, the good season with which we have been so long favored, and other favorable circumstances, our prospects are brighter than they have been for many years.

"Many of the planters are extending their cultivation to the utmost, and are rapidly recovering from their late embarrassments; while numbers of laborers have purchased deserted estates, and are engaged in the cultivation of sugar, and are thus raising themselves into that middle class which Slavery annihilates, and without which no country can prosper. In every respect, there is a decided, palpable progress. The change from slavery to freedom, in this country, is as from darkness to light. The laborers are, for the most part orderly, industrious, and happy. Schools and places of religious worship are being extended over the land, and are generally well attended. In fine, everything augurs a steady advancement toward a permanent and general prosperity."—*London Morning Star*.

#### VULCANISED INDIA-RUBBER SHOES.

[Concluded from page 175.]

With these views well matured, they began operations in the month of May last year. Their staff consisted of only four people—two English girls, one Irish girl, and one Irishman, whom they had brought from the United States to teach our people the process. That process we shall now proceed to explain; and for this purpose, we must ask the reader to accompany us in a glance through the works. We begin at the north side of the quadrangle, a large and spacious side of the building, consisting of five floors, which is entirely devoted to the manufacture of India-rubber shoes.

The first thing we observe here worthy of notice, is the enormous piles of raw material scattered in various heaps over the basement floor. Some of it in flat cakes, some of it in the form of round bullets about the size of a man's head—hence, in the language of the trade, called negro-head, to which part of the native African it bears, we must say, an extraordinary resemblance. The commercial supply of this material, we were informed, is derived, in the order of its importance and intrinsic value, from the Brazils, from Central America, from the East Indies, and, lastly, from Africa. The South American rubber imported from Para, the great entrepot of our Brazilian commerce, is worth about 1s. 6d. per

pound; the East Indian, from Singapore, about 1s. per pound; while the African, which is very inferior in point of quality, is only worth about 3d. per pound. As to the consumption, it has been computed that, for a period of twenty years previous to 1856, there were exported from South America to England about twelve million pounds; and the exports from the same quarter to the United States during the same period amounted to twenty-two million pounds. The United States, therefore, appear to consume nearly twice as much of the material as we do in England—we may almost say in the whole of Europe.

The first process of the manufacture is to convert this raw India-rubber into sheets. For this purpose, it is first of all crushed through ponderous iron rollers, which soon make flat enough work of the negroheads. It is then cut into small pieces. These pieces are thrown into an iron vat of hot water, which has the effect of softening and cleansing them at the same time. The India-rubber is now subjected to a curious process of grinding through heated iron cylinders, which convert it into a soft plastic mass, well fitted to assimilate with the necessary ingredients which produce the chemical metamorphosis. After being triturated in this way for some time, it is finally rolled into a smooth sheet through a congeries of double rollers made of iron, very highly polished and very hot. This sheet, which comes forth in the most regular form imaginable, is passed on endless bands to the floor above, where it is cut into proper lengths and stored upon layers of calico. This vulcanised sheet India-rubber constitutes the material for the uppers of the shoes.

The next step is to fabricate the inside lining. This consists merely of cotton cloth of different degrees of texture, which is coated with the viscid preparation of India-rubber while passing through the hot rollers in the same manner as the sheets. This waterproof cloth is used, coated on one side only, for insoles and inside lining, but is coated on both sides for the purpose of packing or welting, or whatever the narrow stripes are called which cover the seams.

The third process is to stamp out the sole. For this purpose the material goes through a similar arrangement of rollers; but the surfaces, in this case, in place of being smooth and polished, have deep indentations cut into them, corresponding with the height of the heel, and the thickness of the sole—a species of circular die, in point of fact. These rollers are also reticulated on the outer surface, in order to produce the little facets we observe on the sole of the shoe; and, in addition to this, they are usually stamped with a matrix of the manufacturer's name.

Such is the preparation of the material for the shoe. We must now go up stairs and see those materials put together. In order to do this, we get into a lifting machine which traverses the whole height of the building, and pass in suc-

cession, first the room devoted to packing and warehouse business, and second, the room where the sheets are cut into the proper shapes. The soles, uppers, insoles, inside lining, all pass through the hands of certain artisans, who correspond to the cutter or clicquer of the orthodox shoe-trade. Our conductor told us, while ascending in the lift, that hitherto the manufacture had been conducted by men whose wages ranged from fifteen to twenty-five shillings per week; but, in all subsequent stages, they made large use of female labor, both from its superior cheapness and its superior taste. Just at this point we reached the fourth floor of the building; the signal was given—the lift stopped, and we were ushered into the making department.

Here we found ourselves surrounded by a multitude of very nice-looking girls, most of them tastefully dressed, and all of them particularly clean and tidy. The reader can suppose a room—equal in area to the largest class of ball-rooms—beautifully clean and well lighted, and in this room a double row of white deal tables, with four of our female shoemakers comfortably seated at each, and he has thus got the outline at least of our picture. We should like to devote some time to fill in the groups of figures and add a little coloring, but it would be out of place here. As to the wages of the girls, we may state that, after undergoing a nominal apprenticeship of three months, they are paid for what they can earn, which ranges from nine to twelve shillings per week.

One of those young ladies—who, by the way, came from the States—was now selected to shew us the whole process of making a shoe. So far as we could observe at the time, she pursued the following order.

1. She took up a last,
2. Which she wrapped round with a piece of inside lining.
3. She then stuck on the insole.
4. And overlaid all the seams with narrow stripes, to make them strong.
5. The quarter or heel-stepping was now added.
6. And then the bottoms were filled in.
7. The upper was now laid over this.
8. And, lastly, the sole was stuck on.

The shoe was now finished, and in almost as little time as it has taken us to write, the raw material transformed into the article of wearing apparel. We never saw or heard of anything like it. The explanation, however, is very simple: there is no sewing or stitching needed. The tools employed resemble book-binder's tools more than those of the shoemaker. Such is the adhesive nature of the substance, that whenever two surfaces are brought together, they unite as firmly as if they had never been separated. The only thing requisite after this is to give them a coat of varnish, and that is effected in a manner equally curious and expeditious. A platform is brought by the lifting machine up to the railway which intersects

the floor, and on this platform are stuck some 300 pair of the shoes, by means of spikes passing into the lasts. The whole thing is now rolled into the varnishing department, where each shoe is coated with a particular kind of resinous varnish; and then it is thrust into an oven, where it remains until its exterior is thoroughly dried.

To give an illustration of the magical celerity with which these India-rubber shoes are produced, we may state that the sheets are cut up one day, the shoes are made the next, and these are packed ready for the market on the next again. The North British Rubber Company turn out regularly in this manner about 4000 pair every day.

The consumption of this article is now very great. In England, Ireland, Scotland, and the continent, particularly in Germany, the demand is growing with unheard-of rapidity; and the reason, we think, is obvious. The thing is at once a necessary and a luxury. A lady may wear her goloshes on a wet day, at an evening-party, or a concert, without considering them vulgar and common because the dairyman's daughter over the way goes about the cow-shed, and marches across the yard with a pair of precisely the same things protecting her feet. There is no mistake as to their beneficial qualities. But, of course, there is a time for everything. It will not do to wear India-rubber goloshes, or waterproof clothing of any description, constantly under all circumstances. What is good for keeping out wet, is also good for keeping it in; or, in other words, by a constant use of this article of dress, we run the risk of checking the perspiratory organs, which is very hurtful. We may mention on this point, however, that the girls in the works who wear the shoes constantly, find no ill effects resulting from this cause.

There are a number of other curious things to be seen at the Castle Mills. For example, the machine for making lasts is a really wonderful piece of mechanism. The steam-engine itself, of one hundred horse-power, is well worth examination; and, indeed, the machinery through the works generally is of a very high order, most of it, we believe, of American origin. We cannot enter at present on the other branches of the manufactory—the machinery bands, tubes, springs, and such things; but we may remark, in conclusion, that the India-rubber manufacture seems to have become established in Scotland, and we wish it all success. We have no jealousy at all that it has been done by American capital and skill—quite the reverse. This circumstance, indeed, will suggest the important reflection, that, after all, the spirit of commerce is the true bond between civilised nations, the best agent for improving the condition of the people, and the only legitimate source of national wealth and prosperity.—*Chambers' Journal*.

Haste makes work, which caution prevents.

From the American Messenger.

"In the morning will I direct my prayer unto thee, and will look up.—PSA. 5: 3.

Before the portal of the east  
In golden glory breaks,  
Before the voice of slumbering man  
Its varied echo makes,

Before the lily of the field  
Unseals its cradled eye,  
Before the pinions of the lark  
Unfold in melody,

My heart awaking turns to Thee,  
In whom is all her trust,  
Who breathed this mystic power of thought  
Into a frame of dust.

Oh, at this sweetly sacred hour,  
From earth's intrusions free,  
Smile, Lord, upon the waiting soul  
And draw her near to thee.

L. H. SIGOURNEY.

Hartford, Sept. 20, 1857.

THREE SUGGESTIONS.—*First*. Go to no place where you cannot ask God to go with you. *Second*. Engage in no business which you cannot ask God to bless. *Third*. Indulge in no pleasure for which you cannot return thanks to God.

He that cannot forgive *others*, breaks the bridge over which himself must pass: for every man has need to be forgiven.—*Lord Herbert*.

#### SUMMARY OF NEWS.

FOREIGN INTELLIGENCE.—Liverpool advices are to the 11th inst. The financial difficulties appear to be extending through Europe. The Bank of England has raised the rate of discount to 10 per cent. The City Bank of Glasgow, and the Western Bank of Scotland, in the same city, have suspended. The latter had 100 branches and £6,000,000 of deposits. Its failure is attributed to reckless discounting for insolvent traders. Several heavy mercantile failures have taken place. Deputations from Liverpool and Glasgow have unsuccessfully endeavored to induce the government to adopt measures of relief. The Manchester Commercial Association declined to participate in the movement. The Bank of France has raised its rate of discount to 8 per cent. for bills under 30 days, 9 per cent. for those under 60 days, and 10 per cent. for those under 90 days. Similar movements have taken place at Frankfort and Berlin, and a panic prevailed also at Hamburg, where all bills of exchange were unsaleable.

The *Moniteur* had announced that after the 3d inst., telegraphic dispatches might be sent directly from France to Africa by the submarine Mediterranean telegraph.

SPAIN.—The Spanish government had not signified its decision on the last communication from Mexico, which states that the offered mediation of France and England will be accepted on condition that the Mexican envoy, M. Lafragua, shall be previously received at Madrid in his official capacity. The envoy was at Paris awaiting the reply of the Spanish cabinet.

AUSTRIA.—A very considerable reduction is about to be made in the army. Many of the companies are to have only half the present number of men, and thirty generals will be placed on the retired list. This reduction it is believed will produce a saving of 50,000,000 florins yearly. The Customs department

is also to be reformed, and notice has been sent to the several foreign legations, that an inter-national commission may be assembled, to represent the interests of all parties concerned. The exorbitant duties now laid upon some articles will probably be reduced. The Credit Bank of Vienna, being in want of ready money, has demanded payment from those who have obtained advances on government and private stocks; a step likely to cause extensive embarrassment.

**PORTUGAL.**—The government is said to have offered 5000 Portuguese troops to the British government, and that the offer was declined by Lord Clarendon, on the ground that existing circumstances do not render it necessary to employ foreign levies. The latest dates from Lisbon report a considerable decrease in the number of deaths from the epidemic, and that the inhabitants were returning.

**PRUSSIA and DENMARK.**—It is reported that England, France and Prussia, have offered their joint mediation in the Holstein dispute; and that most of the German States have notified Prussia of their adherence to the measures proposed by that government.

**INDIA.**—The King of Delhi and his two sons had been captured by the English. The former was spared, but his sons were shot. The English loss in the assault on Delhi is now stated to have been 61 officers and 1,178 privates, killed and wounded, being one-third of the storming force. The garrison of Lucknow had been relieved, and a large part of the city afterwards taken by Gen. Havelock. The government has made arrangements with the Oriental Mail Steamship Company for the conveyance of a weekly mail to and from India.

**BURMAH.**—A Paris letter in the *N. Y. Journal of Commerce*, states that Gen d' Orgoni has gone to Rome to announce to the Pope, in the name of the Emperor of the Burmans, that the Roman Catholic missions in the Empire will be not merely tolerated but encouraged and aided. The Emperor has built at his own cost, spacious schools, and will provide funds for the support of the European professors who may be attached to the institutions. He is about to erect a hospital, to be attended by French "Sisters of Charity," and intends to build places of worship, should the number of converts among his subjects render it necessary.

**AFRICA.**—A new English expedition for the exploration of the Niger river has lately been fitted out, composed of fourteen Europeans, twenty-five natives of the countries on the Niger, and fifty Kroonien. It is intended to try the experiment of establishing trading posts on the banks of the river, for the collection of cotton and other native produce. The Portuguese also have an expedition on foot for exploring the Congo, with the purpose of making a complete survey of the river.

**MEXICO.**—In consequence of the critical state of public affairs, Congress has conferred extraordinary powers on the President, and suspended some of the most important guarantees of the Constitution. The press will again be subject to a check, and the people cannot assemble in public meetings, carry arms for self-defence, or freely express their opinions. The President is authorized to borrow money to the amount of \$5,000,000, and to make contracts for railways across the Isthmus of Tehuantepec, and from Vera Cruz to the Pacific, but is forbidden to sell or pledge any part of the national territory to any foreign government. The whole country is in a very disturbed state, and the Indians are committing great ravages in many parts. The Minister of Justice has issued a circular, declaring all ecclesiastical decisions in civil or criminal cases to be void.

**DOMESTIC.**—The people of Carson Valley and the neighboring districts, in the western part of Utah, have prepared a memorial to Congress, and elected a

delegate to lay it before that body, asking to be formed into a new Territory, for which the name of Columbus is proposed. A Committee has also been appointed to bring before the Legislature of California, a proposition for that State to cede to the new Territory her claim to all lands lying east of the Sierra Nevada, and thus make the summit of that mountain chain the boundary of California, instead of the 120th meridian of west longitude as now. The Washo Indians, a hostile and warlike tribe, have been committing depredations on the settlers, who have asked aid from the Superintendent of Indian Affairs in California.

The first Governor of the Choctaw Indians under a republican Constitution has recently been inaugurated. Other national officers were installed at the same time, and the Legislature was subsequently organized, and enacted a complete set of laws. All the officials bear English names, but it is not stated whether they are Choctaws or whites. The oath of office was administered both in English and Choctaw.

A treaty between our government and that of Nicaragua has been signed. The transit route is to be protected by U. S. troops, should Nicaragua be unable to do so, in consequence of foreign invasion or domestic insurrection, but the troops are to be withdrawn on the return of peace. The new Nicaraguan Minister, Yrissari, has been recognized by the President.

A case under the Dred Scott decision has arisen in Indiana. It is thus mentioned by the *Indianapolis Journal*:

"Some months ago, Dr. William A. Bowles, of Orange County, brought into this State seven slaves, to be kept here temporarily, and then taken back to Kentucky. After keeping them here for some time he did take them back. In the meantime proceedings were instituted in the Orange County Common Pleas Court against Bowles, charging him with bringing negroes into this State contrary to our Constitution and laws. Bowles defended on the ground that the negroes were slaves, and that he had a right under the Dred Scott decision, to bring them into Indiana. This defence was overruled by the court of Common Pleas; and he was fined forty dollars. From this judgment he appealed to the Supreme Court of Indiana."

F. P. Stanton, Secretary of the Territory of Kansas, has forwarded to the President his official resignation, to take effect on the 31st of next month.

Charles Sumner arrived at Boston on his return from Europe, on the 19th inst. His health is much improved, and he hopes to take his seat in Congress at the opening of the session.

An overland mail line between San Antonio, Texas, and San Diego, California, is now in regular operation. Five mails have been carried to San Diego, the first in 53 and the last in 26½ days. It is thought the time may be still further reduced. The act of Congress establishing an overland mail from St. Louis fixes the time at 25 days, but it is doubtful whether it can be accomplished in that time.

The steamboat Rainbow was burnt on the 21st inst., about ten miles above Napoleon, Arkansas. From fifty to seventy lives are reported to be lost, including all the officers of the boat. The boat, cargo, and all her books and papers are a total loss. The Rainbow was a fine boat, of 487 tons, and was built at New Albany, Ohio, in 1854.

The steamer Republic, arrived at Louisville on the 21st inst., reports that sixteen coal boats were sunk during the storm on the 18th inst., in the Ohio and Mississippi rivers, near Cairo, by which it is estimated that one hundred lives were lost. The boats contained 300,000 bushels of coal, valued at \$30,000, which is a total loss.

*A testimony of Hitchin Monthly Meeting, concerning PHOEBE ALLEN, deceased.*

In our testimony concerning this our late dear and much-valued friend, we desire, in accordance with her own wishes, to express ourselves in few words.

She was the daughter of William and Sarah Lucas, and was born at Hitchin, on the 4th of the Twelfth month, 1769.

When about two years of age, she was deprived by death of her affectionate mother; but in a few years her father married a second time; and often did she express her sense of obligation to her dear father and stepmother for their watchful care in restraining her natural liveliness of disposition and high flow of spirits. Early impressed, also, with religious truth, and submitting to its chastening influence, she exhibited through her long life a striking example of natural vivacity, regulated and restrained by the love and fear of God, and by an earnest desire to devote her talents to his service. Gifted with lively powers of conversation, she was ever watchful to avoid personal remarks, or anything that might wound the feelings or detract from the character of others. Her manners were affable and engaging, and her society was much sought by her neighbors and friends. To the young she was a most improving companion, and her overflowing affection greatly endeared her to them. Kind consideration for the poor, and unremitting efforts to contribute to their improvement and comfort, were likewise remarkable traits in her character.

She first spoke in the ministry in 1797, and was acknowledged as a minister in the year 1800, three years before her marriage with our dear friend Samuel Allen, then residing near Witham, in Essex. This event removed her for about five

years into that neighborhood; but previously to this she had, with a Minute from this Meeting, united with a friend in a religious visit to the families of Friends in Hertford Monthly Meeting. In the prospect of this engagement she made the following memorandum:—"A painful sense how poor I am, and weak in the faith, under the prospect of future exposure, saw something of the necessity of the experimental part keeping pace with outward appearance; and oh! may this sense abide with me, and preserve out of a superficial and forward spirit and its activity, which tend to wound the pure life. And oh! if the Good Husbandman is indeed separating for a portion of work in his vineyard, may the eye of the laborer be to him for direction, that so the work may be effectual and blessed. But it is a day of treading down and deep dismay."

At subsequent periods she was engaged in religious service in various places; but her ministerial labors, which were continued to near the close of her life, were chiefly confined to this neighborhood, in conjunction with her beloved husband, to whom she proved a most affectionate and sympathizing companion. To her children she was a tenderly solicitous and watchful parent.

Her long life of devotedness to the truth, her living faith in the inward manifestations of the Divine will, and her lively concern for the spiritual good of her friends, and for the moral and religious improvement of all around her, have left a sweet remembrance, inviting those to whom she was long known to follow her, as she endeavoured to follow Christ.

The following instructive memoranda were found amongst her papers, but without date:—"Unfaithfulness, disobedience and spiritual indolence will always gradually work a decay of the Divine power in the soul, with the precious anointing that accompanies it; and then uncomfortable, unpleasantness, uneasiness and indeed unhappiness, crowd in from all quarters, from within and from without,—a host of foes,—and our best friend and ally alienated from us. On the other hand, such is the nature of the Divine power, that the more the gift is exercised the brighter it shines, the stronger it grows. Let us, therefore, strive to go on quietly, softly and feelingly, in our own little line of life. The times are poor, and a famine at times seems to threaten in the land.

“ ‘Work out your own salvation with fear and trembling; for it is God which worketh in you both to will and to do of his good pleasure,’ (Philippians, ii. 13),—a Divine agency and man’s co-operation, in which the measure and manifestation of the Spirit, given to every man,—the gift of grace,—will not be received in vain. From this is the Divine awakening and teaching, without which he must remain ignorant of his own sinful and lost state, and indifferent and unbelieving as to the appointed means of restoration, at enmity with the doctrines of the cross and a crucified Saviour.

“ Silent worship and religious meditation, at regular and stated times, in order to be profitable to the mind, require a vigorous and unceasing control of the imagination, which can only be obtained by the most regular and severe mental discipline. This may be considered nothing more or less than exercising individually the Saviour’s injunction, ‘What I say unto you I say unto all, watch;’ and may no professor who desires to call him Master and Lord, shrink from such an essential duty because it points to a standard difficult to attain, and is out of the reach of merely human reason.”

When declining health and a painful affection of the eyes precluded her from the frequent use of her pen, or from much reading, in which she had always taken great delight, and when increasing infirmities rendered her unable to enjoy the society of her friends, she deeply felt and often touchingly alluded to the trial, but desired to bear it with Christian fortitude and resignation.

Her last illness was short, and allowed but little time for much expression, though her faculties were clear, and her mind remarkably preserved in peace. Her faith in her dear Saviour was unabated. At one time she remarked, “If ‘Thy will be done’ be the highest anthem which can be sung on earth or in heaven, my prayers may be in small compass.” Her prayer for patience was mercifully granted; most sweetly and quietly she breathed her last, and, we thankfully believe, was, through redeeming grace, numbered amongst those “who through faith and patience inherit the promises.”

She died on the 2nd of the Tenth month, 1856, and was interred in Friends’ burial-ground at Hitchin, on the 8th of the same; aged nearly 87 years; a minister 59 years.

#### THE GREATEST WONDER IN THE WORLD.

We are surrounded by wonders, and by things which we do not understand; but the greatest wonder in the world to me, is the man, who, with common intelligence, makes no preparation for another world.

The mysteries of nature, profound as they are, and even the higher mysteries of the union of soul and body, and of the being of God, although

they cannot be explained, yet still may be laid at God’s feet in humble faith, but I cannot account for that strangest of all things, a being with common sense, neglecting to prepare for another world. Why, what can the man be thinking of? Where are his senses? Does he not see his friends and acquaintances dying daily, and how does he know but that his turn may be next? What will become of him then? How any man can put his head upon his pillow and go to sleep, not knowing but that he may die before morning, without being prepared, is something that I cannot understand. It seems to me that I could neither eat, drink, nor sleep, until the matter was settled. The idea of a man’s living in this world, dependent upon God for his very breath, and yet never asking God to save his soul, is wonderful.—*Am. Presb.*

#### SAMUEL FOTHERGILL’S CHARACTER AND DEATH.

The annexed account of this eloquent minister of the gospel appeared in the Gentleman’s Magazine for 1773, under the signature of “*A Lover of Truth and Virtue.*”

“To commemorate the virtues of great and eminent men, who have been honorable in their day, is a tribute due to their memory. A tribute which sensible men pay from emotions of respectful gratitude; and from a hope that it may prove an incentive to the living to emulate their virtues.

Of this class the late Mr. Samuel Fothergill, of Warrington, an eminent preacher among the Quakers, may with great justice be ranked. I knew him well, and had the happiness of his occasional acquaintance; I call it the happiness, because I never enjoyed the company of any person from whom I received more real satisfaction; and however diversified with affliction the future part of my life may prove, I shall never remember those hours I have spent with him, but with peculiar pleasure. He was a happy compound of the gentleman and the Christian; the virtues and amiable qualities of each character being admirably blended in him. Graceful in his deportment, easy and affable in his manner, he commanded both respect and love: he possessed natural abilities far superior to the generality of mankind, and improved them to the utmost of his power. Well read both in books and men, his studies did not terminate in barren speculation; but the great truths of religion were deeply implanted in his heart, and beamed forth illustriously in a benevolent and truly Christian conduct.

As a member of civil society he was exceedingly useful, filling up the social and relative duties of life with great propriety. Blameless in his manners, kind, charitable, and ready on all occasions to devote his time and talents to promote the best of all causes, the good of mankind, he lived beloved, and his loss is deeply deplored

by all who had the happiness of knowing his worth.

As a preacher, he was far superior to most who fill up that station. Sound in the important doctrines of the Christian faith, he endeavored to promote them universally, with the greatest energy of language, and the most persuasive eloquence. In this capacity he was truly great; and his greatness received additional lustre from his humility. Although followed by numbers, and courted by persons of superior rank and station, and admired by those of all persuasions, the applause which his eminence justly acquired, did not exalt, but evidently tended to make him humble. He was a person of an enlarged mind, zealous without bigotry, and a steady promoter of universal charity.

In his sermons, it was evident to all his intelligent hearers, that he deeply felt the force of those solemn truths he delivered; and his manner of displaying them was so justly emphatical, that none but the insensible or obdurate could withstand their force, or remain unaffected by them.

He had travelled much, from the most disinterested motives, among his friends in Great Britain, Ireland, and the American Colonies, for the promotion of piety and Christian virtue, and for the advancement of that faith and religion in which he most surely believed, and was so eminent an example."

The following are some of the last expressions of this faithful servant, uttered by him a little before his happy entrance into the joy of his Lord; on the fifteenth of the Sixth month, 1772, the fifty-seventh year of his age, and the thirty-sixth of his ministry.

"Our health is no more at our command, than length of days:—Mine seems drawing fast towards a conclusion; but I am content with every allotment of Providence; for they are all in wisdom—unerring wisdom.

"There is one thing which, as an arm underneath, bears up and supports; and though the rolling, tempestuous billows surround, yet my head is kept above them, and my feet are firmly established.—O, seek it!—press after it—lay fast hold of it.

"Though painful my nights, and wearisome my days, yet I am preserved in patience and resignation. Death has no terrors, nor will the grave have any victory. My soul triumphs over death, hell and the grave.

"Husbands and wives, parents and children, health and riches, must all go—disappointment is another name for them.

"I should have been thankful had I been able to have got to the ensuing Yearly Meeting in London, which you are now going to attend, where I have been so often refreshed with my brethren; but it is otherwise allotted; I shall remember them, and some of them will remember me. The Lord knows best what is best for us; I am content and resigned to his will.

"I feel a foretaste of that joy that is to come; and who would wish to exchange such a state of mind?"

"I would be glad if an easy channel could be found to inform the Yearly Meeting that I have lived, as I shall close, with the most unshaken assurance, that we have not followed cunningly devised fables, but the pure, living, eternal substance.

"Let the aged be strong, let the middle aged be animated, and the youth encouraged; for the Lord is still with Zion; the Lord will bless Zion.

"If I be now removed out of his church militant, where I have endeavored in some measure to fill up my duty, I have an evidence that I shall gain an admittance into his glorious church triumphant, far above the heavens.

"My dear love is to all them that love the Lord Jesus."

#### THE PERFECT WORK OF PATIENCE.

Patient!—not indolent, not careless, not indifferent. Don't mistake the want of earnestness and interest in your work, for the growth of quiet trustfulness in God. Too many profess to be waiting *for* God, who do not wait *on* Him by importunate prayer and diligent endeavor. It is possible to lose the sense of our own responsibility in a supposed submission to God's will and way. The husbandman has "long patience" for the precious fruit, but he is not unconcerned about its appearance, nor satisfied although it should never come.

But while deeply solicitous for success, and unwearied in your efforts to secure it, you must "let patience have her perfect work," and not cast away your confidence which hath great recompense of reward.

How soon that "recompense of reward" may be yours, He only knows who will bestow it. But oftentimes it is much nearer to us than we, with our weak faith, are willing to believe. One Sabbath a sad-hearted teacher went to his class as usual. He was in a very desponding state of mind; just inclined to abandon his post in utter hopelessness of ever doing any good there, for no serious impressions seemed to be made on the minds and hearts of his children. They came week after week, and sat in their places with the same impassive appearance; going mechanically through their lessons, and seldom manifesting the slightest interest in response to his earnest appeals. And his experience was often in close sympathy with that of the disappointed prophet: "Then I said, I will not make mention of the Lord, nor speak any more in His name; but His Word was in mine heart as a burning fire shut up in my bones, and I was weary with forbearing, and I could not stay."

So he spoke to them once again; and one of his remarks in conclusion was to this effect, that "many came just to the door of heaven who will

never enter in." That very evening several of those children came to him, without any knowledge of one another, to ask if there was hope for *them*? and he found that more than one had for some time past been under deep convictions of sin, and were seeking that peace which Jesus alone can give! His desert was beginning to smile!—*S. S. Journal.*

For Friends Review.

LETTER FROM THE SOUTH OF FRANCE.

Congenies, Dept. de Gard, France, 10th mo., 1857.

MY DEAR FRIEND,—Having long wished to pay a social visit to the few Friends who live in the South of France, I left home a few weeks since, accompanied by my wife and one of her sisters, to commence the journey. Landing at Rotterdam, we passed through the amphibious plains of Holland, partly by steamboat, partly by railway, to Antwerp and Brussels. After a short stay in those cities we proceeded onward to the Rhine, which river we navigated for two days amidst its loveliest scenery, and only left it to enjoy scenery equally grand and pleasing on the German side of the stream, extending from Heidelberg to Basle. At the latter town we visited the Missionary establishment, which has proved a means, under divine Providence, of sending out many earnest-minded laborers into the Christian field, some of whom I have personally known, and was gratified in meeting there, as a visitor like ourselves, a merchant from Petersburg, who had rendered services to our English Friends when at that capital, who was well acquainted with Daniel Wheeler, and who stood by the bedside of his dying wife, and closed her eyes in death. I asked one of the tutors of this large institution whether the young men paid for their board and instruction. They pay nothing, he said, they receive all freely. How then is the seminary supported? We draw on a bank of faith, he replied: God knows our wants, and supplies all our need; we are helped by friends in many nations; we would not exchange our foundation of continual dependence on divine bounty, for the richest endowment which the millionaires of Basle could afford to make for us. We were much pleased at the apparent piety and zeal thus manifested, and at what we saw of the young men who were pursuing their studies, and the school for the missionaries' children. If any of our American friends, in their visits to the continent of Europe, should stop at Basle, I would recommend them to call at this interesting establishment. From Basle we went to Lucerne, traversed its lake and surveyed its mountains, and then passed on to Geneva, Chamouni and Mont Blanc. We had the great satisfaction of seeing this giant of the Alps with his head uncovered: the clouds, after an interval of doubtful weather, had passed away, and his crown of ice and snow reflected the beams of a rising, setting and noon-day sun. Having now

seen two of the sublimest mountain heights of the world, Mont Blanc and the Peak of Teneriffe, I shall be quite content without seeing more. Switzerland has both beauty and grandeur, and some of its scenes will remain impressed on our minds whilst memory lasts.

In coming to this part of France, and among those who profess our religious principles, and to a small town where a Friends' meeting is held, we feel it like something of a home to us after our short travel. Congenies, though a village only in point of population, as it has but a thousand inhabitants, is built like a town, of stone houses clustered together, without gardens between them, and looks on the whole somewhat rude and dismal.

From an eminence near, called "la montagne aux moulins," we have an extensive prospect of a plain stretching from Beaucaire, seventeen miles east of the city of Nismes, to the mountains of Certe beyond Montpellier, thirty-six miles to the south, and as far as to the shores of the Mediterranean. The first impression of this view to the uninstructed eye of a stranger is that of a poor country without timber trees, craggy and rude, covered with dwarf bushes and having but little cultivation; continued surveys, however, with a little reflection, serve to remove the illusion, and to unfold a land rich in produce, and supporting a large population. The trees are dwarfish, but they bear an abundance of fruit, and even the rocks nourish them. Here the vine yielding largely of the grape, the fig tree loaded with delicious figs, the olive abundant in oil berries, the almond, the chestnut and the pomegranate, flourish delightfully, and cover hill and plain. The rocky surface of the ground yields aromatic herbs, and in treading upon them we are often regaled with their rich odor. It is a country, in fact, much resembling Judea in its productions, and I have no doubt much resembling it also in the grand outlines of nature: "honey is poured out of the rock, and oil out of the flinty rock;" and grapes may be found occasionally in large clusters, not like those of Eshcol, but still large and goodly. The climate is good, and field operations rapidly succeed each other: "the plowman overtakes the reaper, and the treader of grapes him that soweth seed." The mountains and the rocks, the fruitful earth, and the desert places, all remind us of the Holy Land; and the numerous towns and villages, such as are called cities in Scripture, built of stone, heavy in outward appearance, and with roofs, though not flat, yet nearly so, deepen the impression, and lead us to believe that we look on a land such as Abraham, Isaac and Jacob lived in, and where our Saviour journeyed and his Apostles preached. Numerous texts of Scripture receive here a practical illustration: the shepherd goes before his sheep; he calls them by their names and they follow him; the treader of the wine press stains his garments; the mulberry

trees carry us back to the days of King David; the beautiful fruit of the pomegranate shews us the adornment of the High Priest's robe,—“a bell and a pomegranate—a bell and a pomegranate, round about the robe to minister in.” Near the towns and villages are found desert places, such as those where our Lord often taught his disciples, and where the multitude were fed. There are here few isolated farm houses or cottager's dwellings; almost all the people, rich and poor, live in towns, and go out to cultivate the land and bring in the produce; the towns are small and near together, just as they were in Judea and Galilee; and the stranger might almost say to himself, here are Bethany, and Bethlehem, and Emmaus; or there is Nazareth and there Capernaum.

This is the country in which the Protestants of France are most numerous and where those among them who go by our name as Friends almost exclusively reside. These latter are few in number and simple in their dress, habits and manner of living; they nearly all of them cultivate the ground, gather in wine and oil and a little corn, or rear silk worms. Some of them by these occupations obtain money, and invest it as it comes to their hands in the purchase of some of the numerous small plots of ground into which the vine and olive districts of France have become subdivided. A small proprietor of fifty acres will have, perhaps, fifteen or twenty fields, some of them two or three miles apart from each other; all the produce, therefore, to be under the eye of the owner must of necessity be brought to the home-stall; that home-stall is his house, where a stable and sheds and dung yard are to be found, and where in their season the grapes are turned into wine, and the olive press yields its oil. It is a great pleasure to spend a few days or weeks amongst such a people when operations of this sort are going forward, and to eat of their delicious ripe grapes and figs as we do from morning to night. It is good also to attend their small religious meetings, for Friends being few in number and much scattered, their meetings are all of them small. We have now been at every place where a meeting is usually held, and have sat down in these places with the few who come together. The largest meeting is Congenies, at which place we met forty or fifty persons, many of them not members; at St. Gilles, twenty miles distant from it, we met about fifteen; at Fontanes, seven miles off, the same number; at St. Hyppolite, at the foot of the Cevennes mountains, thirty-three miles from the city of Nismes, ten or twelve; and at Nismes itself, including the girls' boarding school, not exceeding thirty; of whom only about ten were members of the Society.

The total number of registered members in France is, of adults, twenty-five men, fifty-six women, in all eighty-one; to which must be added those under age, twenty five, making a total of

one hundred and six persons. There are also a few descended from Friends, or connected with them, who sometimes attend their meetings for worship; and some who call themselves Friends, and who say that they would not on any account change their religion for another; but who, nevertheless, never attend any place of worship, and appear to have no religion whatever. The number of Friends has gone on gradually diminishing for many years past: a correspondence is kept up between their two months' meeting for discipline and our Meeting for Sufferings in England, and numerous visits have been paid them by deputations, and by ministers under religious concern, both from your country and ours. They have two acknowledged ministers in this neighborhood, and one in the department of Drome, who sometimes comes to visit them; and they have among them a few, at least, who love the truth, and who desire to serve their Lord. Candor, however, compels me to say, and I lament it, that religion seems to be at a low ebb in these parts among Protestants in general, and that our poor Society partakes largely of the depression. Some Protestant ministers encourage the belief that gospel principles are gaining ground; we trust it is so, and we sincerely hope that our Friends in France may share in any revival that may yet prevail. Our Christian testimonies are not upheld here as they should be, and they are too precious to be lost. There is evidently an open door for English Friends and their ministry among the Protestants here in the South. The pastors of congregations willingly lend us their meeting houses when solicited to do so; and it has been cheering to us to learn the satisfaction expressed by some of them at the late religious labors of a public kind of our dear friends Eli and Sibyl Jones, and E. P. Gurney, and the estimation in which the services of some other of our friends are held who once labored in these parts.

But the French are a volatile people, and but little disposed to embrace Quaker principles, however willing they may be to hear what a stranger has to say. If they do not love war, they admire military parade and pomp and show, and what is denominated martial glory, and are addicted to the frivolous pursuits of pleasure. France is rich in land, rich in the produce of its fields and rocks, rich in science and in some other departments of intellectual culture, but poor, very poor, it is to be feared, in genuine piety, and far removed from that righteousness which exalts a nation. The Bible colporteurs are doing a good work in the land, and this with other means in existence for the improvement of its people may in time bring about a reformation. But how distant that time seems to be! It is very disheartening to an enlightened Protestant to go through such a country, and to see and hear what passes around him: the moral world would seem to be a wilderness. Excuse these rambling re-

marks, prompted by the occasion. The visit to our friends has been pleasing and grateful to us, and we now turn our steps homewards by way of Thoulouse, Bordeaux and Paris. With love to you all, I remain

Thy affectionate friend,

JOHN CANDLER.

JUSTICE, CHARITY, HUMILITY.

The subject of differences among brethren has always been a delicate one. These differences have always been exaggerated. If we could but behold the number of those who are seeking to promote the same holy end—burning with love and zeal for the same blessed cause, and at the same time appreciate the blessedness of Christian unity and fellowship, we should be led to conclude that no sacrifice of personal feeling and no degree of spiritual wrestling would be too great; no trial of our faith and patience too humiliating, and no labors too arduous, which might be required for its preservation or restoration. We would then be engaged to look at individuals on the right, not on the wrong side. We would understand and appreciate one another. We would forget wrongs and injuries done to ourselves. Oh, if we would only do this, in humility, we must think less of ourselves, and more of the sentiments and feelings of others; we must avoid extreme statements, as to the desires, designs and practices of others, and thus keep our own hands free and clean. We must not charge our brethren with wilful misrepresentation, nor impugn the motives of those whose lives and conversation give at least equal evidence with our own, that they are endeavoring to obey the voice of the Spirit.

MOTHERS.

Let us state a case, or rather a couple of them in contrast. There is a minister of the gospel, well known in the temperance world—well known to us. He has often pleaded the cause both with tongue and pen, and his advocacy by both has been highly valued, and as greatly useful. In temperance labors abundant, he is no less zealous as a minister of Christ. His temperance is of long standing. When but a boy he joined the ranks of the old temperance movement, and continued steadfast to its principles till it merged in the more advanced and consistent one of abstinence. Amongst the first to join this later movement, he has adhered to it, till now it is honored by many who despised it, and he has honor on account of it from many who, at one time, were not slow to say he had disgraced himself by connexion with it. His life has been one of continued usefulness, and is so still. He is at work for God and man, finding therein the highest enjoyment; and nothing gives him greater pleasure than evidence that his labor has not been in vain in the Lord.

Nothing cheers him more or stimulates him more to it than the confidence that it shall not be in vain.

He has seen several of his youthful companions fall victims to intemperance; he has had to deplore the dishonor and deposition, on account of the same, of many brethren in the ministry around him in every denomination; and he blesses God that, in his early years, he was led to cast in his lot with those who neither touch, taste, nor handle that which blights so many in the spring time of life, and drags so many from spheres of usefulness to degradation and death. He has the conviction strong within him that, under God, he owes his safety from the fate of others to his connexion with our movement. He never hesitates to tell those he addresses that a regard to that safety, as well as a wish to benefit others, keeps him steadfast in his adherence to the cause. He has met with many temptations in his upward course; and, with a social disposition and powers of pleasing, he ran not a little risk of being led astray, had he in any degree accorded with the drinking customs of society. But his being an abstainer has been the means of keeping him from falling by what has been the ruin of many such as he; and, sensible of this, it gladdens his heart to help its advancement.

Now, Mothers, mark this, *He owes his temperance to his Mother.* It was her influence, affectionately and judiciously used, which led him, as a boy, to sign the temperance pledge. It was through her instruction he was able to do this intelligently. It was her example and counsel that so strengthened him in his adherence to it, and he is not slow to acknowledge his obligation to her, who rejoiced in his onward and upward progress toward that office to which, as another Hannah, she had dedicated her infant Samuel; and the memory of that mother is dear to him, for this amongst many things besides, that she led him so early to do that which he is conscious has been to him a valuable safeguard, and has helped him not a little in doing good in his way to the ministry and since his entering upon it.

In contrast with this there is a case occurs to us, of a young man, now gone. He was one of high promise, one of no common abilities, and one whose prospects were of the most favorable kind. His parents, who occupied a superior position in society, expected of him, and not without reason, that he would be an honor and a blessing to them; and long was it ere they would believe otherwise of him. They were compelled at last to acknowledge that he was a drinker, (if not a drunkard in the fullest sense of the word,) and on the way to ruin. From bad to worse he went, spending their means, paining their hearts, and pursuing a course of wickedness. At last they were glad to get him shipped off, as many a spendthrift has been, to one of our distant

colonies. They heard little of him afterwards till they were informed of his death. Often their minds went across the wide waters to his place of exile, and with sorrow thought they of their darling prodigal son. We know not that self-accusings made their thoughts more sad and bitter; but if not, it well might have been so. Drink was in common use in his father's house, and he often got, as the boy, the sip sweetened by his father with the sugar, and rendered more sweet by his mother's smile. It so happened, that frequently at that table sat the youthful abstainer mentioned above, and many a banter had he to stand for his temperance principles, a bantering in which that mother had never joined, if she had foreseen the fate of her much loved Benjamin. To that mother, as a widow, the information came of his death, and she had sorrowed much as one who had no hope, till tidings reached her that her long lost son had for two years previous to his death been a total abstainer from all that intoxicates. There was no disposition to think or speak lightly of the abstinence movement then. Through it she felt she had got the only hope she could entertain that Benjamin had been turned from the error of his ways, and perhaps brought to the Saviour, and that she might meet him in the better land. Need we ask you, mothers, which of these cases you should have liked to be yours, which of these courses you would prefer your sons should follow? We cannot promise you that any of them shall be ministers of the gospel, or shall occupy a sphere above the mass of those in your present rank. But this we can say, that the adoption of temperance principles and adherence to them will tend to keep them from conduct which would hinder their advancement in whatever position they occupy, and put them in a way of rising, by God's blessing, above the condition in which they now are. Temptations abound on every hand: they are subject to exposure to these, and in danger of falling before them, and there is no human safeguard equal to the practice of our principles and union with us in avowed adherence to them. Such has been the means of saving many a one. Parallels to what we have given, if not in actual social condition, yet in the leading circumstances, are not uncommon. There is no one but could point to instances in which abstinence has proved a safeguard, and cases in which the want of it has been deeply to be deplored.—*Bristol Temperance Herald*.

#### THE MAIDEN FISH-TAMER.

A few years ago I read in a newspaper that the fishes in a certain pond had been tamed, and brought back again, at least in some degree, into the original association with humanity. Being at leisure at a certain time, and having some curiosity to ascertain the truth of this statement, I embarked in a boat in Boston

harbor, and in the boat I went down to Hingham. It was near night. Next morning, and quite early in the morning, I went towards the pond, which was said to be the theatre of this interesting and unprecedented state of things. I recollect that I went through a long piece of woods, which was without habitations, and which, in its tranquillity and beauty, was favorable to benevolent dispositions and thoughts. The early sunbeams were playing with the dew-drops; and the birds were singing in the branches. After passing through the woods and coming in sight of the pond of water, I went to a farmer's house not far from it. I knocked, and a good-looking woman, with that intelligent and benevolent aspect which marks the women of America, came to the door. Making such apology as I was able for a visit so early, I remarked that I had come for the purpose of seeing the fishes in the neighboring pond, which were said to be tamed. Readily accepting my explanations, she pointed to a place on the brink of the water, and said that one of her children would soon come down there.

I had not stood there long before a little girl, apparently anxious not to detain me, came running down. She seated herself on a rock on the shore and looked into the mirror of the morning waters, which reflected back the delightful image of her innocent beauty. She called to the fishes; calling them sometimes by the names of their tribes and sometimes by particular names which she had given them. There was one, a large one, which she called Cato. But Cato was in no hurry to come. She said it was rather early for them. They had not yet left their places of slumber. But repeating still more loudly the invitation of her sweet voice, they began to make their appearance. The smaller ones came first, and then the larger ones of many varieties; and at last Cato, who was a sort of a king and counsellor in this finny congregation, came among them. Delighted with this renewed visit of their virgin queen, although they seemed to be conscious it was rather early in the morning, they thrust their heads above the water; and she fed them from her hand. And I fed them also.

Observing something peculiar at a little distance in the water, I was surprised to see two turtles making their way towards her. Her voice of affection had penetrated beneath their dark hard shells. And I noticed that they came with great effort and zeal, as if afraid of being too late at the festival of love. One of them, as soon as they reached the shore, scrambled out of the water, and climbed upon the little rock beside her. And she fed them both. I shall not easily forget this interesting scene;—this little episode of millennial humanity.

It will not be considered surprising, I hope, that I entered into conversation with this affectionate and charming girl. In the course of our

conversation, she told me she once had a brother, a little older than herself, who had aided her in taming the fishes. But he was now dead. This too touched my feelings. How sad it was, thought I to myself, for such a sister to part with such a brother. But she spoke of her brother in such a way, that his benevolent spirit seemed to be not far distant; but to fill the air and to be with us and around us where we stood.

Oh maiden of the woods and wave,  
With footsteps in the morning dew!  
From oozy bed and watery cave,  
The tenants of the lake who drew,  
Thy voice of love the mystery knew,  
Which makes old bards and prophets true.

They tell us of that better day,  
When love shall rule the world again;  
When crime and fraud shall pass away,  
And beast and bird shall dwell with men;  
When seas shall marry with the land,  
And fishes kiss a maiden's hand.

The iron age has done its best  
With trump and sword and warriors slain;  
But could not tame the eagle's nest,  
Nor lead the lion by the mane;  
With all its strength and all its woe,  
There was an art it did not know.

'Twas fitting that a maid like thee,  
In childhood's bright and happy hour,  
Should teach the world the mystery  
That innocence alone has power;  
That love the victory can gain,  
Which is not won by millions slain.

Oh man, if thou wouldst know the art  
The shatter'd world to reinstate,  
Like her put on a loving heart,  
And throw away thy guile and hate.  
A maid shall tell thee how 'tis done,  
A child shall show the victory won.

*Upham.*

## FRIENDS' REVIEW.

PHILADELPHIA, TWELFTH MONTH 5, 1857.

**FRIENDS IN FRANCE.**—The letter with which we have been favored by our dear friend John Candler, and which is presented to the readers of the Review this week, gives a recent, but perhaps not a very hopeful account of those who profess with Friends in the South of France. Many visits have been paid them at various times by English and American Friends, and much interest has been felt for their welfare and the education of their children. The first visit was by Sarah Grubb, George Dillwyn, Mary Dudley and others, in 1788.

It appears that this small body of professors had existed long before under the name of *Inspirants*, having a simple religious organization and discipline. Wm. Savery relates that their first knowledge of Friends in England arose from

a public notice which appeared in the Paris newspapers, requesting the owners of a vessel and cargo, which were taken by the British in the war with America and France, to come forward and claim their respective proportions, as a Friend who was part owner of the ship which captured the French vessel could not hold their property; it being inconsistent with his conscientious scruples.

It seems that they have been placed in a position and are surrounded by influences unfavorable to a faithful support of some of our distinguishing views; yet as a number of worthy and useful members have been found among them, it is to be hoped there will be many more such, and that the kind attention and aid of English Friends will not be withheld from them.

**MEMORIALS.**—Having been kindly furnished by a Friend in England with a pamphlet containing the Memorials, read in the last Yearly Meeting of London, concerning deceased ministers, we copy one of them this week, intending that others shall follow it. Similar testimonials issued by New York Yearly Meeting have been received, and will be inserted, respecting several faithful servants of the Lord, whose labors were long a blessing to the church, and from whose lives and example deeply instructive lessons, as well as encouragement and comfort, may be derived.

**AID TO WOMEN.**—A society has been formed in this city, called the "Industrial Women's Association of Philadelphia," with the object of aiding those females who desire to go to the country or to the West to obtain employment. Large numbers of industrious women have been thrown out of employment, and it cannot but be anticipated that during the winter which has already commenced with unusual severity, many will be brought into distress. It is believed that the services of women are much wanted in families in various parts of the country, more particularly in the West where provisions are abundant and cheap.

The Executive Committee of the Association ask that Societies may be organized for the purpose, or that individuals will furnish them with the number of females for whom employment may be found in the capacity of house-servants, sewing-girls, nurses, or any other engagement;

and the price of wages per week, with the board included. They desire prompt action; letters to be addressed to J. M. Church, Secretary, No. 116 South Seventh street, Philadelphia.

MARRIED, at Friends' Meeting, Bloomfield, Parke County, Indiana, on the 21st of 10th mo., ABRAHAM HOLLADAY to AGATHA OUTLAND, both members of Bloomfield Monthly Meeting.

—, At Friends' Meeting, at Whitewater, Richmond, Indiana, on the 4th of 11th mo., BENJAMIN JOHNSON, JR. to ELIZABETH, daughter of Matthew and Ruth Barker, of the former place.

—, On the 11th ult. at Friends' Meeting, Hope-well, Vermillion County, Indiana, DAVID TRIMBLE to ELIZABETH H., daughter of Aquila and Lydia E. Branson, all of that place.

—, At Friends' Meeting, Chappaqua, Westchester Co., N. Y., on the 12th of 10th mo., KING RYDER, of Ulster County, to AMY T., daughter of Henry Hunter, of Mount Pleasant.

—, On the 23d of 9th mo. last, at Friends' Meeting, Fairfield, ZADOK MILLER, of Clermont Co., Ohio, a member of Newbury Monthly Meeting, to EMILY, daughter of John and Rebecca Hodson, of Highland County, Ohio.

—, At Friends' Meeting, Harden's Creek, 9th mo. 24th, 1857, WILLIAM CHERRY, of East Monroe, to E. ELLEN, daughter of James and Sarah Hadley, all members of Fairfield Monthly Meeting, Highland County, Ohio.

DIED, at her residence on Sandy Creek, Randolph County, N. C., on the 19th of the 4th month, 1857, RUTH HINSHAW, (widow of Ezra Hinshaw,) a member of Cane Creek Monthly Meeting of Friends, in the 98th year of her age.

—, On the 14th of 3d mo. last, at his residence, Vermillion County, Indiana, WILLIAM HENDERSON, in the 50th year of his age, an esteemed member of Vermillion Monthly Meeting.

—, On the 14th ult., at her residence near Martinsville, Clinton County, Ohio, MATILDA, wife of Pleasant Hockett, in the 20th year of her age, a member of Newberry Monthly Meeting. She bore her sufferings with much patience, and near her close expressed that she was willing to die if it was the Lord's will, and added, that her robes had been washed in the blood of the Lamb.

—, After a short illness, on the 11th of 10th mo. last, at the residence of his parents in New Martinsburg, Fayette County, Ohio, ISAAC PERDUE, aged 26 years, son of Gershom and Abigail Perdue, a member of Fairfield Monthly, and Walnut Creek Particular Meeting. Although his life from childhood had been apparently innocent, he was very sensible he had been lacking in his duty in serving his Creator, and said if he was raised up again he would be more faithful the remainder of his days in serving his Lord. He spoke with much interest of the love, mercy and power of the Saviour. He was favored with resignation to the divine will, and exhorted those who took leave of him, to do right and prepare for Heaven. Near the close he bid his parents, brothers and sisters respectively, an affectionate farewell, told them he was going to Heaven, and desired them to retire to stillness, and after a time of silence he said, "a plain coffin," and soon quietly passed away in much peace.

—, Suddenly on the 5th of the 11th mo. 1857, at his residence in Fayette County, Ohio, JOHN DOSTER, in the 53d year of his age, a member of Fairfield

Monthly and Walnut Creek Particular Meeting. His death was caused by the crush of his dwelling which was entirely destroyed by a tornado. The deceased had not long since been received into our Society by request. We have a comfortable hope that he who saw proper to remove him from time in an instant, was mercifully disposed to take him to a mansion prepared for the righteous.

DIED, at her residence in Ledyard, Cayuga County, New York, on the 16th ult., SUSANNA MARRIOTT, in the 89th year of her age, a much beloved and highly esteemed member of Scipio Monthly Meeting, and widely known to Friends in this country during many years, for her labors as a successful teacher, both at New York city, and afterwards in Cayuga County. Her mental faculties remained unimpaired and vigorous nearly to the last; and her purity of life and her unaffected and fervent piety leave no doubt with her friends that she has received the inheritance of the righteous.

—, On the 23d of 9th mo. last, at the residence of her sister Rachel C. Smith, after a lingering and painful illness, LYDIA BURROUGH, in the 65th year of her age; a member of Philadelphia Monthly Meeting for the Western District. The agonies of her disease were borne with a Christian fortitude, in the feeling that they could be counted as nought in comparison with the sufferings endured for her by her crucified Redeemer, and in the blessed assurance that they would end in the joy laid up for the believer through His atoning merits and intercession.

—, On the 26th of 9th month last, at her residence in Philadelphia, ANNA MORTON, in the 68th year of her age; a member of the Western District Monthly Meeting. In recording the decease of this dear Friend, we are reminded of her unobtrusive worth, blameless life, and remarkably guarded conversation. Her sincerity of character endeared her to those who were privileged to have intercourse with her, and her patience under suffering gave evidence that her strength and support were based upon the only sure foundation. She was strongly attached to the principles of the Society of which she was a member.

—, On the 11th of last month, at her residence in Germantown, ELIZABETH PEARSALL, in the 82d year of her age, widow of the late Robert Pearsall, and a member of the Western District Monthly Meeting.

Having been blessed with good health until within the last few years of her life, she diligently used the talents given her. She was a member of the Committee of Women Friends who superintended the "Shelter for colored orphan children," and had been a member of the Ladies' Committee of the House of Refuge in New York, where she formerly resided, and also of the one in this city for some years after its establishment. Regardless of her personal ease, she gave her time and services cheerfully to the sick as long as her strength permitted, and was exemplary in attending our religious meetings. Humility, which was a marked trait of her character, prevented much expression during a long and suffering illness, throughout which she was mercifully preserved in great patience, bearing calmly and with Christian resignation what her Heavenly Father saw meet to dispense to her.

*"What fruit had ye in those things whereof ye are now ashamed."*

Let the voluptuous person say it out upon his death bed what pleasure or profit doth then abide with him of all his former sinful delights. Let him tell if there remain any thing of them all, but

that which he would gladly not have to remain, the sting of an accusing conscience, which is as lasting as the delight of sin was short and vanishing. Let the covetous and ambitious declare freely, even those who have prospered most in their pursuit of riches and honor, what ease all their possessions or titles do then help them to; whether their pains are the less because their chests are full, or their houses stately, or a multitude of friends and servants waiting on them with hat and knee. And if all these things cannot ease their body, how much less can they quiet the mind. And therefore is it not true, that ill pains in these things, and the uneven ways into which they sometimes stepped aside to serve those ends, and generally that all the ways of sin wherein they have wearied themselves, were vain rollings and tossings up and down, not tending to a certain haven of peace and happiness? It is a lamentable thing to be deluded a whole life time with a false dream.—*Leighton.*

#### PAPER ON TEMPERANCE.

Read before the British Association.

We are glad to find that during the late meeting of the "British Association for the advancement of Science," held in Dublin, James Haughton, Esq., read an important paper before its statistical section, on "the necessity of prompt measures for the suppression of intemperance and drunkenness." Mr. Haughton commenced by observing—

"I do not profess to bring much that is new under your notice, but I hope to satisfy you that no further time should be lost in getting rid of the main cause of most of the crime and misery we have to contend against. Mr. G. R. Porter brought this question under the notice of the Association in 1850. I would respectfully ask, what has our body done in the interim to relieve our country from the sin and burden of intemperance? *Facts and figures are valueless unless we use them; our object is not to talk and separate, and do nothing farther to promote human happiness.* The intelligent men I have the pleasure to address should throw themselves heartily into this noble work, and strive to make the knowledge they acquire the rule of life. They should spread that knowledge of the poison alcohol which science teaches, and call on mankind to respect her teachings on this as on all other subjects. Education, and not prohibition of the liquor traffic, is said by many to be the proper means of repressing the evil. We need both instrumentalities."

The paper is replete with statistics and authorities, judiciously arranged and forcibly urged, which, we regret, our space forbids us further to quote.

"I conclude, gentlemen, (says Mr. Haughton,) by asking you, am I out of place, in an association such as I have the honor to address, surrounded by a body perhaps as enlightened as can

be found in the world—am I, I ask, out of place in entreating you all to cast yourselves energetically into the ranks with those who are laboring to place the happiness of mankind upon a surer foundation by the overthrow of those drinking customs which all acknowledge to be productive of evils incalculable? No body of men should more anxiously take this question into consideration than the members of the 'British Association for the Advancement of Science.' Science proves that alcohol is a poison; multitudes use it without being at all aware of its deleterious effects. A Maine liquor law, supported by public opinion, combined with moral suasion, would secure the desirable end all have in view."—*Bristol Temperance Herald.*

#### LETTER FROM THE PROTESTANTS OF FRANCE ON SLAVERY.

The undersigned have been requested by the Protestant Christians of France to lay before their brethren in the United States the following appeal. The original document is in our possession. A copy of the appeal was sent to every Protestant church in France. This, when signed by the officers of the Church, was returned to the Committee in Paris who had the matter in charge. When all the signatures had been obtained, the several copies of the address were bound in volumes, and these have been forwarded to the care of the subscribers. The signatures number five thousand four hundred and forty-three. They include the names of the Pastors, Elders and Deacons of all the 'Reformed' churches of France; the Pastors and Elders of all Evangelical churches constituted upon the Augsburg Confession; and the Pastors and other officers of all the Independent Churches, *i. e.*, those Congregational, Presbyterian, Methodist and Baptist churches that are independent of the State.

The undersigned have had no agency, not even by way of suggestion, in the preparation of this appeal, and are simply the selected agents of the Committee at Paris to bring it to the knowledge of American Christians. They respectfully request the editors of newspapers, both religious and secular, throughout the country, to aid in giving it the widest circulation.

ALBERT WOODRUFF, 44 Front St.

JOSEPH H. THOMPSON,

Pastor of the Broadway Tabernacle Church.  
NEW YORK, Sept. 26, 1857.

*The Protestant Christians of France to all their Brethren in the United States of America; Greeting and Peace through Jesus Christ:*

BRETHREN:—We come to you with a few words which we have so long held back that they weigh heavily upon our consciences. Yes, for a long time past—and we ought to have told you of it—we have followed you through the great and solemn crisis to which your noble country is

a prey; we make your griefs and prayers our own. Forgive a silence which, had it continued, would, in our view, have become a want of faithfulness.

A question glowing with interest meets us whenever we turn our thoughts toward the other side of the Atlantic—a question upon which recent events have concentrated the attention of all Europe—a question, in fact, so nearly allied to the honor of Protestantism, that we may no longer pass it unnoticed. SLAVERY, (is it necessary to name the word?)—this is the subject upon which we would now open our hearts to you.

Do we come before you as judges, as accusers? By no means. Our only aim is to make known to you our thoughts, our unanimous conviction, so as to encourage some, charitably to warn others, and openly to refute the calumnies brought against our common faith.

Do you know what language daily greets our ears? 'Protestantism,' they say, 'and SLAVERY agree wonderfully well. In the United States this odious institution numbers many Christians amongst its advocates; they preach and pray in its behalf, they labor to extend its territory. And this Slavery, for which they thus act, is the selling of families by retail; the breaking up of marriage; the yearly recruiting of the market with men, women, and children, picked one by one from the plantations of Virginia and Kentucky: it is, in short, a monstrous thing, not merely revolting to pious minds, but at variance with the first elements of humanity. Nevertheless, the Protestants of America accept this state of things; they deem it in accordance with the Gospel, and the Protestants of Europe undoubtedly think as they do, or they would have vented their feelings in one strong outcry of grief and disapprobation!'

Brethren, we must not give our enemies occasion for such language. As for us, we feel the necessity of proclaiming abroad, that there is not amongst us one single Christian who has been able to reconcile with the law of love and holiness, the right of possession in one man over another, the making merchandise of immortal beings, the barbarous breaking up of family ties, the suppression of marriage, the unavoidable increase of immoral relations.

We know that under the economy of the Old Testament—an economy which no longer exists—Slavery as well as Polygamy was tolerated; but tolerated with such restrictions that the law of Moses had almost suppressed it. We know that afterwards, at Rome and in Greece, the Apostles, brought face to face with slavery, (and this slavery was widely different from yours, since everything in the laws of those heathen nations favored emancipation,)—the Apostles, we say, faithful in this to their principle of never interfering with the civil law, did not and could not pronounce a decree of legal abolition, since such

a proclamation on their part would have rendered impossible the spiritual revolution for which they labored, by transforming it into a social revolution. But we also know, that at the same time they spread throughout the whole world fruitful principles, whose development must everywhere overthrow that deplorable institution known under the name of slavery.

Do not imagine that we fix our thoughts upon a few exceptional cases of cruelty, or that we deny the kindness and gentleness of many a slaveholder. We say that, independently of the cruelty of some and the kindness of very many masters, slavery, such as it inevitably is, such as your laws and official declarations define it to be, is a most terrible calamity.

Do not think either that we pretend to exalt ourselves above you. Our own evils are great, and we may not be proud. Who knows whether, if situated as slaveholders are, we would not yield to the same influences?

Your difficulties are very great; not to make allowance for these would be unjust. Nothing short of Christian faith can triumph over them. But faith will work miracles. Has it not, in spite of everything, already secured the abolition of English slavery? Victory with you will be much more difficult; it will also be much more illustrious. It lies in your power to render to the cause of the Gospel, to the cause of Protestantism, the most signal service they have received for ages.

Believe us, we feel for you, for your honor, for your country, a Christian jealousy. Your trials and your success will be our success. We need to see you great and honored. When we see the respect and admiration once commanded by the United States daily on the decrease; when we see their enemies lift up their heads, and joyfully point to the rock upon which, in their opinion, America will wreck their fortunes, we are seized with bitter grief. And what? Shall so much of true liberty, so many noble examples, so many generous purposes, so many Christian deeds, disappear behind one monstrous scandal—the plans for the triumph of American Slavery?

*Scandal* is the word! Our age, you may rest assured, will not bear with it. One can easily understand that States in which slavery already exists cannot rid themselves of it in a day;—but to spread the leprosy into other territories; systematically to plan the extension of the disease; to take the slavery in adjacent countries under one's protection; to affirm that the abolition of slavery in Cuba would be equivalent to a declaration of war,—this is what no human conscience can reconcile itself to; this is what should be stigmatized without mercy.

To persist in this line of conduct would be to rush into ruin, to give a legitimate subject for triumph to whoever envies and deplores the gigantic prosperity of the United States, to whoever seeks for a pretext that will enable him to repre-

sent the advances of their liberal and Protestant flag as a public misfortune.

You do not wish to give the enemies of the Gospel, the enemies of liberty, so sad a reason for rejoicing. You do not wish to grieve the Spirit of the Lord, nor abuse his forbearance.

God is aware of all the obstacles that lie in your path. He will not require of you more than you can do. Whatever He shall ask of you, He will give you strength to accomplish.

That the Christians of America should differ about the means, the time, and many other questions, nothing can be more warrantable. It is natural that those who are acquainted with all the difficulties of the case; who are involved in the questions themselves, their families, and their property; that those who are called upon to make sacrifices, and who also can best judge of the dangers, should be very cautious, and slow to decide. Upon this point alone do we entreat you to be unanimous—the desire to bring about the abolition of slavery, the inflexible resolution not to permit its extension.

It is to your Christian feelings that we appeal. We wish neither to provoke nor foment revolt. God forbid! This would be disregarding the spirit of the Gospel, that spirit which at the same time teaches the slaves obedience and the masters justice; that spirit which is gentleness and charity. God is witness that we love both masters and slaves. We desire the true welfare of both. We know that slavery is a terrible evil for both. When hearts shall be gained over, we will rest satisfied. Great evangelical revolutions proceed from within outward; they move first upon the conscience; they convert souls in order to transform societies.

And now, brethren, will it be in vain that we have opened our hearts to you? God knows. He knows also that it is from the very inmost recesses of our conscience that this universal cry goes forth which now reaches you.

Doubly united to you as Christians and as Frenchmen, can we err in sending you this utterance, whose sincerity you cannot suspect? Have we presumed too far in believing that this unanimous appeal from sister churches would not in vain be cast into the scales where the destiny of American Christianity is now being weighed?

May the spirit of the God of Truth and of Love be with you in this fearful crisis, and rest upon you, your churches, and your country!

YOUR AFFECTIONATE BROTHERS IN JESUS CHRIST.

June 1, 1857.

*(Here follow the signatures.)*

It is a dangerous perversion of the end of providence, to consume the time, power and wealth, he has given us above other men, to gratify our sordid passions, instead of playing the good stewards, to the honor of our great benefactor, and the good of our fellow creatures.—*Penn.*

#### LABOR—POVERTY—RELIEF.

The condition of the poorer classes in our large cities, is the subject of continual comment in the newspapers. Thousands of working people have been thrown out of employment; prices of provisions, owing to a depreciated currency, have not fallen much; winter is rapidly approaching; bread, fuel, and shelter must be had. What is to be done?

Unfortunately, in seasons of general distress, the thriftless, the idle, the vicious, are most clamorous for relief. They are poor, not from necessity, but from bad habits. They are not ashamed to beg, or to steal, and they prefer either to honest toil. They haunt the city, because in its numerous excitements they can gratify their depraved appetites. The calamity that has lately overtaken the country has emboldened them to issue from their dens of infamy, and to threaten society with robbery and anarchy. "Bread or Battle," is their motto. They have a right to bread, they say, and bread they will have. And the Mayor of New York, in true Jacobinical style, calls upon the Corporation to satisfy their demands, by undertaking expensive public improvements. He would have the city a kind of Government workshop, and all sorts of idlers and vagabonds taken into its pay. The honest and provident are to be taxed for extravagant and unnecessary works, and the thriftless and disorderly are to be taught to look to Government for subsistence, and to be used as convenient tools by demagogues for the accomplishment of selfish purposes.

We do not believe that the noisy meetings in our Eastern cities, pretending to be composed of working men, represent the real working classes, or those who have for a time lost employment. Their style of proceedings and spirit have a flavor of communism about them; they suggest a foreign origin. Their leaders seem more intent on propagating anarchical ideas, than obtaining solid relief for the destitute. The honest toilers will not be hood-winked and befooled by those who deserve nothing but the House of Correction, or the Jail.

But, that more than usual attention must be devoted to the wants of the poor and the unemployed, no one doubts. There need be no suffering among the deserving, if proper measures be taken. There is enough for all, and to spare. Clerks who have lost their places, should remember that there is ample field in the West for brains, thews, and muscles. Why waste substance, heart, and hope, looking out for something to do in the crowded city? Labor commands full reward in the West, and the necessaries of life are cheap. Let the able-bodied who can go, leave the cities, and there will be a better chance for the poor, who are obliged to remain.

While the employers are economizing, let them see whether they cannot afford more work to the poor, by retrenching in other ways. Let them

dispense with luxuries, but labor is the last item they should cut off.

Let associations be got up for the purpose of buying provisions directly from the farmer, avoiding the taxes of the middle men, and furnishing the poor with necessaries at low prices.—*N. Era.*

From The Athenæum.

#### A PILGRIMAGE TO OVERSTRAND.

September 24.

I have lately been a sojourner on the "marram" hills,—that is, the sand-hills bound together with "marram," or bent,—of the north-eastern corner of Norfolk, and beg to be allowed to direct attention to a little secluded spot in that district which has some peculiar claims to notice.

My head-quarters were in Cromer, a town which lives in a perpetual state of siege. The contentious waves of the Northern Sea come full dash against it. In summer they spend their force in play upon the hard sands; but winter sees another sight, and when hounded on by a north-wester, old Ocean seems as if about to inclose Cromer and all its belongings in a watery embrace. Battlements have been thrown up in the town's defence, and as yet they are effectual; but ere these measures of protection were taken, Shipden, a parish which stood in the old time between Cromer and the sea, had disappeared, and even now, east and west of Cromer, where the coast is unbattlemented, many a rood of good barley-growing land is yearly washed down "The Devil's Throat," the uncomplimentary but significant name of the Cromer roadstead. Off at sea, when the tide is low, you may behold, as you sail over them, the ruins of Shipden Church; and, if you are imaginative, may hear the waves sing anthems in its well-washed nave. Its tower, no longer ivy-mantled, is now covered with luxuriant sea-weed, which gracefully rises and falls, contracts and spreads itself out to the movement of the ebb and flow. The country around Cromer approaches more nearly to the picturesque than any other part of Norfolk. It abounds with charming spots, but that to which I desire to direct attention is the little church at Overstrand. Under the protection of the Lighthouse Hill, this simple little edifice rests secure from the encroaching sea, the thunder of which can there scarcely be heard. Ivy covers the broken walls, and hangs down from various parts of them in pendent tresses. Ruin as it is, it has an air solemn, but not desolate. A plain slab near the centre marks the resting-place of Sir Thomas Fowell Buxton. On the simple stone I found a vase of brilliant flowers, and was told that they are renewed almost daily by the affectionate tenderness of surviving friends. The brightness of their tints harmonizes with the warm-heartedness of the most energetic of modern philanthropists, not less than with the ardor of his

Christian hopes. But he does not rest alone. Within sight of this secluded spot stands North Repps Cottage,—a simple residence, sheltered by an adjacent eminence, and standing embowered among trees which overhang and almost inclose it. On the lawn you will perceive a multitude of birds and animals,—partridges, pheasants, rabbits, cats, dogs, chickens, and hares, all at liberty and sporting fearless and undisturbed; a piece of water near at hand is peopled with broods of various kinds of water-fowl. The gates are open, any one may pass through the grounds, but confident in the kindness which has long reigned throughout that domain, none of these favorites are in the least disturbed by the sight of strangers. Alas! these favorites are now the only tenants. North Repps Cottage was the abode of two ladies, of whom the world has heard but little: one a sister of Sir Thomas Fowell Buxton; the other, and the younger of the two, a Miss Gurney, a cousin of Elizabeth Fry and Lady Buxton. These ladies passed here lives of the purest and most active benevolence. They did not quit the world from any feeling of misanthropy, nor from any notion of the merit of mortification; they established themselves near to relatives, and energetically devoted wealth and time, in partnership, to promote the welfare of the people around them. Both now rest from their labors, but their works follow them. Go where you will throughout the district, you hear of them as having been active workers for good. Miss Buxton was the leader. She was thus sketched by Miss Gurney:—

In saddening memory's magic glass, that placid mien  
I see,  
The eye which, speaking love to God, spoke tender-  
ness to me;  
The mind within the house of clay, intense, acute,  
and clear,  
Which poured a tide profusely round of blessings far  
and near;  
The graceful form she wore on earth, so exquisitely  
frail,  
The welcome winning smile that played around those  
features pale;  
Thus fancy paints her as she was, that more than  
sister dear:  
The cold reality returns, and all is lone and drear.

Amongst the poorer classes, it is curious to observe how the striking beauty of her person has almost outlived the memory of her specific good deeds. They will talk willingly of the more recent doings of her surviving friend, but when speaking of Miss Buxton, they are sure to remind you, with evident admiration, of the grace which was one of her striking characteristics. "She might have gone to heaven unchanged," was the assurance to me of a laboring man.

Miss Gurney occupied a niche in the gossip of the newspapers on the occurrence of her death about three months ago. Her facility in the acquirement of languages was commemorated, and her translation of the Saxon Chronicle adduced as evidence of the literary use to which

she applied her learning; but on the spot you hear only of the philanthropic uses of her peculiar faculty,—how she gave herself up to the study of languages in order that she might correspond on subjects of benevolence with natives of distant countries, and with every one in his mother-tongue; and how, when foreign ships were wrecked in the dangerous Foulness, Miss Gurney was on the cliff's edge during the pitiless pelting of the storm, energetically superintending a Manby's apparatus, which she kept prepared for use, and ready to comfort those who were rescued from an ocean grave, not only with the means applicable to their physical condition, but, generally speaking, even in kind words uttered in the language of their native lands. For the neighboring fishermen and their families these ladies established schools and classes, which they personally superintended. The chair in which they successively sat in the little gallery of Overstrand Church, by the side of these school-children, stands there a relic as venerable as the chair of St. Peter,—but, alas! unoccupied by any successor. Day by day, men and women, boys and girls, were allured to North Repps Cottage, and brought within the sphere of its practical and unaffected benevolence. The young girls fell naturally under notice, but the general voice seems to intimate that the village-boys were even still more peculiarly the objects of Miss Gurney's regard. Morning, noon and night, whenever the other occupations of the villagers permitted, and on Sunday, at stated times all day long, there was sure to be something going on at the cottage. At breakfast-time the girls assembled and were fed as well as taught; later in the day came the boys; later still the men and women. And no one was sent empty away. There was a word of kindness or encouragement for every one, and, if it was needed, there was active help. "You see," remarked a fisherman who had often benefited by Miss Gurney's kindness, "Miss Gurney had seen a deal of the world, and knew what could be done and what could not; and if a poor man wanted anything, she would either show him why it could not be had, or if she thought it right, she would never rest until he had it." And all this, be it remembered, was accomplished under the pressure of an amount of bodily helplessness which would have precluded a weaker and less energetic mind from even attempting any exertion.

When I looked into the ruined chancel of Overstrand, where these ladies lie in the same vault with the emancipator of our slaves, I thought, "Truly this is holy ground." The morals which such lives teach are high and solemn, and it is almost a sin to allow the facts from which they are to be deduced to pass into oblivion.

I love service, but not state: one is useful, the other superfluous.

#### A STORY WITH A MORAL.

Once upon a time, during a famine, a rich man invited twenty of the poorer children in the town to his house, and said to them:

"In this basket is a loaf for each one of you; take it, and come back every day at this hour, till God sends us better times."

The children pounced upon the basket, wrangled and fought for the bread, and each wished to get the largest loaf; and at last went away without thanking him.

Francesca alone, a poor, but neatly-dressed girl, stood modestly apart, took the smallest loaf which was left in the basket, gratefully kissed the gentleman's hand, and went home in a quiet and becoming manner.

On the following day the children were equally ill-behaved, and Francesca, this time, received a loaf which was scarcely half the size of the others. But when she came home, and when her sick mother cut the loaf, there fell out of it quite a number of bright silver pieces.

The mother was alarmed, and said, "Take back the money, this instant, for it has, no doubt, got into the bread by some mistake."

Francesca carried it back, but the benevolent gentleman declined to receive it.

"No, no," said he, "it was no mistake. I had the money baked in the smallest loaf, simply as a reward for you, my good child. Always continue thus contented, peaceable and unassuming. The person who prefers to remain contented with the smallest loaf, rather than quarrel for the larger one, will find blessings in this course of action still more valuable than the money which was baked in your loaf."

#### ELI THAYER'S COLONY IN VIRGINIA.

The *Cincinnati Gazette* has a letter from Ceredo, the new town in Virginia, the building of which has just been commenced by the Yankee Colony under Eli Thayer. The writer says:

"As I approached, a busy scene presented itself on the opposite shore. Workmen and teams were engaged in digging down the highest bank, and opening a highway from the river to the town that is to be. The grade will be carried far back, so as to be of the easiest and gentlest slope to be found perhaps anywhere on the Ohio. After reaching the top of the bank, some of the advantages of the location were apparent at a glance. One of the widest bottoms on the whole river stretches away for miles above and below. The soil is sandy, eminently favorable to dry cellars and basements. There is a sufficient slope everywhere to carry off all surface water. An excellent quality of building stone is close at hand and in great abundance. This is also the natural and most feasible terminus, we understand, of the great Central Virginia Railway, now being constructed from Norfolk to the Ohio river, and which is already completed as far as Covington, between the Blue Ridge and Alleghanies.

"The season was so far advanced when operations were commenced, that there can be little show of buildings this winter. However, quite a number of cellars are already dug, and foundation walls laid up. Forty thousand dollars worth of steam engines, now lying at Parkersburg, will be floated down this week, and set in operation as soon as suitable shelter can be provided; and when Spring opens, the work will go vigorously onward.

"The town of Ceredo is in Wayne County, which was formerly a part of Cabell. A few persons in Cabell having interest about Guyandotte felt jealous of the new town, and got up a meeting a few weeks since to denounce the Yankee invaders."

In reply to this meeting there was a gathering at Ceredo on the 13th inst., when Eli Thayer, at considerable length, defended his projects from the various attacks made against them.

#### THE "PURGATORIAN SOCIETY."

Can it be believed that there exists in the city of New York, in the year of our Lord 1857, and under the approbation of "the archbishop of New York," a Society, the object of which is "to provide a fund, that when one of its members dies, they can have several masses offered for the repose of his soul?" It seems incredible to Protestants at this late day, and yet the existence and objects of such a Society are certified by a printed card lying before us.

In this we are told that, "for the convenience of persons desirous of joining this association, a register will be kept at several churches in this city wherein the names of members are to be enrolled," and that "a member contributing fifty cents a year shall be entitled to the following benefits; namely, two masses each month shall be offered for the grace of a happy death of all the members; and on the death of a member, the first *eight masses* that are said for the Society shall be offered for the repose of the soul of the late deceased. *By forming this intention, all of the members are equally provided for at death, though thousands of miles distant.*" And then follow three prayers. Each of them would occupy about one line in this column, of which it is promised, "as often as you repeat them you gain three hundred days indulgence," that is from the pains of purgatory!! which the document informs us is a "fiery furnace."

Is it not a sad reflection to Bible-loving Christians, that there are thousands among us, with the Bible open before them containing not one word of such a place as Purgatory, who contribute annually of their means to escape its imaginary fires, instead of applying directly to the blood of Christ for that cleansing which alone will fit them for heaven? How earnestly should Christians labor and pray for the universal diffusion of "the truth as it is in Jesus."—*Am. Messenger.*

*Reflections from the flash of a meteor.*—PSALM xc. 12.

BY GEORGE M. HORTON, (A SLAVE.)

So teach me to regard my days—

How small a point my life appears;  
One gleam to death the whole betrays,  
A momentary flash of years.

One moment smiles, the scene is past—  
Life's gaudy bloom at once we shed,  
And sink beneath affliction's blast,  
Or drop as soon among the dead.

Short is the chain wound up at morn,  
Which oft runs down and stops at noon;  
Thus in a moment man is born,  
And lo! the creature dies as soon.

Life's little torch, how soon forgot,  
Dim burning on its dreary shore;  
Just like that star which downward shot,—  
It glimmers and is seen no more.

Teach me to draw this transient breath,  
With conscious awe my end to prove,  
Early to make my peace with death,  
As thus in haste from time we move.

Oh Heaven! through this murky vale,  
Direct me, with a burning pen;  
Thus shall I on a tuneful gale,  
Fleet out my threescore years and ten.

From the Chester County Times.

#### HYMN OF FORBEARING.

Oh, living were a bitter thing,

A riddle without reasons,  
If each sat lonely, gathering  
Within his own heart's narrow ring,  
The hopes and fears encumbering  
The flight of earthly seasons.

Thank God that in life's little day,  
Between our dawn and setting,  
We have kind deeds to stow away,  
Sad hearts for which our own may pray,  
And strength when we are wronged to stay,  
Forgiving and forgetting.

Thank God for other feet that be  
By ours in life's wayfaring;  
For blessed Christian charity,  
Believing good she cannot see,  
Suffering her friends' infirmity,  
Enduring and forbearing.

We all are travellers who throng  
A thorny road together;  
And if some pilgrim not so strong  
As I, but footsore, does me wrong,  
I make excuse—the road is long,  
And stormy is the weather.

What comfort will it yield the day  
Whose light shall find us dying,  
To know that once we had our way  
Against a child of weaker clay,  
And bought our triumph in the fray  
With purchase of his sighing?

Oh, who, when life to many souls  
So little hath to cheer it,  
Will cover up his kindly coals  
In ashes, hoard the slender doles  
Which to the shipwrecked on Earth's shoals  
Might still so much endear it?

That man is most like God who bears,  
Like him, long with the sinning;  
The music of loag-suffering prayers  
Brings angels from the upper airs,  
As when, 'mid agonizing cares,  
Our ransom was beginning.

*Ludlow.*

## SUMMARY OF NEWS.

**FOREIGN INTELLIGENCE.**—Dates from Liverpool and London to the 11th ult. have been received. A great financial panic occurred in England on the 12th. Some of the banks refused to discount on any terms. The withdrawal of upwards of \$5,000,000 in gold from the Bank of England, to aid some of the Scotch banks, which were subjected to a heavy run, increased the alarm, and the demand for discounts became very pressing. A number of failures were announced. In the midst of the panic, the Treasury issued an order suspending some provisions in the charter of the Bank of England, and authorizing the issue of small notes. This order was received with much satisfaction in commercial circles, and caused an immediate cessation of the panic. Parliament is expected to meet earlier than usual, when the government promises to propose a bill of indemnity for any excess of notes issued by the Bank above the amount prescribed by its charter. The Wolverhampton and Staffordshire bank has stopped payment. A panic had occurred in the English breadstuffs market at the last advices, and prices were declining. The money market was firmer.

The Bank of France had announced its determination to extend its issues, and was discounting liberally. The rate of discount at Hamburg had receded to 9½.

**FRANCE.**—There is less commercial distress than in most other European countries, but the failure in the foreign demand for French manufactures excites apprehensions of coming suffering among the workmen from want of employment. Happily, an abundant harvest has reduced the prices of bread and potatoes to one half those of last winter. The exportation of grain, and distillation from it, both of which had been interdicted on account of scarcity, have been again authorized.

**BELGIUM.**—A ministerial crisis has occurred, growing out of differences between the liberal and the Roman Catholic party, and has ended in the return to power of the former, supported by the influence of all the large towns.

**RUSSIA.**—A reduction of five-eighths in all the corps of the army is to be made. A militia system similar to that of Prussia is likely to be adopted.

New governmental districts have been inaugurated in Siberia. Two steamers, built in America, are navigating the Amoor river with success. The Japanese appear disposed to open a regular trade with that river. The districts south of it have recently been surveyed by a traveller named Permikon, who states that the inhabitants are anxious to throw off their allegiance to China, and come under the dominion of Russia.

**ITALY.**—Two Swiss officers who had fought a duel in Rome, have both been condemned to five years hard labor and a large fine. The seconds did not escape much better. The laws of the Papal States place the duel on the same footing as premeditated murder.

**SIAM.**—The two kings of Siam have sent an embassy to the Queen of England. The envoys are accompanied by young men who are to be educated in England.

**SOUTH AMERICA.**—The revolution in Peru shows no indication of an approaching termination. The revolutionary party in Bolivia appears to be gaining strength, and Gen. Cordova is said to be likely to be overpowered. Chili is tranquil politically, but its commercial situation is unfavorable, and in some of the agricultural districts, distress prevails because of the high prices of the necessaries of life; on which account breadstuffs have been provided by the government to be sold to the poor at moderate prices. The prospects for the growing crops are favorable.

**AUSTRALIA.**—Destructive floods have visited the

Murray and Hunter river districts. Whole townships have been inundated, cattle swept away or starved, much property destroyed, and many lives lost. The ship Dunbar, from London for Sydney, with 120 persons on board, went ashore on the coast, and all except one man perished. An expedition sent to explore the interior of South Australia, (the south-western part of the island,) reports the discovery of a large fresh water lake and a great tract of fertile land, in a region hitherto supposed to be sterile.

**CENTRAL AMERICA.**—The decree issued by Costa Rica against the landing of filibusters, has been approved by the State of Salvador. Nicaragua has declared war against Costa Rica, on account of the pretensions of the latter to control the Transit Route.

**DOMESTIC.**—Accounts from California are to the 5th ult. The banking firm of Sather and Church had suspended payment, but with assets exceeding their liabilities. The news of the loss of the Central America caused a general gloom in San Francisco. Public meetings were held, at which resolutions were passed denouncing the mail steamship companies for providing defective vessels, and making suggestions for the future safety of the passenger carriage between New York and San Francisco.

The reports of Indian outrages in Honey Lake and Carson Valleys appear to have been false. The Washo chief is said to have come thither to negotiate for peace with the settlers, stipulating that white men violating the rights of the Indians should be punished, and agreeing to give up to the whites any of his tribe who should commit depredations upon them. No person was authorized by the inhabitants to enter into a treaty on their behalf, but one individual, much respected by his neighbors, agreed to the terms of the chief, and engaged to furnish his tribe with flour, &c.; and good order prevailed in consequence.

Gov. Walker, of Kansas, has arrived at Washington, and has had several interviews with the President. Their views on the subject of the proper course to be taken relative to the action of the Constitutional Convention are said to be completely opposite; the President being disposed to sustain that action, while Gov. Walker regards the refusal of the Convention to submit the Constitution to a popular vote as a violation of the Federal Constitution, of the Kansas-Nebraska act, and of the right of self government. He states that only 43 out of 60 members of the convention signed the Constitution, that an overwhelming majority of the people of the Territory are opposed to it, and that the State government could not probably be put in operation under it except by Federal power. The Free State Executive Committee of the territory issued a call for a delegate convention to be held on the 2d inst., to consider the question; but the call was subsequently revoked, on a promise it is said, from Secretary Stanton, as Governor *pro tem.*, to call an extra session of the Legislature.

A violent storm, accompanied by snow, prevailed over Lakes Michigan and Erie and the adjacent region, on the 18th and 19th ult. A part of the track of the Buffalo and Niagara Falls railroad was washed away by the waves from the lake. The Great Western railroad, C. W., was obstructed by drifts so as to stop freight trains. A number of vessels were lost on the lakes. The Erie canal was closed by ice at several points, and by the 25th, navigation was completely suspended; but a subsequent change to milder weather opened it again. Snow fell as far south as Goldsboro', N. C., and at Augusta, Ga., ice half an inch thick was formed on the morning of the 20th. The Mississippi river closed at St. Paul on the 13th.

The reported loss of sixteen coal boats near the mouth of the Ohio has been contradicted. Several boats were sunk near Memphis, but no lives appear to have been lost.

# FRIENDS' REVIEW.

*A memorial of Purchase Monthly Meeting, concerning RICHARD MOTT, deceased.*

Our beloved friend Richard Mott having, after a long life devoted to the service of his Heavenly Father, been removed from us by death, we deem it a duty to preserve a brief memorial of him, setting forth his labors of love, and showing the efficacy of that grace, through the influence of which he was gradually prepared to fill an elevated position in the church, and strengthened to labor extensively for the promotion of the cause of truth and righteousness among men.

He was the son of James and Mary Mott, and was born the tenth of First month, 1767. His parents then resided in the City of New York, but in a few years after removed to Mamaroneck, West Chester County, State of New York, within the limits of Purchase Monthly Meeting of Friends. Of this Meeting he continued to be a member to the close of his life.

In childhood he was deprived of a mother's care, by her death; and the training of the children, (four in number, of whom he was the eldest,) devolved entirely on the father, who was highly esteemed as a worthy and consistent member of our religious Society.

From statements made by our deceased friend, it appears that the religious training of these children constituted the principal concern of their father; and well were his pious and untiring efforts rewarded. Often has this son been heard to speak in the most tender and grateful terms, of the unremitting care of his father over him during this critical period of his life.

He has been frequently heard to say, when urging upon young people the importance of yielding a ready and cheerful submission to the counsel of their parents, that he had no recollection of having, in a single instance, withstood the

affectionately expressed desire of his father, and that it continued to be a cause of inexpressible comfort to him.

He was accustomed at an early age to the diligent attendance of religious meetings, which it appears from his statements were at that time very small, and uniformly held in silence, unless they had the company of some minister from a distant meeting. He has often been heard to speak of the reverent manner in which those in the front of the meeting sat, and the marks of devotion observable in their countenances—the trickling tear revealing the secret emotions of their hearts—and that not unfrequently, at those seasons, a solemnizing influence would spread over the meeting, and furnish evidence of the efficacy of silent worship.

The Monthly Meeting was held at a considerable distance from his father's residence. Convenient vehicles for travelling were not common, and in attending these meetings, the practice was for him to ride upon the same horse with his father. In this simple manner they might be seen regularly attending the Monthly Meeting: and while the father was thus manifesting his concern, an early interest in the disciplinary affairs of the Society was awakened in the soul. Another circumstance that he loved to dilate upon, was, that his father's house was a place of resort for Friends who were travelling in the ministry. He was greatly interested in the company of these, and their instructive conversation tended to strengthen and confirm the religious tendency of his feelings. By these means impressions were made upon his mind that were never obliterated. He loved to speak of them—they were the interesting theme of some of his latest conversations—and there is reason to believe that they exerted a powerful influence in the formation of his character.

As he approached manhood the gracious visitations of Divine love, operating upon a heart thus prepared, were gradually gaining an ascendancy, though not without many mental conflicts. These he has described as being at times almost insupportable; but there was a powerful Arm that secretly sustained him. By this dispensation, he was, without anticipating it himself, being prepared for the work of the ministry, unto which he was soon after called. Respecting these conflicts, and his entrance upon that im-

portant engagement, the following expressions of his own, uttered during a severe illness in the latter part of his life, will be interesting.

"I often reflect upon my early life, before I knew that it would be required of me to speak in the ministry; and think of the very great trouble of mind that accompanied me at that time, both in meetings and out of meetings, on account of my sins. And afterwards under the prospect of being called to the ministry, how I hesitated, and struggled, and bore the exercise; but I never thought I resisted too long. And after I had taken that step, how slow my progress was! After a while I saw another danger that attended me. I saw I was in danger of being urged on too fast by the flattering encouragement of others. I saw the necessity of turning a deaf ear to everything of that nature. And I now believe that but for this care my ruin would have been inevitable."

In the year 1787 he was united in marriage to Abigail, daughter of Uriah and Mary Field. This union he was wont to speak of as having been an indescribable blessing to him. She proved a tender and most affectionate wife and judicious counsellor, in all the varied exigencies of life fully sustaining the character of "an help meet for him."

It is believed to have been about the same period that he first appeared in the ministry. If his progress was slow, as he intimates it was, yet proceeding watchfully, he was led safely forward; and in the year 1794 he was acknowledged as a minister.

In the year 1797, with the concurrence of the Monthly Meeting, he engaged in a religious visit to some parts of his own Yearly Meeting. This appears to have been the commencement of his labors abroad as a minister of the gospel. The following lines, penned by him near the close of this engagement, will show the frame of mind attending him on that occasion, and probably may be regarded as an index of his exercises in other similar engagements:

"I have had to review our present journey—my leaving my home, and the endeared companion of my life—going forth in my Master's cause without purse or scrip. I have known what it is to suffer the most famishing want, and also, in some degree, to experience an abounding. Well would it be for me could I add, that I have learned in every allotment, as well adverse as prosperous, to be content therewith. But such is my proneness to forbidden things, and such my great liability to depart from the watch tower, that it is necessary for me to be baptized again and again into suffering and death, on my own account. And joined to this, the sufferings that are, by the travellers and laborers in the gospel, to be experienced, in sympathy with the seed which is oppressed, the trials are at times almost insupportable; and had it not been for the superintending care, and abundant goodness of the

universal Parent in preserving and bearing up where should I have been!—Wherefore, Oh! my soul, bow thou in reverential awe and dread before the Divine Majesty. Thou knowest he is thy all in all. Thou knowest he has strung thy bow in the day of battle, that he has been thy shield and helmet; and that he will, as thou continuest under his guidance and direction, be thy salvation. Mayest thou be pleased, most Holy Father, to support and protect. Thou knowest that I love thee, that I desire to serve thee, and that I have left all to follow thee. Mayest thou be with and support the endeared companion of my life in her lonely moments. Cause that the guardian Angel of thy presence may encamp round about her, and about all those who love thee. Strengthen and support the mourners in Zion, and the heavy-hearted in Jerusalem, that so, oh dearest Father, they may press forward in thy holy warfare, and come up to thy help against the mighty; for thou art eternally and gloriously worthy, saith my soul."

In the following year our beloved friend was similarly engaged in other parts of his own Yearly Meeting; and in this, and all his subsequent engagements in the ministry, he appears, from the records, to have had the unity of the meetings of which he was a member.

In the year 1799, feeling his prospect of religious duty expand, he entered upon a gospel visit within the limits of New England Yearly Meeting; and in 1801 he was similarly engaged within the limits of Philadelphia and Baltimore Yearly Meetings.

His visits to the above named Yearly Meetings, and to various places within their limits, were often repeated in subsequent years. In the course of these visits he frequently appointed meetings with those not connected with our religious Society—a service for which he was eminently qualified. These labors of love, together with frequent religious services within his own Yearly Meeting, appear to have occupied a very large portion of his time up to the year 1823, thus giving proof of his willingness to spend and be spent in the service of his Divine Master. He left no written memorandums of these journeys, but we learn from the records that his labors in the ministry were acceptable and edifying.

From the year 1823 to 1830, it does not appear that he was engaged from home in the work of the ministry; yet this was not a season of relaxation to him. He felt a deep interest in the welfare of the Society with which he was connected, and in which as a minister he had labored faithfully and fervently; and whatever threatened to impair its stability, whether in relation to its doctrine, or the harmony and unity essential to its prosperity, was the cause of great concern to him. The period now under notice was particularly marked in these respects; and it was his lot to pass through very trying exercises in the course thereof and to witness feelings of estrange-

ment springing up where Christian fellowship had existed, and finally ending in a schism that was productive of many and sore trials.

It was a comfort to him in the latter years of his life, to perceive that these feelings were subsiding, and to meet with individuals to whom he had formerly been warmly attached, but with whom intercourse had been suspended, and to receive from many of them assurances of their continued kind remembrance.

To our beloved friend and his affectionate companion in life, bereavements in their family were permitted to an unusual extent. They had four children: two of these were removed by death in their childhood. An only daughter, whose amiable and promising qualities had greatly endeared her to her parents, at the interesting age of early womanhood, was suddenly taken from them by severe disease. The remaining son attained to the meridian of life, esteemed by all who knew him. In the year 1826 his health gave way, and he was summoned to an early grave.

Thus were they bereft of all their children. These repeated strokes of affliction were keenly felt; but they were enabled to bear them with Christian meekness and resignation, adopting the submissive language, "The Lord gave, and the Lord hath taken away; blessed be the name of the Lord." In their bereaved condition, it was a source of comfort to them, as they sometimes expressed, to believe that they had a family in heaven.

The son above alluded to, left a wife and infant son. After the lapse of many years, this daughter-in-law and her son settled in Burlington, New Jersey, and their home furnished the bereaved parents with a comfortable and agreeable retreat in their declining years.

In the year 1830, Richard Mott felt drawn again to attend the Yearly Meetings of Philadelphia and Baltimore, and to visit some places within the limits of the former Meeting. In 1834 he attended the Yearly Meeting of New England, and had other religious services within its limits. He continued to attend these Yearly Meetings frequently, and to labor in different parts of them, as the prospect of duty opened to his view, attending likewise to religious services within the compass of his own; thus faithfully occupying his time and talents in earnest endeavors to promote the cause of Truth and righteousness.

In the early part of the year 1847 he was attacked with disease of an inflammatory character, by which his strength was greatly prostrated; and the issue for a time appeared doubtful. During this period of suffering, he was preserved in a resigned and tranquil frame of mind, and his heart being often enlarged with love for others, and with desires for the welfare of the Church, he gave utterance to many interesting expressions. On one occasion, allusion was made to the peaceful quiet with which he was favored, and it being attributed to a well spent life, he

very solemnly replied, "It is not by works of righteousness which we have done, but according to his mercy he saveth us, by the washing of regeneration, and renewing of the Holy Ghost."

At another time he said, "The change from a state of health to one of prostration like this, produces a feeling that cannot be fully conceived but by experience. It has often been the subject of my reflection, and I have endeavored to anticipate the views and impressions that would be likely to attend such a state, and to live prepared for it; and I find the comfort now of having done so. There appears to be a great difference in the feelings and experience of different persons in the prospect of the near approach of death. Some speak of their enjoyments and hopes in almost rapturous strains—while others have appeared to have very little to say in this way. I have never expected it would be my lot to say much to others concerning myself at such a time, whenever that may arrive. I have no prospect at present when it may be. I leave that. I have endeavored to discharge my duty in this respect, as I have passed along through life; and though it may have been feebly done, the work of the day has, I think, been done with tolerable faithfulness. I express these things as they rise before me, without reference to my present situation. I do not suppose I am considered dangerously sick."

From this illness he gradually recovered, but did not regain his previous state of health; yet in 1848 he attended the Yearly Meeting of Philadelphia, and also that of New England. In 1850 he again attended the latter meeting. This proved the close of his public labors beyond his own meeting. He was then in the eighty-fourth year of his age; thus to this advanced stage of life, manifesting his continued devotedness to the service of his Divine Master, which he had espoused in early life, and in which his energies of body and mind had been freely expended. During the long period of time, and the extended labors that have past in review, we believe his ministerial services were very generally satisfactory and edifying to those among whom his lot was cast.

(To be concluded.)

For Friends Review.

OUR FOREFATHERS.

My mind has been led back to the days of our forefathers in the Truth, to those ancient worthies who were reviled and persecuted, who were shut up in prisons, whose names were cast out as evil for the Son of Man's sake.

It would appear to some, perhaps, that while they were confined within the gloomy walls of prisons their usefulness was marred, that their gospel labors ceased; but on the contrary, in how many instances do we find that their bonds tended to the furtherance of the gospel, and I have believed that their sufferings were permitted by In-

finite Wisdom for their own good, for the good of the world, and of the precious cause which they had espoused. Indeed, we find that those valiants, those defenders of the faith once delivered to the saints, when thus confined, were not idle in the Lord's vineyard, but spake and wrote as they were moved by the Holy Ghost, declaring the Word of Life to those that were hungering and thirsting after a knowledge of the Truth, even to the astonishment and admiration of their persecutors. They were enabled to give forth and leave to the world many valuable legacies, as Penn's "No Cross no Crown," and numerous other writings, containing much valuable counsel and instruction. In taking a retrospective view of that day and the present among us, I am led to query, how is it with us who live in a day of ease and outward prosperity? We may indeed exclaim, that others have labored and we have entered into their labors. Where is the zeal, the love, the devotion, and dedication that so eminently characterized our fathers and mothers in Israel? Are we willing to suffer as they suffered for His sake? Let it be remembered, that in order to reign with Him we must be willing to suffer with and for Him.

"He that would have a crown to wear,  
Must also have a cross to bear."

O! that we might be awakened from a lethargy which seems to prevail so alarmingly throughout the length and breadth of the land; which causes the faithful to mourn in solitary places, that so few are willing to come up to the standard of truth and holiness, and bear the precious testimonies committed unto our forefathers to bear.

O! that each and every one that makes a high and holy profession might solemnly enquire of the Lord, as one formerly, "Lord what wilt thou have me to do?" Especially do I appeal to the dear youth of our beloved Society, now, in the morning of your days, "whilst the evil days come not, nor the years draw nigh wherein you shall say, I have no pleasure in them," to dedicate yourselves unto the cause of Christ; employ your talents, given you for a wise and holy purpose, even to glorify your God, and then in the evening of life you will have cause to say, "good is the Lord, and greatly to be praised; thy ways, O God, are indeed ways of pleasantness, and all thy paths, paths of peace." P. A. W.

— "YOUR KING HEARS YOU."

"Did I ever tell you," said a lady to her daughter, desirous of reproving some of her fellow passengers in the railway carriage, who were making use of very profane language, taking the name of God in vain,— "Did I ever tell you the story of a certain king who once overheard two of his followers speaking in a way greatly to displease him? He very gently drew back the curtains of his tent, and uttered this quiet reproof, 'Remove a little farther, gentlemen, for

*your king hears you.*" "My child," continued the mother, "may not some people yet need such a reproof?" "It would be of no use," replied the child, "for let us remove as far as we can, *our heavenly king always hears us.*"

How long it lasted, I cannot tell, but one thing I know, the fellow travellers of this lady ceased their profane language during the rest of the journey. Now, dear boys and girls, from this little story I think we might manage to gather two very useful lessons. For instance, if I mistake not, it teaches what power there is in a few words "fitly spoken," and what good we may sometimes do by making use of such words. Still, while I would have you think of that lesson, it is not the subject I wish to speak of now. The story teaches another, and that other I want to talk to you about for a very few minutes.

"It would be of no use," was the reply of the little girl to her mother's question, "for let us remove as far as we can, *our heavenly king always hears us.*" I wonder how many boys and girls here now feel this—God "our heavenly king always hears us." You are taught in the hymns you sing, you are told in the Bible you read, how that "there is not a word on your tongue," however softly spoken, "but thou, O Lord, knowest it altogether." Yet though you know all this, how many I ask, *how many* of you *feel* it? I say *feel* it, for if you all really felt it. I think some of you at least would be much more careful of the words you make use of, words which I know from what I read in my Bible, must be displeasing to God, the heavenly king who always hears us.—*S. S. Journal.*

— HENRY DUNCAN.

Henry Duncan was the son of George Duncan, minister of the parish of Lachrutton, Scotland. Having studied for the ministry, he accepted a living in the parish of Ruthwell. Although not a tempting position, it presented what he considered of chief account—the best opportunity for a life of clerical usefulness. His standard of such a life, at this period, must be taken into account, and it is thus announced by his biographer: "If the eternal welfare of his flock occupied any considerable share in his thoughts, I fear it must be confessed that the hope of advancing these interests rested chiefly on the influence he might possess in cultivating their kind and benevolent affections, in promoting a social and friendly spirit among their families, harmonizing their differences, rousing their patriotism, and becoming their example in all that is amiable, worthy and honorable. Such seems to have been his beau ideal of a country minister's life; and if he could live to promote these purposes, he does not seem to have questioned that he should amply fulfil all the purposes of a Christian ministry."

Thus far Henry Duncan had gone on, beloved

by his people, to whom he was a fair example of all that is dignified and amiable in the natural man, as well as zealous in the discharge of all those general duties with which his office was connected. Something more, however, was still necessary to bring him into vital contact with the spiritual life of his sacred calling, and show how much, as yet, was wanting in his endeavors to promote the eternal welfare of those committed to his charge. His example and his efforts, excellent though they were, had still fallen short of the mark. But, in 1804 the time had come when those spiritual perceptions were to be vouchsafed to him, under which he would continue his ministerial career with new ardor and redoubled efficacy. This new light, too, under which such a happy change was to be accomplished, was neither to arise from the study of the works of the great masters of theology, nor yet from the reasonings or example of his learned co-presbyters; but from a despised people, as yet almost new in Scotland, and whose names were seldom mentioned, except for purposes of ridicule and merriment. One man and two women, of the Society called "Friends," had arrived at Annan, and announced their intention of holding a meeting, in the evening, for worship. Induced by curiosity, Henry Duncan, who was in the town, attended the meeting, and was struck by the warmth and simplicity with which these strange preachers enunciated those Christian doctrines that had long been familiar to his mind, but to which the new style whereby they were now embodied, imparted the charm and power of novelty. An interview with the Quakers followed, and the impression was deepened; the minister gradually began to perceive that he had something still to learn before he could become an efficient Christian teacher. The lesson abode with him, until, through a course of years, its fruits were ripened and matured; and ever after, he was wont to revert, with pleasure, to this visit of the "Friends," and the benefits he had derived from them.—*Chambers' Biographical Dic. of Eminent Scotsmen.*

For Friends' Review.

1 KINGS XVIII., 1-39.

Her varying seasons earth three times had told,  
And half round her orbit again had she rolled,  
Yet still the aerial fountains were sealed,  
Brooks cheered not the valleys, nor night dew the field;  
And fearful forebodings pervaded each soul  
That death was assuming his final control.  
But Israel's God, who so often had been  
Their mighty deliverer when suffering for sin,  
Beholding their trouble, remembered, once more,  
His covenant made with their fathers of yore.  
And though their afflictions seemed not to avail,  
For the people still bowed to the image of Baal,  
Yet in pity he witnessed their sorrow and pain,  
And graciously granted the promise of rain.  
He said, (and Elijah obeyed the command,)  
"Go thou to Samaria, where thou shalt stand  
In the presence of Ahab, for now shall the dearth

Be stayed, and I'll cause it to rain on the earth."  
Whate'er position a man occupy,  
In the scale of humanity, lowly or high,  
Of royal extraction, or ignoble birth,  
If poor, or possessing the treasures of earth,  
Possessed of an intellect clear and refined,  
Or medium, barely, the powers of his mind,  
If he, being rightly commissioned, proclaim  
The word of the Lord, in the fear of his name,  
All earthborn distinctions must vanish away,  
Like stars from the sky in the blaze of the day.  
His words emanating from that only source  
That can give them a true, irresistible force,  
Are arrows that iron nor brass can withstand,  
Hurled by an almighty, invisible hand.  
And such was Elijah, who, Ahab had heard,  
Was approaching, and though he recoiled from his  
word,

Yet in anger he banished his natural fear,  
And hurried away to encounter the Seer;  
With the charge of afflicting the people, assailed  
The prophet; but all his audacity quailed  
When he witnessed the ardor that glowed in his eye,  
And felt the rebuke of his truthful reply.  
"I have not troubled Israel," Elijah rejoined,  
"But thou and thy impious house have combined  
To forsake the commandments of Israel's God,  
And fast in the footsteps of Balaam have trod.  
Go gather the people to Carmel," he said,  
"The prophets of Baal by Jezebel fed,  
Together with those of the groves shalt thou bring."  
Which order was promptly obeyed by the king.  
The prophets, the people at Carmel, convened,  
With deference due, to Elijah demeaned,  
Whose appeal on behalf of the Deity stole  
A silent conviction to every soul.  
In anguish of spirit he loudly complained,  
That of all the Lord's prophets, he only remained.  
But of the adorers who bow at the shrine  
Of Baal, four hundred and fifty divine.  
"Now choose you a bullock; you first shall select,  
It is for an offering; an altar erect;  
Put the flesh on the altar, but kindle not there  
A fire, except by the fervor of prayer.  
And I too will offer to Israel's God,  
(For neglecting of whom you are feeling his rod.)  
A bullock, when I have erected again  
His altar that long here in ruins has lain,  
And to him, who shall answer by fire, we'll award  
The glory and honor of being the Lord."  
The people assented. An altar was reared,  
The bullock was slain, and the prophets revered,  
And loudly petitioned, again and again,  
From morning till noon, but petitioned in vain!  
That he might their folly more fully divulge,  
Elijah in mockery deigned to indulge.  
He urged them with greater vehemence to cry:—  
"Peradventure your God is conversing on high,  
Away on a journey, or locked in the arms  
Of slumber, and wholly entranced by her charms."  
The prophets leaped up on their altar and cried,  
And mangled their flesh, till their garments were dyed.  
And yet they petitioned and suffered in vain;  
Baal heard not their cries nor regarded their pain,  
For still unconsumed did the sacrifice lay  
On the altar when daylight was waning away.  
"T was then, when the sun sinking down in the west,  
Shed back upon Carmel a luminous crest,  
And twilight her drapery silently spread  
O'er the valleys that welcomed the coolness it shed,  
When scenery, silence and all things combined  
To kindle devotional fire in the mind,  
And the hour was approaching in which 't was de-  
creed  
That in Israel a lamb for an offering should bleed,  
Elijah invited the people around,

While he with a reverence awful, profound,  
 Erected the altar at Carmel again;  
 And chose him a bullock, which, when it was slain  
 And laid on the altar, he deluged the whole  
 With water, and, deep from his agonized soul,  
 A fervent petition ascended on high:  
 "O, God of our fathers, be pleased to supply  
 To these an assurance that thou art the Lord,  
 And that what I have done is of thine own accord."  
 Then quick as the lightning, and bright as its glow  
 When it breaks from a cloud on an object below,  
 Descended a fire that the twilight illumed,  
 And the sacrifice, wood, and the altar consumed;  
 Burned the stones and the dust, while it darted  
 around

And licked up the water that lay on the ground.  
 Though often Jehovah had graciously deigned  
 To grant an assurance that he alone reigned  
 In nature, and that his imperial will  
 The laws of the universe only fulfil,  
 Yet they had forgotten his wonders of old;  
 Forgotten that God, the omnipotent, rolled  
 The turbulent waters away from the path  
 Of their fathers, when fleeing from Pharaoh's wrath;  
 Forgotten that he in the wilderness fed  
 His people with flesh and with heavenly bread;  
 And when in the desert they fainted with thirst,  
 Commanded, and water from adamant burst;  
 That he on Sinai in thunderings loud,  
 From his awful pavilion, an ebony cloud,  
 Gave forth his commands from the fountain of right  
 To Moses, who quaked at the terrible sight.  
 Nor remembered they that an invisible hand  
 Led their fathers triumphantly into that land,  
 Where in desperate conflict, again and again,  
 Their lives were preserved and their enemies slain;  
 For at this supernatural proof of his power,  
 The prophets of Baal like criminals cower,  
 And the people exclaim with united accord,  
 "The God of our fathers, our God, is the Lord!"

Plattekill, N. Y.

S. H.

ADDRESS OF THE INDIANA BIBLE ASSOCIATION  
 OF FRIENDS.

To Friends of Indiana Yearly Meeting and in the western  
 country generally:

DEAR FRIENDS,—On being solicited to unite  
 yourselves in labor with us, or contribute your  
 means to aid us, or others, in the good cause of  
 endeavoring to promote the more general supply  
 of our fellow-men of all classes and nations with  
 the Holy Scriptures, and the more diligent and  
 earnest perusal of them, you will expect that we  
 will offer you some reasons for our procedure.

In the first place, then, we are deeply im-  
 pressed with the *inestimable value of the Sacred*  
*Writings*. We receive them as given by Divine  
 Inspiration; holy men having written them as  
 they were moved by the Holy Ghost; and, there-  
 fore, they are of Divine Authority, to be received,  
 believed, and their precepts obeyed, as profitable  
 for doctrine, for reproof, for correction, and in-  
 struction in righteousness. The book alone,  
 however, will be of little avail toward the benefit  
 of the world, unless the Holy Spirit be granted  
 for the assistance of the sincere reader, in bring-  
 ing home and applying those sacred truths to  
 his own heart and particular condition. But we  
 are graciously promised that he that seeketh shall  
 find; and that our Heavenly Father will give the

Holy Spirit to them that ask Him. The Lord  
 has been pleased to make use of instrumental  
 means from early ages, to bring our fallen race  
 to a knowledge of Himself; and, accordingly  
 His will concerning us has been communicated  
*by writing*, as well as *by words*, in His command-  
 ments, admonitions, warnings, and promises,  
 which have from time to time been given through  
 His servants. Of old He gave to Moses the  
 tables of the commandments, written by Him-  
 self, containing a summary of doctrine and duty  
 so excellent, and so far above the combined wis-  
 dom of men unassisted by the Holy Spirit, as to  
 give most satisfactory evidence of its Divine Au-  
 thority. The messages of the prophets, also, were  
 delivered and perpetuated by being *written*. And  
 the glad tidings of salvation through our Lord  
 Jesus Christ are given to us by the holy evan-  
 gelists in the same way. And to these may be  
 added those precious epistles of doctrine, instruc-  
 tion, and edification, given forth by the apostles  
 of our Lord through the help of his Spirit. And  
 we rejoice in the confidence of believing that the  
 sacred truths revealed in the Holy Scripture have  
 been blessed to the conversion and salvation of  
 multitudes in all ages, who have believed—the  
 promise of the Holy Spirit being fulfilled. Where  
 is the devout Christian, in all the world, who is  
 able to read the Holy Scriptures, and is in the  
 practice of doing so, who does not esteem them  
 as a precious gift of God?

Beside all this, the morality taught in the  
 Bible gives evidence of its Divine Authority, by  
 being infinitely superior to anything else of the  
 kind ever known among men. We shall look in  
 vain among all the most enlightened heathen  
 nations of all ages for precepts like these: "Thou  
 shalt have no other god before Jehovah. Thou  
 shalt worship one God, and him only, who is the  
 Lord. Thou shalt not commit adultery. Thou  
 shalt not covet. Speak ye every man truth to  
 his neighbor. Let the wicked forsake his way,  
 and the unrighteous man his thoughts. Wash  
 ye, make you clean. Cease to do evil; learn to  
 do well. The heart is deceitful above all things  
 and desperately wicked. Men love darkness  
 rather than light. Ye will not come to the light,  
 lest your deeds be reproved. God sent his Son  
 into the world that the world through him might  
 be saved. Repent and be converted. He that  
 believeth in him shall not perish, but have eternal  
 life, and shall not come into condemnation. He  
 that believeth not shall not see life. Have faith  
 in God. Love your enemies. Bless them that  
 persecute you. Do unto others as ye would have  
 others do unto you," etc., etc. No nation of  
 men that has not adopted the religion of the  
 Bible, embraces and brings into practical action  
 such precepts as these; on the contrary, the op-  
 posite of every one of them is much more in ac-  
 cordance with their practice.

It is not surprising then, although an inter-  
 esting fact, that, wherever the Holy Scriptures

have been circulated and received, a marked impression has been made upon the whole community; a different code of morals has found its way into practice; the heart has been softened; the laws have been made better; education has increased; humanity has been improved; the women have been relieved from degradation, and their condition has been greatly elevated—in short, enlightened civilization has followed on, and the general welfare has been unspeakably increased. Multitudes of examples might be brought forward, if time admitted and our purposes required, to prove this. On the contrary, "the historical fact cannot be denied, that vital piety has nowhere, and in no age, continued to mark the character of a people by whom these invaluable records have been neglected."

Now, let us look at the world and see how it is. A large proportion of our fellow-men are yet in heathen darkness. Idolatry and all manner of corruption, wickedness and degradation prevail. Millions of our fellow-men, our brethren by creation and in humanity, heirs like us for eternity, are at *this time* sunk in this misery and degradation, and *we may see it*, if we will open our eyes to geography and history. The cry of their sin and corruption ascends before the Lord. Shall our brethren remain in heathen darkness for lack of knowledge when we can help? or shall we by our apathy, or selfishness, or indolence, stand back until God sends others more worthy to do the work and receive the reward? Then how shall we appear in the day of account? These are great and solemn questions for us individually. But our thoughts need not dwell on the heathen nations only—there are *thousands* of our own citizens in these United States, and *hundreds* in every State, and *more or less* in every community, who have not the Holy Scriptures, and who neither hear them, nor read them carefully, nor regard their precepts. Of this there is evidence amounting to positive proof.

Now, let us look at ourselves, as to our means of being useful to others. God, in his goodness and mercy, has exceedingly prospered and blessed the inhabitants of this country. We should be culpably ungrateful if we did not acknowledge this with thankful hearts. Look at the rich lands in this vast and fruitful valley! Look at the extensive fields of waving grain, and the beautiful meadows, all prepared to store the barns to overflowing! Look at the luxuriant cornfields, and at the herds of cattle and of swine, yielding a large surplus over and above all our need! and to these may be added many other rich products which gladden our hearts with plenty. Let us think also of the comforts we are permitted to enjoy with our happy homes, our wives and children; our schools; our free exercise of worship, and under the protection of an enlightened civil government. In all these blessings, we as a people largely participate according to our num-

ber. Our duty is plain. Having all these favors, we shall be exceedingly remiss—we shall be exceedingly ungrateful, we shall fall far short of our indispensable duty, we shall not stand clear in the day of righteous judgment, when the secrets of all hearts shall be known, if we neglect or refuse to do good to our fellow-men when it is so plainly in our power.

The favored Israelities were required to yield one-tenth of the fruits of their land as a duty to God—but we have no tithes to pay. But behold a field of labor is open before us, ample for all, and is already white unto harvest. Ought we not, therefore, to enter upon the labor ourselves, and pray that more laborers be sent forth into the harvest?

Impressed with these considerations, we have formed ourselves into an Association by the name of the *Indiana Bible Association of Friends*, the object and design of which are set forth in our Constitution hereto annexed. For the present we shall publish no Scriptures, inasmuch as we can purchase them in great variety at prices below what it would cost us to publish them. Also, for the present, our Association will be independent as to formal connection with any other. There is nothing, however, in our Constitution to prevent us from becoming auxiliary to another, if at any future time it shall seem clearly best to do so, in order to accomplish more effectually the purpose of our Association. We shall be glad to have as many auxiliaries in the western country as Friends may be disposed to organize. But we have no prospect, in case our Association should hereafter itself become auxiliary, of ever surrendering our own regulations and government. That will not, we believe, be necessary.

The interest of Women Friends in our concern is affectionately solicited. The Bible has done more, with the aid of the Holy Spirit from which it came, and the religion which it is an instrumental means of teaching, for the help and relief of your sex, than every other thing whatsoever. No persons are better fitted—very few so well—as devoted women, to search out the destitute, and, under the influence of the Christian spirit and the soft manners which become the sex, to supply them; at which time an appropriate season is afforded to offer a word of exhortation and encouragement. The conversion of many precious souls has owed its beginning to impressions received from reading the heart-reaching truths of Holy Scripture, and you will feel it to be an honor and a joy to you, if Divine Providence shall see fit so to bless such a work in your hands. Let us labor in faith and hope, waiting for the recompense of reward.

*Constitution of the Indiana Bible Association of Friends.*

#### ARTICLE I.

The object of this Association is, and shall continue to be, to aid and encourage the circulation of the HOLY SCRIPTURES among all classes of people, in our

own and other countries, and to promote, as far as we can, the diligent perusal of them, in order to an unprejudiced and practical knowledge of their contents, and to a hearty belief in their Divine Inspiration and Authority. The English version to be circulated is to be that commonly in use, known as King James' version, without note or comment.

## ARTICLE II.

The Officers shall be a Secretary, who shall preside and conduct the meetings after the manner of Friends; a Treasurer, and an Executive Committee of twelve, of which the Secretary and Treasurer shall be *ex officio* members.

## ARTICLE III.

Any person who pays into the Treasury, One Dollar, may be a member for a year, or Twenty Dollars during the year, a member for life. Members of the Parent Association shall be members of the Auxiliary in their district.

## ARTICLE IV.

The formation of one Auxiliary Association in the limits of each Quarterly Meeting shall be encouraged.

## ARTICLE V.

The management of the Association shall be mainly intrusted to the Executive Committee, whose duty it shall be to meet at least quarterly on adjournment or call of the Secretary; to keep a good supply of Scriptures on hand; to appoint agents and distributors; to collect and forward funds to pay for Scriptures; and to promote, in every way, the object of the Association. Associations auxiliary to this will be expected to take the same course.

## ARTICLE VI.

There shall be an Annual Meeting of the Association on Sixth-day evening of the week of the Yearly Meeting at Whitewater, when the Executive Committee shall lay before the Association a Report in detail of the proceedings of the year; the appointment of officers for the ensuing year shall be made; and all other matters incident to the concern attended to. Meetings of the Association may also be held at other times, by adjournment, or on call of the Executive Committee, whenever it shall be considered necessary. Auxiliary Associations are to make a clear report of their proceedings for the year to the Annual Meeting.

## ARTICLE VII.

This Association, and its Auxiliaries and Executive Committees and Agents, shall unite their endeavors to those employed by other Bible Societies, in promoting a general and personal supply of the Holy Scriptures, in this country, so far as their circumstances and their means will permit, and so far as they can do so consistently with the principles of Friends; and the Treasurer of the Auxiliaries shall remit annually or oftener to the Parent Association, all the funds that can be prudently spared from the supply of their own field, to aid in the supply of other parts of the United States, or foreign countries, accordingly as they may direct, or as the Executive Committee of the Parent Association, if not directed, shall think best.

## ARTICLE VIII.

To Auxiliaries and members, and for gratuitous distribution, the prices of Bibles and Testaments are to be about the cost of production, to which is to be added the expense of transportation.

## ARTICLE IX.

No alteration shall be made in this Constitution, except by authority of an Annual Meeting.

"That is not the best sermon which makes the hearers go away talking to one another, and

praising the speaker, but which makes them go away thoughtful and serious, and hastening to be alone."—*Bishop Burnet.*

## FRIENDS' REVIEW.

PHILADELPHIA, TWELFTH MONTH 12, 1857.

## INDIANA BIBLE ASSOCIATION OF FRIENDS.—

The circulation of the HOLY SCRIPTURES amongst all classes and in all countries has engaged the earnest attention of a large number of Protestant Christians during the last fifty years. In order to accomplish this great work more thoroughly, the British and Foreign Bible Society was established in 1804. It has grown in dimensions and usefulness, and in 1855 its receipts from all sources were £136,000, equal to \$652,800, and the issues of the Scriptures for that year amounted to more than half a million each of Bibles and New Testaments; having also, since its organization, published the Scriptures in more than 150 different languages. In 1816 the American Bible Society was organized at New York; and since that time has constantly increased in public favor and usefulness, its operations extending over the whole of the United States, and many parts of foreign countries. Its issues last year were 770,000 volumes of Bibles and Testaments, and its total receipts were 441,805 dollars. By the persevering efforts of these noble Societies, and their auxiliaries, and of others independent of them, thousands, and perhaps millions, of our fellow men have been supplied with the Holy Scriptures; and thus that instruction which is able to make wise unto salvation through faith in Christ, has been brought near to them, and has been mercifully blessed, in a great number of instances, as a means to lead to Christ, and to the conversion of the soul. Greatly as these efforts have been extended, and immense as the number of Bibles distributed has been, one fact, which has become evident from actual inquiry, is very remarkable, and that is, the destitution that still remains, even in our own country. And when we turn our eyes to foreign countries, Asia and Africa, for instance, we may know that there are multitudes who are destitute of this invaluable book, which was "written for our learning, that we through patience and comfort of the Scriptures might have HOPE."

This excellent and heart-comforting work of supplying the Scriptures to the destitute is one

in which all sincere Christians can unite. The proposition is exceedingly simple—too simple to allow of much variety of opinion—to supply the *Holy Scriptures*, without note or comment, to the destitute in this and other countries; and this is the principal article in the constitutions of Bible Societies. The members of each Religious Society may, if they choose, have their own Associations, acting independently or as auxiliaries, and conduct them as they prefer; their efforts being directed to the one single object.

The Society of Friends, although not entirely idle in this good work, has done far less, it is apprehended, than would become them, considering their Christian profession, their belief in and deep love of the sacred volume, and the abounding kindness of a good Providence in pouring out his blessings so abundantly upon them.

It will be perceived by a movement which has recently been made in the limits of Indiana Yearly Meeting, that many Friends in the western country are turning their attention more effectually to this interesting subject; and while we believe that the divine blessing will accompany their labors, we may hope that the concern will grow and increase, tempered by truly Christian zeal, until it finds a fellow-feeling in every neighborhood, and more or less in the heart of every individual.

The "Indiana Bible Association of Friends" was organized during the week of the late Yearly Meeting at Richmond, and about two hundred names were subscribed to the Constitution as members. Having been furnished with a copy of that document, and also of an Address issued by the Association to Friends in the West, we present them, in connection, to our readers, and ask for them a careful consideration.

The following officers were appointed for the ensuing year: *Secretary*, Charles F. Coffin; *Treasurer*, Elijah Coffin; *Executive Committee*, Joseph Cox, Ephraim Morgan, Charles H. Moore, Benjamin Fulghum, George Evans, Levi Jessup, Francis W. Thomas, Enos G. Pray, Daniel Hill, Joseph Dickinson, John Hadley, Jr., and Joseph Moore.

MARRIED, at Friends' Meeting, Harden's Creek, Highland County, Ohio, on the 22d of 10th month last, JOSEPH ALLEN, of Bloomfield Monthly Meeting, Parke County, Indiana, to MAHALA B. STALKER, of the former place.

At Friends' Meeting, Highland, Morgan County, Indiana, on the 25th ult., JOHN H. JOHNSON

to MARY EMILY STANTON, both members of West Union Monthly Meeting.

[We are informed by a Friend, of China, Maine, that the notice sent to us, and published in our 11th No., of a marriage at that place, was not correct. Publishers of periodicals are of course liable to such impositions, as persons who are so destitute of moral principle as to commit an act of this kind, will not hesitate to forge the signatures of respectable individuals.]

DIED, on the 19th ult., LOIS T., wife of Abram Wanzer, of Morris, Otsego County, N. Y., in the 34th year of her age.

In Laurens, Otsego County, N. Y.; the 23d ult., EDWARD CORNELL, in the 93d year of his age.

On the 25th ult., CALLATHA, wife of Allen Holcomb, of Morris, Otsego County, N. Y.

The above-mentioned three friends were members of Butternuts particular Meeting.

On the 22d ult., DANIEL, eldest son of John and Katharine Diggs, in the 21st year of his age; a member of Poplar Run Monthly Meeting, Randolph County, Indiana. He was an exemplary and amiable young man, and much esteemed by all who knew him.

On the 22d ult., near Hart's Village, Dutchess County, N. Y., LYDIA A., wife of Isaac Swift, aged 30 years. She was an esteemed member of Nine Partners Monthly Meeting.

The decease of this dear friend has left a void in her family very deeply felt, yet they are comforted with the knowledge that she died in the arms of her Redeemer, whom she dearly loved in life, as her daily walk testified. Many can bear testimony of her sympathy with the poor and afflicted. On the morning previous to her departure, after bidding those around her an affectionate farewell, she said "do not weep for me, for all is well." After which she fell into a deep sleep, in which her spirit took its flight.

On the 20th ult., in East Farnham, Canada East, HANNAH R., wife of Seneca Stevens, and daughter of Nathan and Sarah Meader, of Lincoln, Vt., in the fifty-eighth year of her age; a member of Farnham Monthly Meeting.

This dear friend bore her last sickness with Christian calmness and resignation. At one time saying, "I believe I have seen a place prepared for me, where all will be peace and parting will be no more." And when near her end she bade her friends farewell, and requested them to give her love to all that enquired after her; then folding her hands, said "come, Lord Jesus, thy servant is ready;" these were the last words she was heard to say, and she quietly passed away without a struggle.

On the 27th of 8th month last, near Raysville, Henry County, Ind., BENAJAH PARKER, Sen., in the 75th year of his age.

For many years he was confined principally to the house, with chronic rheumatism, often being wholly unable to leave his room, suffering at times intense and agonizing pain. But during all his affliction, he was preserved in much Christian patience, never murmuring at his lot, but apparently cheerful and contented, making an agreeable companion for his family and friends. The greater part of the week previous to his death, his sufferings were so great as to render him unconscious of what was passing around, yet we have a consoling hope that through Divine mercy his end was peace.

On the 8th of the 5th month, 1857, in the twentieth year of her age, JANE COGGESHALL, daughter of Edward and Sophia Coggeshall, of Dover Monthly Meeting, Wayne County, Indiana.

During her last sickness, which she bore with much patience, she often expressed that her hopes of salvation were alone placed upon a Saviour, saying that

she believed it was only through the grace of a Redeemer that she would be saved.

She was frequently engaged in supplication, and she gratefully acknowledged the religious care which her mother had extended over her while she was young; although her mother had been deceased for several years, yet her counsel still remained fresh in her memory.

A friend calling to see her, she expressed that all looked bright and peaceful before her.

DIED, Suddenly on the 25th ult., of paralysis of the heart, in Hopkinton. R. I. DEBORAH COLLINS, relict of the late Peter Collins of the same place, aged 66. She was an esteemed and devoted member of South Kingston Monthly Meeting of Friends, and frequently when able to be out, felt constrained to proclaim to others the unsearchable riches of Christ, to the comfort of her friends. Though suddenly called from works to rewards, her friends have the consoling belief that her lamp was trimmed and her light burning, and she prepared to enter a mansion of rest and peace, forever to be with the Lord. And their loss is doubtless her eternal gain.

#### THE KEYS.

A bunch of keys, which he saw on a table, in the house of a wealthy lady, led *Gotthold* to make the following reflections: As no one key can open all locks, so no one man possesses all talents. God distributes His gifts according to His holy will, this to one, and that to another; and none is sufficient for all emergencies, and independent of the help of others. Each, however, ought to endeavor to serve his neighbor according to the measure of the gift he has received. In this manner, the God of love has knit us all to one another by a bond of peace. I hope, Madam, *Gotthold* continued, that these keys are your own absolute property, and that there is not one in all the bunch which is at the disposal of—Satan. Remember that, according to the words of the apostle, if any one have this world's good, and seeth his brother have need, and shutteth up his bowels of compassion from him, and refuses to open his coffers, then, unquestionably, the devil is the owner of the keys.

The best keys, however, are those which open heaven. In the year 1555, one of the blessed martyrs, shortly before his decease, spake these words: "Let us cheerfully tread the path before us, assured that death can never so prevail as to become to us an infamy and dishonor, but is rather an entrance into glory. Let us resolutely embrace and welcome it, seeing that it comes not armed with an *arrow* to wound us unto death eternal, but rather with a *key* to open the kingdom of heaven, and admit us to the vision of Jesus Christ, our only and everlasting life." I also know of a boy, only ten years of age, who once, at the suggestion, as I have no doubt, of the Holy Spirit, comforted his widowed mother in her sorrow and dejection, by observing that God was a rich gentleman, and had immense stores, that His pantries were full, and His supplies inexhaustible, but that the key to them was fervent prayer, and if we would but diligently

use it, we should want for nothing. This, in fact, was just what the Saviour meant, when He said: *Whatsoever ye shall ask the Father in my name, He will give it you.* And thus it is that prayer is one of the keys of heaven, and death the other. The latter, however, may easily be converted into the key of hell, and will certainly be so, if in this life we shamefully neglect to use the former, which, by Divine grace, is always at our command, and if we keep our temporal wealth too carefully locked up from our neighbor when he is in want.—*Gotthold's Emblems.*

#### THE HUMAN ORGANIZATION.

The living body of man unites in itself the contrasted and apparently incompatible qualities, of great stability and great mobility. It is so stable that it can last for threescore years and ten; for a hundred or more; maintaining its sharply defined individuality all the time. It is so mobile that it does not consist of entirely the same particles during any two successive moments. The dead matter of the outer world, it is ever changing into its own living substance, and its living substance it is ever changing into dead matter, which, as alien to itself, it returns to the outer world. Like the heavenly bodies, it undergoes a series of secular variations, which carry it with continually altering conditions through the several phases of embryonic, infant, adolescent, adult and senile life. Like certain of the heavenly bodies, also, it describes a diurnal revolution, knowing the alternations of sleep and waking, hunger and satiety, activity and rest. The reproduction of its kind involves a peculiar series of very complex changes, especially in the maternal organism. Mechanical injuries disabling or destroying organs and tissues require the manifestation of corresponding reparative processes. Disease, equally defacing and destructive, demands a countervailing *vis medicatrix* to neutralize its violence; or rather, disease is a battle between the organismal elements which are quick at finding a *casus belli* and are very rarely at perfect peace with each other. Everlasting change and yet fixity. Unceasing struggle and yet no schism. Civil war and yet no anarchy. These unlike conditions are realized and harmonized, every moment, in our fearfully and wonderfully made bodies.

If we reduce those apparent incompatibles to their simplest expression, we shall perhaps find it in this. Physically, the human organism is an aggregation of solids and liquids which are continually changing into each other; the solid melting into the liquid, the liquid congealing into the solid; whilst both stand so related to the air which is the breath of life, that they are continually vaporizing into gases, and gases are continually liquefying and solidifying into them.

Blood is liquefied muscle, sinew, nerve, brain, and bone. Bone, brain, nerve, sinew, and muscle are solidified blood; and at every moment flesh

is becoming blood, and blood flesh. The current in our veins is at once a river of the water of life, feeding and sustaining all that grows along its shores, and a river of the water of Lethe quenching in oblivion everything that it touches. Like the Nile or the other great rivers of the world, it is at the same time wearing down hills, and building up continents; but with this difference, that whereas the Nile is only destructive among the mountains of Abyssinia, and only constructive in the plains of Egypt, the blood at every point in its course is simultaneously adding and abstracting. Those wondrous crimson barks or wood-cells which navigate the arteries are keen traders, and follow the rule of the African rivers, where sales are effected only by barter; but they add to this rule, one peculiar to themselves, which neither civilized nor savage men care to follow, namely, that they give away new goods in exchange for old. Here the traffickers on the Red river deposit fresh brain-particles, to replace those which the immaterial spirit has sacrificed to the expression of its thoughts: for Jeremy Taylor taught a great physical truth when he declared long ago, that "while we think a thought we die." The eloquent preacher saw death near us at every moment, and nearer at each than at the moment before; but death is *in* us at every moment, and it is not merely *whilst*, but *because* we think a thought we die. Alas! that we cannot be content with such innocent self-slaughter, which the river of life in our veins forgives into resurrection in every case as fast as it ripples along. It cannot help us, if we overthink ourselves and die before our time, but during life its mariners deal in all vital wares. As fast as the blacksmith wastes his muscles by each blow, they barter against the spent cordage of his arm, new flesh-particles to make it strong as before; they restore to its integrity the exhausted auditory nerve of the musician, give the painter a new retina, and the singer a new tongue. Wherever, in a word, the million lamps of life, which keep up its flame at every point of the body, have burned to the socket, they are replaced by freshly trimmed ones; nor is it here as with the barter of Aladdin's Lamp. The new lamp is in this case the magic one; the Genii has departed from the old.

Chemically, again, the human organism is the continual subject of swift changes of its composition in opposite directions. One half of the blood, which is in the arteries, is always in one chemical condition; the other half, which is in the veins, is in another condition: and the whole blood is at all times rapidly transferred through these alterations. The arterial blood is charged with oxygen; the venous with carbonic acid. These gases are partly the causes, partly the effects, partly the indices of chemical differences between the two bloods, which affect probably more or less all their respective ingredients. At one half revolution of the circulation, they are changed

in one way at the capillaries of the lungs, whilst oxygen is absorbed: at the other half revolution they are changed in another way at the capillaries of the system, whilst oxygen is lost and carbonic acid takes its place.

There is thus continual addition of matter to the body, and continual withdrawal of matter from it; but apart from this, and within the ring-fence of its own organism, a process of combustion, and one the very reverse, are going on together. Our bodies are at all times like the fire which was shown to the hero of Pilgrim's Progress in the Interpreter's House, which had water poured on it, on one side of the wall against which it blazed, and oil on the other. Here one tissue is burning like fuel, and there another is becoming the depository of combustible matter. We have, as it were, millions of microscopic wind-furnaces, converting into carbonic acid, water-vapor, and other products of combustion, all the combustible elements of the body, and millions of blast-furnaces reducing the starch and sugar of the food, and the sulphates and phosphates of the body, into inflammable oils and other fuels, which are finally transferred to the wind-furnaces and burned there. Burning, and what we must call in contradistinction, *unburning*, thus proceed together; the flame of life, like a blow-pipe flame, exhibiting an oxidizing and a reducing action, at points not far distant from each other.

There are thus as concerns the organism, continual addition and continual abstraction; continual physical alternation of liquefaction and solidification; continual chemical alternation of combustion and reduction. The blood-vessels are at once the water-pipes of the city of Mansoul, bringing fresh springs into it, and the drain-tunnels carrying all that is waste and useless away. The heart is the one conjuror's bottle, pouring forth, aye, and at the same time, liquids the most unlike, to satisfy thirsts as strange; saliva to wet the lips, tears to relieve the eye, milk to swell the mother's breast, and oil to make supple the wrestler's limbs. The whole organism is, as the older writers loved to call it, a *Microcosm*, or world in little, where in one land they are rejoicing, and in another weeping; where on this shore they are singing *Te Deum*, and on that shore *Miserere*; where at the same moment it is "a time to love, and a time to hate; a time of war, and a time of peace."

Such is the human body, ever changing, ever abiding. A temple, always complete, and yet always under repair. A mansion, which quite contents its possessor, and yet has its plan and its materials altered each moment. A machine which never stops working, and yet is taken to pieces in the one twinkling of an eye, and put together in another. A cloth of gold, to which the needle is ever adding on one side of a line, and from which the scissors are ever cutting away on the other.—*Edinburgh Essays.*

## BAYARD TAYLOR IN NORTHERN EUROPE.

*The Midnight Sun.*

Correspondence of The N. Y. Tribune.

STEAMER GYLLER, Arctic Ocean, {  
July 27, 1857. }

My last letter closed abruptly with our arrival in the Alten Fiord.

There is nothing of interest between Alten and Hammerfest, except the old sea-margins on the cliffs, and a small glacier on the island of Seiland. The coast is dismally bleak and barren. Whales were very abundant; we sometimes saw a dozen spouting at one time. They were of the hump-backed species, and of only moderate size, yet the fishery would doubtless pay very well, if the natives had enterprise enough to undertake it. I believe, however, there is no whale fishery on the whole Norwegian coast. The desolate hills of Qvalø, surmounted by the pointed peak of the Tjuve Fjeld, or "Thief Mountain"—so called, because it steals so much of the Winter sunshine—announced our approach to Hammerfest, and toward 9 o'clock in the evening we were at anchor in the little harbor. The summer trade had just opened, and forty Russian vessels, which had arrived from the White Sea during the previous week or two, lay crowded before the large fish warehouses, built along the water. They were all three-masted schooners, the main and mizen masts set close together, and with very heavy, square hulls. Strong Muscovite faces, adorned with magnificent beards, stared at us from the decks, and a jabber of Russian, Finnish, Lapp and Norwegian came from the rough boats, crowding about our gangways. The north wind, blowing to us off the land, was filled with the perfume of dried codfish, train-oil and burning whale—"scraps," with which, as we soon found, the whole place is thoroughly saturated.

Most of the travellers who push so far north as Hammerfest content themselves with one experience of the midnight sun, and return with the same steamer to Drontheim. A few extend their journey to the North Cape, and once a year, on an average, perhaps, some one is adventurous enough to strike across Lapland to Tornea. The steamers, nevertheless, pass the North Cape, and during the summer make weekly trips to the Varanger Fiord, the extreme eastern limit of the Norwegian territory. We were divided in opinion, whether to devote our week of sunshine to the North Cape, or to make the entire trip and see something of the northern coast of Europe, but finally decided that the latter, on the whole, as being unfamiliar ground, would be most interesting. The screw-steamer Gyller (one of Odin's horses) was lying in the harbor when we arrived, and was to leave in the course of the next night; so we lost no time in securing places, as she had but a small cabin and no state-rooms. Nevertheless, we have found her very comfortable, and in every respect far superior to the

English vessels which ply between Hull and Christiania.

When I came on deck yesterday morning, we were in the narrow strait between the island of Magerøe, the northern extremity of which forms the North Cape, and the mainland. On either side, the shores of bare, bleak rocks, spotted with patches of moss and stunted grass, rose precipitously from the water, the snow filling up their ravines from the summit to the sea. Not a tree, nor a shrub, nor a sign of human habitation, was visible: there was no fisher's sail on the lonely waters, and only the cries of some sea-gulls, wheeling about the cliffs, broke the silence. As the strait opened to the eastward, a boat appeared, beating into Kjelvik, on the south-eastern corner of the island, but the place itself was concealed from us by an intervening cape. This is the spot which Von Buch visited, in the summer of 1807, just fifty years ago, and his description would be equally correct at the present day. Here, where the scurvy carries off half the inhabitants, where pastors coming from Southern Norway die within a year, where no trees grow, no vegetables come to maturity, and gales from every quarter of the Icy Sea beat the last faint life out of Nature, men will still persist in living, in apparent defiance of all natural laws. Yet they have at least an excuse for it, in the provision which Providence has made for their food and fuel. The sea and fiords are alive with fish, which are not only a means of existence, but of profit to them; while the wonderful Gulf Stream, which crosses five thousand miles of the Atlantic to die upon this Ultima Thule in a last struggle with the Polar Sea, casts up the spoils of tropical forests to feed their fires. Think of Arctic fishers burning upon their hearths the palms of Hayti, the mahogany of Honduras, and the precious woods of the Amazon and the Orinoco!

In the spring months, there are, on an average, eight hundred vessels on the Northern Coast, between the North Cape and Vadsø, with a fishing population of five thousand men on board, whose average gains, even at the scanty prices they receive, amount to \$30 apiece, making a total yield of \$150,000. It is only within a very few years that the Norwegian Government has paid any attention to this far corner of the peninsula. At present, considering the slender population, the means of communication are well kept up during eight months in the year, and the result is an increase, (perceptible to an old resident, no doubt,) in the activity and prosperity of the country.

On issuing from the strait, we turned southward into the great Porsanger Fiord, which stretches nearly a hundred miles into the heart of Lapland, dividing Western from Eastern Finmark. Its shores are high, monotonous hills, half covered with snow, and barren of vegetation, except patches of grass and moss. If once wooded, like the hills of the Alten Fiord, the

trees have long since disappeared, and now nothing can be more bleak and desolate. The wind blew violently from the east, gradually lifting a veil of grey clouds from the cold, pale sky, and our slow little steamer, with jib and foretopsail set, made somewhat better progress. Toward evening, (if there is such a time in the Arctic summer,) we reached Kistrand, the principal settlement on the fiord. It has eight or nine houses, scattered along a gentle slope a mile in length, and a little red church, but neither gardens, fields, nor potato patches. A strip of grazing ground before the principal house was yellow with dandelions, the slope behind showed patches of brownish-green grass, and above this melancholy attempt at summer stretched the cold, grey, snow-streaked ridge of the hill. Two boats, manned by sea-Lapps, with square, blue caps, and long, ragged locks of yellow hair fluttering in the wind, brought out the only passenger and the mails, and we put about for the mouth of the fiord.

Running along under the eastern shore, we exchanged the dreadful monotony through which we had been sailing for more rugged and picturesque scenery. Before us rose a wall of dark cliff, from five to six hundred feet in height, gaping here and there with sharp clefts or gashes, as if it had cracked in cooling, after the primeval fires. The summit of these cliffs was the average level of the country, and this peculiarity, we find, applies to all the northern shore of Finmark, distinguishing the forms of the capes and islands from those about Alten and Hammerfest, which, again, are quite different from those of the Lofodens. "On returning from Spitzbergen," said a Hammerfest merchant to me, "I do not need to look at chart or compass, when I get sight of the coast; I know, from the formation of the cliffs, exactly where I am." There is some general resemblance to the chalk bluffs of England, especially about Beachy Head, but the rock here appears to be mica-slate, disposed in thin, vertical strata, with many violent transverse breaks.

As we approached the end of the promontory which divides the Porsanger from the Laxe Fiord, the rocks became more abrupt and violently shattered. Huge masses, fallen from the summit, lined the base of the precipice, which was hollowed into cavernous arches, the home of myriads of sea-gulls. The rock of Sværholt-klub, off the point, resembled a massive fortress in ruins. Its walls of smooth masonry rested on three enormous vaults, the piers of which were buttressed with slanting piles of rocky fragments. The ramparts, crenelated in some places, had mouldered away in others, and one fancied he saw in the rents and scars of the giant pile the marks of the shot and shell which had wrought its ruin. Thousands of white gulls, gone to their nightly roost, rested on every ledge and cornice of the rock; but preparations were already made to

disturb their slumbers. The steamer's cannon was directed toward the largest vault, and discharged. The fortress shook with the crashing reverberation; "then rose a shriek, as of a city sacked"—a wild, piercing, maddening, myriad-tongued cry, which still rings in my ears. With the cry, came a rushing sound, as of a tempest among the woods; a white cloud burst out of the hollow arch-way, like the smoke of an answering shot, and, in the space of a second, the air was filled with birds, thicker than Autumn leaves, and rang with one universal, clanging shriek. A second shot, followed by a second outcry and an answering discharge from the other caverns, almost darkened the sky. The whirring, rustling and screaming, as the birds circled overhead, or dropped like thick scurries of snow-flakes on the water, was truly awful. There could not have been less than fifty thousand in the air at one time, while as many more clung to the face of the rock, or screamed from the depth of the vaults. Such an indignation meeting I never attended before; but, like many others I have heard of, the time for action was past before they had decided what to do.

It was now 11 o'clock, and Sværholt glowed in fiery bronze lustre as we rounded it, the eddies of returning birds gleaming golden in the nocturnal sun, like drifts of beech leaves in the October air. Far to the north, the sun lay in a bed of saffron light over the clear horizon of the Arctic Ocean. A few bars of dazzling orange cloud floated above him, and still higher in the sky, where the saffron melted through delicate rose-color into blue, hung light wreaths of vapor, touched with pearly, opaline flushes of pink and golden gray. The sea was like a web of pale slate-color, shot through and through with threads of orange and saffron, from the dance of a myriad shifting and twinkling ripples. The air was filled and permeated with the soft, mysterious glow, and even the very azure of the southern sky seemed to shine through a net of golden gauze. The headlands of this deeply-indented coast—the capes of the Laxe and Porsanger Fiords, and of Mageröe—lay around us, in different degrees of distance, but all with foreheads touched with supernatural glory. Far to the north-east was Nordkyn, the most northern point of the mainland of Europe, gleaming rosily and faint in the full beams of the sun, and just as our watches denoted midnight, the North Cape appeared to the westward—a long line of purple bluff, presenting a vertical front of 900 feet in height to the Polar Sea. Midway between these two magnificent headlands stood the Midnight Sun, shining on us with subdued fires, and with the gorgeous coloring of an hour for which we have no name, since it is neither sunset nor sunrise, but the blended loveliness of both—but shining at the same moment, in the heat and splendor of noonday, on the Pacific Isles.

This was the Midnight Sun as I had dreamed it—as I had hoped to see it.

Within fifteen minutes after midnight, there was a perceptible increase of altitude, and in less than half an hour the whole hue of the sky had changed, the yellow brightening into orange, and the saffron melting into the pale vermilion of dawn. Yet it was neither the colors, nor the same character of light as we had had, half an hour *before* midnight. The difference was so slight as scarcely to be described, but it was the difference between evening and morning. The faintest transfusion of one prevailing tint into another had changed the whole expression of heaven and earth, and so imperceptibly that a new day was already present to our consciousness. Our view of the wild cliffs of Sværholt, less than two hours before, belonged to yesterday, though we had stood on deck, in full sunshine, during all the intervening time. Had the sensation of a night slipped through our brains, in the momentary winking of the eyes? Or was the old routine of consciousness so firmly stereotyped in our natures, that the view of a morning was sufficient proof to them of the pre-existence of a night? Let those explain the phenomenon who can—but I found my physical senses utterly at war with those mental perceptions wherewith they should harmonize. The eye saw but one unending day; the mind notched the twenty-four hours on its calendar, as before.

Before 1 o'clock, we reached the entrance of the Kjöllefiord, which in the pre-diluvial times must have been a tremendous mountain gorge, like that of Gondo, on the Italian side of the Simplon. Its mouth is about half a mile in breadth, and its depth is not more than a mile and a half. It is completely walled in with sheer precipices of bare rock, from three to five hundred feet in height, except at the very head, where they subside into a stony heap, upon which some infatuated mortals have built two or three cabins. As we neared the southern headland, the face of which was touched with the purest orange light, while its yawning fissures lay in deep-blue gloom, a tall ruin, with shattered turrets and crumbling spires, detached itself from the mass, and stood alone at the foot of the precipice. This is the *Fimkirka*, or "Church of the Lapps," well known to all the northern coasters. At first, it resembles a tall church with a massive square spire, but the two parts separate again, and you have a crag-perched castle of the Middle Ages, with its watch-tower—the very counterpart of scores in Germany,—and a quaint Gothic chapel on the point beyond. The vertical strata of the rock, worn into sharp points at the top and gradually broadening to the base, with numberless notched ornaments and channels fluted by the rain, make the resemblance marvellous, when seen under the proper effect of light and shade. The lustre in which we saw it had the effect of enchantment. There was a play of color upon

it, such as one sees in illuminated Moorish halls, and I am almost afraid to say how much I was enraptured by a scene which has not its equal on the whole Norwegian coast, yet of which none of us had ever heard before.

We landed a single passenger—a Government Surveyor, apparently—on the heap of rocks beyond, and ran out under the northern headland, which, again, charmed us with a glory peculiarly its own. Here the colors were a part of the substance of the rock, and the sun but heightened and harmonized their tones. The huge projecting masses of pale yellow had a mellow gleam, like golden chalk; behind them were cliffs, violet in shadow; broad strata of soft red, tipped on the edges with vermilion; thinner layers, which shot up vertically to the height of four or five hundred feet, and striped the splendid seawall with hues of bronze, orange, brown and dark red, and great rents and breaks, interrupting these marvellous frescoes with their dashes of uncertain gloom. I have seen many wonderful aspects of Nature, in many lands, but rock-painting such as this I never beheld. A part of its effect may have been owing to atmospheric conditions which must be rare, even in the North; but, without such embellishment, I think the sight of this coast will nobly repay any one for continuing his voyage beyond Hammerfest.

We lingered on deck, as point after point revealed some change in the dazzling diorama, uncertain which was finest, and whether something still grander might not be in store. But at last Nordkyn drew nigh, and at 3 o'clock the light became that of day, white and colorless. The north-east wind blew keenly across the Arctic Ocean, and we were both satisfied and fatigued enough to go to bed. It was the most northern point of our voyage—about  $71^{\circ} 20'$ ,—which is further north than I ever was before, or ever wish to be again. B. T.

#### A CRUSADE AGAINST TOBACCO.

A friend has furnished us with several pamphlets, in which powerful arguments are employed against the use of tobacco. The writer contends that the habit is at war with religion; that it is deleterious to health, and that it is productive of many deplorable consequences. Among the facts and arguments employed are the following:—

Science says Tobacco is a poison, a rank poison, as really a poison as ratsbane, Prussic acid, or any other deadly thing, which takes the name.

The Journal of Health says Tobacco is an absolute poison; a small quantity of which has been known to extinguish life very suddenly.

Rees's Cyclopaedia says a drop or two of the oil, placed on the tongue of a cat, produces convulsions and death in the space of a minute.

A college of physicians has said that not less

than twenty thousand in our land annually die by the use of this poison.

A German periodical says, that of twenty deaths of men between the ages of eighteen and twenty-five, one-half originate in the waste of the constitution by *smoking*. The same periodical says, Tobacco burns out the blood, the teeth, the eyes, the brains.

Dr. Shaw names some eighty diseases, and says they may be attributed to Tobacco.

Governor Sullivan says, "My brother, General Sullivan, used snuff, and his snuff lodged him permanently in the grave."

The French poet, San-euil, was killed by a little snuff being thrown into his wine-glass, at the Prince of Conde's table.

Bocarme, of Belgium, was murdered in two minutes and a half, by a little nicotine, or alkali of Tobacco.

Dr. Twitchell believed that sudden deaths and Tobacco, among men, were usually found together, and he sustained this opinion by an array of facts altogether conclusive.—*Penna. Inquirer*.

#### COLORED PEOPLE OF WASHINGTON.

About one-fifth of the population of Washington are people of color, of whom again about one fifth, I believe are slaves. Apparently, the colored population is in a very comfortable condition. They are well clothed, well treated and well employed. I have never before seen so active, industrious, intelligent looking and civilized looking a colored population. Besides domestic service, which they share largely with the Irish and Germans, they are employed as porters, teamsters, coachmen, and in all sorts of miscellaneous labor. They have several flourishing churches and schools, and seem to be, in short, quite as well off as the common laboring class in any of our Northern cities.

On paper, that is to say on the statute-book of the city, the colored people are subject to absurd and disgraceful regulations, copied apparently from the police codes of Vienna, Paris, or some other despotic capital. For example, no free person of color can have a dance, a ball or assembly at his or her house, without first having obtained a permit from the Mayor (as in Paris from the Chief of Police), in which shall be mentioned the place, time of meeting, number of guests, and hour of breaking up the party. No free black is allowed to go at large through the City of Washington at a later hour than 10 o'clock at night without a pass, except the drivers of vehicles. Offenders against this statute may be arrested and confined in prison until the following morning, and then be fined \$10, at the discretion of a Justice of the Peace. There are also regulations, similar to those in force in the despotic monarchies of Europe, by which free people of color becoming residents

of the city are obliged to register themselves and give bonds for good behaviour. Practically these statutes appear to be nearly obsolete, and they are certainly not generally enforced. To some extent they have had a good effect upon the morals of the colored population, by restricting their opportunities for dissipation.—They might, without much harm to the community, be extended to and put in force against a portion of the white population; for Washington is just now badly infested by gangs of rowdies, whose nightly outrages the police does not seem strong enough to restrain.—*Cor. Trib.*

#### THE GLORY TO BE REVEALED.

"I reckon that the sufferings of this present time are not worthy to be compared with the glory that shall be revealed in us."

Wouldst thou inherit life with Christ on high?  
Then count the cost, and know  
That here on earth below  
Thou needs must suffer with thy Lord, and die.  
We reach that gain to which all else is loss,  
But through the cross.

O think what sorrows Christ himself has known!  
The scorn and anguish sore,  
The bitter death He bore,  
Ere He ascended to His heavenly throne;  
And deemst thou, thou canst with right complain,  
Whate'er thy pain?

Not e'en the sharpest sorrows we can feel,  
Nor keenest pangs, we dare  
With that great bliss compare,  
When God His glory shall in us reveal,  
That shall endure when our brief woes are o'er  
For evermore!

—SIMON DACH, 1640.

#### SUMMARY OF NEWS.

FOREIGN INTELLIGENCE.—Liverpool advices are to the 25th ult. The demand for discounts at the Bank of England continued unabated. One large firm in the American trade obtained an advance of £1,000,000. No further increase had been made in the rate of discount, and it was hoped that the large arrivals of gold from Australia would make such a step unnecessary. The Bank had prepared about £2,000,000 of additional notes, under the authority granted by the government, but less than half a million had been actually taken out by the public. In the manufacturing districts trade was almost at a stand. Still confidence was gradually returning. A large and influential meeting at Glasgow had resolved to accept the notes of the suspended Scotch banks as currency, and to aid them to resume. Private letters from Paris represent the feeling there as more cheerful, and in some of the other continental cities there were indications of partial revival. In the Liverpool market, both cotton and breadstuffs showed a declining tendency.

ENGLAND.—Some riots had occurred among the unemployed operatives at Nottingham, but quiet had been restored. Temporary relief had been afforded to many families, and the able bodied were employed in constructing a new road, instead of being compelled to go into the workhouse.

An attempt was made on the 19th to move the Great Eastern to the water's edge, but it failed, the chains breaking without starting the ship.

About fifty miles of the submerged portion of the Atlantic telegraph cable nearest the shore had been recovered, but the wire breaking at that point, the remainder is probably lost. The recovered portion is uninjured, and has been stored at Keyham with that deposited from the Niagara and Agamemnon, for a second attempt next summer. About 1600 miles more of cable are preparing.

A meeting of the holders of shares and bonds of the New York and Erie railroad was held on the 18th, at which resolutions were adopted expressing confidence in the intrinsic value and ultimate solvency of the work, and a committee was appointed to procure subscriptions of additional capital to prevent the foreclosure of mortgages on the property.

FRANCE.—The permission to export grain had caused a slight rise in its price.

ITALY.—A submarine telegraph has been successfully laid from Cagliari to Malta, a distance of about 300 miles.

Upwards of 400 persons implicated in a conspiracy at Naples, are said to have been arrested in one night.

PORTUGAL.—The fever at Lisbon continued, and had spread beyond the city. On the 7th, 223 new cases occurred in 24 hours.

GERMANY.—The powder mills at Mayence, on the Rhine, recently exploded, destroying a portion of the city, killing 30 persons, and wounding nearly 500.

AUSTRIA.—The financial accounts from the manufacturing districts were very unfavorable; many failures had occurred, and the panic was the greatest ever known in Vienna.

RUSSIA.—A great fire at St. Petersburg on the 5th ult. caused the loss of many lives. No particulars have been received.

SWEDEN.—The government has granted 1250 dollars for meteorological observations in the kingdom, to be made under the direction of the Academy of Sciences.

EAST INDIES.—Two eruptions of the volcano Amoe, in one of the Sanquir Islands, near Borneo, are stated to have occurred on the 2d and 17th of 3d month last. The emission of lava, stones and ashes, was so great as to obscure the sun, and produce total darkness. A violent hurricane and lightning accompanied the eruptions. A whole village was destroyed, with a large amount of growing rice, and nearly 3,000 persons were killed.

DOMESTIC.—Meetings have been held at Lawrence and Leavenworth, Kansas, to consider the action of the Constitutional Convention, at both of which resolutions were adopted denouncing the proposed Constitution as a fraud, and a violation of the expressed wishes of the people of Kansas, pledging themselves to resist all attempts to thrust it upon them, and repudiating the election proposed to be held on the 21st inst. It was also suggested, that if the Territorial Executive did not immediately call a special session of the Territorial Legislature, Gov. Robinson should call a special session of the State Legislature as early as possible. A vigilance committee is forming throughout the Territory. It is believed that the President designs leaving the whole matter to the action of Congress. The Senate will also be called upon to confirm or reject Gov. Walker, his appointment having been made by the President in the interval of the sessions of Congress.

It is reported that Brigham Young has publicly and formally declared Utah to be a separate and independent Territory, owing no allegiance to any government or laws but its own, and has called upon the people to support him in this position. Recent advices indicate the danger of great suffering on the part of the U. S. expedition on the way to that Territory, during the

present winter. Letters to the *St. Louis Republican* dated the 3d ult., state that a skirmish had taken place between the Mormons and the advanced guard of the U. S. troops, in which several of the former were taken prisoners. The officers were determined to push on to Salt Lake City, if possible, while the Mormons were equally resolute in opposing their entrance. The troops were said to be very desponding, on account of apprehended privations.

The Territory of New Mexico is at present destitute of any government, the Governor, Secretary, and Chief Justice having all resigned and left the Territory before the arrival of any successors. The Governor of Nebraska has also acted in the same manner, leaving his post vacant.

J. C. Underwood, a citizen and landholder of Virginia, who was expelled from the State by mob violence, last year, for attending the Republican National Convention as a delegate, has been tried, in his absence, by the court of Clark County, and fined \$300, for having declared that the master has not the right of property in his slave. In addition to the New England colony at Ceredo, a Pennsylvania company has commenced a settlement in Bath County.

Two colored men from Geneva, N. Y., having been inveigled into the southern part of Ohio, have been taken thence to Kentucky and sold into slavery. One is in jail in that State, and the other has been sold again, probably to go farther South. The Governor of New York has commissioned an agent to proceed to Kentucky and endeavor to rescue them, as well as to bring the kidnappers to justice.

Both Houses of Congress met on the 7th inst. A letter from the Vice President was read in the Senate, stating that he would not be able to reach Washington at the commencement of the session; whereupon, B. Fitzpatrick, of Alabama, was elected President, *pro tem.*, of that body. In the House of Representatives, J. L. Orr, of S. C., was nominated as the Democratic, and G. A. Grow, of Pa., as the Republican candidate, and the former was elected on the first ballot by a vote of 128 to 84, with 13 scattering votes. The other usual officers were also elected.

The President's Message was sent to both Houses on the 8th, accompanied by the reports from the various Departments. The Message treats first of the financial difficulties of the country, which it attributes to an extravagant and vicious system of paper currency and bank credits, but intimates that the remedy lies only in State legislation, since Congress has not the power to regulate the paper currency. It suggests an uniform bankrupt law, applicable to all banks, making suspension of specie payments a forfeiture of charter. Our relations with foreign governments are generally in a favorable condition. In regard to Kansas, the President recognizes the Leecompton Constitutional Convention, as well as the legislative bodies which preceded it, as the legal exponents of the public sentiment of the Territory; and argues that if they do not represent the views of the majority, it is because the latter refused to vote. He understands the organic act of the Territory to require that the question of slavery should be submitted to the people; though he admits that even on this point, the proposed Constitution does not carry out the doctrine of popular sovereignty. He declares that the rebellion in Utah must be put down, and recommends the incorporation of the Territory of Arizona.

The Message and documents were ordered to be printed. In the Senate a debate on the Kansas question followed, in which Douglass, of Ill., and others, opposed the views of the President, while others defended them. The House was occupied with a debate on the subject of a public printer.

*A memorial of Purchase Monthly Meeting, concerning RICHARD MOTT, deceased.*

[Concluded from page 211.]

In the summer of 1847 he and his wife went to spend some time with their daughter-in-law, at Burlington, not designing it as a permanent change of residence. Her health was much impaired at the time, and continuing to fail, she was unable to return home, and closed her life there in the year 1851. Thus, after a continuance of sixty-four years, was a union dissolved, that had proved a solace and a stay to him through the various changes and trials of his life. He felt the bereavement keenly; but bowing with Christian submission to the afflictive dispensation, he found relief in placing his hope and confidence in that All-powerful Arm that had sustained him hitherto. A few short extracts from his letters, expressive of his feelings on this trying occasion, are here inserted. Writing to a relative he says, "Ah! how we feel our sore bereavement! but, in her own sweet and almost heavenly language, 'let us seek for a state of resignation in which we may be able to say, 'The will of the Lord be done.'" On another occasion, referring to his loss, and speaking of the deep and inexpressible feeling of bereavement which seemed to press upon him like an overflowing stream, he remarked, "I don't mean that my heart repines, or that I would wish things in relation to my bereavement were different. My heart is fixed in the goodness and mercy of our Heavenly Father. All that he does is best for us. But the heart, the heart is sometimes so soft, so subdued under the pressure of affliction, that it is almost ready to break by its own weight! when at the same time it blesses the rod that has inflicted the wound."

In this state of resignation to the Divine Will

he was strengthened to cast off the weight of affliction that had pressed upon him, and gradually to regain, in a considerable degree, his wonted cheerfulness.

Feeling that in his bereaved condition, with his own health impaired, he needed the kind attention and sympathy of his children, he continued to reside with them in Burlington. Though remote from the Meeting of which he was a member, he still attended the Monthly and Quarterly Meetings, as steadily as his health would admit.

He was constant in his attendance of the Yearly Meeting, taking great interest in the management of the concerns of the Society. And in the deliberations and decisions of that body, his talents and the soundness of his judgment fitted him for extensive usefulness. He was first appointed Clerk to the Yearly Meeting in 1798; and from that time, with the exception of a few years, he continued to serve the Meeting, either as Clerk or Assistant Clerk, performing the duties to the satisfaction of Friends, until the eighty-fifth year of his age, when he was released at his own request.

He was early appointed a member of the Meeting for Sufferings; and this appointment he held until the close of his life, embracing a period of more than sixty years; and here also his talents, and his devotedness to the duties confided to that Meeting, rendered him a useful and highly valued member.

Through the increase of bodily infirmities in his latter years, the attendance of these meetings was not accomplished without difficulty—and the Meeting for Sufferings, in inclement seasons, was frequently omitted. The prospect of being prevented from mingling with his friends in their annual assemblies, as he had so long been accustomed to do, was trying to him; but he endeavored to stand resigned to the will of his Heavenly Father, and as the time for holding these Meetings arrived, the physical disabilities were so far removed as to admit of his attendance to the last year of his life.

Soon after the Yearly Meeting in 1856, he left the city with the view of spending some time, if his health would admit of it, in visiting his relations and friends within the compass of Purchase Monthly Meeting and parts adjacent. During the time thus spent, though often under

the pressure of bodily infirmities, his placid countenance and enjoyment of everything around him, seemed to bespeak a mind at peace. He attended the Monthly and other meetings as they came in course, and his ministry on these occasions was particularly marked with a tenderness and fervency, that rendered it very comforting and edifying. At one time while pleading with the youth to dedicate the morning of their life to the service of their Creator, he adverted to his own early life, with feelings much affected, and said that, notwithstanding his many missteps, he had been mercifully favored to hold fast the covenants then made; and that the promise that, to those who seek first the kingdom of God and his righteousness, all things necessary shall be added, had been abundantly verified in his own experience. In the last meeting he attended, he dwelt particularly upon the text, "I know that it shall be well with them that fear God, which fear before him; but it shall not be well with the wicked, neither shall he prolong his days, which are as a shadow; because he feareth not before God."

On Third day, the fifteenth of Seventh month, after having spent about five weeks in making highly acceptable visits to his numerous friends, he arrived at the house of his relatives, Stephen C. and Jane Griffen, quite ill. The day following, his disease having increased, a physician was called in, who thought the symptoms were of a serious nature, and indicative of approaching paralysis. There was a constant tendency to sleep, and consciousness was, in a considerable degree, suspended. Towards evening these symptoms abated.

Fifth-day morning the tendency to sleep continued; yet he would rouse from it, and express himself sensibly. In the afternoon he seemed pleased with the visit of a friend who called to see him, and embraced the opportunity to send messages of love to several friends at a distance; and expressed his disappointment in not being able to visit them, and attend the approaching Quarterly Meeting. On parting with this friend he sweetly said, "I am persuaded that neither heights nor depths, principalities nor powers, nor any other thing, shall be able to separate us from the love of God which is in Christ Jesus our Lord."

For several succeeding days there was no apparent material change in the disease; but he suffered much from oppression of the chest, and from a nervous restlessness, which he said was more distressing than pain; yet he endured his sufferings with great patience and composure, seldom speaking of them except in reply to inquiries made.

About this time he remarked that he did not say much, but endeavored to place his hope and trust in the everlasting Arm, and that thus far he believed he had been enabled, in a considera-

ble degree, to do so. A few days later, perceiving that his strength was wasting, he said he had given up the thought of ever leaving that place—that it had been a trial to him to be sick and confined there, but on thinking of it he was content.

Fifth-day the 24th, he was visited by two relatives to whom he was fondly attached. He had expected them sooner, and on seeing them he said, "Why have the chariot wheels tarried so long,"—and then added, "You see the strong man laid low. I do not see the end. I have no anxiety, and only desire that the will of my Heavenly Father may be done. The stupor I am in is trying to me, but stupid as I am, I am with you in your afflictions," (alluding to severe disease in their family.) On its being observed that sleeping might prove a rest to him, he replied, "It is a sluggish rest,—not the rest that my soul longs for,—not the fervency of spirit that I desire,"—repeating the promise of our Saviour, "and ye shall find rest to your souls." He said that there was great uncertainty of their meeting again, once more remarking that his only wish was, that the will of his Heavenly Father might be done. Alluding to the kindness of his friends, he said that every want had been supplied.

Sixth-day the 25th, in the morning, he appeared brighter and better than usual. Though he had relinquished the prospect of being able to return to his children at Burlington, yet the desire to do so would occasionally revive; and his physician now speaking encouragingly of his soon being able to return, it had a cheering effect: but after a short time of reflection he said, he believed he was very little better, if any. The next morning a change for the worse was obvious, and he continued to decline.

First-day the 27th, towards evening, perceiving that his nephew had been writing to his children, he desired to hear the letter read, and requested to have inserted—that he felt great sympathy with them on account of the sickness in the family, and their consequent separation from him in his severe illness: and he dictated a message of love to them, expressing his strong desire for their welfare.

The day following his strength steadily declined, but amid the suffering and sinking of nature, his distress was endured with patience, and his countenance retained its usual serenity. In the evening it became evident that the closing scene was drawing near. About five in the morning, the twenty-ninth of Seventh month, he quietly expired, in the ninetieth year of his age. His remains were removed to Burlington, and interred beside those of his wife.

Our beloved friend, whose dedication and labors and trials through the different stages of a long life, we have faintly traced, was richly endowed with intellectual gifts, and, devoting them to the service of his Creator, he became an

eminent minister of the Gospel, and stood as a pillar in the Church.

He was of a cheerful disposition, and was fond of social intercourse. Possessing a well cultivated mind, his conversation was enlivening and instructive, and his social visits would frequently prove seasons of rare intellectual enjoyment. Hence his company was regarded as a privilege, and was particularly prized by young people, towards whom he was very open and affable. Often near the close of such seasons, serious impressions would overspread his mind, and religious communications would follow, adapted to the state of those to whom they were addressed; and springing as they did from the fresh flowing of gospel love, could scarcely fail to leave its impress upon the heart.

From an apprehension that the abundance of light literature of the present day was calculated to draw the attention from more profitable reading, he was often engaged to recommend the perusal of the writings of Friends, both historical and doctrinal, and for the purpose of encouragement would allude to the usage of former times, when a large portion of the reading in Friends' families was supplied by the approved writings of its own members.

He highly esteemed the Holy Scriptures, as being given by Divine inspiration, and designed for our instruction in righteousness; and was often concerned to recommend to Friends the diligent and daily perusal of them, with their families collected—a practice which he steadily observed in his own.

On such occasions it was interesting to see his wife, whose hearing was greatly impaired, seated by his side, and intently tracing the lines with her eyes as the reading progressed.

The constant encroachment on the rights of the aborigines of this land, and the slavery and sufferings of millions of the African race, excited his sympathy and compassion; and he was ever ready, in the true spirit of philanthropy, to unite with Friends in earnest endeavors to remove these great national evils. Believing that the use of the produce of slave-labor was the principal support of the system of slavery, he was frequently concerned to urge this consideration upon the attention of others, and to press upon them the inquiry, whether, in thus using these articles, they could be fully clear of contributing to the support of the system itself.

Richard Mott was attached to the doctrines of our religious Society; and, convinced that they are the doctrines of primitive Christianity, he was, through life, their firm and zealous advocate; yet his zeal was tempered with charity towards those who differed from him in opinion. He was earnestly concerned for the support and faithful administration of our discipline, a work for which he was eminently qualified; and the wide departure, in numerous instances, from the testimonies which distinguish us as a people, was

cause of deep regret and sorrow to him. Hence he frequently urged upon Friends his views in this respect, and particularly when addressing the younger portion of Society.

In the exercise of the ministry he was careful not to move without a clear evidence of duty, and he maintained a watchful concern not to extend his communications beyond proper limits, or to interfere with the labors of others who were travelling in the same service.

His ministerial labors were lively and frequent, and were attended with a clearness and force that rendered them instructive and edifying. He was, in the language of the Apostle, "a workman that needeth not to be ashamed, rightly dividing the word of truth." He withheld not the awakening or warning voice from those among whom he labored, when he believed himself called thereto: at other times the language of encouragement or consolation flowed from his lips, greatly to the comfort of his hearers. Frequently his feelings would be drawn forth in affectionate concern towards those in early life, as the class upon whom his hopes of a succession of faithful laborers in the militant church principally rested; and when, with a heart enlarged with love, he was earnestly pleading with them, the glistening eye or trickling tear have furnished evidence that corresponding emotions had been produced in the bosoms of his hearers. May these impressions never be forgotten.

His labor is now finished. Having served his generation faithfully, his life was peacefully closed "in a full age, like as a shock of corn cometh in his season." He has gone, as we reverently believe, to unite with those who "have washed their robes, and made them white in the blood of the Lamb. Therefore are they before the throne of God, and serve Him day and night in his temple; and he that sitteth on the throne shall dwell among them. They shall hunger no more, neither thirst any more; neither shall the sun light on them, nor any heat. For the Lamb which is in the midst of the throne, shall feed them, and shall lead them unto living fountains of waters; and God shall wipe away all tears from their eyes."—REV. vii. 14-17.

#### ANGRY ALMS.

Gotthold was one day occupied with important business, and deeply absorbed in thought, when his daughter unexpectedly entered the room, bringing a paper stating the case of a poor widow, with the causes of her penury, and soliciting an alms in her behalf. Losing his temper, he spoke harshly to the girl, and, in an ill-humour, flung to her the sum she asked. He soon, however, recollected himself, and cried out: Wretched man that I am! how fair the show which my Christianity often presents, to myself at least, and how boldly I venture to say, "Lord Jesus, Thou

knowest all things, Thou knowest that I love Thee;" and yet, now that my Saviour has come and craved a mite for this poor widow, as a practical evidence of my affection, I take offence at Him for disturbing my poor thoughts, though for so short a time, and so good a cause. Go, now, and plume thyself on thy faith and piety! My God! Thou invitest me to come to Thee whenever my pleasure leads, or my necessities compel me; and, come when I may, never is my coming unseasonable, or inopportune. Thou hast the whole world to govern, and yet I trouble Thee not though I break in at morning, noon, or night, and claim an alms from Thy mercy. How conceited I must be to reckon my concerns and cogitations of greater moment than the prayers and sighs of my suffering fellow-Christian! I now see that rashness is sin, and have good cause henceforth to give a more gracious reception to the Lord Jesus in His members, lest in my hour of need He turn His back upon me. God loveth a cheerful giver. (2 Cor. ix. 7.) A benefaction to the poor should be like oil which, when poured from one vessel into another, flows in silence, and with a soft and gentle fall. *An alms reluctantly bestowed is like a rose spoiled and discoloured with the fumes of sulphur*; like sanded flour, or over-salted meat. He who exercises charity with a reluctant heart and angry words, resembles the cow which yields her milk, but overturns the pail with her foot.—*Gotthold's Emb.*

#### PROVERBS.

There is a phrase, which was much more in vogue some forty or fifty years ago than it is now, but of which one hears occasionally still, namely, "The wisdom of our ancestors." We have always had great doubts whether that phrase was not an unwarrantable assumption on behalf of our ancestors, of a much greater amount of wisdom than they really possessed. Lord Bacon has sagaciously said, "The eld of the world is the youth of time;" and again, "They that reverence too much old time, are but a scorn to the new." There are, no doubt, very many foolish people living now-a-days, and often enough folly gets into the chair of wisdom, and speaks like an oracle. Still we do not think there was ever a time in which there was so much wisdom in the world as there is just now. And it would be a sad thing if it were not so; for we have all the advantage of the struggles and toils and failings of the past; and stored up, too, in the works of men that have gone, there are treasures of precious thoughts, which can never become old as long as the world shall last.

And that suggests a qualification to what we have said about "the wisdom of our ancestors." There were amongst them, in all classes of society, keen-witted men; some of them famous still, and some of them men whose names were never heard of beyond the town or village in which they lived; some of them masters of the pen, and

others only masters of speech. Men like these have originated those brief sayings which we call proverbs—pithy sentences, embodying often a world of truth and wit, though sometimes, it must be added, a world of falsehood. In some cases, what afterwards became a new and striking thought, was the coinage of the man's own brain, but which was felt to be so good and so tersely expressed, that it secured universal adoption at once. In other cases, and perhaps more frequently, the originator of the proverb only hit upon some compact form of expressing a principle which was generally admitted; and so, as Lord John Russell has felicitously said, there was "the wisdom of many, the wit of one." There are amongst them many rich utterances of racy, practical wisdom, well worth pondering. Let us try to gather up some of the lessons which are contained in the people's proverbs.

There is a spirit of strong and sturdy self-reliance embodied in some of them, such, for instance, as these: "God helps those who help themselves;" "Better do it than wish it done;" "Every man is the architect of his own fortune." It is a right and noble thing for a young man, as he looks forth on a striving, struggling world, to say, "By God's help I will make myself something better than I am," and then to set himself vigorously to work, hand and brain, as "the architect of his own fortunes." All very well if somebody has laid a foundation for him; but that will be of little service, unless he set himself vigorously to work, and build upon it. If he fail to do that, many a one will rear up the fabric of better fortunes by his side, who had to do everything for himself, foundation and all. It is no uncommon thing for us to see a capital business, which a hard-working father had left his son, melting all away, because the young man, finding so much ready to his hands, set up for a gentleman at once; whilst one of the lads who had swept out the shop and dusted the counter, and for whom nothing was made ready, has won for himself respect and competence. No help will be of much service to the man who will not "help himself."

One development of genuine self-reliance is vigorous *industry*. "Put your own shoulder to the wheel," has been a proverb ever since Æsop wrote that fable in which a carter, whose cart had stuck in the mud, is represented as crying to Jupiter for help, and in which Jupiter is represented as calling out indignantly, "Put thine own shoulder to the wheel." Our fathers, somehow or other, connected industry and early rising so closely, that they would hardly believe a man could be industrious who did not get up soon in the morning. So they said, "He that would thrive, must rise at five; he that has thriven, may lie till seven;" "An hour in the morning is worth two in the afternoon;"

"Early to bed and early to rise,  
Makes a man healthy, wealthy and wise."

Things have altered a little since people breakfasted at six, dined at ten, supped at six, and were tolled to bed by the curfew at eight. We do not necessarily set a man down as lazy who does not get over that first trouble of the day, leaving a comfortable bed, till seven o'clock, and who does not nerve himself for the last till eleven o'clock. People may be "healthy, wealthy and wise" notwithstanding; and there may be just as little sluggishness about them as in the case of those who keep the good old-fashioned hours. The great thing is, that a man work vigorously and earnestly, giving no more time to slumber than is necessary to recruit exhausted nature. Still, there can be little question that early hours are on every account the best—best whether for the body, the mind, or the estate; and that in this respect it is at least questionable whether modern society has improved on the "wisdom of our ancestors."

Some of the most striking proverbs about industry put the thing by way of contrast: "Idleness is the greatest prodigality;" "Idleness is the root of all evil;" "Idleness is the sepulchre of a living man." "What disease was it your brother died of?" was a question once asked of a man of rank. "He died," was the reply, "of having nothing to do." "Enough," was the response, "to kill any of us." There are other proverbs which put it even more strongly: "An idle brain is the devil's workshop." It is instructive to observe how the same ideas are expressed by different nations in similar phraseology. There are some Tuscan proverbs which are very much akin to the above: "A lazy man is the devil's bolster;" "He who labors is tempted by one devil; he who is lazy, by a thousand." May we not trace some of the best of these, both about industry and idleness, not just to the common sense of mankind, but to that repertory of practical and inspired wisdom, the Book of Proverbs? Here are a few of them: "He becometh poor that dealeth with a slack hand; but the hand of the diligent maketh rich;" "The thoughts of the diligent tend only to plenteousness; but of every one that is hasty, only to want." What a beautiful picture that is of the excellent woman in the last chapter! and what a contrast is that of the vineyard of the slothful!—a picture which one could almost wish the pencil of a Hogarth had thrown on his canvass: "I went by the vineyard of the slothful, and by the vineyard of the man void of understanding; and lo! it was all grown over with thorns, and nettles had covered the face thereof, and the stone wall thereof was broken down. Then I saw and considered it well; I looked upon it, and received instruction. Yet a little sleep, a little slumber, a little folding of the hands to sleep. So shall thy poverty come as one that travelleth, and thy want as an armed man." (Prov. xxiv. 30-34.)

(To be continued.)

#### THE COMFORT OF RELIGION IN AFFLICTION.

In the year 1813, Thomas Powell Buxton, then in the 27th year of his age, was visited by an illness, which brought him to the brink of the grave. The disease came suddenly on him, and a feeling of prayer came with it that the illness might bring him nearer to his God. When its appearance was very alarming to those about him, he says, "I spent nearly an hour in fervent prayer. I had been for some years perplexed with doubts. The object of my prayer was, that this perplexity might be removed; and the next day when I set about examining my mind, I found that it was entirely removed, and that it was replaced by a degree of certain conviction totally different from any I had before experienced. It would be difficult to express the satisfaction and joy which I derived from this alteration. 'Now know I that my Redeemer liveth,' was the sentiment uppermost in my mind, and in the merits of that Redeemer I felt a confidence that made me look on the prospect of death with indifference. No one action of my life presented itself with any sort of consolation. I know that by myself I stood justly condemned; but I felt released from the penalties of sin by the blood of our sacrifice. In Him was all my trust. My dear wife gave me great pleasure by repeating this text, 'This is a faithful saying and worthy of all acceptance, that Christ Jesus came into the world to save sinners.' Once or twice only I felt some doubt whether I did not deceive myself; arguing in this manner: 'How is it that I, who have passed so unguarded a life, and who have to lament so many sins, and especially so much carelessness in religion—how is it, that I feel at once satisfied and secure in the acceptance of my Saviour?' But I was soon led to better thoughts. Canst thou pretend to limit the mercies of the Most High? 'His thoughts are not as our thoughts, nor his ways as our ways.' He giveth to the laborer of an hour as much as to him who has borne the heat of the day. These were my many reflections, and they made me easy."

When the medical gentleman who attended him observed that he must be in low spirits—"very far from it," he replied: "I feel a joyfulness at heart, which would enable me to go through any pain." "From faith in Christ?" he was asked, "Yes, from faith in Christ," was his reply; and mentioning the clear view he now had of Christ being his Redeemer, he said, "It is an inexpressible favor beyond my deserts—what have I done all my life long? Nothing, nothing, that did God service, and for me to have such mercy shown! My hope," he added, "is to be received as one of Christ's flock, to enter Heaven as a little child." One of his friends, alluding to his illness as a chastisement, he says, "I never felt it such; I looked upon it, when I was at the

worst, as a gift and a blessing, and the choicest of my possessions. When I was too weak to move or speak, my mind and heart were at full work on these meditations; and my only lamentation was, that I could not feel sufficiently glad or grateful for the mercy, as unbounded as unmerited, which I experienced. The mercy was to know the sins of my past life, that the best actions of it were but dust and ashes, and good for nothing; that, by the righteous doom of the law, I stood convicted and condemned; but that full and sufficient satisfaction had already been made by Him who came to save sinners; and such was the ease and confidence with which this conviction inspired me, that death was not attended with terror."

In another place we find this remark, "In casting up the incidental blessings of the year, I found none to compare with my illness; it gave such a life, such a reality and nearness to my prospects of futurity; it told me in language so conclusive and intelligible, that here is not my abiding city. It expounded so powerfully the scriptural doctrine of atonement, by showing what the award of my fate must be, if it depended on my own merits, and what that love is which offers to avert condemnation by the merits of another: in short, my sickness has been a source of happiness in every way."

Fifteen years afterwards, he thus refers to the impression made upon his mind during this illness: "It was then that some clouds in my mind were dispersed; and from that day to this, whatever reason I may have had to distrust my own salvation, I have never been harassed by a doubt respecting our revealed religion."

#### DIRECT MONUMENTAL CONFIRMATION OF SCRIPTURE HISTORY.

In a work on "*Egypt and its Monuments*," by F. L. Hawks, the author gives an interesting account of the manner in which some of the inscriptions on the monuments in Egypt have contributed to the confirmation of Scripture History. But, to make the account more intelligible, it will be needful to take a glimpse of the means that have been used to decypher the hieroglyphical inscriptions that form the data of the confirmation. An ordinary visitor to the British Museum, in London, would be very likely to pass by, without much attention, a sombre looking fragment of a slab of basalt in the Egyptian saloon, unless his attention had been called to it on account of its important relation to ancient history. It is the "*Rosetta Stone*," and takes its name from the place in which it was found. During the occupation of Egypt by the French, in 1799, a French officer, in digging at *Rosetta* for the foundation of a military post, found the stone in question, marked with various characters;

it finally found its way into the British Museum where it now is.

Upon closer inspection, it was seen that the stone had three inscriptions: The upper one was in hieroglyphics, the lower one in Greek letters, while that between was in a different character, found afterwards, to be called demotic or euhoriel. These inscriptions record the services which Ptolemy the Fifth had rendered his country, and were engraved by order of the High Priests, when they were assembled at Memphis for the purpose of investing him with the royal prerogative. It forms the key to the decyphering of the hieroglyphical and demotic characters of Egypt. The Greek inscription being in a language better known than the others, was translated first, and then became the key to the rest.

In the twelfth chapter of the second book of *Chronicles*, we have the history of the invasion of Shishak, the King of Egypt. We find him marching against Jerusalem, with chariots and horsemen, and people without number—the Lubims, the Sukkims, and the Ethiopians. This was at the time when dissensions among the Hebrews had caused a division of the tribes into two parts, which were respectively governed by Jeroboam and Rehoboam. The humiliation and penitence of Rehoboam under the warnings of Shemaiah, the Prophet, averted from him the calamity of an entire loss of his kingdom; but while the Lord declared that he should not be utterly destroyed, he, nevertheless, added that the people should be the servants of Shishak, (that is, should be made his prisoners.) Shishak came and took away the treasures of the house of the Lord, and the king's treasures—"he took all," and, in short, reduced the kingdom to the condition of a conquered province.

It so happened that when some learned antiquarians from France and Italy visited Egypt, in 1828, Champollion, one of the number, detected the cartouche of this Pharaoh, and read it—"Beloved of Amon, SHESHOUK." Subsequently, on Champollion's passage up the Nile, he landed among the ruins of Karnac; and on entering one of the halls, he found a picture representing a triumph, in which he pointed out in the third line of a row of sixty-three prisoners, (each indicating a city, nation, or tribe,) presented to Amun-ra, a hieroglyphic, surmounted by the bust of a bearded man, having on the symbols of captivity, and translated it—"Judah melek Kah:" "King of the country of Judah."

The picture had been executed by order of Shishak, or Sheshouk, so that here was found the sculptural record of the invasion and conquest recorded in the "*Chronicles*." On the same picture were shields, containing in hieroglyphics the names, Beth-horon, Megiddo, Mahanaim, (the names of places found in the Old Testament,) and some others which Shishak passed through on his invasion of Judea.

Pharaoh Necho and Pharaoh Hophra, both mentioned in Scripture, are proved to be real personages, as their cartouches are found on the monuments. The same may be said of Tirhakah, king of Ethiopia, mentioned in 2d Kings, 19 ch. 9 v.

In conclusion, although the genuineness and authenticity of the Old Testament do not depend upon the testimony of Egyptian monuments, yet there is some satisfaction in reflecting upon these incidental proofs of the correctness of Scripture History, especially when we view them in juxtaposition with the difficulties which the translators encountered in making intelligible to modern readers what was "written aforetime" (and in other languages,) "for our learning, that we through patience and comfort of the Scriptures might have hope." H. M.

#### THE LEMMON SLAVECASE.

THE DECISION OF JUDGE PAINE SUSTAINED—SLAVES NOT TO BE HELD IN NEW YORK STATE IN TRANSITU.

*Jonathan Lemmon, plaintiff in error, vs. The People, ex rel. Louis Napoleon Bonaparte, defendant in error.*—This celebrated case, it will be remembered, was first tried before Judge Paine, of the Superior Court, who discharged certain slaves belonging to Mr. Lemmon, on the ground that they could not be held in this State. Mr. Lemmon claimed that he was holding them *in transitu*, from Virginia to Texas, and by the comity of States he could do so. The Judge, however, decided otherwise, and Mr. Lemmon appealed. An elaborate argument was had, and, on Monday morning, Dec. 7, the Court rendered the following

#### OPINION.

*By the Court.*—The act of the Legislature of this State, passed in 1817, and re-enacted in parts in 1830, (1 R. S. 656,) declaring that "no person, held as a slave, shall be imported, introduced, or brought into this State, on any pretence whatsoever, except in the cases herein specified," and that "every such person shall be free," applies to this case. The slaves in this case were brought from Virginia into this State, and remained here some short time; and, although they were only brought here with a view to carry them from this State to Texas, they were (after the exceptions in that article were repealed by a subsequent act) within the prohibitions of that act, and are free if those acts be constitutional. The addition made to the act, in the Revised Statutes of 1830, seems to have been intended to place this beyond doubt (see sec. 659). "Every person born in this State, whether white or colored, shall be FREE [the capitals are in the Statute,] and every person brought into this State as a slave, except as authorized by this title, shall be FREE." One of the exceptions mentioned in that title allows a person, not an inhabitant of this State, travelling to or from, or

passing through this State, to bring his slave here and take him away again, "provided that, if the slave continued here more than nine months," he should be free. Those exceptions are repealed by the act of 1841.

Comity does not require any State to extend any greater privileges to the citizens of another State than it grants to its own. As this State does not allow its own citizens to bring a slave here, even *in transitu*, and to hold him as a slave for any portion of time, it cannot be expected to allow the citizens of another State to do so.

Subdivision I. of section 2 of article 4 of the Constitution of the United States, makes this measure of comity a right, but with the limitation above stated; it gives to the citizens of a sister State only the same privileges and immunities in our State which the laws give to our own citizens. It declares that "the citizens of each State shall be entitled to all privileges and immunities of the citizens in the several States."

Subdivision 3 of that section, is confined to the case of a person, held to service or labor, escaping from one State into another; it does not extend to the case of a person voluntarily brought by his master into another State, for any period of time; it cannot, by any rule of construction, be extended to such a case. It is "no person, held to service or labor, in one State, under the laws thereof, *escaping* into another, shall, in consequence of any law or regulation therein, be discharged from such service or labor," &c.

The clause of the Constitution giving to Congress power "to regulate commerce with foreign nations, and among the several States, and with the Indian tribes," confers no power on Congress to declare the *status* which any person shall sustain while in any State of the Union. This power belonged originally to each State, by virtue of its sovereignty and independent character, and has never been surrendered. It has not been conferred on Congress, or forbidden to the States, unless in some provisions in favor of personal rights; and is, therefore, retained by each State and may be exercised, as well in relation to persons *in transitu* as in relation to those remaining in the State.

The power to regulate commerce may be exercised over persons as passengers only when on the ocean, and until they come under State jurisdiction. It ceases when the voyage ends, and then the State laws control.

This power to regulate commerce, it has been expressly declared by the Supreme Court of the United States, did not prevent the State of Mississippi from prohibiting the importation of slaves into that State, for the purpose of sale. The same Court has held that goods, when imported, can (notwithstanding any State law) be sold by the importer of the original packages. It follows that the power to regulate commerce con-

fers on the United States some check on the State legislation, as to goods or merchandise, after it is brought into the State, but none as to persons after they arrive within such State.

If this could be regarded, in the case of the slaveholding States, a police regulation, it may also be so regarded as to the free States; they consider (as the legislation of this State, for many years, has shown) that the holding of slaves, in this State, for any purpose, is injurious to our condition, and to the public peace, as it is opposed to the sentiment of the people of this State.

The judgment or order below should be affirmed with costs.

Judge Mitchell remarked, that all the judges concurred in this decision except Judge Roosevelt, who would shortly write out his reasons for dissenting.—*N. York Evening Post.*

---

## FRIENDS' REVIEW.

---

PHILADELPHIA, TWELFTH MONTH 19, 1857.

---

### ABRIDGEMENT OF THE FREEDOM OF SPEECH.—

A friend has furnished us with a copy of the indictment and proceedings in the court of Prince William County, Virginia, against John Underwood, affording an instance of the tyranny which the system of slavery exercises upon the whites as well as the blacks. The indictment charges that "the said John Underwood, on the 15th day of January, 1857, in the said County and within the jurisdiction of the said Court, unlawfully did maintain, by speaking, that the owners of slaves in the Commonwealth have not the right of property in said slaves; by declaring and saying to others that he was an abolitionist; that a negro slave was as good as he is, and as much entitled to his freedom; that if he was a slave, and killing his master would free him, he would do it; and other declarations and sayings of like nature and import, against the peace and dignity of the Commonwealth of Virginia."

The case came to trial on the 26th ult., occupying the entire day. A verdict of guilty was found against the defendant, and he was fined \$312 50. Motions for a new trial, on the ground that the evidence did not justify such a verdict, and for an arrest of judgment, upon the ground that the statute on which the prosecution was founded is a void and unconstitutional Act, were overruled by the Court. Bills of exceptions were then tendered to the Court and signed.

From the first, it appears that the charge against John Underwood arose from two conver-

sations, at a certain store, between him and several other white men—no colored person being present on either occasion. The defendant said he would sooner have voted for Fremont as President than for a Democrat. One of the company saying, he reckoned not, defendant answered that he would; on which the other said: "You must be an abolitionist;" and J. Underwood replied, "I am." The defendant, during the conversation, said, "he considered the negro just as good as he, and ought to have the same privileges." On another occasion, in the same store, he said that "Slavery was an evil to the country and to the State, and it would put people more on an equality if the slaves were free; and that if he was a slave, and killing his master would free him, he would do it."

The bill of exceptions further sets forth that the defendant, aged about 30 years, is a native of Ocoquan, Prince William County, had always resided in the town, was an industrious, quiet, good citizen, a wheelwright by trade; had been twice elected a Justice of the Peace, and was a Justice at the time of the conversations aforesaid; that he had presided with four other Justices on the trial of five slaves for the murder of their master, had decided that they were guilty and condemned them to death.

It thus appears, that notwithstanding freedom of speech is professedly secured by the Constitution of Virginia, as well as by that of the United States, a citizen is liable to prosecution and fine for expressing his sentiments on the subject of slavery, in private conversation among his peers! Truly, we need not envy the oppressor, nor choose any of his ways.

---

### EDWARD PEASE, THE PIONEER OF RAILWAYS.

—We copy, on another page, a short article from the *North American* in reference to the presentation of an Address, from his fellow-citizens of Darlington, to the venerable and justly honored Edward Pease, father of our friend John Pease, whose religious visit to this country is remembered with much interest and affection.

In a sketch of the life of the late Geo. Stephenson, published not long since, the fact of his having presented a valuable gold watch to Edward Pease, was mentioned as a mark of his gratitude for kind aid at the commencement of his remarkable career. The writer of this paragraph had the pleasure, twenty-three years ago, of seeing this

present in the hands of its recipient, and of hearing, in his own house and from his own lips, the interesting history of the first triumph over the formidable difficulties connected with the early construction of railroads in England.

**MOLASSES AND SUGAR FROM THE CHINESE SUGAR CANE.**—From our own correspondence and from numerous statements in the *Country Gentleman*, the *American Agriculturist*, the *Indiana Farmer* and other papers, we think it may be safely inferred that in the North, even where the Sugar Maple tree does not abound, there is no necessity for depending on the labor of slaves for a supply of molasses. The Chinese Sugar Cane grows so luxuriantly and yields such an abundance of juice, that a few square rods of land will yield a sufficient quantity of syrup for a large family. The process of making is simple and not expensive.

We have seen several samples of the syrup which were superior to New Orleans and West India molasses, and almost equal, both in lightness of color and in taste, to the best syrup of the sugar refiners. Of this character were specimens kindly sent to us by our friends, Robert B. Haines, of this city, and Asa Matlack, of Moorestown, New Jersey. The latter obtained three gallons of thick, light colored syrup from 375 stalks of the cane, passed once through wooden rollers.

Sugar has been made in a few instances, and it is hoped a certain process may yet be discovered. About one-sixth of the syrup remaining, after a portion had been used, of that received from Robert B. Haines, has granulated into sugar of a light color. The *Germantown Telegraph* states that Lovering, the sugar refiner of this city, has made sugar from canes grown on his own land; and the Editor of the *Chester County Times* says he has received a sample of excellent sugar, made by Hannah M. Darlington, of East Bradford, from the juice of the Sorgho. But if only molasses can be successfully made by the northern farmer, he may have the gratifying reflection that while partaking of a wholesome article of diet, he is enjoying the fruit of his own industry and labor, instead of contributing to the support of slavery and the slave-trade, by using the molasses of Louisiana and Cuba.

Our friends, Priscilla Green and Mary Nicholson, have returned from their journey in

the Western States, and were in New York last week.

**NOTICES OF MARRIAGES AND DEATHS.**—An obituary has been received in an envelope, post-marked "Dublin, Ind.," but unaccompanied by the name of any person to vouch for its correctness. We take this occasion to remind our correspondents that no notice of a marriage, or death, will be published in the *Review*, unless authenticated by the signature of an Agent or a Subscriber.

**RELIGIOUS VISIT TO THE WEST INDIES.**—A correspondent in Baltimore writes that "Richard and Susannah B. Pedrick, of Richmond, Indiana, sailed on 5th day, the 10th inst., from Baltimore for Jamaica, in the brig R. A. Fisher. She was liberated for religious services in the West Indies, and her husband as companion. They attended our Monthly Meeting on Fifth day."

**DIED**, on the 12th of 6th mo. last, of consumption, SARAH ANN, wife of Thomas Morgan, in the 33d year of her age, a member of Plainfield Monthly Meeting, Hendricks County, Ind. For about seven months she bore her illness with much patience and resignation, affording a comfortable evidence to her friends and relatives that her end was peace.

—, In Milton, Wayne County, Indiana, on the 19th ult., in the fiftieth year of her age, SUSAN STANLEY, widow of William Stanley, and daughter of Thomas and Anne Moore.

She was an esteemed member of Milford Monthly Meeting; one who endeavored to live void of offence towards God and man, and was a bright example of patience in suffering. She was much beloved by her relations and friends, and although they deeply feel her loss, they mourn not as those without hope, believing that she was prepared, through the redemption that is in Christ, for the solemn change.

—, On the 28th ult., at the residence of his father, after a short but severe illness, CYRUS RICH, youngest son of Isaac and Deborah Rich, in the 21st year of his age; a member of Honey Creek Monthly Meeting, Howard County, Indiana.

—, At Norwich, Oxford County, Canada West, on the 20th of 9th month last, FREDERICK STOVER, a beloved friend and elder of Norwich Monthly Meeting of Friends, in the 88th year of his age.

This dear friend was enabled, in early life, to embrace, from conviction, the principles of the religious Society of Friends, of which he became a member by request, and through life remained firmly attached to its doctrines and testimonies. He was endeared to a large circle of friends and connections, by a life of piety and usefulness, a character marked with candor and uprightness, a judgment sound and discriminating, and without the fear of man, evincing that he mainly sought secretly to feel the Divine approval; he was faithful to administer needed reproof or encouragement, as the way of duty was made known to him. In the latter part of his life, it was his lot to experience severe physical suffering, which was borne with Christian patience. He was diligent (when not un-

usually feeble) in the attendance of meetings, until within two weeks of his decease. A few days previous to the solemn close, he said, on viewing his past life, considering human frailty, he did not know that he could better it.

DIED, in Hector, Schuyler County, N. Y., on the 7th inst., WILLIAM CARMAN, an esteemed elder of Hector Monthly Meeting of Friends, aged 75 years.

The decease of this dear friend was very sudden. On the morning of his death he arose in apparently usual health, but feeling a severe pressure of breath, he expressed a belief that his departure was drawing near; he was calm and collected, again lying down on his bed, he feelingly exclaimed, "Lord Jesus receive my spirit," and in a few moments ceased to breathe.

Unexpected and solemn as the call was to his family and friends, they have the consoling belief that having evinced his attachment to the dear Redeemer's cause, by many acts of obedience through a long and consistent life, his last fervent appeal was heard and answered.

How emphatic is the warning to us all—"Be ye also ready, for in such an hour as ye think not the Son of man cometh."

—, in Berlin, Knox County, O., on the 14th ult., JERU LEWIS, a member and elder of Alum Creek Monthly Meeting, in the 56th year of his age.

As he had lived, so he died: a devoted Christian, a kind neighbor, a tender and sympathizing companion, and an affectionate father and friend. Thus bringing honor to the profession he made.

In calm resignation to the Divine will, he bore his lingering illness without a murmur or complaint. Some weeks previous to his death, he observed to a friend that the prospect had been clouded for a season, but that it now opened with great clearness, not a shadow remaining, all was peace and assurance—a glorious immortality awaiting him beyond the grave.

Near his close, being asked if his faith and confidence remained unshaken, he replied in the affirmative, saying in faint accents that he was too weak to say more, and requested the family called. In a few minutes his spirit passed away without a struggle.

—, On the 11th of 9th mo. last, at the residence of Paul Upton, Stanford, Duchess Co., N. Y., MARIA J., wife of David Naramore, of Westmoreland, Oneida Co., N. Y., aged nearly 24 years. She was engaged as companion to our beloved friend Mary A. Peckham, then on a religious visit to Friends of Stanford and Nine Partners Quarterly Meetings.

She was early sensible of the tendering visitations of heavenly love, and submitting to the sanctifying power of Divine grace, she became qualified for usefulness in the church; recommending the doctrine of God her Saviour by a humble and circumspect life and conversation.

About the 18th year of her age she received a gift in the ministry, and during the remainder of her life was often engaged therein, to the comfort and edification of her friends. After passing through much conflict of spirit, she gave up to engage in the aforementioned visit, the greater part of which she was enabled to perform to the peace of her own mind and the satisfaction of those among whom her lot was cast.

She was affected with a pain in her head for several days before reaching the residence of our friend, P. Upton, and soon after the disease assumed a more serious form, which at intervals deprived her of reason. When favored with consciousness, she dropped many expressions showing the exercised and gathered state of her mind: often interceding for patience to bear or suffer her Heavenly Father's will, and love was the clothing of her spirit.

On one occasion, she broke forth in this language. "Oh, my adorable Redeemer, how good Thou art! how much Thou hast done for my soul; how I love

Thee; prepare me to celebrate Thy great name to all eternity." At another time, with a countenance beaming with joy, she said, "O Lord, how good Thou art! my heart is enraptured with Thy love, my soul is in ecstasy." Again, "Dear Saviour, I long to flee away and be at rest in thy arms of love;" "My Father, oh, my Heavenly Father, be pleased to take me to Thyself."

She lingered for more than two weeks, when she passed quietly away, leaving to her sorrowing friends the consoling belief, that her purified spirit was prepared to enter the mansions of eternal glory.

#### THE HOWARD HOME.

UNDER THE CARE OF AN ASSOCIATION OF WOMEN FRIENDS OF PHILADELPHIA.

Being informed that a report is in circulation that the "Howard Home for Discharged Female Prisoners," situated at No. 1616 Poplar street, has been closed and the inmates dismissed for want of funds, the managers feel it incumbent upon them to inform their friends and the public that, although the funds in their treasury are very low, yet trusting to the object of this truly benevolent institution, and to the liberality of their Christian friends, they still hope with the strictest economy to sustain it, and thus afford a shelter to those *homeless and friendless* discharged female prisoners, who manifest a strong desire to reform, and regain a respectable standing in society. After a probation of a few months, and being taught sewing and other domestic duties, situations are found for them among farmers in the country, far away from their former vicious associations; and the receipts of accounts from those who have thus left the city, have been most gratifying to the managers. For women of a *more abandoned* character, the doors of the Rosine and Magdalen Asylums are open. We appeal to those who are blessed in basket and in store, to remember that "He that giveth to the poor shall not lack. He lendeth to the Lord, who will abundantly repay."

Any donations or subscriptions will be gratefully received by any of the Managers:

## A RAILWAY PIONEER.

We were shown yesterday a printed copy of the report of some very interesting proceedings which occurred at Darlington, England, on the 23d of October last, on the occasion of presenting an address, on behalf of the people of that town, to Edward Pease, an aged resident there, who appears to have been the pioneer of railways in Great Britain. Mr. Pease, who is in his 91st year, as far back as 1818 saw "the necessity of unbroken communication by railway, and predicted the extension of that system." He acted upon his grand idea at the time, too, for the address says that he projected, and by his unwearied earnestness of purpose under difficulties almost overwhelming, carried to success the first railroad, from the collieries in the west of England, through Darlington, to Stockton-upon-Tees. He, in fact, bears the appellation of "Father of Railways." His active colleagues in the enterprise were Thomas Meynell and Jonathan Backhouse, and their law adviser was Francis Mewburn, the first Solicitor, who, in the year 1819, carried a railway bill through Parliament.

The first engineer of this pioneer railroad was the famous George Stephenson. Mr. Pease's selection in this instance was indeed, as he said in his response to the Darlington address, a marvellously happy one. Stephenson was exactly the man for the enterprise, and his vigorous intellect and perseverance achieved for the undertaking a success it might not have met with at other hands. This reminiscence is interesting at the present day, when the system begun by Edward Pease and his coadjutors has spread over the civilized world, and especially to the United States, of which it has become the pride. The difficulties which encompassed such a work in the year 1818, were very greatly beyond those now encountered, formidable as the latter are well known to be, and the name of Pease therefore deserves to be cherished among those of the benefactors of the age.—*North American.*

Report of the Tribune's Special Commissioner.

## THE EXILED NEGROES IN CANADA.

*The Colony at Buxton.*

One of the most interesting places visited in the course of our inquiries was the colony at Buxton. About nine years ago, William King, an Irish Presbyterian clergyman, residing at the time in Louisiana, and owning several slaves, servants of his family, and having through his wife become possessed of a number more, brought them, fifteen in all, to Canada, and there emancipated them. Not content with this, and desirous to try, on a sufficient scale, the question whether the emancipated negro would, as an agriculturist, be found self-supporting, and burning to improve the moral and social condition of the negro, Mr. King became the head and moving agent of an association, which obtained, on

favorable terms, a large grant of lands, belonging originally to the clergy reserves. The land, forming a tract six miles long by three miles wide, was surveyed, cut through by avenues intersecting each other at right angles, and divided into plots of fifty acres each, each plot fronting upon one of the avenues. The expenses of surveying, added to the original price of the land, made its cost amount to \$2 per acre. The ground was level, heavily timbered with oak, hickory, beech, elm, maple and basswood, and the virgin soil was a deep, rich, black loam. To this place the negroes were invited to try the grand experiment; each applicant was to receive a farm, not as a gratuity, but paying for it the full cost price in ten annual instalments, with interest added. He bound himself at the same time, within a given period, to put up a house upon his land conforming to a prescribed model; he was to furnish his own farming tools and implements, and to support himself and family. Only when these conditions were complied with, and the lands paid for, was he to receive his deed. A school-house, teachers and tuition were furnished gratuitously; a Sabbath school was established; and a rude log church, in which Mr. King himself officiated, was erected, and was open to all who might choose to attend public worship in it. Such is an outline of the plan of the settlement of the Elgin Association at Buxton, and at the end of seven years from the date of its origin that settlement numbers two hundred families and about eight hundred souls!

Buxton is about thirteen miles south-west from Chatham, and is about three miles distant from the shore of Lake Erie.

The house of Mr. King is a long log-house, with a high, steep roof and dormer windows, and a porch extending the whole length of the building; interiorly, it is divided by transverse partitions into a number of rooms which serve as office, sitting-room, dining-room, &c. Everything was perfectly plain, but neat and substantial. Not far from the house are the little mission church, already mentioned, the school-house and post-office of the settlement, all built of unhewn logs, while at some little distance are a steam saw-mill, a brickyard, a pearl-ash factory, with blacksmith, carpenter and shoe shop, and the country store for the settlement.

We found Mr. King at home and disengaged. From him we learned that there were now at the settlement 200 families, each occupying their own house, and numbering in all about 800 souls. Of the land, 1,025 acres were cleared and under fence, beside 200 acres on which the trees had been felled and were ready for burning, and which would be under cultivation the ensuing spring. Of the land already fenced, 354 acres were planted with corn, which already, at the time of my visit, was safe from the frost, and promised a more than average crop; 200 acres had been planted with wheat, 70 with oats, 80

with potatoes, and 120 with other crops, such as beans, peas, turnips and grass. There are owned by the settlers 200 cows, 80 oxen, 300 hogs, and 52 horses; there are likewise a few sheep, but they have not done well, and the experience of the community has not been favorable to sheep raising.

There are now two schools at Buxton, a male and female, the latter established within the past year for the purpose of teaching the girls plain sewing, as well as those that might wish it, the higher branches of female education. The number enrolled in both schools was, during the past year, 140, and the average attendance 58. Hitherto these schools have been gratuitous, but, in conformity with the original idea of making the whole establishment self-supporting, a small payment will henceforth be required. A Sabbath school, kept open on every Sabbath during the year, is attended by 112 pupils, and the average attendance is 52.

The negroes, for the greater part, belong to the Baptist and Methodist persuasions; and while Mr. K.'s personal influence has brought a full attendance to his own little church, many of the negroes maintain their former religious connections. About one quarter of the whole number do not attend church at all, and no compulsion is used. No intoxicating liquor is made or sold within the settlement; drunkenness is unknown there, and since its first formation but one person connected with it has been arrested for a violation of the laws. The general moral standard of the community is high, and the social improvement is marked and manifest.

The settlers are, for the most part, fugitive slaves, and of the whole number about one-third are of pure African descent. If Mr. King be right in this, the proportion of blacks is, I think, much greater than in the Province at large. Those of them who have been accustomed to farming, and have had some capital to commence with, have done exceedingly well, having cleared more land and made greater improvements than the great majority of white settlers in the same time and under similar circumstances. Those who have brought neither skill nor capital have had a much more difficult task, but even these have so far either paid up their instalments regularly, or when they have passed them it has been by permission, the money being laid out upon the land, so as to render future payment easier. *Many have already paid in full for their farms and received their deeds*, others are prepared to do so in the coming year, and Mr. K. is confident that at the expiration of the ten years all will have come into full possession of their lands.

Two settlements of Europeans have been formed in Canada under Government direction, one of Highlanders at Notowasaga, north of Toronto; another of mixed Irish, English and Scotch emigrants at Ramsey, near Brookville;

the settlers of both for some time received aid in provisions, farming implements, &c., but both have failed. At the Highland settlement some 20 or 30 of the original settlers, with their families, still remain; the others have long been dispersed. They began to do better immediately the Government aid was discontinued. Mr. King attributes the greater success of the settlement at Buxton partly to the fact that, in the first place, the negroes are better axe-men than European emigrants, and so are better fitted to contend with the difficulties attendant upon clearing a heavily timbered country; but mainly to the circumstance that the colony at Buxton was from the beginning, self-supporting. The negroes perfectly understood that they were to depend upon themselves alone; that they were to receive no supplies in money, in food, or in clothing; and thus, their pride and self-reliance being excited, they worked with a will, not otherwise to have been looked for. If, on the whole, this has been wise and has worked well in one respect, it may have retarded the progress of the settlement, or, at least, have diminished the result as seen in it; since many of the negroes have found it more profitable, perhaps necessary, to employ part of their time and labor at a distance from Buxton. Now, however, the completion of the saw-mill, the brickyard and the potash factory affords a field for labor on the place itself.

Of the fifteen slaves of Mr. King originally brought with him, three have died, though their places have been taken by children that have since been born in Canada; nine are with him still settled at Buxton; one is married and lives at Chatham; two, a mother and daughter, are at Detroit, but Mr. King has lately received a letter from the daughter, stating that they are about to return to Buxton. One of the slaves, at that time an old man of sixty-five, received, in consideration of his age, some assistance in putting up his cabin, and we believe in clearing his land. He married at Buxton a woman of suitable years, and has ever since supported her and himself without any assistance. I saw his house, his garden, and his corn-patch, and everything looked neat and flourishing.

In company with Mr. K. and our companion from Chatham, we walked over a part of the settlement. The place was certainly no realization of a Utopia, nor did the cabins resemble the neat, white-painted houses of a New England village. Everything was new, rude and rough. To a city-bred man the timber was terrible. I saw one tree left standing by the roadside, at least five feet through at the base, and rising straight as an arrow, and scarcely diminished in circumference, to an immense height, before it gave off a branch. Most of them were from two to four feet in diameter. The road was merely a wide lane cut straight through the forest, with the roots of the trees everywhere traversing the deep, friable soil. On either side, here and there,

were scattered the cabins and clearings of the settlers—the former all built of unhewn logs, set back the prescribed number of feet from the road, and each one surrounded by its kitchen-garden. They were not destitute of all traces of ornament. Over the rude porch in front of the cabin creepers were frequently trained, and one, covered with a hop vine in full bearing, looked exceedingly pretty. Some of the gardens boasted flower-beds, and bright-colored phloxes and poppies and corn-flowers were in contrast with the dark forest which hemmed us in. We entered the cabin of a fugitive, but two years from Kentucky, and who had married, we believe, some time after he had reached the settlement. The cabin was smaller than the model; but the owner, with an eye at a future time of adding to it, had built the chimney double, and a huge brick fire place stared at us from the outside. Within was the wife, with a couple of small children, her relations, to whom the couple afforded a home. There were chairs, a table, a large chest, a cooking-stove and its utensils. The family dinner was still on the stove, pork and potatoes, while into another vessel, in a quantity of hot, bubbling fat, had been thrown some green corn in the ear. The man was absent at work in the brick-yard.

Another cabin we entered belonged to a man—a full black—who, fourteen years before, had escaped from Missouri. He had been six years at the settlement, and had twenty-four acres of land fenced and under cultivation, and six more on which the wood had been felled. He had paid up four of his instalments, and owned a wagon, a yoke of oxen, a mare and two colts. He had four or five children, and his eldest boy, fourteen years old, was reading Virgil!—for him, I fear, unprofitable reading. The day was warm, and the smaller children, like the rest of those we saw, were dressed for warm weather: their legs, feet and arms were bare, and their garments had apertures about them which had not been bestowed by the tailor or dressmaker. In the house, beside the ordinary bed and bedding, chairs, tables, &c., we found a rocking-chair, and a large new safe—a recent importation from Yankee land. On asking for a glass of water, it was brought in a clean tumbler and upon a plate.

Another cabin, belonging to an old settler, was more ambitious. It was larger, with a vine-covered porch; had a hall in the centre, and a room on either side; about the walls were hung sundry staring prints, and a carpet, sofa and a large cooking-stove were added to the usual articles of furniture. One feature of all the cabins we must not forget—the huge brick fire-place, occupying the best part of one side of the room, and which, with its chimney, bore tokens of the roaring fires which blazed in it during the winter.

We saw only a small, and, as we were informed, the newest and least advanced, part of the settle-

ment, but our stay in Canada was limited, and, despite the hospitable invitation of Mr. King to remain a few days with him, we felt ourselves compelled to hasten home. We left Buxton with the belief that we had seen one of those rare men who, by a single-minded devotion to one worthy object, not only accomplish great ends, but ennoble our common humanity.

#### DOGS OF DAMASCUS.

BY DR. SMITH.

There are several plagues in all Mohammedan countries besides the awful disease which bears that name—the plague of vermin, the plague of insecurity of property, and the plague of poverty. But no one has particularly described the plague of dogs.

In discussing this subject, it would be quite proper to embrace extensive geographical boundaries, and to take in the varieties and distinct families of dogs on the old continent of Asia. They collect in and about every town and village, and the number appears to bear some kind of proportion to the population.

Asiatics do not entertain that fondness for the animal, when domesticated, that is evinced by Europeans and Americans. They are considered *unclean*, and therefore held in semi-abhorrence. They are as ancient, in the condition in which we now study them, as man himself. When the Jews fled from bondage, the city dogs unquestionably followed upon the heels of the camp, for the garbage that they found.

Moses directed that when the domestic animals had been “torn of beasts,” in other words killed, the flesh should not be eaten, but cast to the dogs. This implies their existence, certainly, if not their abundance, outside. Goliath said to David, when he stood before him, sling in hand, “Am I a dog, that thou comest to me with staves?” This passage conveys the idea of their prowling character, and the enmity that was manifested towards them, by keeping them at bay with staves. “As a dog returns to his vomit, so a fool returneth to his folly,” says Solomon in the Proverbs, which shows his familiar knowledge of the habits of the semi-domesticated dogs, the progenitors of the present dogs of Judea. The savage animals will gorge themselves excessively, when an opportunity presents. If the stomach is over-distended, and the putrid mass is ejected, their appetite, no way impaired, enables them to fill up again immediately.

Damascus, the capital of Syria, located in the centre of an extensive plain, beautifully watered, swarms with dogs. Their number is past finding out. They are not the variety which associate on friendly terms with men. They could not be domesticated to become companionable, and yet they always cluster about human habitations, Were it not for the refuse crumbs and scraps of food thrown into the streets, on which they prin-

cially subsist, thousands of them would inevitably die of starvation in a single week. As it is, large numbers undoubtedly perish in that way, since they scramble and fight so furiously for a morsel, the strong must succeed better than the young and weak. Detested, they are tolerated as a necessary nuisance, because they are scavengers to remove every morsel of meat, bread and bone, which would otherwise accumulate to the public detriment. Charitably disposed Mus-seluen throw into the streets an occasional supply, as offerings of pity for the wretched looking creatures. They could not be driven away, nor could they be exterminated without actually periling the public health, under the ordinary municipal arrangements. Through the day they are sleeping, or at least keeping quiet; but with the approach of evening shades, they astonish the spectator with their numbers and ferocious appearance. These dogs are small, of a dingy yellowish color, with sharp snouts, bright, fierce eyes, and the sharpest, whitest rows of teeth ever seen in any jaws. Whether in Damascus they have divided the city into sections, which are recognized as the specific domain of a family or particular tribe, was not ascertained; but in Alexandria or Cairo, such divisions of territory are actually defined. Many a puppy is slaughtered without mercy, from being ignorant of the line, and running over the limits.

Constantinople is infested by the same race of scavenger dogs to an enormous extent. There may be nearly a million of them. Their habits in one city illustrates their economy in all. So vastly numerous are they in the streets through the night, that no one dare venture out without a lantern. No person is allowed by the sentinels to attempt walking out in the evening without a light, lest they should be instantly devoured by the packs in pursuit of prey. The lantern is suspended by a string from the hand, and carried close to the ground. A circle of dogs move with the light, but never venture to get very near it. Were it not for the fear of a light, it would be extremely hazardous to attempt going from one door to another through a gauntlet of those blood-loving animals. They bark incessantly through the night. Being accustomed to the constant annoyance, the inhabitants are less disturbed than they otherwise would be. Their multiplication is quite astonishing, when the difficulty of sustaining life is taken into consideration.

Litters of puppies may be seen almost everywhere through the day. The dam nurses them very quietly, paying no attention to the passer—unless by accident a foot or tail is trodden upon. Then the welkin rings with their howling, which is propagated by the nearest dog, and extended till the yelpings are lost in space.

At the village of Gezah, opposite the ruins of Fastat, once the capital of Lower Egypt, there is a depot for cattle which are driven from the in-

terior of Africa, following the windings of the Nile for the sake of the water. The cattle have a hump on the shoulders, large as an ordinary hat—which is much of a curiosity, and therefore worth going to see. Sometimes nearly a thousand head are collected at Gezah, waiting to be sold. They become restive from the irritation of insects, thirsty and hungry, too, and in their excitement gore and trample many to death. Others die from other causes, so that every morning one or two are found dead.

The dogs lie about the borders of the enclosure, fully expecting every morning a new carcase or two. When the herdsmen drag the dead bodies to the line, the dogs stand in rows impatiently waiting; and as the men step back, they seize the carcase and drag it as firemen run with an engine, making the dust fly as they go—and in an incredibly short space of time after, it is torn into shreds, and the bones gnawed as though they had been rasped with a steel rasp. When these multitudes of dogs can find no other food, they seek subsistence in the superficial graves, in which bodies are interred without coffins. Their whole history, therefore, is extraordinary.

Several varieties of the dog, which have no intercourse with man, either as his friend, companion, or looker-on, waiting for what he is disposed to give away, are met with in Asia. They hunt in packs like the wolf, and combine for mutual protection. These half-savage, scavenger dogs of the East licked up the blood of Naboth, and ate the body of Jezebel, all but the palms of her hands and the soles of her feet. Thus, by understanding the habits of these dogs of Damascus, the Bible accounts of them are cleared from all obscurities.

#### THE POOLS OF JERUSALEM.

There is no Croton river near Jerusalem, from which water can be obtained. In the time of a siege, three soldiers with their picks, in case New York was besieged, could divert the stream from the reservoir, and leave 600,000 people without water. Against this same catastrophe Jerusalem had to contend. Hence the pools of Gihon, Bethesda, and others of immense extent, were excavated, and still are found within the walls of Jerusalem.

About six or eight miles beyond Bethlehem, we saw the far-famed Pools of Solomon. Of these he is believed to speak in Ecclesiastes 2: 6—"I made the pools of water to water therewith the wood that bringeth forth trees." The three pools cover together about seven acres, and are respectively 25, 39 and 50 feet in depth. Such immense tanks or reservoirs, are constructed of stones of very great size, and are of great age. Tradition invariably assigns them to Solomon, and we are inclined to that belief.

The three Reservoirs are situated on the side

of a mountain, so that as fast as the upper one fills, the water overflowing runs into the second, and on its becoming full, it flows into a third. They are at present in miserable repair, none having more than fourteen feet of water. The cement with which the immense stones were laid has become quite as hard as the marble itself, of which they seem to be built.

The conduit, or aqueduct, leads the water about fifteen miles to Jerusalem, always following the sinuosities of the mountain. The ancients did not understand how water followed a syphon of any shape to a point as high as the source. Hence the immense aqueducts at Carthage, Rome and other places were carried along on lofty stone arches for miles and miles.

Here was one cause of the awful suffering in Jerusalem in the time of her sieges. This aqueduct was broken up, and they were compelled to trust to their pools within the gates, and the rain that might fall. But the unchained madmen, under the dreadful curse of sin, poisoned these cisterns, pools and wells.—*Nat. Intelligencer.*

#### THE ANSWERED PRAYER.

I prayed for riches. Oh! for lavish wealth,  
To pour in golden showers on those I loved;  
I would have gladly spent my youth and health,  
Could I by gifts like these my love have proved  
I prayed for riches,—that before God's shrine  
I might with gifts and costly tribute kneel;  
And thought the treasures of Golconda's mine  
Too poor to show the fervor of my zeal.

Alas! wealth came not; and the liberal deeds  
My heart devised, my hand must fail to do;  
And though o'er prostrate truth my spirit pleads,  
In vain the aid of magic gold I woo.  
The poor may plead to me for daily food,  
And those I love in lowly want may pine;  
I will pour out for them my heart's warm blood,  
But other gifts than this can ne'er be mine.

I prayed for genius—for the power to move  
Hard hearts, and reckless minds and stubborn  
wills;  
To execute the holy deeds of love,  
And light Truth's fires upon a thousand hills.  
I prayed for eloquence, to plead the cause  
Of human rights, and God's eternal grace;  
To cry aloud o'er Mercy's outraged laws,  
And speed the great redemption of my race;—

But all in vain. My feeble tongue can breathe  
No portion of the fire that burns within;  
In vain my fancy vivid thoughts may weave  
In scorching flames to vanquish human sin.  
Powerless my words upon the air float by,  
And wrong and crime disdain the weak crusade,  
While vice gleams on me its exultant eye,  
And bids me show the conquests I have made.

I prayed for peace—for a strong heart to bear  
The keen privations of my humble fate;  
For patient faith to struggle with despair,  
And shed a brightness o'er my low estate;  
I prayed to be content with humble deeds,  
With "widow's mites," and scanty charities;  
To follow meekly where my duty leads,  
Though through the lowliest vale of life it lies.

My prayer was answered! for a peace divine  
Spread through the inmost depths of all my heart;  
I felt that that same blessed lot was mine  
Which fell on her who chose the better part.  
What though the world abroad ne'er hears my name?  
What though no chains upon weak hearts I bind?  
It is a happier lot than wealth and fame,  
To do my duty with a willing mind.

#### SUMMARY OF NEWS.

FOREIGN INTELLIGENCE.—Liverpool dates to the 28th ult., have been received.

Another large provincial joint stock bank, the Northumberland and Durham District Bank, stopped payment on the 25th, with liabilities estimated at about £3,000,000, (nearly \$15,000,000.) The assets were thought to be unfavorable. The bank was connected with many collieries, iron works, and ship building establishments, some of which it was feared would be obliged to stop. The branch Bank of England was assisting some of them, to enable them to keep their workmen employed. The pressure at the main Bank of England and in the discount market, had still further subsided. It was understood that the issues of the Bank had returned to the limits authorized by its charter. Its weekly returns showed an increase in bullion of £779,576, and the influx of gold continued. The Bank of France had reduced its rate of discount 1 per cent., and had lowered the premium on gold. Additional failures had occurred at Hamburg, but confidence was reviving.

INDIA.—The fugitives from Delhi had been overtaken and defeated at various points. At Agra, the rebels had also sustained a severe defeat. Generals Havelock and Outram were both near Lucknow with large bodies of troops, and reinforcements were advancing, but the rebels were also strong in that neighborhood. Troops were arriving from England.

SOUTH AMERICA.—The revolution commenced in Bolivia by Dr. Linarez has been successful, and the President, Gen. Cordoba, has fled for safety to Peru. In Lima, anarchy prevails, the Council of Ministers, the Convention and the military striving among themselves for supremacy. A military faction abruptly dissolved the Assembly on the 2d ult.

MEXICO.—President Comonfort was formally installed as Dictator on the 1st inst., together with the other officers of the Supreme government. The revolutionary forces are reported to have been defeated at Puebla and other points, and the position of the government is improved. Campeachy is still besieged, and the inhabitants are said to be suffering much from want of provisions.

CENTRAL AMERICA.—Walker with about 150 of his followers, landed at Punta Arenas on the 25th ult., without opposition, the purpose of the expedition not having apparently been suspected. After landing them, the steamer proceeded to Aspinwall, where Com. Paulding, of the U. S. frigate Wabash, attempted to seize it, but its papers being found correct, he was obliged to release it. The British and American naval forces had sailed from Aspinwall for San Juan, with the design, as was supposed, to prevent the landing of any more filibusters. Walker is supposed to have about 400 men under his command, and an additional force of 1000 men was expected to leave Mobile this week, under the command of Gen. Henningsen.

It is supposed that the difficulties between Costa Rica and Nicaragua, which led to the declaration of war by the latter, will be settled without a resort, to actual hostilities. The Congress of the former has authorized the Dictator to send Commissioners to Nicaragua for that purpose.

WEST INDIES.—Turk's Island, one of the Bahamas,

is said to be suffering a scarcity of provisions, and some of the inhabitants are in danger of starvation.

**AFRICA.**—The recent action of the French government, in sanctioning a revival of the slave trade under the specious pretence of a voluntary emigration of hired laborers from Africa to the French West Indies, has had a disastrous effect upon the legitimate commerce of the coast. The quantity of palm oil brought to Whydah for export, speedily fell off two-thirds, and some of the native chiefs forbade all trade, and proclaimed war for the purpose of obtaining slaves. The first French vessel which professed to carry voluntary emigrants could obtain but a partial cargo, and was obliged to depart hastily to prevent their deserting. Afterwards the price was paid to the chiefs, and a cargo was more readily procured; but even then, in consequence of the competition of Cuban slave-traders, the enterprise proved pecuniarily unprofitable to the contractors. It is hoped a stop may soon be put to this nefarious undertaking.

**DOMESTIC.**—Official despatches have been received from the commander of the Utah expedition, Col. Johnson, at South Pass, 10th month 18th. The advanced body under Col. Alexander, were on a branch of Green river, where Col. Johnson proposed joining them and occupying that valley during the winter, the season being too far advanced to admit of reaching Salt Lake City, on account of the probability of being impeded by deep snows. Some of the mules and oxen had perished from cold; the thermometer stood at 16° above zero at sunrise, and 34° at noon. The Superintendent of the South Pass wagon-road, had tendered the aid of some of his teams and such of his men as would volunteer, which offer was accepted.

J. Calhoun, as President of the Lecompton Constitutional Convention of Kansas, has issued proclamations providing for the election to vote on the Constitution on the 21st inst., and for an election for State officers on the 14th of next month. Secretary Stanton, as acting Governor, called a special session of the Territorial Legislature to meet on the 7th inst. The President having been advised of the fact, forthwith removed him from office, and nominated in his stead J. W. Denver, now Commissioner of Indian Affairs, who was confirmed by the Senate on the 10th inst. The reason given for this removal is said to be, that the convening of the Legislature could only engender strife and embarrass the people in voting on the slavery question, in the form proposed by the Convention, and that hence the act is a violation of the instructions given to the Secretary, to avoid every thing which could disturb the peace of the Territory. J. W. Denver was already in Missouri, and has been notified by telegraph of his appointment. The Territorial legislature assembled pursuant to the summons, when acting Governor Stanton sent a message, in which he recommended the passage of an act directing an election to be held, under different officers, at the same time and places as that provided for by the President of the Convention, at which the people may vote for the Constitution in either of the forms presented by the Convention, or against it in both forms; also an act making a fraudulent return of votes a felony, with suitable punishment. Intense excitement prevails among all parties in the territory. A Delegate Convention held at Lawrence, on the 2d inst., among other resolutions, adopted one requesting the extra session of the Territorial Legislature to pass a law providing for submitting to the people both the Topeka and Lecompton Constitutions; the one receiving the majority of legal votes, to become the fundamental law of the State of Kansas. A call has been issued for a Democratic Convention, to meet on the 24th inst., for the purpose of petitioning Congress to pass an Enabling Act, under which a new Consti-

tution may be formed and submitted to a popular vote.

The banks of New York city and of Albany, resumed specie payments on the 12th inst., and those of Boston and New Haven, on the 14th.

A colored girl who had resided six years in Caseyville, Ill., with a man named Mallory, professedly as bound to serve until she was 18, was, some months since, taken by her master to St. Louis, on his removal thither with his family. Subsequently he returned to Caseyville, and on its becoming known that the girl was held as a slave, he sold her to prevent her escaping. He was arrested on a charge of kidnapping, and after an examination before the Recorder, was discharged on the ground that the girl was a slave, although she had resided six years in a nominally free State.

A fugitive slave arrived at New York, on the 28th ult., as a passenger on the steamer from Savannah, his white skin enabling him to pass without suspicion. A telegraphic despatch, announcing his escape and requesting that he should be returned, having preceded him, he was arrested on his arrival by some special policemen, and detained in custody at Brooklyn, for the purpose of being sent back in the steamer. Application being made to Judge Culver, the latter issued a writ of *habeas corpus*; and, on the trial, no legal authority to detain the man being produced, he was discharged. Those concerned in his capture and imprisonment were arrested for conspiracy and kidnapping, and held to bail for trial.

Accounts from California to the 26th ult., state that heavy rains in the interior had caused great loss to the river miners, the rapid rise of the streams carrying off their works and materials. Quartz mining is prosecuted with great vigor. The yield of grain this year is fully equal to the average, in quantity, if not in quality, owing to the increased amount of land cultivated. The State government is administered economically; all demands against it are paid in cash, and there are upwards of \$100,000 in the treasury.

The Florida war against the Seminoles, which has been carried on, at intervals, for twenty years, is about to be renewed. The Indians, who never exceeded 4,000 or 5,000 at the utmost, are now much reduced in numbers. Besides a large force of U. S. troops, about 2,000 Florida volunteers have been called out. It is stated also, that some *dogs*, well practised in tracking negroes, have been taken to Tampa Bay, to be used in finding the Indians.

**CONGRESS.**—In the Senate, on the 9th, Senator Douglass made a speech on the subject of Kansas, opposing the Lecompton Constitution, on the ground of its not being submitted to the people. Senator Bigler, of Pa., defended the action of the Convention, and advocated the admission of Kansas under that Constitution. On the 10th, Senator Douglass gave notice of his intention, at an early day, to introduce a bill authorizing the people of Kansas to form a Constitution and State Government. On the 14th, the death of Senator Butler, of S. C., which has occurred since the last session, was announced.

The House of Representatives, on the 9th, elected Jas. B. Steadman, as Public Printer. On the 10th, a committee was appointed, in accordance with a resolution passed the previous day, to examine the whole subject of the public printing, and report such reforms as they deem advisable. A resolution was adopted, providing for the distribution of books heretofore printed, to new members. J. Letcher, of Va., took the opportunity to point out the evils attending this practice, and to urge the necessity of a reform. On the 14th, the Speaker announced the standing committees. A report was adopted directing that the House meet in the new hall on the 16th.

## THE CHRISTIAN MISSIONARY.

"How beautiful upon the mountains are the feet of him that bringeth good tidings, that publisheth peace." Thus exclaimed the prophet, when the glory of the gospel day was opened to his vision. He foresaw that they who came under the government of the Prince of Peace would *learn war no more*. And how consonant herewith are the instructions given by our Holy Redeemer, to those whom He sent to proclaim *good tidings*,—"Behold, I send you forth as sheep, in the midst of wolves: be ye therefore wise as serpents, and harmless as doves." "And into whatever house ye enter, first say, Peace be to this house." His disciples were not at that time perfectly redeemed from the bondage of the law; but on one occasion, in particular, they manifested a spirit of vengeance on some who would not receive them; for which he rebuked them, by saying, "Ye know not what manner of spirit ye are of: For the Son of man is not come to destroy men's lives, but to save them." There is nothing recorded in the New Testament to warrant those whom Christ commissions to preach the gospel in expecting help in their labors from fighting men. The Apostle Paul, in writing to the Philippians, who had witnessed his sufferings for the gospel, says: "But I would ye should understand, brethren, that the things which happened unto me, have fallen out rather for the furtherance of the gospel." And so prevalent, formerly, was the sentiment that the gospel flourished under the patient suffering of its advocates, that it became a proverb, "*The blood of the martyrs is the seed of the church.*" But modern preachers and public teachers proclaim the doctrine, that the sword opens the door for the gospel; so that we might suppose the proverb now

to run thus: The blood of *unbelievers* is the seed of the church.

It is true, there have been, and still are, very interesting instances of individual missionaries who beautifully illustrate the *peace* principles of the gospel, in their intercourse with the heathen; but probably all missionary societies, as bodies, recognize the lawfulness of war.

Great was the progress made by the missionaries of the early Christian church, while they received no support from military power; but from the time that the church fraternized with the army, it declined in purity and spirituality.

Many good men are now greatly alarmed lest, if our armies are not victorious in India, all openings for the gospel there should be closed. They seem to shut their eyes to the truth, that He who sent out the early missionaries, and enabled them to propagate his gospel without the aid of soldiers, is able to do the same in the present day. Many persons, however, appear to think that it must be done through the medium of soldiers. The following language is reported to have been uttered by a speaker at the meeting of the Wesleyan Missionary Society: "By pouring shells into Canton, the Chinese were brought to their senses; our guns had cleared the way, under the good providence of God, for our admission into the corrupt city; and in due course we would build our churches within its walls, and plant in the midst of them the standard of the Cross." Is not this somewhat analogous to the case of the Israelites, when the Prophet Hosea said, "By killing and stealing . . . they break out, and blood toucheth blood." "For Israel hath forgotten his God and buildeth temples." And he declared in the Divine name, "I desired mercy, and not sacrifice." The *Christian Times*, (whose martial views it might be wished did not represent those of a large body of Christians,) in referring to the mutinies in India, says, "On our side, nerving the arm and strengthening the heart of our gallant countrymen, is the Lord God of Hosts." The *British Standard*, in commenting on our wars in the East, a short time since, observed: "Hitherto the providence of God has so worked; first, the British soldier, then the British merchant, and now the British missionary."

Some years since, the amiable and estimable Bishop Wilson, of Calcutta, in attending one of

those exhibitions irreverently styled "consecration of colors," said: "It is by the bravery of the noble soldier that the minister of religion can prosecute his holy duties—that the arts and sciences can flourish—that commerce can extend her benefits—that education and religion can diffuse their benefits. Christian soldiers! the honor of your religion is entrusted to your hands in this country."

We know that early impressions are often deeply rooted in the mind; so that, while we must consider such sentiments are not Christian, we may, without abusing charity, believe that many persons hold them in perfect sincerity. Yet we cannot imagine the apostles using such language. How unlike approving of the employment of military power in propagating the gospel, is Paul's description of a teacher of religion. "The servant of the Lord must not strive, but be gentle unto all men; apt to teach, patient, in meekness instructing those that oppose themselves." "And your feet shod with the preparation of the Gospel of Peace." The epistles of Peter and James contain instructions of the same import. As our Saviour said that *his kingdom is not of this world*, and that *they that take the sword shall perish with the sword*, it is safe to assert, that his kingdom never will be established by "the battering train, the Enfield rifle, and the heroism of Britain's soldiers," in which some good men have expressed their confidence.—*London Herald of Peace.*

#### DANGER OF COMING NEAR TEMPTATION.

"Avoid it, pass not by it, turn from it, and pass away."  
—Proverbs iv. 15.

When a sailor knows that there is a dangerous whirlpool in the part of the ocean he has to cross, what does he do? He keeps at as great a distance from it as possible, steers as far as he can in the opposite direction. Why so? Because he knows if he once gets within the current, though far from the centre at first, he could not escape, but would be drawn at last down to destruction. Now this is the advice which the Holy Spirit, speaking by Solomon, here gives us: "Enter not into the path of the wicked, and go not in the way of evil men. Avoid it, pass not by it, turn from it, and pass away." Keep at a distance from sinners. Do not pass that way. Avoid the places where you know you are likely to meet bad companions; or if you have fallen in with them already, be warned in time, and break off from their society. Do not look at the forbidden fruit, do not listen to the voice of the tempter. Ask the Lord to lead you in His paths, and give you grace to walk straight forward. And so you shall have the promise fulfilled: "And thine ears shall hear a word behind thee, saying, This is the way, walk ye in it, when ye turn to the right hand, and when ye turn to the left, (Isa. xxx. 21.)—*Christian Year Book.*

#### SERMON BY ROBERT BARCLAY.

*My Friends,*—This is the testimony that was borne of old, and it is also borne this day, that there may be an agreement, between the members and the Head, the word and the power, the notion and the substance. "He that hath the Son hath life, and he that hath not the Son, hath not life." So that in this the substance is known, whereby men are redeemed to live unto God, and to live for God and to glorify him. This is the end of the testimony of the gospel of our Lord and Saviour Christ Jesus, that we may all come to partake of his life, and that by partaking of it, we may live upon it, and being made alive to him, we shall then be made able to serve him; then shall we be enabled to worship him, to glorify him, and to declare of his glory, and of his power, and of his wisdom, and of his goodness, to those that are strangers to him, and to invite all to be partakers thereof. Let all your eyes this day be towards him, and to the enjoyment of his life, that you may be sensible, and that you may be witnesses of his life.

And this life is not to be obtained but by death; there is a dying before there is a living: every plant seed or grain that is placed in the earth dies before it grows up; there is a dying before there is a living; those that come to the life of the Son of God come to it through death; for it was through dying that he obtained this life; it was necessary that the Son of God, the prince of life, should die, that he should be crucified; else he could not finish the work of our salvation, and make way for the revelation and the sowing of that seed, and the dispensation of that grace, whereby we might come to have a share with him in that eternal life he obtained for us: they that come to the life of the Son of God must obey him; for they must receive the sentence of death to that life which they derive from Adam, that cursed, that corrupt life of unrighteousness, that life of ungodliness, that life wherein self and the will of man delight, wherein the natural man, the animal man hath a life; we must die, and by dying come to be partakers of the life of Jesus; he communicates himself to us, and by our receiving him we receive life; "He that hath the Son hath life, and he that hath not the Son hath not life," and the consequence is, he that hath not this life hath not the Son of God.

This is the true way for every one to try and examine themselves by, and to make a true judgment of themselves that they may know whether they have the Son of God or not, whether they have Christ or not; if they have Christ, they have the benefits of his death, and of his blood and sufferings; they that have this life in them are in the faith, and are partakers of justification and sanctification and adoption; and to all those that are under the dispensation of the gospel, that have the benefits of Christ's death, he giveth himself, and to those to whom he giveth himself, he giveth

this life. This is not the life of Adam, a life of unrighteousness, but a life that springs from the heavenly incorruptible seed ; such as partake of it are born again of the word of the Lord that remains for ever. This is a life that comes from the Lord from heaven, the quickening spirit, and this life tends heavenward, it looks heavenward ; it carries the affections towards the things that are above, it dwells not in them that have their pleasures in this world ; it looks not to the things of this world, it comes from heaven, and tends to heaven again, it raiseth the soul that is quickened by it. They that are born of it are made heavenly by it, it makes all heavenly that are quickened by it. *By this we may know that we have the Son of God ;* by this we have an understanding of him, and are brought into him that is true.

And this is the living manifestation of Christ, whereby he cometh into thy soul, and into my soul. This is the gift of God ; we receive God's gift, that we may receive life from him and by him, that we may live this life ; this is that which makes the yoke of Christ easy, and his burden light, and his commandments not grievous to us. The life of Christ doth the work of Christ naturally ; those that are in the flesh, mind the things of the flesh ; those that live a carnal life, mind the works of the flesh ; it is their joy, their delight and their pleasure ; that which their hearts are carried after. They rise early and lie down late, and all for this end ; it is that which their hearts run after all the day long. What is the reason of it ? They are in the flesh, in the life of lust ; that life moves them, and acts them, and governs them ; that life useth and employeth all their faculties, their understandings, wills, affections, and imaginations, and it useth all the members of their bodies to please the flesh, and fulfil the lusts thereof ; these are the consequences of a life of unrighteousness in those things that are unrighteous.

But those that have received the spirit of God, have received Jesus Christ the Son of God ; and this is the consequence, they are become dead to the life of unrighteousness ; all that are dead in sins and trespasses he hath quickened. Now when you have received the Son of God, you have received a new life, another life ; then your affections are set upon things that are above, and you are come to sit in heavenly places in Christ Jesus ; you sit no more in the earthly place, nor live an earthly life, but in the heavenly place, where the heavenly life abounds. For this end the eternal Son of God came into the world, *that we might have life, and that we might have it more abundantly ;* that we might abound in the life of Jesus, and in the abundance of it. This is that which is recommended to us, that we might receive the Son of God into our souls, and by receiving him, partake of his life ; and then let this life produce its actions ; *let the word of God dwell richly in you,* in all those things that

are divine ; these are the consequences that it brings forth amongst the children of God.

For it is not the things of the earth that we are to remember, and to have dwelling in us, but the word of God, and that which proceeds from the life of the Son of God. All words and testimonies, preaching, prayer, exhortation and spiritual counsel, which are not from the life of the Son of God, edify not the body of the Lord Jesus Christ in love : let us receive that which comes from the life of the Son of God, which is manifest among us, and shed abroad in our hearts ; let us watch and take care that whatsoever is not of this life may not appear, may not be manifest and made known among us. And this life that we receive from the Son of God, is that which will stand us in stead in the day of trial, and he is well pleased with as many as live unto God in this divine life ; and the tempter, the wicked one, cannot touch them at all, nor reach them, nor hurt them. This is my testimony unto you from the life of God, which, to the glory and praise of his name, hath risen in my soul in some measure ; it is the desire and labor and travail of my soul that you may be inwardly gathered into this heavenly life, that all my dear brethren and sisters, who are of the household of faith, may be inward in this life, that the fruit thereof may be manifest, that the notice thereof, the sound thereof, the language thereof may be heard in this assembly at all times, that the Lord our God may be made known to us, through this word of life in our hearts, to the praise, honor and renown of his name, who alone is worthy, to whom be glory for ever and ever. Amen.

#### INFLUENCE OF MENTAL EXERTION ON HEALTH.

It is a very old saying, that "Whom the gods love, die young." This, naturally enough, was suggested by the many cases in which fair and fragile forms, seemingly endowed with the richest intellectual gifts, fade away before our sight, leaving disappointed hopes and mournful memories.

The thought is not merely a sad, but an irrational one ; and there is much unhealthy sentiment connected with it. Nature is a rigid economist, and the principles of her housekeeping are evolved in averages on a grand scale. It would not be good or wise economy to take early out of life those whom they love best ; nor do they, except in very unusual cases. The largely-gifted are needed here ; and it is but reasonable to suppose that they will be longer spared to do their beneficent work. The facts of human history, duly scanned, will sustain this view beyond a question. The men whose intellectual organization, and whose activity have been greatest, have been the longest lived. Socrates and Plato, Isocrates and Gorgias, Marmontel, Rogers, Cuvier, Humboldt, Lyndhurst, Brougham, the elder and

younger Adams, as they are sometimes called—the honored and venerable Quincy, are typical men. They represent whole classes of such as, having from the Creator a healthy and powerful brain, obeyed their Creator's laws by exercising their high faculties in noble pursuits. Some of them still live, and the new generation rise up before them, wherever they appear, and delight to do them reverence. Glorious were they among their contemporaries, and their presence among us is a blessing and an honor.

Many false notions still prevail on this subject. Hard study is generally thought to be adverse to health; and conversely, unhealthy students are thought or think themselves to be identical with hard students. Paleness of countenance, nervous weakness, headaches, are cultivated or affected, because they are supposed to indicate superior intellectual gifts. Dangerous fallacy, which has cost many a good fellow his life! No man, or woman either, ever killed himself or herself with hard study; not a bit of it; but many a lazy fellow, fond of intellectual occupation with physical inaction, has fallen a victim to disordered digestion and crazed nerves, all the time laboring under the grievous mistake that he was one of those favorites of the gods who die young, because they are of too ethereal a temper to stand the rude shock of such a miserable world as this! Why, the world is a brave world—worthy to be the dwelling place of the noblest creatures God ever made. It is too good for the simpleton who does not know how to take care of himself; who mistakes neglect of body for culture of mind; who goes moping and moaning about, because his breakfast sits uneasy upon his weakened stomach, thinking it the proof that he is too delicate or too refined for the hardships of human condition. Up, man, dreamer, go plunge into the health-giving, joy-inspiring waves of yonder ocean while summer lasts; take a cold shower-bath in winter; walk long distances, if you have time; if you have not, swing the dumb-bells; be as naked as when you were born for half an hour when you get up in the morning, and exercise, with the fresh air blowing upon you through the blinds of your dressing room. Exercise, we say, either with dumb-bells, or in *skiomachia*, until you sweat, (don't talk about perspiring), and then rub yourself with hair gloves and strap; then take a short walk, and when your breakfast will be ready, you will be ready for your breakfast.

Depend upon it, hot cakes and a beefsteak won't hurt you. You may work as much as you please after this. If you have another walk, very well. If you don't, it's no matter. You will have a sound mind in a sound body. Your brain will work freely and delightfully; your blood will course nimbly through your veins; your pen will be pointed with sparkling wit, or subduing eloquence; the right words will fall into the right places; you will not be

sentimental; you will be in no danger from the spirits; you will see clearly, hear rightly, reason logically: in short, you will be neither a dyspeptic, epileptic, cataleptic, fool nor medium. Cold water, vigorous exercise, hard study—these are the conditions of moral, mental, and bodily health.

Nothing is a surer guarantee of a long life than a sound education. The sickly thought that study, of the most thorough sort, is unfavorable to health, is a theory that leaves the brain in the very worst condition. Parents, if you wish your children to live long in the land, let your first care be to educate them well. Children, if you desire to enjoy the blessings of a healthy existence and venerable age, study hard, exercise your brains while you are young. And remember cold water, swing the dumb-bells, or run three miles every morning; rub down your skin as vigorously as a groom curries his horse. If you neglect these things, don't flatter yourself that your headaches and dyspepsias, your dizziness and lassitude, your unwillingness to work and your craving for unhealthy stimulants are consequent upon study. You are not hard students, but very soft ones indeed.—*Boston Bee*.

#### THE LAST HOUR OF THE YEAR.

I sigh not for the radiant glow,  
The golden light on summer's brow;  
I weep not for the blushing rose,  
The twilight hour of soft repose;  
For bright winged birds on tracks of light,  
For rosy morn or dewy night.  
Earth's joys—Earth's beauties I resign,  
My parting sigh, oh man, is thine.  
Yes, thine! Dim though my failing eye,  
I view the scattered jewels lie,  
Scattered with ruthless hand by thee,  
Those priceless pearls from Time's deep sea;  
Now thine no more—the tide shall sweep  
Those gems away—well may'st thou weep!  
But on eternity's vast shore  
They shall arise to life once more.  
Thou young and joyous one! whose breast  
The weight of sorrow ne'er hath pressed,  
Thou hear'st no sadness in my knell,  
Smiling thou breathest forth farewell!  
Yes! thou canst smile and gently sink to sleep,  
Whilst older pilgrims sit to watch and weep.  
Thy memories are but of a spring time past,  
Thy future, of a summer that will last.  
But the days come, young spirit, e'en to thee,  
When clouds and darkness o'er thy path shall be  
Yet fear them not, for still thy heart may say,  
"Father, be thou my guide in life's young day."  
Farewell, ye faithful! on my scroll I bear  
Full many a record of your hours of prayer;  
I take them hence, but on that solemn day,  
When heaven and earth alike shall pass away,  
He, whose loved name ye bear, shall bid you come  
To the bright glories of your purchased home;  
There shall ye learn why by the grave ye stood,  
And own with grateful heart that "it was good."  
Then shall ye know wherefore your joys decayed,  
Your fondest hopes low in the dust were laid;  
And ye shall tune your golden harps to praise,  
More for your wintry than your summer days;  
And there confess that had your earthly prayer  
Been always granted, you had not been there—

But hark; Time's hand now strikes my latest knell,  
Children of mirth, children of prayer, farewell!  
Watch ye and pray: soon your last hour shall come,  
May ye but find in heaven your lasting home.

JAMES EDWARD MEYSTRE—THE BLIND AND  
DEAF MUTE.

Meystre was born at Lausanne, Switzerland, in November, 1826. His faculties were all perfect at birth, but at the age of eleven months he was attacked with small-pox, by which he lost his hearing, and consequently his speech, while his sight was with difficulty preserved. In the Spring of 1834, when a little more than seven years of age, his sight was destroyed by the accidental discharge, in his face, of a fowling-piece, loaded with small shot. On the recovery of his health, after this terrible calamity, he amused himself for a year or two in the shop of his father, who was a carpenter, but being deprived of this resource, he attempted, without instruction, to make some rude articles, such as mouse-traps, benches, etc. These displayed considerable mechanical talent, but showed plainly, that he had had no instruction. As he grew older he went from house to house, sawing wood, for which he received his food.

At the age of eighteen and a half years, he was admitted as a pupil in the Blind Asylum at Lausanne. The character of the deaf mute predominates in him. He has the self-reliant air and bearing of the deaf and dumb, rather than the embarrassed and hesitating manner of the blind. His blindness, however, is complete; he retains not the slightest gleaming of light. He soon familiarized himself with the Asylum, and was able to find his way about the building alone, in the course of a few days.

We will not weary our readers by a detail of the plan adopted to give him a knowledge of the names of objects. The word or sign, and the thing signified, were presented to him together, and he soon learned to distinguish them readily, and after some instruction in articulation, to pronounce them. It will be of more interest, we presume, to the reader, to learn something of Meystre's moral developement.

Four months after his admission into the Asylum, Meystre secretly took from the Director a Swiss coin, of the value of about fourteen cents. On being charged with the theft, he at first denied it quite confidently, but circumstances having betrayed him, he avowed it, and excused himself by saying, that it was not worth the trouble of speaking of it. The Director took from him his knife and cigars, and as a punishment confined him in a room, where he could watch him. He immediately sought to escape by the window, but the iron net-work preventing this, he went to the door, and at first by force, and afterward by means of a nail, attempted to unlock it. After some effort he succeeded, and repairing to his workshop, (he had commenced learning the trade

of a turner,) supplied himself with cigars and matches, and returned to the room in which he had been confined. When questioned in regard to this act, he protested that he had not gone out. As the cigars proved the falsity of this statement, he alleged that the door opened of itself. At last he was brought to acknowledge the truth. M. Hirzel proposed to remove him to another room, where he could not escape; he opposed this with violence, threw himself upon the Director with great fury, and made vigorous resistance. Being overpowered and placed in confinement for a time, he seemed better disposed, and never again attempted to steal. His propensity to falsehood was not as readily cured.

On New Year's day, 1846, after spending the day with his mother, Edward returned at night-fall with her to the Asylum. The gates were shut, but soon after Edward was missing. M. Hirzel sought for him unremittingly for nearly four hours, and finally found him at an inn, and under the influence of wine. On being questioned the next day as to his conduct, he replied, that not finding his companions readily, he felt dull, and took advantage of an open door to go out. Suspecting the falsity of this statement, M. Hirzel questioned him further as to his clothing, which was badly torn. Thus detected, he acknowledged that he had climbed over the fence, (at that point about eight feet in height,) and that his clothing had caught in one of the pickets. He showed no penitence for his fault, and even after a day's solitary confinement, he remained intractable and rebellious. Deeply impressed with the danger of allowing Meystre to go out at will, and as deeply with the necessity of eradicating this habit of falsehood, M. Hirzel resolved, after explaining to him his grief for his misconduct, to inflict corporal punishment upon him. He did so, and with apparent success. So deeply rooted, however, had this vice become, that it was not long before he was again found guilty of it. At this repetition of his fault, M. Hirzel adopted a different course. He explained to him that an honest man does not tell lies, and then made him write and pronounce the word *lie*; having done this, he shut him up, with this word in his hand. Returning to him an hour later, he found him much afflicted, and very penitent. At first, M. Hirzel was in doubt how far he comprehended the idea of falsehood; but he soon had evidence, in his watchfulness, in regard to the truth of every statement that was made to him, that he fully understood it. From that time he was never known to be guilty of prevarication.

Up to this period, his teacher had carefully abstained from giving him any religious ideas, being desirous that his intellect should have attained to such a degree of developement, as to permit him to understand them thoroughly, before he attempted to communicate them to him. He had now not only learned the names of many objects, but by the use of the manual alphabet

and by writing words on the hands of others, which he had learned to do, he communicated quite freely with those around him. He had no idea of God, although he seemed, like Julia Brace, to have some vague notion of a resurrection. He had observed that the young blind pupils kneeled at evening, and with clasped hands addressed some one who was not in the room, and one day he asked one of them if he were speaking to the sun; the boy replied that he was speaking to some one like a man, who lived far on high. Meystre at once inquired, whether it was necessary to cry loudly, in order to be heard. After a little further reflection, he inquired again, whether this being, similar to men, would die.

Deeming it time that he should be informed concerning the being and attributes of God, M. Hirzel led his mind onward, step by step, in this way: "Who made that bread? Of what is the bread made? Who made the flour? Whence came the grain? Who made the wheat to grow?" "The sun," replied Meystre. "Who made the sun?" inquired M. Hirzel. Seeing that his pupil was perplexed by this last inquiry, M. Hirzel explained to him that God had made the sun, and all other things in nature, and that it was to him that men offered their prayers. The countenance of the poor blind deaf mute was irradiated with joy and reverence at this information. The God that made the sun was to him a being worthy of all reverence; and from that time forth he voluntarily repeated every night on retiring to bed, "My God, give me the sun," (that is, its warmth and comfort.)

An incident which occurred a few months later will illustrate the impression which the revelation of the character of God had made upon him. A young blind pupil had stolen a small sum of money; and there being some doubt as to who was the real offender, each pupil was questioned, in turn, as to his guilt. When it came to Meystre's turn to answer, he replied with great solemnity that he was innocent, and that he would not steal because God knew his thoughts. He then left the room for a few minutes, and returning, approached one of the pupils, (the guilty one,) and after describing by signs the theft, he asked him if he had not committed it; the boy hesitating, Meystre noticed it, and again questioned him, saying at the same time, Lie, God? with so much earnestness, that the boy pushed him roughly away, and, by his violence, betrayed his guilt.

During the period we are describing, not more than two or three hours of the day were devoted to his intellectual culture; the remainder of the day he worked at wood turning, in which he soon became remarkably skilful. He executed cups, balls, and other articles of fancy wood turning, with such taste and skill, that they received honorable mention for their perfection and beauty, at the World's Fair at London in 1851.

He had also made commendable progress in

his studies, having acquired a good knowledge of the elementary rules of arithmetic, and a very considerable fund of general information. He had been instructed in articulation, and could repeat a series of selections, amounting to about two octavo pages, the meaning of which he seemed fully to understand. He had also acquired considerable knowledge of geography, by means of maps in relief. The fear of death occasionally agitated his mind, and manifested itself in his conversation. M. Hirzel felt that to take away this depressing fear, it was necessary to rob death of its sting, by teaching him the way of salvation, through the atonement of Christ. Up to this period he had only known God as a creator, and as the powerful sustainer of man, and of all worlds; but though, occasionally, the consciousness of sin had disturbed him, he knew nothing of the great sacrifice for sin.

M. Hirzel having resolved to delay no longer his instruction on this deeply interesting topic, commenced with characteristic caution, by causing him to read, and explaining to him the life of Christ. Step by step, and with constantly increasing interest, they passed in review each event of that pure and holy life, and it was with the deepest sadness that Meystre read of his trial, his scourging, his crucifixion. The tender solicitude of the dying Saviour for his mother, so cruelly bereft, affected him even to tears, but when he had in imagination followed him to the tomb, and seen him deposited there, his interest ceased; the narrative seemed indeed incomplete; it was a story of human suffering, whose ultimate object he had not comprehended. It was at this point that M. Hirzel again called his attention. "Jesus Christ rose from the tomb on the third day," he said. "Yes, his soul, not his body," Meystre replied. "Soul and body!" Meystre started in surprise. "Did any one feel with his finger the prints of the nails in his hands and feet?" "Yes." Hope and joy irradiated the countenance of the blind deaf mute as he exclaimed, "This story is very beautiful; I wish to print it." M. Hirzel then told him of the ascension of Christ, and of the plan of redemption which brought him to earth, and as he listened to the wondrous story of the cross, tears trickled down his cheeks.

Nor was the effect thus produced transitory in its character. The love of Christ, in submitting to death for sinners, had opened in his heart a fountain of adoring love, which constantly overflowed. It was the subject of his sleeping and waking thoughts. Often in the night he rose from his couch to pour forth his mute orisons of thankfulness, and his oft-repeated inquiry to his fellow pupils, to the attendants, and to those who visited the asylum, was, "Do you know and love Jesus?" When he received an affirmative answer, he seemed overjoyed. He found one day, on a table, a book in raised letters, and asked what it was; the attendant made him read the

title, "The Life of Christ." He at once passed to the date, and finding that it had been published some three years before, he inquired in a manner indicating mingled sorrow and reproach, "Why was I not earlier taught this beautiful story?" Soon after he inquired of M. Hirzel, whether his mother, who had recently deceased, had known and loved Jesus? On learning that she had, he asked very earnestly, how it was that she had not taught him concerning the blessed Saviour?

We have only to add that recent intelligence from Lausanne represents this interesting young man as still growing in knowledge and in favor with God and man. The love of Christ still awakens emotions in his heart; his truthfulness, conscientiousness, and devotion are worthy of imitation by all professing disciples of Christ. His thirst for knowledge increases in intensity. He has been devoting some attention to sculpture, and with extraordinary success. That keen perception of the beautiful in form, developed in wood turning, has received a new impulse, and he is exceedingly fastidious in regard to the proportion of his figures. In some of the departments of physical science, as well as in other studies, where his faculty of touch can be brought to aid mental action, he has made fine progress, and there is no doubt that, if his life is spared, he may yet become eminent in some of the departments of natural science.

THE MONITOR—NO. XII.

*Debating Schools.*

Talleyrand, one of the most unscrupulous of European politicians, once said, "The object of language is to conceal thought." He was, no doubt, largely endowed with what the Apostle Paul terms "the wisdom of this world;" but the manner in which it all "came to nought," after a long life of successful intrigue, may be truly inferred from the dismal remark made by him when he found himself approaching the confines of eternity—"I have no other feelings but sickening recollections of the past, and gloomy forebodings of the future!"

How puny, contemptible, and repulsive are the low arts of trickery and insincerity, compared with the noble simplicity of honesty and truthfulness! And how important it is in the education of young people, that they should never become tainted with the sin and folly of dissimulation!

These remarks have been suggested by observing the effects frequently resulting from *debating associations*—formed for the purpose of teaching young men the art of speaking in public, and very generally organized in schools of the higher class, not excepting those under the care of Friends. A close and long-continued observation has induced me to believe that some

serious evils are inseparably connected with them, and that among those evils are the following:—

1. They place the debaters in the attitude of lawyers, who argue for victory, and not always for truth.

2. They tend to destroy one of the finest virtues which a young man can possess, namely, *candor* and *sincerity*; because the position he is led to take, makes him disposed to reject truthful arguments and facts, advanced by opponents, and to hunt for quibbles and sophistry on his own side, if he cannot get facts. He uses language to conceal truth, if not thought.

3. As the debaters are expected to make *speeches*, it learns them to talk with many words to fill up time, placing facts and sound thinking too frequently on the back-ground.

4. Hence, as a too general thing, young men, who have much frequented debating schools, become captious in their conversation, insincere in their arguments, unwilling to admit the force of truth, and still more unwilling to search for it impartially, especially if they find it adverse to their corrupt inclinations. Occasionally the bad effect has been such as to prove the preponderating influence towards evil in the turning point of life, directing to the path of ruin.

5. The spirit of insincerity thus induced, often prompts young people to reject the reasons which may be given against the practice of participating in such debates, and hence the evil is often difficult to cure.

As an example of the evil tendency of these practices, I have known young men to take the ground, perhaps at first merely for the sake of argument, (but those arguments doubtless had afterwards their strong influence in the hour of temptation,) that *lying* was sometimes justifiable and right, and, no doubt, they gave what they regarded as very ingenious reasons in its favor—although they were assured on infallible authority, that "*all liars shall have their portion in the lake that burns with fire and brimstone, which is the second death.*"

"But if these debates are so fraught with evil, how are we to learn to speak in public, a most desirable and valuable accomplishment?" Taking the ground, in the first place, that no accomplishments should ever be acquired at the expense of moral virtue, the practice of some of our best colleges may be cited, and which I have known to be successfully adopted elsewhere. It is briefly this:—A common subject for discussion is previously given; and at an appointed time, and after full reflection, each speaker gives, extemporaneously, his views accurately and candidly on the subject, in as good, condensed, correct and finished language as he may be able to do. His defects are briefly and kindly pointed out, either by teachers or fellow-students, and rapid improvement is thus made both in his skill

in searching for truth and in expression, and without ever arguing for victory, or sacrificing his candor to his cause. T.

## FRIENDS' REVIEW.

PHILADELPHIA, TWELFTH MONTH 26, 1857.

ROBERT BARCLAY'S SERMON.—In a long epistle, written by George Fox, in 1699, relating to the "church order of the gospel," and the special duties of Quarterly and Monthly Meetings and of the members individually, in many matters connected with the welfare of the Society, he directs that when Friends have been moved to speak in "steeple-houses to the priests, or in markets to the people, or in courts, or fairs, or assizes, or towns," an account shall be drawn up, "with the substance of their words, that they spake in the power of God." "This," says he, "would be a book that may stand to generations, that they may see their faithful testimony, and what strength God did ordain out of the mouth of babes and sucklings. And Friends that have been moved to go to the professors' meetings; that their testimony there may not be lost, together with all the examples that have fallen upon the persecutors." A correspondent has sent us for insertion, a copy of one of these "faithful testimonies," which appears to have been delivered by Robert Barelay in Grace Church Street, London, during his last visit to that city, in 1688, and it may be read with interest, both from its intrinsic excellence, and as affording an example or specimen of the style of speaking of that eminent servant of the Lord.

ABOLITION OF SLAVERY IN THE DUTCH POSSESSIONS.—This long anticipated measure is, at length, announced, as may be seen by an article copied from a St. Thomas newspaper. Of the number of slaves to be emancipated we have not seen a recent statement; whatever it may be, the act of the government of Holland affords gratifying evidence of some progress in sound, Christian views on this great subject.

But in contemplating the emancipation question in our own land, we may at once perceive a wide and disheartening difference as regards the position of the emancipating power in this country and in those European nations which have abolished slavery. In the latter instances, slavery existed in distant colonies, and, powerful

as was the slaveholding interest and prejudice, legislative action rested mainly with those who neither held the slaves nor would be placed in close relation with them after they became free-men. In our Southern States, on the contrary, the slaveholders control all legislation. No decree of liberty can go forth in opposition to their will. Slavery is in their midst, and they regard its abolition as involving a revolution in domestic arrangements, a lessening of political influence and a risk of pecuniary loss, the fear of which operates powerfully upon the human mind and is not readily removed.

Discouraging as the whole aspect of the case, in this country, undoubtedly appears from these and other unfavorable circumstances, we should still cherish faith in the ultimate triumph of the principles of the religion promulgated by Him who was sent to preach deliverance to the captive and to set at liberty them that are bruised. Let us remember, also, that as faith without works is dead, we should be earnestly concerned to fulfil whatever duties our position as Christian citizens lays upon us in this matter.

THE FOSTER HOME.—The following appeal has been handed to us, with a request that it may be laid before the readers of the *Review*, as exhibiting a claim upon their beneficence, from one of those charitable associations which grow out of the necessities of the poor in cities, and are under the management of our female Friends. It is believed that in many parts of the country where the harvests have been abundant and the poor do not abound, there are farmers and others, who would gladly send a barrel of flour, a bushel of potatoes or corn meal, and other kinds of provisions to aid an institution where seventy-seven pittle ones are waiting to be fed. The "Foster Home" is at the corner of Hamilton and Twentieth streets. Donations in money may be sent to Sally Simmons, Treasurer, Walnut street, below 16th, or to Sarah P. Morris, 807 Spruce street; and contributions in produce to Paschall Morris & Co., N. E. corner of Market and Seventh streets, Philadelphia.

"It is with regret that the Managers of the 'Foster Home Association,' appeal to the Christian benevolence of their fellow citizens, but they are compelled to do so by pressing necessity. They entertain a cheerful confidence that this excellent institution, which was never more useful or more needed than at present, will not be permitted to languish for want of that kind help

and sympathy, which hitherto have so liberally been extended to it. In the prospect of a winter which must entail much suffering to the poor, will not all who have the power, be willing to aid an Institution, which promotes the moral and religious culture of children committed to their care?

In founding the above named Institution, the design of the Managers has been to establish a home for half orphan children, or for those who have been deprived of a parent's support. Such children are received in 'The Home,' clothed, fed, and educated, and when a suitable age is attained, situations in families are obtained for them by their friends or the Managers. Nor is the benefit derived from such an Institution confined to the child alone; the parent has, perhaps, an equal share. A widowed mother, receiving but a small compensation for her labor, is utterly unable to support a family depending upon her. Her work must be pursued away from home, and the children are either locked up in their miserable dwelling, or left to roam the streets. By paying the small sum of seventy-five cents a week, destitute children, such as these, are taken into 'The Home,' supplied with every necessary comfort, and brought up in such manner as to fit them for the duties of their station. In many instances, from the extreme destitution of the parents, this Institution provides for the support of the child without receiving any compensation. The Managers invite *all* who feel an interest in the welfare of the poor, to visit 'The Home,' and form an unbiassed judgment from their own observation."

#### BIBLE AND TESTAMENT IN LARGE TYPE.—

The Pennsylvania Bible Society, corner of Walnut and Seventh sts., Philadelphia, have issued the New Testament in very large plain type, adapted to those whose eye-sight is weakened by age or disease. It is bound in one, two, and four volumes. Also, the whole Bible in four volumes; and Psalms separately bound. These editions are much prized on account of their convenience, and can only be had at that place.

A respectable colored man from the South, manumitted by his late master for meritorious services, and highly recommended as steady and industrious, an excellent farm hand and accustomed to the care of stock, &c., wants a situation immediately for a *small* compensation, until labor shall be more in demand. He has left four children in slavery, whom he desires to redeem by his own labor. Friends willing to aid a worthy man may secure a good hand by *early application* at this office.

MARRIED, on the 12th of 8th mo. last, at Red Cedar Meeting of Friends, Cedar County, Iowa, JOHN MORRIS, son of Joseph and Jane Morris, of Ohio, to SARAH GIBSON, daughter of Samuel and Ann Gibson, of Red Cedar Monthly Meeting.

MARRIED, On the 12th inst., at a Meeting of Friends in Smithfield, Rhode Island, JOSIAH NICHOLSON, of Newby's Bridge, North Carolina, to ELLEN M. BASSETT, of the former place—daughter of William and Rhoda A. Bassett, (the former deceased)

—, At Friends' Meeting, Springtown, Hendricks County, Ind., on the 18th ult., JOHN D. EDWARDS to LUCINDA M. HODSON, daughter of Robert W. and Catharine Hodson; both members of Mill Creek Monthly Meeting.

DIED,—On the 13th inst., near Richmond, Wayne Co., Ind., MICAJAH HENLY, in the 73rd year of his age.

He had from early life been a consistent member of the Society of Friends, and for more than forty years a member of White Water Monthly Meeting. He settled near Richmond in 1812. The country was almost an unbroken wilderness. During the war between England and the United States, which had then just commenced, he was one of the faithful few whose trust in the peaceful principles of the Christian religion was unshaken; and he remained at his "clearing" instead of fleeing to the fort or block house. The result was, that the red man became his guest, his friend, and watched to protect him from harm instead of wreaking that vengeance upon him and his which fell upon so many in the new settlements of the West who put their trust in "carnal weapons."

In his death the community has lost a good citizen, Society a valuable member, and his large family, numerous relatives and friends, a father and a friend whose social qualities and many virtues, had endeared him to all.

Through a long illness, which lasted more than a year, and for five weeks was very severe, he was not heard to murmur or complain at his lot, but on the contrary he was calm, resigned and cheerful; manifesting an unwavering trust in a merciful Redeemer. Frequently through his sickness he expressed that "all is peace," "there is nothing in my way." Just at the close he repeated the same, adding, "Give my love to all Friends," and thus passed away to that rest prepared for the righteous from the foundation of the world,

—, On the 5th ult., ABIGAIL, wife of John P. Osborne, a valuable member of Weare Monthly Meeting of Friends, aged nearly fifty-two years.

—, On the 4th inst., SUSAN, wife of Dr. Samuel Stokes, in the 64th year of her age, a beloved member of Stroudsburg Particular and Abington Monthly Meeting, Pa.

—, on the 1st inst., near Rancocas, N. J., KEZIA TOMLINSON, in the 77th year of her age; a member of Burlington Monthly Meeting.

—, On Seventh day, the 25th inst., at the residence of her uncle, Joshua Collins, near Rocksylvania, Hardin County, Iowa, from the effects of a fit, with which she had been effected for about a year, HUDHA COLLINS, aged 12 years, daughter of Peter and Sarah Collins, of Humboldt County, Iowa.

—, At East Farnham, Canada East, on the 8th inst., in the 65th year of his age, SENECA STEVENS, a consistent member of Farnham Monthly Meeting of Friends.

He survived his wife Hannah R. Stevens, whose decease was recorded in the Review of the 12th inst. 18 days, and we humbly trust, has centered into everlasting rest.

#### POCKET ALMANAC FOR 1858.

The subscriber has just issued a Pocket Almanac for 1858. Price, 6 cents.

HENRY LONGSTRETH,  
915, Market st., Phila.

The spirit of God is not manifested in the boisterous movements of our senses and passions, but in holy patience, in silent waiting on the spirit, which helpeth our infirmities and maketh intercession for us.—*Dr. Guistani*.

Earthly pleasures are as brief as the mists which obscure the brightness of the morning sun; when we turn to embrace them their glories have fled.

#### GENERAL EMANCIPATION THROUGHOUT THE DUTCH DEPENDENCIES.

It seems that Holland is at last resolved to follow the example of her neighbors in abolishing slavery in her colonies in the West Indies.

We read in the *Curacaohe Courant*, of the 22d inst., an official publication of the Home government preparing the inhabitants for the emancipation of slaves in Curacao, Bonaire, Aruba, St. Eustatius and Saba.

The indemnification fixed is as follows:—In the islands of Curacao, Bonaire, Aruba and St. Eustatius, the amount of 50f. (about \$20) will be given for a slave under the age of 5 years; from 5 upward unto the age of 10 years, 75 francs, (\$30); from 10 years upward unto the age of 15 years, 225 francs, (\$90); from 15 years upward unto the age of 20 years, 325 francs, (\$130); from 20 years upward unto the age of 25 years, 475 francs, (\$190); from 25 years upward unto the age of 35 years, 500 francs, (\$200); from 35 years upward unto the age of 40 years, 450 francs, (\$180); from 40 years upward unto the age of 45 years, 325 francs, (\$130); from 45 years upward unto the age of 50 years, 200 francs, (\$80); from 50 years upward unto the age of 55 years, 75 francs, (\$30); from 55 years upward, 50 francs, (\$20.)

[On the island of Saba the average indemnification will be somewhat less.]

For sick slaves, a reduced price will be paid, which is to be fixed after the slave has been examined by two physicians, one appointed by Government and the other by the owner thereof.

No indemnification will be given for slaves infected with leprosy or any other contaminating diseases; for runaway slaves who have been absent more than two years, or for those condemned to hard work and whose punishment will only expire after four years.

Slaves emancipated by Government are subject to the vigilance of functionaries paid by Government for that purpose, and bearing the name of district masters. The emancipated slaves are obliged to assume a family name, which will go over to their children. All those from the age of 20 to 50 years of age can be called upon by turns to work for the State, which will pay them reasonable wages. All this will be arranged in such a manner as to insure satisfaction.

All emancipated slaves are obliged to contri-

bute to the formation of a fund destined to pay back to the State the expenses of their emancipation. They are to enjoy religious instruction, and schools will be provided for their children by the Government. The emissaries for that purpose will also be appointed by Government.

Whilst their privileges as citizens will in some cases be defined, they will enjoy the same rights and privileges as the rest of the inhabitants.

All quarrels which may arise between themselves, or between them and the rest of the inhabitants, will be decided by the District Master superintending the quarter in which the disputants reside.

Payment will be made by Government, immediately after delivery is made, in bonds on the colonial chest, or on the national treasury.

Children of emancipated parents, born after the proclamation of this law, are free, and not subject to the restrictions which their emancipated parents are under; and they are to remain under the control of their parents to the age of twelve years.

The date for the emancipation of the slaves is to be fixed by the Home Government.—*St. Thomas Tidende*.

#### THE FLORA OF THE COAL MEASURES.

The flora of the Coal Measures was the richest and most luxuriant, in at least individual productions, with which the fossil botanist has formed any acquaintance. Never before or since did our planet bear so rank a vegetation as that of which the numerous coal seams and inflammable shales of the carboniferous period form but a portion of the remains,—the portion spared, in the first instance, by dissipation and decay, and in the second by the denuding agencies. Almost all our coal,—the stored up fuel of a world,—forms but a comparatively small part of the produce of this wonderful flora. Amid much that was so strange and antique of type in its productions as to set the analogies of the botanist at fault, there occurred one solitary order, not a few of whose species closely resembled their congeners of the present time. I refer, of course, to its ferns. And these seem to have formed no small proportion of the entire flora of the period. Francis estimates the recent dorsiferous ferns of Great Britain at thirty-five species, and the species of all the other genera at six more,—forty-one species in all; and as the flowering plants of the country do not fall short of fourteen hundred species, the ferns bear to them the rather small proportion of about one to thirty-five; whereas of the British Coal Measure flora, in which we do not yet reckon quite three hundred species of plants, about a hundred and twenty were ferns. Three-sevenths of the entire carboniferous flora of Britain belonged to this familiar class; and for about fifty species more we can discover no nearer analogies than those which connect them with the fern

allies. And if with the British Coal Measure we include those also of the Continent of America, we shall find the proportions in favor of the ferns still greater. The number of carboniferous plants hitherto described amounts, says M. Ad. Brogniart, to about five hundred, and of these two hundred and fifty,—one half of the whole,—were ferns.

Rising in the scale from the lower to the higher vegetable forms of the system,—from its ferns to its trees,—we find great conifers,—so great that they must have raised their heads more than a hundred feet over the soil; and such was their abundance in this neighborhood, that one can scarce examine a fragment of coal beside one's household fire that is not charged with their carbonized remains. Though marked by certain peculiarities of structure, they bore, as is shown by the fossil trunks of Granton and Craighleith, the familiar outlines of true coniferous trees; and would mayhap have differed no more in appearance from their successors of the same order that now live in our forests, than these differ from the conifers of New Zealand or of New South Wales. We have thus, in the numerous ferns and numerous coniferous trees of the Coal Measures, known objects by which to conceive of some of the more prominent features of the flora of which they composed so large a part. We have not inadequate conceptions of at once the giants of its forests and the green swathe of its plains and hill-sides,—of its mighty trees and its dwarf *underwood*,—of its cedars of Lebanon, so to speak, and its hyssop of the wall. But of an intermediate class we have no existing representatives; and in this class the fossil botanist finds puzzles and enigmas with which, hitherto at least, he has been able to deal with only indifferent success. There is a view, however, sufficiently simple, which may be found somewhat to lessen, if not altogether remove, the difficulty. Nature does not dwell willingly in mediocrity; and so in all ages she as certainly produced trees, or plants of tree-like proportions and bulk, as she did minute shrubs and herbs. In not a few of the existing orders and families, such as the Rosaceæ, the Leguminosæ, the Myrtaceæ, and many others, we have plants of all sizes, from the creeping herb, half hidden in the sward, to the stately tree. The wild dwarf strawberry and minute stone-bramble are of the same order as our finer orchard trees,—apple, pear, and plum,—or as those noble hawthorn, mountain ash, and wild cherry trees, that impart such beauty to our lawns and woods; and the minute spring vetch and everlasting pea are denizens of the same great family as the tall locust and rosewood trees, and the gorgeous laburnum. Did there exist no other plants than the Rosaceæ or the Leguminosæ, we would possess, notwithstanding, herbs, shrubs, and trees, just as we do now. And in plants of a greatly humbler order we have instances of similar variety in point of size. The humblest

grass in our meadows belongs to the same natural order as the tall bamboo, that, shooting up its panicles amid the jungles of India to the height of sixty feet, looks down upon all the second class trees of the country. Again, the minute forked spleenwort of Arthur's Seat, which rarely exceeds three inches in length, is of the same family as those tree-ferns of New Zealand and Tasmania that rise to an elevation of from twenty to thirty feet. And we know how in the ferns provision is made for the attainment and maintenance of the tree-like size and character. The rachis, which in the smaller species is either subterranean or runs along the ground, takes in the tree-fern a different direction, and, rising erect, climbs slowly upwards in the character of a trunk or stem, and sends out atop, year after year, a higher and yet higher coronal of fronds. And in order to impart the necessary strength to this trunk, and to enable it to war for ages with the elements, its mass of soft cellular tissue is strengthened all round by internal buttresses of dense vascular fibre, tough and elastic as the strongest woods. Now, not a few of the more anomalous forms of the Coal Measures seem to be simply fern allies of the types Lycopodaceæ, Marsileaceæ, and Equisetum, that, escaping from the mediocrity of mere herbs, shot up into trees,—some of them very great trees,—and that had of necessity to be furnished with a tissue widely different from that of their minuter contemporaries and successors. It was of course an absolute mechanical necessity, that if they were to present, by being tall and large, a wide front to the tempest, they should also be comparatively solid and strong to resist it; but with this simple mechanical requirement there seems to have mingled a principle of a more occult character. The Gymnogens or conifers were the highest vegetable existences of the period,—its true trees; and all the tree-like fern allies were strengthened to meet the necessities of their increased size, on, if I may so speak, a *coniferous* principle. Tissue resembling that of their contemporary conifers imparted the necessary rigidity to their framework. The Lepidodendra,—great plants of the club moss type, that rose from fifty to seventy feet in height,—had well nigh as many points of resemblance to the coniferæ as to the Lycopodites. The Calamites,—reed-like, jointed plants, that more nearly resemble the Equisetaceæ than aught else which now exists, but which attained, in the larger specimens, to the height of ordinary trees, also manifest very decidedly, in their internal structure, some of the characteristics of the conifers. It has been remarked by Lindley and Hutton of even Sphenophyllum,—a genus of plants with verticillate leaves, of which at least six species occur in our Coal Measures, and which Brogniart refers to one of the humblest families of the fern allies,—that it seems at least as nearly related to the Coniferæ as to its lowlier representatives, the Marsileaceæ. And it is this union of

traits, pertaining to what are now widely separated orders, that imparts to not a few of the vegetables of the Coal Measures their singularly anomalous character.

Let me attempt introducing you more intimately to one of those plants which present scarce any analogy with existing forms, and which must have imparted so strange a character and appearance to the flora of the Coal Measures. The Sigillaria formed a numerous genus of the Carboniferous period: no fewer than twenty-two different species have been enumerated in the British coal fields alone; and such was their individual abundance, that there are great seams of coal which seem to be almost entirely composed of their remains. At least the ancient soil on which these seams rest, and on which their materials appear to have been elaborated from the elements, is in many instances as thickly traversed by their underground stems as the soil occupied by our densest forests is traversed by the tangled roots of the trees by which it is covered; and we often find associated with them in these cases the remains of no other plant. The Sigillaria were remarkable for their beautifully sculptured stems, various in their pattern, according to their species. All were fluted vertically, somewhat like columns of the Grecian Doric; and each flute or channel had its line of sculpture running down its centre. In one species (*S. flexuosa*), the sculpture consists of round knobs, surrounded by single rings, like the heads of the bolts of the ship carpenter; in another, (*S. reniformis*), the knobs are double, and of an oval form, somewhat resembling pairs of kidneys,—a resemblance to which the species owes its name. In another species, (*S. catenulata*), what seems a minute chain of distinctly formed elliptical links drops down the middle of each flute; in yet another, (*S. oculata*), the carvings are of an oval form, and, bearing each a round impression in its centre, they somewhat resemble rows of staring goggle-eyes; while the carvings in yet another species, (*S. pachyderma*), consist chiefly of crescent-shaped depressions. The roots, or rather underground stems, of this curious genus attracted notice, from their singularity, long ere their connection with the carved and fluted stems had been determined, and have often been described as the "stigmata" of the fossil botanist. They, too, have their curious carvings, consisting of deeply marked stigmata, quincuncially arranged, with each a little ring at its bottom, and, in at least one rare species, surrounded by a sculptured star. Unlike true roots, they terminate abruptly; each rootlet which they send forth was jointed to the little ring or dimpled knob at the bottom of the stigmata; and the appearance of the whole, as it radiated from the central mass, whence the carved trunk proceeded, somewhat resembled that of an enormous coach-wheel divested of the rim. Unfortunately we cannot yet complete our description of this strange plant. A specimen, traced for about

forty feet across a shale bed, was found to bifurcate atop into two great branches,—a characteristic in which, with several others, it differed from most of the tree-ferns,—a class of plants to which Adolphe Brogniart is inclined to deem it related; but no specimen has yet shown the nature of its foliage. I am, however, not a little disposed to believe with Brogniart, that it may have borne as leaves some of the supposed ferns of the Coal Measures; nowhere, at least, have I found these lie so thickly, layer above layer, as around the stems of Sigillaria; and the fact that, even in our own times, plants widely differing from the tree-ferns,—such, for instance, as one of the Cycadææ,—should bear leaves scarce distinguishable from fern fronds, may well reconcile us to an apparent anomaly in the case of an ancient plant such as Sigillaria, whose entire constitution, so far as it has been ascertained, appears to have been anomalous.—*The Testimony of the Rocks.*

From the London Athenæum.

#### HOW THEY WENT BY ROAD, AND HOW THEY GO BY RAIL.

At the close of the seventeenth century, Hyde Park, which was of greater extent than the present inclosure, as it then included a large portion of Kensington Gardens, was the favorite spot to which Londoners made excursions. It was then "country;" and it remained so for a considerable period subsequently, as we may see from the fact, that as late as the reign of George the Second the coach of his Queen, Caroline, could not, in bad weather, be dragged from St. James's to Kensington in less time than two hours. As for Kew, it was, at the latter period, more distant from London than Osborne is in our days. The road, of course, was in nowise to be compared with an ordinary turnpike-road now existing. It was indeed so bad that, occasionally, the royal carriage itself stuck fast in a rut, or was heaved gently over into the mud.

When such accidents happened to royalty, we hardly require to be told that citizens and the commonalty, generally, travelled as little as possible, and seldom went far, except under the pressure of rude necessity. The excursionists appear to have considered Hyde Park far enough off for health and pleasure, and accordingly, during several years, that fashionable spot was the resort not only of the upper classes, but the "drives" were crowded with hired and "hackney" vehicles, which overflowed with people crammed together to enjoy ease and fresh air.

Were a hackney vehicle to pass the gates now, there would be as great an outcry after it, on the part of police and gate-keepers, as if it contained a nest of traitors, hatching treason as they rode. The fact is, that the uproariousness of the company that did ride in the original "hacks," led to the expulsion of all such conveyances from the Park.

Hyde Park was thus closed against persons who took their holiday trips in the conveyances named above. Their embarrassment was, no doubt, considerable, for the Park was the most pleasant locality that could be reached by Loudouers with certainty, and without great outlay of time and expense. The stage, for instance, did not, for a very long period, accommodate the views either of excursionists, or what might more correctly be called "travellers." Their great fault was the lack of certainty about their departure, to say nothing of their slowness or the uncertainty of reaching the inn advertised as their destination.

Even so late as a century ago, and more than half a century from the period above mentioned, numberless illustrations of this unsatisfactory style of travelling are to be met with in the equally unsatisfactory journals of the day. Thus, in the *Daily Advertiser* for May 6, 1757, we find the following advertised uncertainty of travelling:—"For Lincoln, Stamford, Grantham, and places adjacent, a four-wheel post-chaise, and two-wheel post-chaise, both with able horses, will set out from the Plough Inn, in Princes Street, Leicester Fields, to-morrow or Sunday." It will be seen that by these conveyances, a man, who wanted to dine at any of the above places on a fixed day, was by no means certain of reaching his host's house till a day after the dinner-party. In some cases the matter was still worse, that is, the uncertainty was greater. For example,—“For Chester, Liverpool, Warrington, and Manchester, choice of good returned four-wheel and two wheel post-chaises, on steel springs, with able horses, will set out from Robert Park's, the Axe Inn, Aldermanbury, this day, to-morrow, Sunday, or Monday. Here the traveller had choice of vehicle, but he had no choice as to day for setting forth, unless indeed the "or" here is intended to signify that he might start on any one of the above days, but on no other day of the week. We think, however, that these vehicles depended on travellers for their time of departure. If they did not fill, the "able horses" had temporary sinecures. This seems to be the case from the fact, that the above advertisement terminates with a note (from travellers under embargo till they could procure companions) to this effect:—"Wanted a partner in a four-wheel, and a partner in a two-wheel post-chaise, to Chester." Even when the day arrived for departure, there was but little security with regard to the hour. Broad-wheel wagons were advertised for Hitchin and Hatfield at the comfortably-defined periods of "twice a week, about noon;" and the Banbury carrier offers to convey passengers to the town of sweet cakes, without specifying time, but with the assurance of conveying them "reasonably."

A coach twice a day from and to Highgate is a rarity with regard to the scrupulousness with which the various times are defined. For example, in the summer of 1757—that summer

when Oliver Goldsmith was working so hard for Griffiths, the publisher, in Paternoster Row—we read that "On Tuesday next, a coach will set out from the Nag's Head, at Highgate; and every morning, at seven, to the Green Dragon, the corner of Little Britain, near Aldergate; returning from thence at ten; from Highgate again at five, and London at seven." Two journeys up and down were all, with the chances by the longer stages passing Highgate, that the necessities of the times required a hundred years ago, between the metropolis and the outlying village, which is now itself a city annexed to the capital.

It must not be forgotten that the roads were in such a plight at the period last mentioned, that Government was compelled to look after them. The administration of the Duke of Newcastle and the elder Pitt treated the defect in a thoroughly English administrative style. They did not think of mending the roads, but of suiting the vehicles to the route to be traversed. There was a law made against narrow wheels. "But," says a correspondent of the *Universal Magazine*, in 1757, "the obstinacy of some wagoners who still refuse to comply with these salutary laws, together with the stage-coachmen, who load their carriages with goods as well as passengers, destroy the roads nearly as fast as the narrow-wheel wagons did."

Fine people who moved about loved nothing more than to have a black boy to wait on them. These were as common at the Wells and at the "Bath" as groom-porters at St. James's. And what is still more surprising, they were publicly bought and sold, as an advertisement in *Reader's Journal* will testify, which says:—"Any person that has an Indian or Negro boy to dispose of reasonably, from 12 to 16 years old, may hear of a purchaser by addressing a line of particulars to R. P., Forrest's Coffee House, Charing Cross."

With or without such a fashionable appendage as a black boy, the traveller by stage or private carriage who arrived at Bath was met at the entrance to the city by the most extraordinary class of touters that ever molested weary wayfarer for patronage. These touters were not agents of lodging-house keepers, nor servants of tradesmen, nor deputy waiters from the hotels, but the representatives of the physicians resident in the ancient city. Every visitor, by whatever vehicle he reached Bath, was supposed to be more or less in need of medical advice, and the physician or surgeon was ready to take possession of him, adopting the initiative too, in order to accomplish that for which he was prepared. Accordingly, travellers were beset by shabby-genteel men, with cards in their hands, each recommending his own master, extolling his skill, delicacy, and moderate charges, while he denounced his rivals as extortioners, dunces, and slayers of their kind. A coach-load of invalids deposited on the pavement of Bath after a two-days' journey from London, must have been bewildered at the con-

test which went on in order to bind them captive to some particular doctor.

For the especial benefit of these invalids, and in order to facilitate generally the means of transit between London and Bath, a turnpike-road had been completed a few years before, but neither wagoner nor coachman would use it! They looked on the innovation with horror. "The M——gh coachman," says the *Gentleman's* for December, 1752, delicately intimating thereby the *Marlborough* Jehu, "resolutely refused to take to the new turnpike-road, by which he might have driven some *forty miles in nine hours*, but stuck to and in the old wagon track, called *Ramsbury*. He was an old man, he said, and relished not new fantasies. His grandfather and father had driven the aforesaid way before him, and he would continue in the old track till death." Mr. *Urban* says that at the time above referred to, a Londoner no more thought of travelling into the West of England for pleasure than he would have thought of going to Nubia.

Till the middle of the last century, every "long" stage coach put up at sundown, and "slept on the road." The first night-coach appeared in 1740, but people were too timid to patronize it. During the last quarter of the century we find post coaches running three times a week from London to Newcastle, "sleeping" the first night at Grantham, the second at York, and arriving the third night at its destination. This coach carried six inside and two outside passengers, and its rate of travelling altogether was not despicable. The man who started from town on *Tuesday morning* might reckon upon reaching Newcastle some time on *Thursday night*. This, however, would depend upon circumstances. There were curious delays upon the road. Three-quarters of a century ago it would occasionally happen that while the coach "stopped to dine," a passenger who had a friend in the neighborhood would hire a post-chaise and pay him a visit. Nobody was in a hurry then, not even the coachman. As late as the commencement of the present century, the Shrewsbury and Chester "Highflyer" performed its forty miles in twelve hours. Travellers now pass to and from in about one hour, less time than the old coach-passengers required for dining; and on these the coachman would sometimes look benevolently in and blandly remark, "Don't let me disturb you, gentlemen, if you wish for another bottle." A century ago the Brighton coach consumed two days on the road, sleeping at East Grinstead. *Now*, the distance is accomplished half-a-dozen times a day! The Liverpool coach arrived in that town in the evening of the fourth day after it rolled out of London. The quickest rate of transit about a hundred years ago was accomplished by the "flying coaches" on the Dover road. With six or eight horses they contrived to rattle down from town within one long day; and this helter-skelter pace excited something like awe in people

who remembered that in 1700 the coach went from London to York in eight days—only a quarter of the speed attained, as we have noticed above, in 1740. At the latter period it was considered rather a clever feat when the Edinburgh coach in midsummer, travelling twelve or fourteen hours daily, arrived in London *on the tenth day!* Forty years earlier, in rough weather, it did not arrive in less time than a fortnight or three weeks!

We owed "fast" coaches chiefly to Mr. M'Adam, that "Colossus of Roads," who, by improving the "way," gave facilities for the introduction of a more rapid style of travelling. We have seen thousands of pounds laid out in making a crooked path straight, in order that a mail coach might save two or three minutes of time. The difference of the slow and the rapid styles was pleasantly illustrated some years ago in the *Quarterly*, in an article which has been so often reprinted that we need only refer to it. *Then*, it was a marvel to be conveyed to Brighton in five hours. "Long" coachmen used to look anxiously at the neat dials inserted at the off side of the "box." Minutes were precious to those "artists," whose skill might have excited the envy of him who was the first and most unlucky of "fast" men, the audacious Phaëton. In nobility of birth, some of our latest and swiftest drivers were scarcely inferior to the founder of their class. We have seen coaches "tooled" by baronets; sons of earls have held the "ribbons" of many a once lively day-coach, and, on the western road, we have wonderingly beheld the son of a marquis horse the coach for a stage, drive it for a couple score of miles, and gracefully touch his hat for the shilling flung to him by the *snobs*, and the half-crowns handed by *swells*.

"Fast" as travelling was, it was not speedily enough accomplished for those who heard that there was a yet more speedy method of transit. The idea of acceleration was inconceivable to some, and was scorned by many. The coachmen generally treated it with contempt. They were proud and prejudiced, hated the sight of a poor traveller, and cared only to drive "gentlemen and, of course, ladies." Never had there been such carriages, such drivers, such horses, such roads as at the period just before the old system perished. All was perfection, and how could you go beyond perfection? This Socratic way of getting the best of an argument, by a question, the reply to which could only put the querist in a triumphant position, was of no avail. The rail was accomplished in spite of all the prophecies and sneers of scientific and professional men. When Dr. Arnott saw the first train sweep along it, he discerned its levelling tendencies and its advantages to poor travellers, and he exclaimed, "Good night to Feudality." When the Newcastle mail-guard beheld the first locomotive hissing along the iron-lines, which, he was told, would do

away with his craft, the poor fellow cried out that it was all over with England, since she was to be converted into a gridiron, and covered with tea-kettles!

The change that has been wrought will be understood, and the profit to all classes will be at once seen, by a few statistical truths which, so far from being dry, as statistical facts generally are, have something in them of the exhilarating effects of poetry.

[To be concluded.]

Selected for Friends' Review.

#### A YEAR IN HEAVEN.

A year uncalendared; for what  
Hast thou to do with mortal time?  
Its dole of moments entereth not  
That cycle, mystic and sublime,  
Whose unreached centre is the throne  
Of Him before whose awful brow,  
Meeting eternities are known  
As but an everlasting *now*!  
The thought removes thee far away:  
Too far beyond my love and tears;  
Ah! let me hold thee as I may,  
And count thy time by earthly years.

A year of blessedness, wherein  
Not one dim cloud hath crossed thy soul;  
No sigh of grief, no touch of sin;  
No frail mortality's control;  
Nor once has disappointment stung;  
Nor care, world-weary, made thee pine;  
But rapture, such as human tongue  
Hath found no language for, is thine.  
Made perfect at thy passing, who  
Can sum thy added glory now?  
As on and onward, upward through  
The angel-ranks that lowly bow,  
Ascending still from height to height,  
Unfaltering where rapt seraphs trod,  
Nor pausing 'mid their circles bright,  
Thou tending inward unto God!

A year of progress in the lore  
That's only learned in heaven; thy mind  
Unclogged of clay, and free to soar,  
Hath left the realms of doubt behind;  
And wondrous things which finite thought  
In vain essayed to solve, appear,  
To thy untasked inquiries, fraught  
With explanations strangely clear.  
Thy reason owns thy forced control,  
As held it here in needful thrall;  
God's mysteries court thy questioning soul,  
And thou may'st search and know them all.

A year of love! thy yearning heart  
Was always tender, even to tears,  
With sympathies whose sacred art  
Made holy all thy cherished years;  
But love whose speechless ecstasy  
Had overborne thy finite, now  
Throbs through thy being, pure and free,  
And burns upon thy radiant brow;  
For thou, those hands' dear clasp hast felt,  
Where still the nail prints are displayed;  
And thou before that face has knelt,  
Which wears the scars the thorns have made!

A year without thee! I had thought,  
My orphan heart would break and die,  
Ere time had meek quiescence brought  
Or soothed the tears it could not dry;

And yet I live, to faint and quail  
Before the human grief I bear.  
To miss thee so! then drown the wail  
That trembles on my lips, in prayer:  
Thou praising—while I weakly pine!  
Thou glorying—while I vainly thrill!  
And thus, between thy heart and mine,  
The distance ever widening still.

A year of tears to me; to thee,  
The end of thy probation's strife:  
The archway to eternity;  
The portal of immortal life.  
To me, the pall, the bier, the sod;  
To thee, the palm of victory given:  
Enough, my heart: thank God! thank God!  
That thou hast been a year in heaven!

#### THE FRENCH ARMY IN THE CRIMEA.

A statement of casualties in the French Army, during the Crimean war, just published from the pen of Dr. Serive, the Physician General to the expedition, shows that the total numbers of all ranks despatched from France to the East during this brief contest amount to no fewer than 309,278, and of these as many as 200,000 entered the hospitals of the army for professional treatment at some time or other; and that only one-fourth of the entire number of cases arose from wounds received in action, the rest being due to disease, which, says the *Times*, in an article on the subject, "in all human probability admitted to a greater or less extent of prevention or control."

#### SUMMARY OF NEWS.

FOREIGN INTELLIGENCE.—Liverpool dates are to the 9th inst. Many additional failures had occurred both in England and on the continent. At Hamburg, where the crisis was very severe, twenty prominent houses failed in one day. An order had been promulgated at Berlin, enacting a suspension of the usury laws.

GRAT BRITAIN.—Parliament was opened on the 3rd inst. A bill had been introduced by the Chancellor of the Exchequer, to indemnify the Bank of England for its recent over-issue, and had been passed to a third reading. Lord John Russell gave notice of a motion for a committee of the whole House to consider the civil disabilities of the Jews. Lord Palmerston stated that the terms asked by Austria for the use of her projected line in telegraphing to India, were such as the government could not accept, and the negotiations had therefore failed. Both Houses have, in accordance with the Queen's recommendation, voted a pension of £1000 yearly, to Gen. Havelock.

Great distress was prevailing in the manufacturing districts of Ireland, owing to the stagnation of trade; though the low price of provisions was some mitigation.

The work of launching the Leviathan, (Great Eastern,) steamship was progressing slowly but surely, by moving it a few feet each day, and the engineers were confident of final success.

A disastrous storm had occurred off the coast of Banffshire, Scotland, in which forty-two fishermen were lost; many of whom left families.

FRANCE.—The legislative body was opened on the 28th ult., for the verification of powers, &c., after which it would adjourn to the 18th of next month. Two of the Republican members had refused to take the oath of allegiance to the Emperor, and their seats

had been declared vacant. The Journal *La Presse* was suspended for two months by the government, on account of an article on this subject contained in it.

**SPAIN.**—The government had refused to accede to the demand of Mexico that the envoy of the latter shall be received, as a necessary preliminary to negotiation; but hopes were still entertained of a pacific settlement.

**CHINA.**—Accounts from Shanghai, dated 10th mo. 7th, state that long continued rains had greatly injured both the rice and cotton crops, so that famine was apprehended. It was understood that Lord Elgin had abandoned his intention of proceeding to Peking, at least for the present, as the Russian Envoy had failed to open a communication with the Emperor. It was supposed that another attack would be made on Canton near the end of the year.

The Russian Minister to China, who had recently visited Japan, expressed the opinion that a revolution was taking place in the policy of that people, and that their jealousy of foreign trade and influence would soon give place to an anxiety for them. A steamer, given them by the Dutch, was navigated wholly by a Japanese crew.

**AUSTRALIA.**—A lively agitation is said to be going on for a confederation of the colonies, with a central colonial administration and parliament. Some of the most influential newspapers are in favor of the project, while its enemies denounce it as a mere plot to organize a separation from the mother country. In New South Wales, the legislature has devoted much attention to a bill for separating Church and State, leaving the church to support itself without direct pecuniary aid from the government. Much excitement exists among the miners against the Chinese. In the legislature of Victoria, a bill was introduced to tax them five dollars per month; a measure which led to a large meeting of the Chinese, and the adoption of a petition to the legislature, praying that they might not be more harshly treated than other classes. Their number in that colony was estimated at upwards of 33,000.

**INDIA.**—At the last accounts, 11th mo. 1st, Gen. Havelock was reported to be hemmed in at Lucknow, but had received provisions. Gen. Campbell was marching to his relief.

**DOMESTIC.**—At the latest accounts from Kansas, the Territorial Legislature had done nothing towards carrying out the recommendations of acting-Governor Stanton. They had declared the returns from Kickapoo fraudulent, had rejected the members from Leavenworth Co. in consequence, and given the seats to the legally elected Free State members. Preparations were said to be making in the border counties of Missouri for another invasion, to control the election on the 21st, but some doubts were entertained whether the opponents of the Leecompton Convention would permit the election to be held. A letter from Leecompton to the *St. Louis Democrat*, dated the 16th inst., states that Secretary Denver had arrived there, but Stanton was still acting as Governor, apparently with his approbation. Gen. Harney had posted U. S. troops at several of the principal towns, and upon Stanton's requisition, had dispatched two companies of cavalry to Fort Scott, where an outbreak had occurred, in which several lives were lost. R. J. Walker resigned the Governorship of Kansas on the 15th inst., in a letter addressed to the Secretary of State, giving his reasons at length, and justifying the course he had pursued relative to the Constitution.

The election in Oregon Territory is believed to have resulted in the success of the proposed State Constitution, the rejection of slavery, and the exclusion of free colored persons.

Resolutions were lately introduced in the Texas Le-

gislature in favor of the revival of the African slave trade, but they do not appear to have been passed. In the western part of that State, a violent persecution of the Mexican inhabitants has been practised, and the Mexican Minister at Washington has complained to the Secretary of State that peaceable residents of Mexican origin have been forcibly expelled from San Antonio. The Secretary has addressed the Governor on the subject.

A French trader from Utah, recently arrived at Kansas City, Mo., confirms previous accounts of the hostile attitude of the Mormons. He states that Young exhorts his followers to resist to the last extremity, and if overpowered by the troops, to flee to the mountains. They have burned large quantities of stores at Fort Bridger to prevent their seizure by the troops, and have also burned the grass on the road beyond Fort Bridger. The army has provisions enough for the winter, if it can protect them from the Mormons.

The colored men kidnaped from Geneva, N. Y., mentioned in our paper of the 12th instant, have both been rescued, one having escaped from his pretended master in Ohio, and the other having been readily given up by the man who had bought him, to the agent of the Governor of New York, on evidence of his legal freedom. The kidnapper was arrested and taken to Geneva for trial.

**CORRECTION.**—The statement in the Summary of News two weeks since, that J. C. Underwood had been tried and fined in his absence, by a Virginia court, appears to be an error, having its origin in an incorrect report of the trial of John Underwood, whose case is related in last week's editorial.

**CONGRESS.**—The Standing Committees of the Senate were reported and adopted on the 16th. On the 17th, Senator Gwin, of California, presented a memorial from citizens of California and New Mexico, praying for the establishment of the territorial government of Arizona, and introduced a bill for that purpose. A bill for the construction of the Pacific railroad was reported by a select committee appointed to consider the part of the President's message relative to that subject. On the 18th, Senator Douglas introduced a bill to authorize the people of Kansas to form a Constitution and State government. A bill authorizing the issue of \$20,000,000, in Treasury notes, which had been introduced on the 17th, passed on the 19th. The notes are to be redeemed in one year from date, not to be of less denomination than \$100, to bear interest, not exceeding 6 per cent. per annum, and to be received in payment of debts due the government. On the 22d, a bill was introduced to secure to actual settlers the alternate sections of land reserved in the grants to various States for railroads; and one granting to every head of a family, who is a citizen of the United States, a homestead of 160 acres, on condition of occupancy and cultivation. Senator Wilson, of Mass., introduced a bill granting 1,000,000 acres of land for the benefit of free public schools in the District of Columbia.

The House of Representatives met in their new hall on the 16th. A resolution was adopted to print 20,000 extra copies of the President's Message and accompanying documents, and 15,000 copies of the financial report of the Secretary of the Treasury. On the 18th, the Committee of Ways and Means reported a bill authorizing an issue of Treasury notes; and also the Indian, and Civil and Diplomatic Appropriation bills. N. P. Banks of Massachusetts, introduced a bill authorizing the people of Kansas to form a State Constitution, which was referred to the Committee on Territories. The Treasury Note bill, as it came from the Senate, was adopted on the 22d, yeas 118, nays 86: Both Houses resolved to adjourn on the 23d to the 4th of next month.

## S. TUKE'S *Introduction to his Selections from the Epistles of George Fox.*

The volume of Epistles from which the present selection is made, was published in folio, in the year 1698. It is now extremely scarce. The letters which it contains were written from about the year 1648 to 1690. They embrace a period of full forty years; and, being composed at such different times, and on such various occasions, they serve materially to illustrate the early history of our Society, and the real character and views of the chief instrument of its formation. This character and these views are, in the present day of ease, well worthy of our study.

George Fox had received very little scholastic instruction, but he possessed a mind of no ordinary powers, cultivated too, in a particular direction, in a very remarkable manner. The true knowledge of God, not as an intellectual speculation, but as that which gives rest to the awakened conscience, was the great object of his longing search from youth to manhood; and in this search his almost constant companion was the Bible. There he conversed with Patriarchs and Prophets, with the Lord Jesus and his Apostles, till he became most intimately imbued with the contents of the Holy Scriptures. But, though every word of Inspiration was precious to him, his great desire was to know the mind of the Spirit,—the true harmony of the various parts of the divine records. He conversed extensively with esteemed religious teachers of various classes, but he found they were no physicians in his case. More and more he was brought with child-like submissiveness to look to Christ as his only helper; and thus, after a course of deep spiritual discipline, his eye was opened more fully to see in the light of the Holy Spirit the

character of his Saviour, and to rejoice in Him exceedingly.

Having partaken largely of the spiritual baptism of his Lord, many divine truths were opened upon his mind with great clearness. Unshackled from human ties, and from all the religious systems of men, the great elements and characteristics of the Christian dispensation, in its native simplicity and purity, rose gradually before him. As he travelled onward in his experience, he found that what was from time to time unfolded to his mind was in the fullest harmony with Holy Writ. Many things in the so-called religious world now appeared to him in a new light, and grieved in spirit with its multiplied corruptions, he felt himself required by a divine impulse to proclaim to others the Truth which he had found to the blessedness of his own soul. His great mission was not to found a sect, but to speak truth to all, and to call all out of every *untruth* to the knowledge for themselves, of Him who is the Truth. The acknowledgment of Christ with the lip as a divine person, and the talking about faith in Him, and of his various offices, were prevalent enough in many circles; but the true belief in Him with the heart unto righteousness—the acceptance of Him as the only Lord of the soul, and dependence upon Him for continual guidance by his Spirit—these were things which appeared to George Fox sadly deficient in his day.

As the work of the Holy Spirit on the soul of man is the great means by which it is stimulated and enabled to resist the world, the flesh, and the devil, so had all these powers combined to stultify its authority and to give the name of Christianity to the dogmas or appointments of men, or too much to limit divine power to the agency of the inspired letter which the wisdom of man was so able to bend to its own purposes, but which his unassisted wisdom was wholly unable truly to unfold. He saw that the corruptions of the Christian Church had always been indicated by the increase of dependence upon man, in the work of religion—"the priests of old time ruled by their means, and the people loved to have it so." These words appeared to him descriptive of a great human tendency, forming part of those lusts of the flesh, against which the Holy Spirit ever warreth, and he spake much of that divine light given to man, by

which the inward working of these lusts was manifested, and of that inward warfare with the soul's enemies, in which every one must be a soldier for himself, under Christ his Captain,—denouncing all those arts which he saw to be so prevalent, by which man was persuaded that he could gain the crown, without enlisting under the banner of the cross. Man's alienation by nature from God, and his reluctance to come to Him in truth, notwithstanding the drawings of his love, and the free offers of his mercy in Christ, the propitiation for the sins of the world, were the basis of his appeals. He was eminently a preacher of the free grace of God to all who repent, and who, in subjection to his Spirit, truly come unto Christ. The experimental work of the Spirit in bringing the soul in living faith to Christ as its Lord and Saviour, was indeed the great theme of his ministry; it was that which he felt himself called to urge upon all, that the foundation might be sound, and the superstructure solid.

We do not hesitate then to say, that, however ignorant George Fox might be of many things which rank high in the worldly scale, he was a scribe well instructed, and that he was eminently qualified to know of Christ's doctrine, by an exemplary obedience and devotion to his will, and by an humble reliance upon his all-sufficient aid. "He had," says William Penn, "an extraordinary gift in opening the Scriptures. He would go to the marrow of things, and show the mind, harmony, and fulfilling of them, with much plainness, and great comfort and edification."

The writings of such a man are an object of interest to the serious professor of religion of any name; but they have a peculiar and strong claim to attention from the members of that Society which he was instrumental in forming. The Epistles now presented to the reader exhibit this good man in one uniform character, that of a Christian Apostle, ever laboring to promote "glory to God in the highest—peace on earth—and good will to man." With what zeal he watched over every part of that flock of which he was more peculiarly a shepherd, will appear from these pastoral letters. But his Christian love and zeal were not confined by any sectarian boundaries; they extended to every part of the human family: and many of the letters evince a great desire for the extension of Christ's kingdom in the heathen world. He had himself been in the West Indies and North America, in both which countries the instruction of the African slaves in the great truths of the Gospel, and the improvement of their condition, deeply interested him.

The state of the Indians also claimed much of his attention. Looking upon the Gospel of Christ as adapted to the spiritual wants of man universally, his letters to his friends in America show how desirous he was that the Indians should be instructed in the truths of Christianity. The

want of civilization does not appear to have occurred to him as an objection to the instruction of the Indians, in "*that way wherein the way-faring man though a fool need not err.*" "All Friends everywhere," says he, "all that have Indians or Blacks, are to preach the Gospel to them and other servants, if they be true Christians; for the Gospel was to be preached to every creature. You must instruct and teach your Indians and negroes and all others, that Christ by the grace of God tasted death for every man, and gave himself a ransom for all men to be testified in due time; and is the propitiation for the sins of the whole world."

The same enlarged views are evinced in his letters to the friends who, from being engaged in a seafaring life, had become captives on the coast of Africa. He wishes them to acquire the language of the Turks, that they might be able to communicate to them the glad tidings of salvation, by speaking, and by translating books into their language. The horrors even of Algerine slavery appear to have been lessened in his view, by the hope that it might be the means of good to the captors. It seems that the captives were allowed to meet together for the purpose of divine worship. George Fox exhorts them to the firm support of their Christian testimony, and in one letter observes: "I think you have more liberty to meet there than we have here, for they keep us out of our meetings, and cast us into prison, and spoil our goods."

The religious Society of Friends was, at that time, a laborious, and in England, a very suffering body; many of the letters in the present collection are addressed to Friends under persecution. These letters are remarkable for their high tone of Christian feeling. The sympathy of the writer towards the sufferers is, if possible, exceeded by his meekness towards the oppressors; and every feeling is subordinate to that of spreading the knowledge of the Truth, in the service of which he counted not his life dear. After urging upon some of his suffering friends the steady support of their Christian principles, he says: "I desire, however, that you walk wisely, gently, lovingly, meekly, and soberly to the magistrates and to all people, that they may have no occasion in any thing against you; for the good must overcome the bad, as the apostle says, 'Overcome evil with good;' and dwell in that love that can bear all things, and endure all things."

The letters from which this Selection is made, were originally published with a Preface by George Whitehead, one of the earliest and most esteemed coadjutors of the writer. In this preface he notices some misrepresentations of his opinions, and gives some explanations of terms frequently used by George Fox, which claim a place in this Introduction.

"I am concerned," says he, "to recommend the serious reading and perusal of the ensuing

collection, unto all who sincerely desire the promotion of Christ's kingdom, and prosperity of his Church, in true love, union, and order, in and by Christ Jesus himself, the Head and Foundation thereof.

"In many of the ensuing Epistles, he [G. Fox] often mentions the Seed, the Life, the Power of God, and the like; whereby he intends no other than what the Holy Scriptures testify of Christ; which, we know, he truly loved and esteemed, and was often conversant in reading of them, and had an excellent memory and spiritual sense thereof given him of the Lord. By the pure holy Seed, he meant and declared Christ, the promised Seed; wherein all the promises of God are yea and amen. And as Christ is the Word of Life, the Word of Faith, He is that immortal and incorruptible Seed, of which all true and spiritual believers and children of the light are begotten to God, and born again; and which Seed, or Word of eternal life, abideth in him that is born of God, and he sinneth not because thereof.—1 John iii.

"This our deceased friend and servant of Jesus Christ truly testified of Him in all respects, both as come in the flesh and in the spirit, both as Christ was and is our only Mediator and Advocate, and as He was and is God over all, blessed for ever; whom he so dearly loved and honored, that he often offered up his life, and deeply suffered for Him; and that in dear and constant love to his seed, that a holy generation might be raised, strengthened, and increased in the earth among the children of men. And his knowledge and ministry of our Lord Jesus Christ, being after the Spirit in life and power, did no ways imply any lessening of the dignity or glory of Christ, nor any defect of faith or love to Christ, as He came and suffered in the flesh for mankind; as some adversaries have injuriously misrepresented and aspersed him; for he highly esteemed Christ's sufferings, death, resurrection and glory; and powerfully testified of the virtue, power, blessed and spiritual design, fruit and effects thereof, as revealed and witnessed by his Holy Spirit."

"Christ Jesus being our spiritual Rock, Foundation and Head, He is truly precious to us and all true believers, in all states and conditions, both of his humiliation, glory and dominion; his great grace and goodness appearing in those precious ministerial gifts given by Him (when he ascended up on high) for his ministry and church.

"And it is very observable, that though, to express Christ's lowly condition and appearance in the world, He is sometimes in Holy Scripture termed the Seed, his name is also 'called, Wonderful, Counsellor, the Mighty God, the Everlasting Father, the Prince of Peace; upon whose shoulders the government is laid; and of the increase of his government and peace there shall be no end.'—Isaiah ix. And it is most

suitable to Christ's low, humble and suffering condition, to make use of such instruments as are most like Himself in humility and lowliness of mind, although they be but low and mean in the world's eye and esteem. God is pleased to make choice of low, mean and weak things, and of instruments contemptible in the eyes of the high and lofty ones of this world, to confound the wisdom of the world, according to 1 Cor. i. He chose poor shepherds to divulge that great evangelical truth of Christ's birth; and certain women to preach that Gospel truth of his resurrection, (Luke ii. and xxiv.), and both from angelical testimony, as well as from their sight of Christ himself. Truth must not be rejected because of such instruments which God in his wisdom is pleased to employ in his work; nor the day of small things despised: from small beginnings of good matters, great things, glorious attainments and perfections, do spring. Glory, honor and dominion to our most gracious God, and to the Lamb on his throne, for ever and ever."

These extracts from G. Whitehead's preface may serve as a sufficient illustration of G. Fox's sentiments on some points of Christian doctrine, in regard to which his soundness was so frequently impugned by his enemies, as the most ready mode of depreciating him in general esteem. It had been found in earlier times much easier to call a reformer a *Gnostic*, or a *Manichee*, than to dispute his doctrine or condemn his life; and such is the effect of bold assertion, that, though so often contradicted and disproved, the charge of denying the Divinity of our Lord and Saviour Jesus Christ, and of undervaluing his various offices, as our *Mediator*, *Intercessor*, and *Redeemer*, has yet hardly lost its influence on our Christian brethren of other Societies.

Indeed, we must not be surprised, if, in the steady maintenance of the principles which are at the root of our separation from other religious communities, we are to a considerable extent misunderstood, or even maligned. A people holding so decidedly the spiritual character of Christianity, and rejecting those outward rites which most deem either important or essential (though we fully maintain the truths which those rites profess to embody) must be obnoxious to much undeserved reproach. To some it appears that we are wilfully blind and unworthy of the name of Christian; whilst others judge us more gently and charitably, though very imperfectly estimating the real matter of our *testimony*. We believe, however, there are those among our Christian brethren of other communities, and that the number is increasing, who do to a considerable extent appreciate the grounds of our separation, and acknowledge the accordance of many of our views with the purest state of the Christian church.

The adherence to a confession of faith in very nearly the words of Scripture, and the abandon-

ment of certain terms of scholastic theology which had become as a sort of *shibboleth* of orthodoxy, may probably have led persons attached to those expressions, to suspect a much greater deviation from their own sentiments than actually existed. It may be said of the early Friends, as Erasmus observes of the primitive Christians, that *they were afraid to pronounce of God any thing but what was plainly expressed in the Sacred Writings*; and it is worthy of observation, in the history of the Church, how *creeds* became enlarged, and became less and less scriptural, as Christian piety decayed, and the simplicity of the faith was corrupted.

#### THE BIBLE AT JERUSALEM.

At a late meeting in New York, convened by the Managers of the American Bible Society, Dr. Tyng, who visited Palestine during the past summer, stated that the most active agent in Jerusalem was a New Haven farmer, named Roberts, who used most ingenious means to get the Bible into the hands of the Mohammedans. Roberts could not read Arabic, and would stop a man in the street, and ask him to read a chapter for him. This would attract a crowd, and curiosity would become excited, by which means he circulated his books. He is a most laborious and self-sacrificing man. The English in Jerusalem could not understand him. They always thought Yankees were queer fellows; but a man like Roberts, who would not drink wine, eat meat, or take a salary, they thought must be absolutely crazy. Last Easter more than 13,000 pilgrims visited Jerusalem, and Roberts furnished them with Bibles to read.—*Bible Society Record.*

#### A Memorial of Cornwall Monthly Meeting concerning NATHANIEL SANDS.

The removal of those from our midst who have been laborers in the Church, is eminently calculated to impress the mind with the necessity of ourselves being also prepared for the final change.

This brief memorial of the life of our late esteemed friend Nathaniel Sands, is not intended to eulogize the man, but to commemorate the efficacy of that grace which delivered him from the entangling cares and pleasures of the world, and prepared him for usefulness in the Church.

He was the only son of David and Clementine Sands, and was born in Cornwall, Orange County, New York, the twenty-seventh of Ninth month, 1774. His mind was early visited with tendering impressions, but of the teachings and humbling baptisms of the Holy Spirit at this time, no distinct record was made. His parents were concerned to train up their children in the nurture and admonition of the Lord; and he has often been heard to express his sense of gratitude for the watchful care of his beloved mother.

His father being much from home, engaged religious service, he was early introduced into

the cares and responsibilities of providing for the family,—in the discharge of which duties he labored earnestly and faithfully.

At the age of twenty years, his father left him to perform a gospel mission in a foreign land, and was absent eleven years. In the mean time, being actively engaged in his temporal concerns, the love of the world, its honors and attractions, appears to have gained an undue ascendancy in his mind: yet the restraining influence of the Holy Spirit finally enabled him to realize the insufficiency of mere worldly pleasures to afford that lasting peace his soul desired.

Having married out of the order of Society, he lost his right of membership, and a period of twenty years elapsed before his restoration: at no time, however, did he discontinue his attendance of meetings. His concern for the right education of children was not restricted to the circle of his own offspring, but embraced all within the reach of his influence, and prompted him to devote much time in visiting different institutions of learning, where, with an affability that gave him easy access to the youthful feelings, he delighted to pour into the susceptible mind practical moral and religious truths.

About the sixtieth year of his age he was restored to membership, and an increasing weightiness of spirit and consistent Christian deportment soon became manifest. His qualification for usefulness in the Church was increased, and important offices were confided to him. As an Overseer, his persuasive manners and conciliatory disposition fitted him for settling differences, and reclaiming the wayward. He was deeply impressed with the responsibility that rested upon him, and was concerned in good earnest to take heed to the flock.

Other and weightier services were subsequently confided to him, in his appointment to the station of an Elder; which he acceptably filled for several years; and in the discharge of the duties devolving upon him, he endeavored to conform to the injunction of the Apostle—"The Elders which are among you I exhort, who am also an elder; feed the flock of God which is among you, taking the oversight thereof, not by constraint, but willingly; not for filthy lucre, but of a ready mind; neither as being lords over God's heritage, but being ensamples to the flock."

The power of Truth that had set him free from the servitude of sin, wrought living desires in his mind for the spread of its benign influence among his fellow-men. At a late period of life he was made willing to comply with an apprehended call to labor in the work of the ministry. In his communications he seldom dwelt upon doctrinal points, but in the persuasive language of love, invited others to come, "taste, and see that the Lord is good." Conversion to God, regeneration, and holiness, were themes on which he loved to dwell. He was acknowledged as a minister in the seventy-fifth year of his age.

His gospel labors were mostly confined to his own and the neighboring Quarterly Meetings; yet he attended most of the Yearly Meetings upon this continent, much to his own satisfaction and comfort. From the returning minutes furnished him by these bodies respectively, it appears that the feeling was reciprocal.

Thus laboring for the good of others, our beloved friend lived on to the advanced age of fourscore years, retaining in a remarkable degree his physical and mental powers. His concern for the temporal, moral and spiritual welfare of his fellow-men was constantly on the increase; and he was frequently heard to say, "We must work while it is called to-day, for there is no work, nor device, nor knowledge, nor wisdom in the grave, whither we are all hastening." His mind being stayed on the Rock of Ages, he was favored to look forward with composure to the termination of his earthly labors, often saying that he felt he was living by the day.

The dispensation that summoned him away from earth and its incident afflictions, found him in a patient, waiting, and prayerful state, humbly confiding in Him whom he had endeavored to serve; and while the mortal part yielded rapidly to a severe attack, he felt that the sting of death was taken away, and the victory won through our Lord Jesus Christ. Being asked a few hours previous to his dissolution, if he had any message to convey to his friends, he replied in a very emphatic manner, "yes; give my love, love to every body."

In the death of our dear friend, which occurred on the fifteenth of Ninth month, 1855, the Church militant has lost a zealous and devoted member, and the community a benevolent and liberal minded citizen. We have, however, the comforting belief that our loss is his eternal gain,—that he is mercifully permitted to participate with all those who "have washed their robes, and made them white in the blood of the Lamb."

#### SCRIPTURAL ILLUSTRATIONS.

A correspondent of the *Sabbath Recorder*, who writes from Palestine, refers to customs now extant there, which are, at the same time, living Scriptural illustrations:

Jaffa is now the chief landing-place for the pilgrims who visit the Holy Land. It is said that fifteen thousand pilgrims have landed this year at Jaffa on their way to Jerusalem. On the 24th of April last, there were thirteen steamers here waiting for the pilgrims who were returning from Jerusalem, besides several others that came and left the same day. We now descend by another street, passing down through the bazaars which are filled with a profusion of gay articles, and reach the receipt of custom, and the seat of judgment; which is near the gate of the city, where tribute is received for the produce of the

surrounding country which is brought into the city market. This is a place of general resort for public business, controversies, council, and judgment. When a person commits an offence, he is brought here to be judged and punished. The heavy arched roof affords also a pleasant shade, and many resort here to enjoy the cool breezes that pass through. Sitting in the gate seems to have been an ancient custom. Lot sat in the gate of Sodom when the angels came to him. Boaz went up to the gate, and sat him down there with "the elders of the city." David said, "They that sit in the gate speak against me." Solomon says, "Her husband is known in the gates, when he sitteth among the elders of the land." Isaiah speaks of "him that reproves in the gate." The prophet Amos says, "Hate the evil, and love the good, and establish judgment in the gate." Matthew was "sitting at the receipt of custom," in the gate, when Jesus called him. The scribes who are sitting here are readily distinguished, for each carries with him the writer's inkhorn at his side. This custom of wearing the inkhorn at the side was certainly as old as the prophet Ezekiel. "He called to the man clothed with linen, which had a writer's inkhorn at his side." The inkhorn is a small shaft, with a receptacle for ink, and a case for the reed pens, and a penknife. Here you see also the judge, with his snow-white turban, and his long white flowing mantle, which reminds us of the words of Solomon, "Let thy garments be always white." This kind of mantle has been worn from age to age. It is a strip of cloth about three yards in length and two in width, "usually woven without seam." The wide open sleeves are formed by tacking the upper corners. The sleeves are always thrown off when strength is to be put forth by the use of the arm, which reminds us of the beautiful figure in Isaiah, "The Lord hath made bare his holy arm."

The white worsted mantle is worn only by the higher classes—the Fellahs wear a coarse, heavy, striped woolen garment of the same shape; when they work in the field, they throw this over the left shoulder, fastening up the corners at the right side, leaving the right arm bare. They often use the folds of this garment to gather vegetables, as in ancient times Elisha sent one into the field, and he gathered "wild gourds in his lappel." This garment is also the poor man's covering at night; when in great necessity, he gives this garment for a pledge, as in ancient days. The Israelites were forbidden to keep this pledge: "If thou at all take thy neighbor's raiment to pledge, thou shalt deliver it unto him by the time that the sun goeth down, for it is his covering only: wherein shall he sleep? And it shall come to pass, when he crieth unto me, I will hear; for I am gracious."

When the Arabs set out on a journey, they confine this mantle around the waist with a

girdle; thus Elijah girded up his loins, and ran before Ahab; and thus Elijah said to Gehazi, "Gird up thy loins, and go and lay my staff upon the face of the child." This girdle is of leather, about six inches in breadth, which can be loosened or drawn closer by a buckle affixed to it. The natives carry their daggers and pistols in this girdle, and swords fastened upon it. Thus "Joab's garment that he had put on was girded unto him, and upon it a girdle with a sword fastened upon his loins in the sheath thereof." The natives carry also their money and other things, which are usually carried in the pocket, in this girdle. The word translated *purses*, Matthew 10 : 9, is in the Arabic rendered *girdles*. The linen and silk girdles are worn by the higher class, both by men and women. They are often embroidered and beautifully adorned with ornaments of pearls and precious stones.

The girdle is frequently mentioned in the New Testament, and there is a beautiful figurative allusion to it in Ephesians: "Girt about with truth," denoting that as the girdle affords strength and firmness to the body, so godly sincerity affords strength to the Christian.—*Bible Society Record*.

#### THE MORNING STARS.

I had occasion, a few weeks since, to take the early train from Providence to Boston, and for this purpose rose at two o'clock in the morning. Everything around was wrapt in darkness and hushed in silence, broken only by what seemed at that hour the unearthly clank and rush of the train. It was a mild, serene midsummer's night—the sky was without a cloud—the winds were *whist*. The moon, then in the last quarter, had just risen, and the stars shone with a special lustre, but little affected by her presence. Jupiter, two hours high, was the herald of the day; the Pleiades, just above the horizon, shed their sweet influence in the East; Lyra sparkled near the zenith; Andromeda veiled her newly discovered glories from the naked eye in the South; the steady Pointers far beneath the pole looked meekly up from the depths of the North to their sovereign.

Such was the glorious spectacle as I entered the train. As we proceeded, the timid approach of twilight became more perceptible; the intense blue of the sky began to soften; the smaller stars, like little children, went first to rest, the sister beams of the Pleiades soon melted together, but the bright constellations of the West and North remained unchanged. Steadily the wondrous transfiguration went on. Hands of angels, hidden from mortal eyes, shifted the scenery of the heavens; the glories of night dissolved into the glories of the dawn. The blue sky now turned more softly gray; the great watch-stars shut up their holy eyes; the East began to kindle. Paint streaks of purple soon blushed along the sky;

the whole celestial concave was filled with the inflowing tides of the morning light, which came pouring down from above in one great ocean of radiance, till at length, as we reached the blue hills, a flash of purple fire blazed out from above the horizon, and turned the dewy tear-drops of flower and leaf into rubies and diamonds. In a few seconds the everlasting gates of the morning were thrown wide open, and the lord of day, arrayed in glories too severe for the gaze of man, began his course.

I do not wonder at the superstition of the ancient Magians, who, in the morning of the world, went up to the hill-tops of Central Asia, and, ignorant of the true God, adored the most glorious work of His hand. But I am filled with amazement when I am told that, in this enlightened age, and in the heart of the Christian world, there are persons who can witness this daily manifestation of the power and wisdom of the Creator, and yet say in their hearts, "There is no God."—*E. Everett*.

#### TRUST IN GOD.

A RESORT ALIKE FOR INDIVIDUALS AND COMMUNITIES.

Some twenty-five years since, there was in a New England seaport, a deacon engaged in lucrative business. Although of prudent habits, his benevolence led him to endorse largely for one who had won his confidence as a Christian brother, but afterwards proved to be a designing knave. This issued in the good deacon's failure, when, with scrupulous integrity, every thing that could be claimed by his creditors was given up. A winter of great severity and of general business depression followed. His wife and young children looked to him for a subsistence which he knew not how to furnish, as his most diligent efforts for employment were unsuccessful. A debt incurred with no prospect of payment was, in his estimation, sin; and he sadly saw the little stock of provision which they possessed rapidly diminishing, with no way to obtain more. He was a man of prayer as well as action, and carried the case to Him who feedeth the ravens. Yet long weary weeks passed, and no succor came. At length the morning dawned when the last stick of wood was on the fire, and little Hatty told her father that the candles were all gone; "and how," asked she, "shall we take care of dear mamma to-night?"

The question went like a dagger to the father's heart. The vision of his suffering wife, gasping her life away in the last fearful stages of consumption, her comfortless sick room, unwarmed, unlighted, and the thick darkness which he knew would enshroud her mind, when made aware of the extent of her destitution, would have driven him to distraction, were it not that he yet had hope in One mighty to save. He fled to his closet, and there in an agony of

prayer besought the Lord for help; forgetting all other wants, he plead and plead again for the two articles now specially needed, specifying them with reiterated earnestness. He arose from his knees in full assurance of faith, and with heavenly tranquillity went forth, expecting deliverance, looking for it, however, in but one way, through his own earnings. After a fruitless day of seeking employment, gloomily he returned home, and on entering his gate, was startled to see before him a generous pile of wood. Little Johnny opened the door, clapping his hands, exclaiming, "O, pa! we have got some wood and some candles." "Where did you get them? Are you sure they were not left here by mistake?" "O no, pa!" interrupted Harry, "they were not left here by mistake. A man knocked at the door with his whip, and when I opened it, he asked if you lived here. I told him you did. Then he said, 'here are some candles and a load of wood for him.' I asked him if you sent them, and he said, 'rather guess your pa don't know any thing about it.' 'Who did send them,' said I. 'O,' said he, 'I mus'nt tell; but you may say to your father they are a present.'"

To what instrumentality they were indebted for the relief, was a mystery. And what particularly interested Dea. P., was the character of the anonymous presents; that the very things so much needed, and no others, should be sent, and he was sure he had mentioned his want to no human ear. He questioned the children anew. They described the man who knocked at the door, the horse and truck he drove. A new thought struck him. "Why," said he, "that team belongs to my old enemy, Graff. Can it be possible he is the donor! If so, surely the finger of God has touched his heart." Deacon P. was, however, so convinced that he was their benefactor, that he resolved on an immediate call on tht gentleman.

But who was Mr. Graff? Some years before, the sacredness of the Sabbath was openly violated by a brisk trade in fish. The hundreds of boatmen, sailors and their friends, engaged in this desecration, were so potent in influence, that nobody thought of risking interference. Deacon P., though a man of peace, was also a man of moral courage. He determined to put a stop to the iniquity. His friends warned him that his life would be endangered; but at first alone, and afterwards with a brother deacon, he would take a walk along the wharves of a Sunday morning to ascertain who broke the laws by traffic on that day. Men swore at him like fiends, fired his dwellings at several different times, and at last "bound themselves with an oath" to kill him. Yet they feared his presence, and at his approach, stores would be deserted of customers, and closed with great celerity. This species of Sabbath-breaking was in length broken up, after various hair-breadth escapes on the part of Deacon P. and

his compatriot, the authorities being shamed into action by their fearless zeal.

The brutal drunkenness of the sailors, and the degradation and suffering of their families, with which Deacon P. was in this enterprise brought into contact, opened his eyes to the evils of the liquor traffic; and, turning over his Sabbath reform to the legal authorities, he became known as a temperance advocate. This also brought him enemies, sometimes changing friends into foes. Distiller Graff was among the latter, from a warm friend becoming bitterly alienated. In vain did the grieved deacon strive to conciliate by explanation and personal kindness. Even the trifling civility of a bow was rudely unnoticed by Mr. Graff.

Deacon P. now entered the distillery of his old friend. For the first time for years, its proprietor looked up with a nod and a smile of recognition. It was evident something unusual had softened his heart. "I have called," said the deacon, "to ask if you can tell me who sent some wood and candles to my house to-day?" "Yes, sir, I sent them." "You are very kind; but pray tell me how you came to do so?" "But first let me inquire if you really needed them?" "O, I cannot express to you how much." "Well, then, I suppose I must explain," said Mr. Graff. "It's all very singular, and sometimes seems very foolish. This morning, about 10 o'clock, as I was busy about my work, suddenly a voice seemed to say, '*Send some wood to Deacon P.; he is in want!*' I was astonished. I could not believe you needed it. And I could not send it to you of all others. I tried to banish the thought, and went to work again more earnestly. But the voice, it seemed within me, said again with painful distinctness, '*Send some wood to Deacon P.; he is in want!*' I scouted the idea as weak and silly; a mere phantasy of the brain; but it was of no use; I had to succumb; the more I ridiculed and fought it, the more vivid and irresistible was the impression, until to purchase peace, and in some awe, I confess, I bade John load his team with wood, and leave it at your door. For a moment I was at rest; but only for a moment. The imperative whisper came, '*Send some candles!*' Said I to myself, this is too absurd. I will not gratify this whim; but again I was so beset with the mandate, and so distressed and baffled in repelling it, that as a cheap way to get out of torment, I handed John a package of candles also. This matter has been in my mind ever since. Sometimes I have thought it almost a freak of insanity, and then again, such was the strange character of the impression, so unexpected, so powerful, and such the singular peace following compliance with its dictates, that I almost believe it to be supernatural."

"It is indeed the doings of Him who is wonderful in working," replied Deacon P. "It was about 10 o'clock, I well remember, that I plead with God for the very articles you sent me, in

an agony of wrestling I never knew before. It was then, too, that my soul was filled with the conviction, that my prayer was heard, and relief would come."

The truth of this story is well attested; and an experience, similar in principle, may be found in the life of many a good man. Is not the principle equally applicable to communities? May not nations, trusting God in obedience to his word, rely with equal confidence on his promises for protection and safety? "When a man's ways please God, he maketh even his enemies to be at peace with him." So let a nation, in its whole intercourse with other nations, act on the principles of the Gospel, in its spirit of justice and love, in accordance with its golden rule; and would not a single century's uniform, undeviating pursuit of such a course, insure them against wrong and outrage, better than weapons of war ever have, or ever can?—*The Advocate of Peace.*

## FRIENDS' REVIEW.

PHILADELPHIA, FIRST MONTH 2, 1858.

**TUKE'S INTRODUCTION.**—We would earnestly commend Samuel Tuke's Introduction to his Selections from George Fox's Epistles, to the careful perusal and serious attention of the younger class of our readers. They will find the character of George Fox truthfully drawn, and the principles of our Religious Society incidentally portrayed with clearness.

**TO OUR AGENTS AND SUBSCRIBERS.**—The general derangement of monetary affairs, and the depreciation of the paper currency in many places, have made it difficult, and even impracticable in some cases, for our Agents and Subscribers to send their usual remittances. This state of things has so much improved that, in reply to letters received from various parts of the country, we may say, that most of the Bank Notes current in the Eastern States, and the Notes of the State Banks of Indiana and Ohio, will now be acceptable. When drafts can readily be obtained, at a small premium, on Banks in New York or Philadelphia, they form a safe and desirable mode of remitting subscriptions.

**THE SEPARATE YEARLY MEETING IN OHIO.**—A pamphlet of twelve pages, entitled "A Letter addressed to the Clerk and Members of Ohio Yearly Meeting, by Joshua Maule, Colerain, Ohio, 1857," has been sent to this office.

The author, who is a highly respectable and

active member of the body of which Benjamin Hoyle is Clerk, appears to have addressed the latter privately, in the first instance, and has since made the letter public for the consideration of his fellow members. It refers especially to the course of B. Hoyle, as Clerk; giving the writer's sentiments thereon, and also exhibiting the transactions and condition of the meeting in the 10th month last.

We furnished our readers a few weeks since, [see No. 7, current vol.] with some statements relating to such of those transactions as were of special interest to the members of our religious Society generally; and further information from various sources has fully corroborated our account, excepting a small mistake in respect to the reference of the Report from the Committee on the condition of members in Iowa and other Western States. This report was referred for further consideration next year to the Yearly Meeting itself, and not, as stated in the Review, to the Committee. This error arose from the misapprehension of a member of the meeting; but the facts of great disunity in the meeting and strong opposition being made to the Report, rendering its reference necessary, remain unchanged.

Charges having been widely circulated, both in this country and among Friends abroad, that our account of the proceedings of the meeting of which B. Hoyle is Clerk, much misrepresented them, and that on the part of our correspondents in Ohio, the misrepresentation was intentional, we deem it due to their integrity and to the character of the *Review*, to avail ourselves of some extracts from Joshua Maule's letter, confirmatory of our statements in every important particular.

On the question of reading the certificate of a minister from the Yearly Meeting at Poplar Ridge, J. M. says:

"I believe our late Yearly Meeting was favored with a measure of the cementing and gathering influence of the Head of the Church, very soon after it was opened on Second day morning, and while it was deliberating upon the serious subject of receiving the Friend that was with us from another Yearly Meeting in the important station of a gospel minister. And in and under that influence, the meeting came to a deliberate, clear judgment, largely expressed, to receive, and read his certificate; there was no discussion, not one interposing voice of dissent, while the meeting quietly settled in this decision. Thou [B. Hoyle] first opposed it, and objected to reading his cer-

tificates, and yet told us thou hadst 'sympathy and near unity with the Friend, and believed he was anointed for the work,' &c. In this, several joined thee, (who always evince a readiness to follow where thou leadest,) and expressed their unity with the Friend and his services; some of them saying, they believed he was with us in 'right authority;' but they rejected his certificates, for the reason given by thyself, that we were not in correspondence with the meeting that had issued them. Who or what has prevented us from being in correspondence with that Yearly Meeting, which sends to us 'anointed ministers,' 'clothed with right authority'? By *what authority* do we reject the 'rightly anointed,' as thou and others rejected the proper order and evidence of this Friend's concern? Why do we refuse to own fellowship with meetings which have judged of the concern, and liberated those who are 'anointed by the Master?' For this Friend's concern was laid before, and fully approved by, the select Yearly Meeting of New York. Do we believe the Head of the Church sends his 'anointed ministers' through a corrupt channel? 'Thou art the man,' who hast to the utmost of thy ability, and thy authority has more than anything else, prevented our Yearly Meeting from being in correspondence with that of New York, [held at Poplar Ridge,] and now thou givest this as a reason for rejecting their ministers, who are clothed with right authority and 'anointed for the work!' What a mockery this makes of our profession of being led and guided, in transacting the affairs of the Church, by the 'spirit of truth!'"

We stated that the meeting encouraged this minister to visit the constituent Meetings. On this point, the letter continues:—

"The Friend informed the meeting, that his certificates explained his concern as something further than attending the Yearly Meeting; but as they had been refused, and his friends at home rejected, he did not know but he might be at liberty now to go home, (or to this effect.) This brought his opposers to a strait place; they must either take the responsibility of sending home one clothed with 'right authority,' without performing the service that authority required of him, or they must authorize him to prosecute his concern. This they did, contrary to our discipline and established order, which required the concern to be laid before the meeting by reading his certificate. They urged him to remain, and perform any service, attend and appoint meetings, &c., as he believed right."

The arguments used by the Clerk in his opposition to the reading of the certificate are thus stated by J. M. and will be found to agree with our account:—

"Thy course in regard to correspondence was, I believe, equally subversive of the unity and har-

mony of the Society, and as opposed to the truth as the foregoing. Thou refused to acknowledge Friends of Baltimore Yearly Meeting, (who stood on the ground we did, and whom, I have understood, thou saidst after their separation, 'thou couldst own if thou couldst own thyself;') and rejected their epistle which was on the table, because, as thou hast said in our Yearly Meeting, 'they had corresponded with New York and New England, and we might as well correspond with them all.' There was no evidence before the meeting that this was the case; but thou hadst heard it out of doors; and no evidence, if they had done it, that the truth had not required it of them. But thou refused to read their epistle, (the epistle from the 'smaller body' of Baltimore, held at Nottingham,) because thou *hadst heard* they had done something which thou didst not like. The excellent recommendation of our discipline is, that in transacting the affairs of the Church, we should be 'careful to move and act under the immediate influence of the Spirit of Christ, in the pure love of the Gospel.' According to my measure, I have earnestly desired we might individually be made willing to be governed by His spirit, and leaving the 'Lo here's and lo there's,' seek for and wait for the arising of that light and life in our meetings, which would enable us to come to true judgment.

Thou again brought before the meeting those charges so often reiterated by thee against those bodies of Friends who have stood faithful for our doctrines and testimonies, and of whom our Yearly Meeting has officially declared, 'we believe they are endeavoring to maintain the same testimonies we are called upon to uphold.' This has been continued and repeated in our Yearly Meeting, until it seems to me, (to use thy own words in the Yearly Meeting on another subject,) it has become a 'loathsome disease.' It always produces discussion and debate, and destroys whatever feeling of solemnity the meeting may be favored with. Taking the ground and using *the words* so often used, and so *much worn* by the Separatists, thou made that remarkable assertion, 'that doctrines had nothing to do with the separation in New England; it was a mere matter of discipline!'

But thou saidst the 'small body' was right in the Monthly Meeting, and right in the Quarterly Meeting, but wrong in the Yearly Meeting, because the Yearly Meeting concluded to leave it to the representatives from the other Quarters to decide which was the true Quarter of Rhode Island, and Friends refused to abide by the decision of the representatives. In leaving it to the representatives, I understood thee to include the whole meeting, and to condemn sound Friends because they did not afterwards submit to the *decision* of the representatives. \* \* \*

"Thou told the meeting they ought to have remained where they were, that is, in connection with those who had departed from the faith of

the Society! To confirm this, thou quoted the text, 'The scribes and pharisees sit in Moses' seat; all therefore they bid you observe, that observe and do, but do not ye after their works, &c.'

Was not this command given during the time of fulfilment of the Mosaic law? of which it was also said by the Great Head of the Church, that 'one jot or one tittle shall in no wise pass away till all be fulfilled?' Was it not somewhat straining the application of the text, to apply it to Christians in our day, that they should submit in matters of conscience to the 'scribes and pharisees?' of whom the Saviour also said, "they were blind guides:" 'Ye pay tittle of mint, and anise and cammin, and have omitted the weightier matters of the law, judgment, mercy, and faith:' 'Ye shut up the kingdom of heaven against men, for ye neither go in yourselves, neither suffer ye them that are entering to go in.' Are we not under that dispensation, and to be governed by that authority, of which the apostles spoke when they were commanded 'not to speak or teach at all in the name of Jesus?'—but Peter and John answered and said unto them, whether it be right in the sight of God to hearken unto you more than unto God, judge ye.' My desire is that Friends may be everywhere encouraged, humbly to seek for ability and true wisdom, by which they may be mercifully enabled to stand faithful to our Christian testimonies, and strive to follow the example of those eminent apostles, Peter and John, in preference to the course thou sayest should be adopted, to obey the 'scribes and pharisees.' Had George Fox and his co-laborers made the application which thou hast of that text, and governed their actions by it, there had never been a Society of Friends."

On the subject of disowning those whom they call "Separatists," and the course to be pursued in respect to members in Iowa, Joshua Maule says:—

"Thou and those acting with thee continue in refusing to let a testimony go against those offenders who have forsaken our testimonies, violated our discipline, and for years have not attended our religious meetings. To confirm and establish this rule and others of similar character, which have been pressed upon the meeting, thou explained the principle we must be governed by; that a rule of action might be adopted by the concurrence of a part of the meeting, but it could not be dropped or changed only by the unanimous voice of the meeting! These rules, so firmly fixed, are the measures pursued by those who act with thyself in relation to correspondence, certificates of ministers, treating with offenders, &c., none of which have been adopted by the unity of the meeting, but by a few who have evinced a determination to make their acts and decisions appear to be the acts of the body. Those rules,

thus laid down to govern our meetings, are altogether at variance with the profession we make of waiting for, and seeking to be directed by, the mind of Truth, what we should do and what we should leave undone. These rules are now sought to be extended to Iowa, to give substantial evidence to faithful Friends there that we reject them, and are endeavoring to build up a partition wall between them and Friends around them, by refusing to certify our members who go thither, to their meetings; but the rule is to set up separate meetings among them, which, thou told the Yearly Meeting, would not be in connection with the meetings of Friends there, but are to be accountable to Stillwater Monthly Meeting, Ohio. It would have been more consistent with the precepts of the gospel, to have endeavored to strengthen and encourage them [sound and faithful Friends of the "smaller body" in Iowa] in the right support of the law and the testimony, and to have labored in love to gather them nearer to one another, in the bonds of Christian fellowship; instead of encouraging divisions among them, by setting up separate meetings. These plans and rules appear intended to be as comprehensive as were those made in the days of 'Mordecai the Jew.' The letters have gone forth among us, some written by those in authority in Philadelphia Yearly Meeting, to the same class in ours, advising 'that our Yearly Meeting should not *strike hands* with any other bodies of professors, however much they might feel themselves aggrieved.' And the writing was circulated for the rejection of all the bodies of sound Friends, as it was formerly against the whole people of Mordecai."

We think our readers, after perusing the above extracts, will not be disposed to doubt the integrity of our correspondents in Ohio, or the truth of our former statements; and they will probably agree with us that our remarks upon the "divided and discordant state" of the body having B. Hoyle for its Clerk, are justified by the following sentences from the concluding paragraphs of J. Maule's letter:—

"It was a very painful and suffering Yearly Meeting to many honest-hearted Friends. It seemed that "the whole head was sick, and the whole heart faint;" yet out of this diseased state we are sending down to subordinate meetings a long minute of well-expressed words of advice; and perhaps not a word will appear in our minutes to show our actual state, and the travail and living concern of a large portion of the members for the consistent support of our established order. This course may deceive others, and perhaps ourselves, but it will not help any.

If I have quoted any of thy expressions wrongly, I am open to correction. I have no desire to place thee in any position but such as

I honestly believe thou hast placed thyself in. It is with sorrow I write, exceedingly regretting there should be cause for writing these things. But I believe the truth requires it, and our condition demands it?"

On the Minutes of Philadelphia Yearly Meeting, the body thus sadly described by one of its concerned and prominent members, stands recorded as Ohio Yearly Meeting. All the other Yearly Meetings in this country, and those in England and Ireland, have solemnly refused to acknowledge it as such; and they recognise Ohio Yearly Meeting in a body of Friends which has been rejected by the controlling portion of Philadelphia Yearly Meeting. It is clearly impossible that harmony and unity can exist between those Yearly Meetings and the Yearly Meeting of Philadelphia, while they, respectively, occupy their present antagonistic positions. The causes, too, which have produced discord and confusion in the Separate body in Ohio, are abundantly yielding the same bitter fruit among the members of Philadelphia Yearly Meeting. On the contrary, all the other Yearly Meetings, including the meeting in Ohio of which J. Binns is Clerk, are closely united in love, enjoying internal peace and a good degree of prosperity, and acting harmoniously together for the support of those Christian doctrines and testimonies which appertain to their profession as a religious Society.

Can we do otherwise than most devoutly crave that Philadelphia Yearly Meeting may retrace the steps which have brought its members into great difficulty, and the Church into mourning, and thus be enabled "to keep the unity of the spirit in the bond of peace?"

In 1849, a document, issued by Philadelphia Yearly Meeting, declared that "those Friends who compose the smaller body [in New England] continue to be entitled to the rights of membership, and to such acknowledgement by their brethren as may be necessary for securing the enjoyment of those rights." At subsequent periods, the same Yearly Meeting refused to receive Epistles from the separate meetings at Poplar Ridge and Nottingham; thus rejecting all connection and intercourse with them. The "smaller body" in New England has, however, entered into correspondence and fellowship with those meetings, and has thus assumed a very different position from that which it occupied when those who compose it were recognised as

members of Society by Philadelphia Yearly Meeting. Indeed, it is not to be presumed that this recognition would have taken place under the circumstances which now exist, and how can Philadelphia Yearly Meeting consistently continue it.

Again, in 1855, the body of which B. Hoyle is clerk was accepted in Philadelphia Yearly Meeting as the true Yearly Meeting of Ohio. But it is now found that, when that body last met, it received a minister from Poplar Ridge, appointed a meeting for him, and, without a dissenting voice, encouraged him, as a minister, to visit its constituent meetings, thus fully acknowledging the authority of the Poplar Ridge Meeting which had furnished him with a certificate. It is true the *form* of reading this certificate was not complied with by the Clerk; but this could not materially affect the fact of his reception as a member and a minister; and besides, it is known that his certificate was read in several of the Monthly Meetings.

It is, therefore, obvious that the position of the meeting of which B. Hoyle is Clerk, has become, in a constitutional sense, vitiated; and Philadelphia Yearly Meeting can no longer hold fellowship with it, without compromising itself to a similar fellowship with the separatists whom it has disowned at Poplar Ridge.

MARRIED, on the 20th of 10th month last, at Friends Meeting, Westland, Logan Co., Ohio, JESSE LLOYD, JR., of Marshall Co., Iowa, to EDITH DILLINGHAM, of the former place. Also, at the same time and place, CALLE HATHAWAY, of Huron Co., Ohio, to SARAH W. DILLINGHAM, of the first named place.

At Friends' Meeting, Westriver, Wayne County, Indiana, on 26th of 11th month last, WILLIAM CHAMNESS, son of Jesse and Ruth Chamness, to MARTHA ANN MODLIN, daughter of William and Mildred Modlin, all of Springfield Monthly Meeting.

DIED, in Boston, on the 26th of last month, at the residence of her brother-in-law, Edward A. Frye, MARY C. JONES, widow of the late Charles Jones, of Brunswick, Me., aged nearly 42 years.

The disease which terminated the earthly course of this dear friend, was of a very protracted and suffering character, which, combined with her mental anguish, on account of leaving a family of orphan children, was exceedingly difficult for nature to endure. But through the efficacy of that saving grace, which overcometh all things, she was enabled to resign herself, her beloved offspring and all things beside into the divine keeping, with unwavering faith believing that "all would be well." She had much excellent advice to give her children and friends, took her final leave of them with firmness, and passed, as we doubt not, into the mansion prepared for her.

—, In Philadelphia, 12th Mo., 25th, 1857, GULIELMA MORRIS SMITH, only daughter of Robert Pearsall and Hannah Whitall Smith, aged 5 years and 4 months.

DIED, of pulmonary consumption, in Burrellville, R. I., on the 16th of last month, SMITH BATTEY, a member and approved minister of Smithfield Monthly Meeting.

Throughout his illness of more than three and a half years, he manifested true Christian resignation; an increasing interest in the welfare of the Church; an unwavering faith in the Saviour, and a hope which was, as an anchor to his soul, both sure and steadfast. On one occasion, when an unfavorable symptom in the progress of his disease was alluded to, he calmly remarked: "It is only an evidence that I am going home." The day before his death he was heard in a feeble, yet audible voice in supplication, as follows: "Oh, Father! if it be Thy will, release me; let me go, and receive me into Thy arms; if not, enable me to bear my allotted portion of suffering." And soon after: "Oh! grant me an easy passage, whether it be now or at some future hour!" Nearly his last words to his family and friends, were: "Weep not for me." By the example of his life and the triumph of the Christian hope in his death, his friends are admonished to follow him as he followed Christ. And may they not with propriety adopt the prayer of the Psalmist: "Help, Lord, for the godly man ceaseth, and the faithful fail from among the children of men."

—, On the 3d ult., at the residence of Absalom Dennis, Wayne Co., Indiana, after a protracted illness, in the 39th year of her age, MARY COFFIN, (a member of Springfield Monthly Meeting, Indiana,) daughter of John and Abigail Coffin, late of North Carolina. This dear Friend manifested much patience and resignation to the Divine will, her spirit seemed to be clothed with prayer, both vocal and mental, and through abundant mercy was enabled to say that she saw nothing in her way.

#### EXECUTIVE REPORTS.

##### REPORT OF THE POSTMASTER GENERAL.

Postmaster General Brown's Report is very voluminous. Mr. Brown states that since he entered upon the Administration of the Department, he has ventured on no new theories, nor attempted any innovations on a well-tryed system. He calls particular attention to the fact that while but 8,146 Post Offices were established in the twenty years from 1827 to 1847, the number established in ten years, from 1847 to 1857, was 11,444—being an increase of 3,298 in just one-half of the former period. During the last fiscal year, 1,725 offices have been established, and 704 discontinued, being a net increase of 1,021. The number of Postmasters appointed during the year was 8,680; of which 4,767 were to fill vacancies occasioned by resignations. The total number of Post Offices in the United States at this time is 27,148, of which 368 are of the class denominated Presidential, the incumbents being subject to appointment by the President and Senate. On the 30th of June last, 7,888 mail routes were in operation, with an aggregate length of 242,601 miles; of which 22,530 miles were by railroad, 15,245 by steamboats, and 49,329 by coach. The total annual transportation of mails was 74,906,067 miles, costing \$6,622,046. The cost of transportation was relatively as follows: By railroad, ten cents and five mills per

mile; by steamboat, twenty-two cents a mile; by coach, seven cents and four mills a mile. The length of railroad routes has been increased 2,207 miles, and the length of steamboat routes is increased by 294 miles. The number of mail contractors is 6,576. The stage coaches are going more and more out of fashion; during the year, the length of coach routes has been reduced 1,124 miles, and the annual transportation 24,061 miles. The cost of the Utah routes was increased \$17,500, by the allowance of additional pay, without increased service, on the route between Salt Lake and San Pedro. The extension of railroad service (amounting to 2,458,648 miles) is set forth in tabular form in the report, with an exhibit of the additional expense thereby incurred, amounting to \$249,458 during the year. Compared with the service last year, there appears a decrease of 791 miles in the length of routes, and of 823,034 miles in the annual transportation, while the cost is increased \$120,044. In New York, railroad transportation has increased 293,328 miles, while steamboat service has decreased 161,664 miles, and coach service has fallen off 143,384 miles, but with an increased cost in the latter amounting to \$12,642. The receipts of the Department for the year were \$7,353,591, and the expenditures, 11,508,057. Allowing for certain special provisions on the account of revenue and expenditure, the deficit is stated at \$3,453,718.40. The increase of expenses this year is 5 per cent. in the amount of annual transportation, and 9 7-10 per cent. in cost.

The estimates for 1858 are as follows: Expenditures, \$12,053,247; revenue, \$10,584,074; leaving the sum of \$1,469,173 to be appropriated by Congress to defray the expenditures of the coming year.

##### REPORT OF THE SECRETARY OF THE TREASURY.

The Government spent this last fiscal year, ending June 30th, 1857

	\$70,822,722
On the civil list	\$27,531,922
Interior Department	5,358,274
War Department	19,261,774
Navy Department	12,726,856
Public Debt	5,943,896
The budget of expenditure for the current fiscal year, to end June 30, 1858, is made	\$74,963,058
Actual first quarter	\$23,714,528
Estimates three quarters	51,248,530
The balance in the treasury at the beginning of the year, July 1, was	\$17,710,114
Revenue to 30th September	20,929,819
Estimated to 30th June	36,750,000
<b>Total</b>	<b>75,389,933</b>

This would leave \$426,875, provided the revenue is not over-estimated, nor the expenditure under-rated; to provide against which contingencies,

and to guard the public credit, the Secretary asks for authority to employ Treasury notes, not to exceed the sum of \$20,000,000. The customs revenue for the first quarter was \$18,573,729. The Secretary calculates on only \$33,000,000 for the remaining nine months. Instead of \$231,000,000 in dutiable merchandise for the year, entered for consumption, (as the first quarter would indicate,) he looks for no more than \$174,000,000, owing to the recent revulsion. The land and miscellaneous revenues of the year he sets down at \$6,006,090, of which \$2,356,090 was realized the first quarter.

The public debt was reduced on the 1st of July to \$29,060,386. The Department has since purchased \$3,895,232, leaving the amount outstanding \$25,165,154.

The Department has collected anew the railway capital and debt of the country. These amount—

In capital	\$491,435,661
In debt	417,243,664
	908,679,325

The annual income is reported at \$48,406,488. Interest on the debt, \$25,093,203.

From the London Athenæum.

HOW THEY WENT BY ROAD, AND HOW THEY GO BY RAIL.

[Concluded from page 255.]

When George Stephenson spoke of a locomotive running from Newcastle to London at the rate of fifteen miles an hour, there was not a stage-coachman on that line of road, who heard of the remark, who did not pity the poor gentleman who made it. When the engineer developed his plan before a Parliamentary Committee, men of the mightiest intellect and men with little or none, combined to overwhelm him with reproach, ridicule and contempt. Periodicals, remembering that mails and stages, running ten miles an hour, were occasionally overturned, reluctantly yielded to the iron road, but they prayed the Legislature to forbid a greater speed than eight or ten miles an hour. "Ruin," was the burthen of the elegy chanted by the respectable majority who hated innovation.

There are many yet who can very well remember the starting of the various coaches from the different extremities of the town, "down," to their several destinations in the country. There was much confusion and uncertainty, the latter especially; for passengers who had not booked their places were not sure of finding room, and the different claims of "goods," and "luggage," often led to a traveller being separated from his possessions. When the "long coaches" had left, and it was very rare that above four went to one city, there was little business at the coach office, except with passengers to the intermediate distances, till the evening. There were then busy hours; now we have busy days, and everybody

moving. So great is the increase of travellers, that if there were a necessity of returning to the old system of conveying them, it could not be done, unless the passengers paid, altogether, sixty millions annually. At present they, with "goods," are conveyed for twenty millions. That was the sum realized in 1854. The difference of cost is forty millions, which sum, as Mr. Robert Stephenson remarks, exceeds by 50 per cent. the interest of the National Debt!

There is something startling in the fact that in little more than a quarter of a century, a full third of the amount of the capital of the debt has been expended, on about ten thousand miles of railway. The length is about half the diameter of the globe, and exceeds that of a dozen of the longest rivers in Europe. The grandeur of figures is to be seen in individual lines, as well as in the general system. The capital of the North-Western is over three-and-thirty millions, and its annual revenue is about a third of its capital. Its servants are more numerous than some armies that have fought decisive battles; they amount to thirteen thousand. The stations on this single line are about three hundred and fifty. Upwards of two hundred thousand trains, annually, convey, (in round numbers,) ten millions of passengers, and run over, in the time, nearly as many millions of miles. Accounting to each passenger the number of miles traversed by him, the sum total to all, still annually, is two hundred and forty-two millions. This company has interchanged by traffic with sixty-one railways, and five million tons of goods and coals find an easy and rapid conveyance that would have astounded the west countryman, who thought that roads were only of use to the laboring wain!

"Men shall run to and fro, and knowledge shall be increased," said the Prophet, and truly that period may be said to have arrived. At the very height of "coaching" all the journeys throughout the year, made by passengers in coaches, long and short, did not reach six millions. A year ago, one hundred million separate journeys were accomplished by travellers, and with casualties bearing the proportion of about one in every seven millions of passengers. Ten thousand stages and a hundred and fifty thousand horses would hardly suffice for our moving population now-a-days.

It may be accepted as a fact, that but for the rail, the Cheap Postage system could not have been carried out. It wants two years to make up three quarters of a century since the first mail coach was set up at Bristol. Previous to that, horses, or carts, both equally easy of being plundered, conveyed the "correspondence" of those who kept up intercourse by letters. How confined that intercourse was may be seen in the circumstance, that it was no uncommon occurrence for the London bag to arrive at Edinburgh with a single letter therein! Now, above 21,000 letters from the south are daily delivered in that

city. Many thousands pass through, and there-with may be noticed the 12 or 13,000 newspapers, and about half that number of books and parcels conveyed by the rail. At the time of the establishment of mail coaches, the Post Office revenue was only 146,000*l.* annually. In half a century the revenue exceeded 2,000,000*l.* sterling! The mail trains have enabled the office to successfully bear the decreased and uniform postage. With the old horsed mails, the outlay would have been too great to admit of the sacrifice, and thus the iron road is beneficial, not only to passengers, but to those who are represented by their cheaply sped missives. In 1838, the whole of the London letters were carried off to the country by twenty-eight mail coaches; each took about 3½ cwt. of letters and papers. But now on one line of road alone, the London and North Western, there is not only a flying post office, but it is nightly followed by six or eight vans, conveying the correspondence and papers addressed to persons residing within the districts adjacent to this single line.

The coach proprietors generally passed for "moneyed men," but what was all their wealth, real or fancied, to that of the railway proprietors, as a body? Including Scotland and Ireland, and reckoning the "sidings," we have 18,000 miles of road. For the accomplishment of this mighty work, Parliament has authorised the raising of nearly 400,000,000*l.* sterling!—Nearly 300,000,000*l.* have been actually realized. That stupendous sum represents more than a third of the National Debt, and is more than four times the amount of all the real property in Great Britain. Truly may it be said, that what that sum has purchased is of far more apparent value than what was gained by the millions sunk in two years at Sebastopol.

Neither travellers, nor mere excursionists, probably dwell much on the majesty, or the cost, of the works by which they are enabled to "fly" to their respective destinations. When Johnson told Voltaire he was going to the Hebrides, the French author looked astounded, and congratulated himself on the fact, that the Englishman could not compel him to travel also to a remote and barbarous district,—to almost within sight of which travellers are now safely and swiftly conducted by rail within the limits of a single day!

To accomplish ends like this, we have achieved works which neither Roman nor Egyptian could contemplate with scornful indifference. Our tunnels are above seventy miles in extent. During twenty-five years we have built railway bridges at the rate of a thousand yearly. All the other bridges in England do not equal this number. As to earthworks, we can hardly understand them when we are told that 550,000,000 cubic yards number their extent. We can better imagine the achievement when we are told that if the earth thus moved could be conveyed to one spot, there would be raised there a mountain half a mile in

diameter, and a mile and a half in height. That the work is appreciated by the public is certain by this fact alone,—that *two and a half miles of railway are covered every second throughout the year!* We speak on the authority of Mr. Robert Stephenson, from whose writings we gather that the locomotives now in use, upwards of 5000, would cover, in a line, above thirty miles of ground. The vehicles of various sorts, over 150,000, would reach 500 miles, and the value of the rolling stock alone amounts to 25,000,000*l.* sterling! We have spoken of *one* company retaining a little army of servants. The united companies retain a "host," amounting altogether, servants and officers, to about 100,000. We are afraid to bewilder our readers with the millions of sacks of coke that are consumed, but we shall sufficiently express the amount, perhaps, when we say, that on the roads, in these British Isles, four tons of coal and twenty tons of water are *flashed into steam every minute* throughout the year! *Here is a fact for a man to think of with awe, by whatever class he travels.*

The charm worked is equal to the mighty magic employed for its achievement. What line of old stages could compare with carriages carrying 120,000,000 of passengers yearly? Reckoning fourteen to the ton, the total weight may be easily ascertained. It is accomplished with a speed, safety and general success, which continue to keep the *emeriti* charioteers in despair; passengers and goods pay for their transit by the magnificent fare of 20,000,000*l.* annually!

There has been, and is, some great outlay the other way, before travellers could be carried at a few half-pence per mile, which run up in their total to the millions of pounds above mentioned. 14,000,000*l.* sterling were expended in acts of parliament alone,—for permission to *begin* the work! We have said that the capital raised amounted to nearly 300,000,000*l.* A quarter of this was expended in the purchase of land and conveyancing, that is, for localities to begin *upon*. This was only a preparatory proceeding. Before the system was fully developed the following little *items* had to be provided:—First, 26,000,000 "sleepers," which are so far from being of the stable character implied by their name, that they disappear at the rate of 2,000,000 every year. The rails, too, which reckon, like every other railway *item*, by millions, have to be replaced at the rate of 20,000 tons a year. Coal and iron are used up to an extent which makes thinkers look with anxiety towards our mines; they may look, too, as anxiously towards the forests. We have mentioned the "sleepers." To provide these alone requires the felling of 300,000 trees annually. 5,000 acres of forest must be yearly cleared to provide the necessary quantity of sleepers,—of which a good sized tree will produce but six.

Then, after speaking of the number of regular retainers by the various companies, we must not

forget that the lines give employment to 50,000 persons besides. Reckoning officers, servants, workmen called into activity by the railway system, their wives and families, we have about half a million persons, or 1 in 50 of the whole population, who depend directly or indirectly on the rail. The coaching system never, even in proportion, accomplished anything equally beneficial. But the stages scarcely conveyed in a year the numbers now carried in a fortnight. A curious statistical calculation has been made with respect to differences like these. For instance:—111,000,000 persons travel yearly twelve miles, taking half an hour to do so. The stage went over the same distance in an hour and a half. The hours thus saved by the number above stated are equal to 38,000 years. Supposing these economists of time to be men who work eight hours a day, at 3s. per day for their labor, we have an apparent saving of 2,000,000*l.* per annum. The actual saving is, no doubt, very great. It is within our remembrance when a man could not go to Brentford from London under half a crown. The double journey, and a very slow one, made the expense so great, as to place that locality, (and others like it, with respect to London,) beyond the limits to which a working man could go for pleasure. He could not take his family with him at a much less cost than his week's wages. Now, he may travel five times the distance for half the money,—namely, to Reading. There are occasional when he may journey even further, at a lower rate; and these occasions are more frequent than were those exceptional cases in opposition coach periods, when travellers were allured by promises of being conveyed for nothing, and being treated with a bottle of wine into the bargain.

The stage coach still keeps possession of some of our hilly or mountainous districts. In most of these places the system is well carried out; in none more so than on the 100 miles of road between Dunkeld and Inverness. The distance is accomplished in a long summer's day; and some idea of the costly nature of the system will be conveyed by the fact that these 100 miles require an establishment of 200 horses, for the up and down journeys, and for supply in case of accidents. Vast as are the expenses of the railway system, wherever it has come into competition with the stage, it has beat the latter off the road; chiefly because it can convey a multitude of passengers without being put to much more cost than if only a few were carried along the line. And then it can carry them at the rate of forty or fifty miles an hour! What a contrast does that present with the slow progress of the first excursionist, the patient Asclepiades, who travelled abroad, seated on the back of a cow, and lived on her milk by the way!

It is wise not to seek a secret; and hones not to reveal one.

## LIFE, DEATH AND ETERNITY.

A shadow moving by one's side,  
That would a substance seem,—  
That is, yet is not—though descried—  
Like skies beneath the stream;  
A tree that's ever in the bloom,  
Whose fruit is never ripe;  
A wish for joys that never come—  
Such are the hopes of Life.

A dark, inevitable night,  
A blank that will remain;  
A waiting for the morning light,  
When waiting is in vain;  
A gulf where pathway never led  
To show the depth beneath;  
A thing we know not, yet we dread,—  
That dreaded thing is Death.

The vaulted void of purple sky  
That everywhere extends,  
That stretches from the dazzled eye,  
In space that never ends;  
A morning, whose uprisen sun  
No setting e'er shall see;  
A day that comes without a noon,—  
Such is Eternity.

## SUMMARY OF NEWS.

FOREIGN INTELLIGENCE.—Advices from Liverpool are to the 12th ult. Financial matters in London were improving. The funds were rising, and gold was flowing into the bank from various sources. Nevertheless, numerous failures still occurred. On the continent, monetary affairs continued generally in a gloomy condition. At Hamburg, the city government had established a "Discount Bank," with a capital of 15,000,000 marks banco, (about \$5,000,000.) This afforded partial relief, but the difficulties were still pressing. The National Bank of Vienna had come to the aid of Hamburg by a loan of 10,000,000 marks banco at 6 per cent, to be repaid in a year. A Berlin letter states that the disturbing influence of the American panic had extended as far as Warsaw, where several manufacturers had failed. The bullion in the Bank of France was increasing, and a further reduction of the discount rate was anticipated.

ENGLAND.—The Bank Indemnity bill had passed the House of Commons, had gone through a second reading in the House of Lords, and would pass that body without opposition.

A large and influential meeting had been held in London, to consider the subject of the government of India, at which resolutions and a petition to Parliament against the continuance of the governing power in the East India Company were adopted. One of the resolutions also affirmed reform in the representative system of England to be the only security for the good government of India.

FRANCE.—An extraordinary decree has been issued granting a credit of 1,000,000 francs towards alleviating the sufferings of the unemployed workmen.

The long proposed French expedition to China, comprising a land force of 3,000 men, was said to be about to sail, in consequence of pressing letters from the French Admiral at Canton. A project has been started to connect England and France by a iron bridge over the Straits of Dover, like that over the Menai Strait in Wales. It is proposed that the bridge shall rest upon pillars 500 feet high, so that the largest ships may pass under it. The greatest depth of the channel is stated to be 120 feet, and its average 80 feet.

**SPAIN.**—An amnesty has been granted by the government to political offenders, and to persons condemned to light punishment. The Queen has given birth to a son, who is the heir to the throne.

**RUSSIA.**—The government is said to have peremptorily denied the right claimed by Austria and England, under the treaty of Paris, of interdicting Russia from blockading Circassian ports.

The governor of East Siberia has been endeavoring to trace and open a commercial road to China; for the trade with which country and the United States much benefit is anticipated to Siberia. The last official accounts, however, indicate that the Chinese government has not received either the Russian or other foreign embassies, but is rather disposed to cancel all existing treaties with other nations, and to declare war against them if pressed. It is reported to have demanded of Russia the evacuation of the Chinese territory of which that power had taken possession on the banks of the Amoor.

The production of coal in Russia has centupled in the last ten years, though the mining takes place only in the vicinity of iron works. The beds are very rich, 40,000,000 pounds of coal were extracted in 1856 in the government of Peria. A submarine telegraph is to be constructed, uniting Russia and Sweden.

**TURKEY.**—A meeting of the clergy and most influential members of the Greek church, have resolved to offer a petition to the Sultan requesting a greater guarantee for the free exercise of their religion. The Greek subjects of European Turkey are said to be in an agitated state, and becoming more conscious of their power; while in the Asiatic portion of the empire, the hatred of the Mohammedans against the Christians is increasing, and extends even to the Sultau, who is suspected of unfaithfulness to his religion. Hence arises great difficulty in enforcing measures of toleration. The Mohammedans of the East are said to be generally arming themselves, and a general out-break is apprehended.

**INDIA.**—News from Bombay to 11th month 17th. Generals Havelock and Outram had about 1400 effective troops at Lucknow, but were completely surrounded by the rebels, whose numbers were estimated at from 50,000 to 70,000. Gen. Campbell's force was variously stated at from 1500 to 5000; and Gen. Grant, with 5000 more, was near Lucknow awaiting his arrival to attempt the relief of the besieged.

**MEXICO.**—By a sudden and bold movement in the city of Mexico on the 17th ult., the Constitution was overthrown, the Federal Congress and Supreme Court broken up, and Comonfort declared absolute Dictator, with power to call an extraordinary Congress. Vera Cruz and other cities have united with the new order of things, and the people generally are said to have accepted it gladly.

**NICARAGUA.**—Walker has been captured, with 150 of his men, by an expedition from the U. S. frigate Wabash, under the orders of Com. Paulding. Walker has been sent home on parole, and the men placed on board the sloop-of-war Saratoga, to be conveyed to Norfolk. Walker, on arriving at New York, surrendered himself to the U. S. Marshal, and was taken to Washington, where by direction of the Secretary of State, he was released from custody, to await judicial action on his case. The river and lake steamers on the San Juan, which had been taken by Walker, were recaptured and placed in charge of the American Consul. Fort Castillo had been captured by Walker, and was still held at the last accounts, by fifty Americans, who thus had command of the river. Gen. Martinez, who had been elected President of Nicaragua, had sent a force to retake it, and was also preparing for war on Costa Rica.

**DOMESTIC.**—The territorial legislature of Kansas adopted a resolution re-affirming the Topeka constitution as the choice of the people, and the only constitution for the State of Kansas, and directed this resolution sent to the President, Congress and the Governors of all the States for information. It passed a bill for organizing a militia, under the supervision of a board of officers elected by the legislature, the Governor of the territory being a member of the board and commander in chief. This act was vetoed by Gov. Stanton, but repassed over the veto. An act repealing the law by which the Lecompton convention was created, is reported to have been also vetoed and repassed. Provision was made by law for a fair submission of the Lecompton constitution to a popular vote, on the 4th inst., allowing the three forms of voting for the constitution with slavery, for the constitution without slavery, or against the constitution. A law was also passed to punish election frauds. Gov. Deuver has assumed his post, and issued an address to the people, exhorting them to appeal to the ballot box for the settlement of their difficulties. The election of the 21st ult. is reported to have resulted in favor of "the constitution with slavery;" but the returns are necessarily too meagre, as yet, for certainty on this point.

The President's instructions to J. W. Deuver as Secretary and acting-Governor of Kansas, have been communicated to the Senate and published. He is instructed to employ the troops, should the civil power be found insufficient, to protect the elections of the 21st ult. and 26th inst., authorized by the convention, and also to protect the territorial legislature during its sessions, and any election which it may authorize. The letter refers to the reports of an intention to organize a government under the Topeka constitution, and says that "should the attempt be made, and lead to a practical collision with the territorial authorities, the authority of the government must necessarily be maintained;" and that any attempt, from whatever quarter, to interfere by violence with any election authorized either by the convention or the legislature, must be resisted. It is vitally important, it adds, that the people of Kansas, and they only, should have the full determination of the question now before them; while it denies any power of the territorial legislature to interfere with the elections ordered by the convention.

The Secretary of the Treasury has fixed three per cent as the rate of interest for the new Treasury Notes, and will issue \$6,000,000 as speedily as possible, in denominations of \$100, \$500 and \$1,000.

At the last accounts from the Utah expedition, 11th mo. 7th, all the troops were concentrated near Fort Bridger, in comparatively comfortable quarters. Many of their animals were lost on the road, but the grass was then covered with snow enough to prevent its being burnt.

**CONGRESS.**—In the Senate on the 23d ult., the various subjects discussed in the President's Message were referred to the appropriate committees. Senators Stuart, of Mich., and Broderick, of Cal., expressed their views on the Kansas question, opposing the Lecompton convention, and coinciding with the course of Senator Douglass. A number of documents relative to Kansas affairs were sent by the President, in response to a resolution of the Senate. The House of Representatives, after considerable debate, adopted a resolution directing the Committee on Territories to inquire into the expediency of immediately excluding J. M. Bernhisel, the delegate from Utah, from his seat in the House, on account of the state of rebellion existing in that territory. Both Houses adjourned to the 4th inst.

*A Tribute to the Memory of the late WILLIAM FORSTER.* By one who honored and loved him.

More than three years have now passed away since my beloved friend, WILLIAM FORSTER, finished his earthly pilgrimage; and (so far as I know) no other memorial of him has yet appeared than the "Testimony" of his Norwich brethren. Whether any more extended memoir of his life and labors may still be looked for, or whether any sufficient materials for such a work exist, I know not; but, however this may be, I wish to do the little that I can to preserve the memory of one whose character and history present so much that is worthy to be remembered. I purpose, therefore, first, to attempt something in the way of a portrait of him, as he appeared to his contemporaries and friends; and afterwards to give a brief sketch of his labors as a Christian minister and philanthropist. I wish it to be understood that I alone am responsible for the contents of these pages, having (with a slight exception) neither sought nor received assistance from any one in preparing them. Though no one can well be more sensible than I myself am of my incompetence to do justice to the character and memory of my departed friend, I yet venture to hope that this little labor of love will meet with the kind acceptance of those who, like myself, knew and honored and loved him.

The name of one whom we have often seen naturally calls up the remembrance of his person; especially when, as in William Forster's case, this was not a common one. A large and somewhat heavy frame, which seemed little fitted for bodily activity; a gait and manner which bespoke one who rather shunned than courted notice; a head and forehead of such capacity as

to suggest the idea of considerable mental power; an eye full of quiet intelligence and quick observation; a mouth indicative of gentleness and kindness; and altogether a countenance in which the pleasing and attractive expression of the features amply compensated for any lack of grace or beauty in their form:—such was the general aspect of his person, and such the idea of his character which any intelligent observer might have drawn from it. One, however, who was accustomed to note that peculiar expression which habitual communion with God imparts to the human countenance, would at once have perceived that it also was present, and in no common degree.

This general impression of his mental and moral character, which even casual opportunities of observing him could scarcely fail to produce, was sure to receive an abundant confirmation from closer observation and nearer intimacy; while other and less obvious features of that character then became apparent. Thus no one could associate much with him, in any of the relations of life, without soon discovering that that correspondence which is so often seen between the physical and mental characteristics of men, was in his case strongly marked. The same natural indisposition to active movement which was so apparent in his bodily frame, was then found to extend also to his mental habits; manifesting itself as a sort of inertia, sometimes much more observable than at others, but commonly existing in such a degree as to require motives and impulses of more than ordinary strength to overcome it. How largely and indeed marvellously they did overcome it, even the imperfect sketch of his life and labors which I shall presently give, will serve to show. When, however, their power was not exerted, its influence was often very apparent, and sometimes very remarkable. Operating in conjunction with his natural shyness and low estimate of himself, it undoubtedly had the effect of lessening his usefulness in the ordinary intercourse of social life, by commonly keeping him back from taking his proper place in it: and thus it was that, though a most interesting and instructive companion in a *tête-à-tête* converse, or when two or three intimate friends were present, he could rarely be induced to take a part, much less a prominent one, in the conversation of larger and

more mixed companies. As might naturally be anticipated, the same causes not only made his spontaneous visits to the houses of his friends much more rare than they might have been with benefit to both parties, but also greatly kept him back from making visits of a more directly pastoral character,—a service for which he was in many respects eminently qualified. Except, however, when some special circumstance called forth his interest or prompted the feeling of duty, I believe he comparatively seldom paid them. Of course some of the causes which thus hindered his personal converse with his friends would also have the effect of obstructing his intercourse with them by writing; and in the latter case no less than in the former, their regret that he ordinarily did so little was in proportion to the evidence which he gave them of his ability to do more.

If, in what I have now been saying, I should seem to any of my readers to have needlessly dwelt upon a constitutional infirmity of my beloved friend, I must beg them to suspend their judgment for a little while. In doing as I have done, I have had an important purpose in view, which will fully appear in the sequel of this sketch.

I alluded just now to the indications of mental power which his capacious head and intelligent countenance presented to a casual observer. These were sure to be abundantly verified whenever that power was seen in exercise. My own impression (shared, I believe, by his friends generally) is, that it was of a high order, and such as might have enabled him, had he not been called to work of a nobler kind, and supposing his energy and application to have equalled his capacity, to distinguish himself in various fields of intellectual pursuit, and even in many departments of human affairs. His clear and comprehensive understanding, combined with a singularly accurate and tenacious memory, necessarily gave him great advantage as a reader; and I believe that, when he was not engaged in any public labor, he read much, and on a considerable variety of subjects, though probably, for the most part, in a somewhat desultory way, and without bringing the powers of his mind to bear steadily on any one in particular.

His faculty of memory, to which I have just alluded, was a remarkable feature of his mental character. Associated, as it was, with much quickness of perception, and with a considerable share of general curiosity, it enabled him to store up a large amount of varied and valuable information, gathered alike from books and observation. The knowledge which his friends had of this, made them the more regret that he could not be induced to take a larger part in social converse. As an illustration of the extent and accuracy of his memory, I may mention the surprisingly distinct remembrance which he

continually manifested of the persons and personal circumstances of those with whom he had come in contact in his widely extended travels as a Christian minister.

The indications which his external aspect afforded of his moral qualities were no less faithful than those which it presented of his intellectual capacities. Modesty and gentleness, refinement and delicacy, kindness and tenderness, were alike manifest in the habitual expression of his countenance, and in his whole demeanor and conduct in life; and though, without doubt, divine grace had not only sanctified, but also greatly developed these qualities, they were evidently, in part, original endowments of his nature. And there was yet another feature of his character (one nearly allied to and often associated with those just mentioned), the existence of which it needed but little observation to discover—I mean that of sensitiveness. It manifested itself in various ways; in a spirit that instinctively revolted at whatever was wanting in reverence for God and sacred things, or contrary to holiness and goodness and truth; in feelings keenly and painfully alive to the sorrows and sufferings and wrongs of others; in a quick sense of what was unkind or unjust to himself; and in a tendency to be unduly affected by anything that might seem to indicate dissatisfaction with him on the part of his friends and brethren.

Passing from his moral to his spiritual and religious character, I come now to speak of him as a disciple and servant of Christ, a member and minister of his church. Here again there was much that was obvious even to a casual observer. Everything about him—his air and manner, the expression of his countenance, his demeanor and language—plainly bespoke one whose spirit was filled with deep and habitual reverence for God, and who walked in near communion with Him. Closer observation and nearer intimacy not only served to show how true this impression was, but further discovered, (what might indeed have been anticipated by one accustomed to note the outward indications of Christian character), that his was a religion of no superficial kind, but one of which depth and spirituality were prominent features. All this, I say, was more or less apparent to the observation of others; but of that which was passing within—of the exercises and conflicts of his spirit; of its joys and sorrows, its hopes and fears, its heights and depths—they could know comparatively little. Something might indeed, at times, be gathered from the strain of his ministry, and something might occasionally be disclosed in converse with intimate friends, or in letters to them; but his was a character of mind little disposed to give utterance to its deeper personal feelings, even had the genius and habits of that religious community in which he received his spiritual training, been more

favorable to such a course than they are well known to be. Unless, then, he has left behind him written records of his inner history and experience, they must still remain, as they were during his life, in great measure unknown. That a mind so constituted as his was, must have been, on the whole, more familiar with depths than with heights, with sorrows than with joys, can scarcely be doubted. Yet neither his ministry nor his conversation suggested the idea that his spiritual character was, in any degree tinctured with gloom or despondency. His full and clear perception of gospel truth, and especially of that great central part of it, the love of God in Christ to our fallen race, was indeed little likely to give admission to such feelings.

In that Christian community with which he was immediately connected, he held a conspicuous place for nearly half a century; and not merely as a minister of the Gospel, but also as one who took an active part in the church's internal affairs. I have indeed heard him say that, if he had any gift for service in the church, he thought it lay chiefly in the latter direction. This was no doubt his real opinion, though I cannot regard it as an unbiassed one: for it must, I conceive, have mainly originated (however unconsciously to himself) in the natural desire to reconcile his own mind and the minds of his friends to that comparatively rare exercise of his ministry, when he was not engaged in some special service, which they so often had to lament. Unquestionably, his intimate acquaintance with the history, character, rules, and usages of the body to which he belonged, together with his clear and sound understanding, and his gentle and affectionate spirit, did greatly fit him to take part in the internal affairs of the church. But I believe few if any of his friends would be prepared to admit that his gifts in this way excelled those which belonged to him as a Christian minister. Nor can it, I think, be questioned that some of the qualities of his mind, especially his extreme delicacy and caution (bordering, as the latter often did, on timidity), little fitted him to take a lead in circumstances of difficulty, and amid the conflict of diverging opinions and tendencies.

I now come to speak of that for which he was most of all remarkable,—his gifts as a minister of Christ. And here the only way in which I could give a full idea of what his fellow-members thought of him, is one which I must not take, lest I should seem to be unsuitably drawing comparisons between one and another of the Lord's servants. Let it then suffice to say that, by the common consent of his brethren, his gifts as a Christian minister were regarded, not merely as great and remarkable, but as of very rare and singular excellence. Yet something more than this general estimate of his ministry will naturally be looked for. It will be asked, What were its most prominent and characteristic

attributes? and, wherein did its strength chiefly lie? I feel, however, wholly incompetent to give anything like a full answer to these questions, and shall therefore content myself with noting a few points, which may serve to convey to those who have rarely or never heard him, some general idea of the character of his ministry. They who were most familiar with it, and most qualified to appreciate it, will most feel how imperfect and inadequate my notices are.

I begin with its chief and most remarkable characteristic,—the manifest depth of its source. The principle adopted by the Society of Friends, that every particular exercise of Christian ministry should arise out of a special impression of duty, and give evidence of a direct influence of the Holy Spirit, seemed to be realized in his case much beyond the ordinary measure. It was evidently no slight or superficial exercise of soul, no light or dubious sense of duty, no equivocal unction from above, that prepared him for and constrained him to the exercise of his gift. And the character of the exercise itself naturally corresponded with the source from which it sprang; the fulness of the stream attesting the depth and richness of the fountain from which it flowed. A ministry having such a character and origin as this, would naturally find its most congenial sphere and freest utterance on occasions when, by reason of the pervading presence and influence of the Holy Spirit in an assembly, there was a preparation to sympathize with and receive it. This idea was once strikingly expressed to me by another minister of eminent gifts and large spiritual capacity, who—speaking of an occasion when a more than common sense of the Divine power and presence had been felt at the first gathering of a large assembly—remarked, (with apparent allusion to Ezekiel's vision of the mystic river) that “the waters were deep enough for William Forster to swim in.”

A scarcely less remarkable characteristic of his ministry than this of depth, though one which, from its very nature, was rather occasionally than habitually manifested, was the greatness of the subjects on which he often dwelt, and the vastness of the field which they embraced. By way of illustration, I may just refer to two of his sermons, which made a deep impression upon my own mind, and, I believe, also upon the minds of many others. One was upon Ezekiel's vision of the water; in expatiating on which, his large soul, evidently endued with power from on high, seemed able in some measure to grasp the mighty subject of the gospel's past and future triumphs, in all its amplitude and blessedness; while in those subdued yet thrilling tones for which his utterance was so remarkable, he specially dwelt on the glorious prediction, “And everything shall live whither the river cometh.” The other was upon the vast theme of man's relation to his Almighty

Creator; in which—first laying the broad foundation of his need of a Saviour in the depth of his own fallen and ruined state, and then rising to the glorious subject of his redemption and restoration by Christ—he ranged, as it were, over the whole field of Divine truth, with a comprehensiveness and power that betokened both natural and spiritual gifts of no common kind. After giving such illustrations as these of the class of subjects on which he was wont to dwell, it is needless for me to say that his ministry was, in the most emphatic sense of the term, *evangelical*; a “ministry of reconciliation;” one in which “the gospel of the grace of God” was fully and earnestly proclaimed, and of which the atoning sacrifice of Christ, and the sinner’s justification through faith in His blood, were frequent and prominent topics.

The power which a ministry having such characteristics as these could not fail to possess, was yet further increased by another for which it was scarcely less remarkable. I allude to that singular pathos, (alike manifesting itself in the tones of his voice, and in the matter and language of his addresses,) which was the natural utterance of a heart in which, as we have seen, love and tenderness and sympathy had so large a place.

(To be continued)

#### A PERVERTED TEXT.

“The prayer of the wicked is an abomination to the Lord,” say some of my neighbors, when I urge them to pray. This they hold forth as their reason for not praying; and they seem to think it is a *good* reason.

But no such thing was meant in the text they try to quote. See Prov. 15: 8; 21: 27. The meaning in it is, that even the best thing the wicked do is sinful. They do it with a wrong disposition, from wrong motives, and therefore there is sin in it. God means to teach that wicked men can do nothing holy, nothing pure from sin, while they remain wicked; and therefore they should turn from their wickedness, and trust in God for mercy and renewing by the Holy Spirit.

God has not said that the wicked should not pray. He teaches abundantly that all men *should* pray; but never once that any man should not pray.

If you have used this text as those neighbors of mine have, do it no more. Your sins are great enough without adding to them by falsifying the words of God. It is bad enough to neglect prayer; but it is still worse to throw the blame of it on God. Will you tell him at the judgment-day, that you neglected to pray because *he* objected to it?

Your duty is to pray, and that daily. But while you retain a wicked heart, there will be nothing holy in your prayers. You must put away that wrong disposition, and yield your

heart to God, before you can be acceptable to him in any of your doings.—*Am. Messenger.*

For Friends' Review.

#### “OWE NO MAN ANY THING.”

Although this injunction of the Apostle may with propriety be construed to mean, “owe no man any thing” to his injury; yet with this liberal construction, if obeyed, it would have saved the financial embarrassments which so many are now laboring under, and been far more productive of that peace of mind, which is so essential to true happiness.

An undue love of the “things which perish with the using” leads to hazardous enterprises, frequently resulting in ruinous consequences; as many during the present crisis have found to their sorrow.

I have been seriously impressed, in reading the lives of our early Friends, in observing the great care manifested by them, in relation to their outward affairs; and the fear they entertained lest any should suffer by them.

So high an estimate did they attach to *frugality* and *honesty*, as to number them among the prominent virtues which adorned their lives, and distinguished them as belonging to a “kingdom not of this world.” Would it not be an evidence that we are still governed by that “wisdom which dwells with prudence,” if the same circumspection was observed by us all who profess “to walk by the same rule, and mind the same things?”

It may not be out of place to mention one or two examples of that “carefulness which was wrought in them,” lest any should suffer by them in the least degree.

Thomas Ellwood says in his journal: “When in the prison of Bidewell, two honest, grave, discreet, and motherly women, whose names were Anne Merriek (afterwards Vivers) and Anne Travers, both widows, provided some hot victuals, meat and broth, *for such as were not able to provide for themselves*; and there wanted not among us a competent number of such guests.

“As for my part, though I had lived as frugally as possibly I could, that I might draw out the thread of my little stock to the utmost length, yet had I by this time reduced it to ten pence, which was all the money I had about me, or any where else at my command. Although the sight and smell of hot food were sufficiently enticing to my empty stomach, yet *considering the terms of the invitation*, I questioned whether I was included in it; and after some reasonings, at length concluded, that while I had ten pence in my pocket I should be an injurious intruder to that mess, which was provided for such as perhaps had not two pence in theirs.”

Our *frugality* may never be put to so severe a test; yet the sequel shows that even He who fed Elijah, and hears the young ravens when they cry, supplied all his wants; for, as he further re-

marks, "I had learned by experience the truth of that saying, 'Natura paucis contenta,' i. e. nature is content with few things."

That devoted servant, John Richardson remarks in his very instructive journal, when about embarking for America in 1700, on a religious visit: "I went through many provings which no man knew of, but I believe, when I am gathered to my place, I shall leave many brethren in mutability, that will read my lines in their own experience.

"I would not have any to misunderstand me; for as to my outward circumstances, I left no debt, neither was I in the way of going backward in the world; for ever after I received the knowledge of the truth, I could not see what pretence I could have to religion if any should lose by me."

Such examples are worthy of our imitation; and if followed with watchfulness unto prayer, there would be no fear of our mistaking parsimony for frugality; or rashness for honesty; but we would understand the *true* import of the whole command, "Owe no man anything, *but to love one another.*" W.

---

PROVERBS.

(Continued from page 229.)

Self-reliance, however, needs to be balanced. "I will be the architect of my own fortunes," you may say, "and my diligence shall be untiring till they are reared." Yes; but remember who has said, "Except the Lord build the house, they labor in vain that build it"—a truth which is recognised in some human proverbs. It is implied in one already quoted, though it is certainly not its chief teaching: "God helps those who help themselves;" "Use the means, and God will give the blessing," puts it more directly. There is another: "Every man for himself, and God for us all." If the former part of this means, that, without helping his fellow, a man is to keep his eye steadily fixed on his own interest only; if he is to be so selfish that he does not care, to quote another proverb, though "His neighbor's house be set on fire, provided his own eggs be roasted," then it is bad, and we can have nothing to do with it; but if it means—and we think it does—that every man is to put forth his own best energies, depending, so far as human endeavor is concerned, mainly on himself, and not on others, and then to ask God's help, both for himself and all else who are fighting the rough battle of life, then it contains both sides of a great and glorious truth: "The blessing of the Lord, it maketh rich, and he addeth no sorrow with it."

Sagacious men have seen that even diligence and industry may be carried too far; and so we are told, "Bend the bow too much, and it will lose its spring." Then there is that good old saw, in which we had such implicit faith when we were children: "All work and no play, makes

Jack a dull boy." Many a man has toiled at the oar, overtaking his strength, and looking forward to some distant time of rest, till the oar has fallen from his palsied or lifeless hand; or else he has so enfeebled himself, so worn out his health and energies, that the power of enjoyment is gone when the time comes for him to retire. Let a man enjoy something at least of what he is getting whilst he is actually getting it. Let him give himself "a leisure hour"—time for recreation, time for mental culture, and, not least, time to do something for God! There are few people to be more pitied than the man who needlessly condemns himself to be a mere business drudge.

It is sometimes a slow process for a man to make his way in the world. The fabric of his fortunes has to be reared stone by stone; and it is not unlikely he may think the stones are very little ones, and very far to fetch. If any one thinks that in these times of strenuous competition, a large business is to be raised and a fortune made in a day, he is much mistaken. He cannot go to bed, like the hero of an eastern tale, and, rising in the morning, find a palace ready to his hand, built for him by some slave of the lamp.

"Rome was not built in a day." "An oak is not felled with one blow." Impatience often ruins everything, just as that of the little child did, who sowed his seeds one day, and went and grubbed them up in the morning to see if they had grown. That line of Longfellow's deserves to pass into a proverb, and perhaps it will: "Learn to labor, and to wait." The worst of all is, when such impatience tempts any one to do what is doubtful and wrong. "Better go about than fall into the ditch." "It's very much nearer, sir, across the fields," said a man once to a youth who was asking his way, "you'll go across three fields, and then down the lane, and then take the second gate, and then three or four fields more, and then you'll come to the road again." It was a pleasant thing to walk on a softer path than that of the hard stony turnpike, and very desirable to save a mile's walking; but he soon got bewildered, could not exactly remember his directions, lost his way, and arrived at his journey's end an hour or two later than if he had taken the road, and sadly bespattered into the bargain. "The highway is never about." Avoid all near cuts to wealth; for God's own finger has written up that notice: "No road this way. Dangerous: Trespassers will be prosecuted to the utmost rigor of the law." "He that hasteth to be rich, hath an evil eye, and considereth not that poverty shall come upon him." (Prov. xxviii. 22.) And the Apostle Paul has said, even more emphatically, "They that will be rich, fall into temptation and a snare, and into many foolish and hurtful lusts, which drown men in destruction and perdition." (1 Tim. vi. 9.)

"They that hold the greatest farms, pay the least rent;" that is, those to whom God has given

most, render the least return. Not always; for we know some rich men who really give in proportion to their wealth. Still, it is a proverb of only too wide an application. It is no uncommon thing for people who give liberally whilst they have comparatively little, to give no more when they have much, and even to lessen their liberality. Solomon says, "Honor the Lord with thy substance, and with the first fruits of all thine increase; so shall thy barns be filled with plenty, and thy presses burst out with new wine." (Prov. iii. 9, 10.) "As God hath prospered him," is the new Testament rule; or, to apply the proverb, "the rent according to the farm."

A great many proverbs relate to debt. "Cut your coat according to your cloth;" "Stretch your legs according to your coverlet;" "Sleep without supper and wake without owing;" "Debt is the worst kind of poverty." It seems a hard thing, sometimes, not to have what others have, and an easy, pleasant thing to take credit for what we want, or think we want. As business is conducted now-a-days, many people can scarcely do without credit; but there are others with fixed incomes who have no need for it at all; and no man should buy that for which he has not a fair prospect of being able to pay in a reasonable time. To say nothing of the dishonesty which debt often involves, and of the inconveniences which it entails on others, it is a miserable thing for the man himself, driving him to many a dishonorable subterfuge, and causing him many a sleepless night. There is an old story of a man bidding very high, at a sale, for the pillows of a man whose extravagance had resulted in ruin. He was asked how it was he was so bent on having them. "They must be capital pillows," he replied, "on which a man could sleep with so much debt." We have seen many a one ruined, both in character and estate, and it has all been through improvident and needless debt. Keep out of debt, for "out of debt, out of danger."

(To be continued.)

#### RAIMENT.

One day, while walking with a friend, Gotthold met a young man dressed in the extreme of fashion, and could not help looking back at him, and exclaiming with a sigh, O Righteous God, what will be the issue of this rage for novelties and vain show? How happens it that the world more and more seeks her honor in disgrace, and her wisdom in folly? I often think of what the Holy Spirit says (Acts xxv. 23) of Queen Bernice, viz., that she came "with great pomp" (*orig.* phantasy). The reigning fashion seems to me to be of the same *phantastic* character. There is hardly any one who now considers it a sin to wear a mask, and conform to the world. But, inquired his companion, can there really be so much sinfulness in the changes which dress

undergoes? In itself, replied Gotthold, dress belongs to the class of things neutral. It makes a man neither better nor worse in the sight of God, it draws upon him neither the Almighty's favor nor frown; still the coat shows what the man and what his heart is. Can you doubt, that many a one, in his gay attire, cut according to the newest style, is an idol to himself? With what pomp and pride he struts along, and fancies that none makes so fine a figure. Though one bow ever so soon or so humbly to him, yet he, on the contrary, scarcely deigns to return the salutation. In this way, the old man, whom we are bound to crucify with his affections and lusts (Gal. v. 24), is warmly clothed, expensively ornamented, and idolatrously revered. The money given to supply the wants of a needy brother, is wastefully squandered, and the word of God in the heart choked among thorns. He whose frame of mind is such, that he is always lying abased at the feet of the Omnipotent—he who does not despise a Christian neighbor, though in poverty and rags—he who is ready at any hour, in obedience to the will of God, to exchange the finest suit for the beggar's cloak, or the deathbed shroud, may, perhaps, without sin, wear costly raiment. But how the children of the world, with all their swelling pomp, shall contrive to enter in at the strait gate which leadeth unto life, must be left for them to try, if they will have it so!

My God! naked came I into this world, and naked must I again depart out of it. While my life lasts, give me the food and raiment convenient for me. If my rank or office requires a better dress, disengage, at least, my heart from it, and make me unconscious of what I wear. My soul desires ornaments of a different kind. *Let the blood and righteousness of Christ be my badge and robe of honor.—Gotthold's Emblems.*

#### NORWEGIAN LEGISLATION.—THE FARMER STATE.

I was indebted to Prof. Munk for a sight of the *Storthing*, or National Legislative Assembly, which is at present in session. The large hall of the University, a semi-circular room, something like our Senate Chamber, has been given up to its use, until an appropriate building shall be erected. The appearance and conduct of the body strikingly reminded me of one of our State Legislatures. The members were plain, practical-looking men, chosen from all classes, and without any distinguishing mark of dress. The Speaker was quite a young man, with a moustache. Schweigaard, the first jurist in Norway, was speaking as we entered. The hall is very badly constructed for sound, and I could not understand the drift of his speech, but was exceedingly struck by the dryness of his manner. The Norwegian Constitution has been in operation forty-three years, and its provisions, in most

respects so just and liberal, have been most thoroughly and satisfactorily tested. The Swedes, and a small conservative party in Norway, would willingly see the powers of the Storthing curtailed a little, but the people now know what they have got, and are further than ever from yielding any part of it. In the house of almost every Norwegian farmer one sees the Constitution, with the facsimile autographs of its signers, framed and conspicuously hung up. The reproach has been made that it is not an original instrument—that it is merely a translation of the Spanish Constitution of 1812, a copy of the French Constitution of 1791, &c.—but it is none the worse for that. Its framers at least had the wisdom to produce the right thing at the right time, and by their resolute and determined attitude to change a subject province into a free and independent State: for, carefully guarded as it is, the union with Sweden is a source of strength and security.

One peculiarity of the Storthing is, that a majority of its members are, and necessarily must be, farmers—whence Norway is sometimes nicknamed the *Farmer State*. Naturally, they take very good care of their own interests, one of their first steps being to abolish all taxes on landed property; but in other respects I cannot learn that their rule is not as equitable as that of most legislative bodies. Mugge, in his recently published *Nordisches Bilderbuch* (Northern Picture-Book) gives an account of a conversation which he had with a Swedish statesman on this subject. The latter was complaining of the stubbornness and ignorance of the Norwegian farmers. Mugge asked:

“The Storthing then consists of a majority of coarse and ignorant people?”

*Statesman*.—“I will not assert that. A certain practical understanding cannot be denied to the most of these farmers, and they often give their sons a good education before giving them the charge of the paternal fields. One therefore finds in the country many accomplished men: how could there be 700 students in Christiania, if there were not many farmers' sons among them?”

*Author*.—“But does this majority of farmers in the Storthing commit absurdities; does it govern the country badly, burden it with debts, or enact unjust laws?”

*Statesman*.—“That cannot exactly be admitted, although this majority naturally gives its own interests the preference and shapes the government accordingly. The State has no debts; on the contrary, its treasury is full, an abundance of silver, its bank-notes in demand, order everywhere, and, as you see, an increase of prosperity, with a flourishing commerce. Here lies a statement before me, according to which, in the last six months alone, more than a hundred vessels have been launched in the different ports.”

*Author*.—“The Farmer-Legislature, then, as I remark, takes care of itself, but it is niggardly and avaricious when its own interests are not concerned?”

*Statesman*.—“It is a peculiar state of affairs. In very many respects this reproach cannot be made against the farmers. If anything is to be done for science, or for so-called utilitarian objects, they are always ready to give money. If a deserving man is to be assisted, if means are wanted for beneficial purposes, Insane Asylums, Hospitals, Schools, and such like institutions, the Council of State are always sure that they will encounter no opposition. On other occasions, however, these lords of the land are as hard and tough as Norwegian pines, and button up their pockets so tight that not a dollar drops out.”

*Author*.—“On what occasions?”

*Statesman*.—“Why you see, (shrugging his shoulders,) these farmers have not the least *comprehension of statesmanship!* As soon as there is any talk of appropriations for increasing the army, or the number of officers, or the pay of foreign ministers, or the salaries of high official persons, or anything of that sort, you can't do anything with them!”

*Author (to himself)*.—“God keep them a long time without a comprehension of statesmanship! If I was a member of the Storthing, I would have as thick a head as the rest of them.”—*Bayard Taylor*.

#### THE SMITHSONIAN AQUARIUM.

A fine “marine aquavivarium,” or “aquarium,” has been prepared at the Smithsonian Institution, where the public can now inspect its curious contents. It is said that an eminent French zoologist, in order to prosecute his studies on the marine animals of the Mediterranean, provided himself with a water-proof dress, glass helmet, and breathing tubes, that he might walk about under water, and mark the habits of the various creatures pursuing their avocations. Any one who will visit the Smithsonian aquarium can enjoy the same opportunities, and become acquainted with the strange animals and plants of the sea without diving to gaze on them.

The aquarium is simply a glass tank erected on a table, and filled with sea water, in which flourish marine plants and animals without any aid, or even changing the water. All that is necessary is to maintain such a balance between the animal and the vegetable existences that the one shall exactly sustain the vital functions of the other. Vegetation, under the stimulus of light, produces pure oxygen, and, as this is the vivifying principle of animal life, it is easy to perceive that the vegetable and the animal respirations counterbalance each other.

The bottom of the Smithsonian aquarium is an imitation of the bottom of the sea, composed

of silver sand, coarse sand and pebbles. In the centre is a mass of rock, giving shelter and concealment to such animals as like concealment, while jotted about are growing specimens of *Fuci* and *Algae*. In this miniature ocean cave are about three hundred specimens of animal vitality, belonging to some thirty-eight species of fishes, Mollusea, Crustacea, and Polypes. Some of these burrow in the sand, or modestly hide among the pebbles; others, like the hermit crabs, (having taken possession of vacant suits of submarine armor,) flourish about belligerently, ready for a fight. Some are perfectly transparent, like animated particles of jelly; others are enshrined in their thick shells. The curious "horse fish" paddles about with his filmy dorsal fin; and a lethargic "clam" protrudes its siphons, enveloped in a shaggy fringe; a solitary "flounder" was evidently annoyed when rooted out, and immediately burrowed himself again in the sand; while two pugnacious crabs fought over an *amphitrite aurocoma*, which had been obligingly sacrificed, that we might see its golden combs.

It is next to impossible, though, to give an idea of the inhabitants of the Smithsonian aquarium, and we advise all who can to pay it a visit. It will repay them for the trouble, and will add to their stock of useful information.—*Washington paper*.

## FRIENDS' REVIEW.

---

PHILADELPHIA, FIRST MONTH 9, 1858.

---

**INCREASE AND RENEWAL OF THE SLAVE-TRADE.**—For several months past the newspapers have contained numerous accounts of active slave-trade operations on the coasts of Africa and Cuba. The French Immigration scheme has also been added to the common slave-trade, producing similar effects in Africa and differing from it in no important feature. A committee of the South Carolina Legislature, submitting a report on that part of the Governor's Message which relates to slavery, strongly urged the policy of re-opening the African slave-trade to the United States, and recommended the adoption of the following resolutions, which, however, did not receive the sanction of the Legislature:

"1. That the chief and almost entire productive industry of the slaveholding States is agriculture, to the successful prosecution of which the labor of negro slaves is indispensably necessary.

2. That there is a great and growing deficiency of agricultural labor in the said States, which the natural increase of the slave population is inadequate to supply.

3. That the effect of prohibiting the importation of slaves from abroad is to limit the expansion of the productive industry of the said States, and of the population which that industry sustains, to the ratio of the natural increase of the slave population.

4. That the importation of slaves from abroad would accelerate the development of the agricultural resources of the slaveholding States, and promote their progress in wealth, population and general improvement, and that such importation, carried on under proper regulations, would not be inconsistent with the principles of justice and humanity.

5. That the effect of an entire suppression of the African slave trade would be to confine the negroes to their own country, and preclude them from such means of relief from the pressure of a redundant population as might be afforded by emigration in the only form in which its benefits can be extended to them."

The concluding resolution argues that "the act of Congress declaring the African slave-trade to be piracy, if it be understood as affirming that it is piracy in the nature of things and in the sense of the Constitution, affirms what is untrue; and inasmuch as it purports and intends to convert into piracy what is not so in the nature of things and in the sense of the Constitution, the said act is unconstitutional, null and void."

In these resolutions and in the increase of the slave trade, we have revealed the grand motive which lies at the bottom of slavery, and is constantly urging to daring and successful efforts to fill up its waste of human life, and to supply the ever increasing demand for slave-labor.

"The chief and almost entire productive industry of the slaveholding States is agriculture;" the principal results of this agriculture are cotton, sugar, molasses, rice and tobacco; the natural increase of the slave population is inadequate to furnish a sufficient amount of labor for the supply of the market with these articles; hence the necessity felt by Cuba of resorting to Africa for slaves, and hence the extensive domestic slave trade between the planting States and those States where slave labor is no longer profitable, and hence, too, the desire in the former to revive the African traffic in human beings.

Can we doubt the truth of the proposition that the vitality of the whole system depends upon the demand for its fruits? that the market for the products of slave-labor makes slavery and the slave-trade? But this bringing the responsibility home to our tables and our wardrobes is apt to cause unpleasant sensations when connected with

a knowledge of the extensive and extraordinary efforts to extend and strengthen the iniquity. "The slave trade," wrote a correspondent of the *Ledger*, a few days since, "is now carried on with redoubled energy on the southwest of Africa and the river Congo. The American slavers, from Boston, New York and New Orleans, prosecute the trade with great energy and success. The slave barracoons are along the coast, on every bay and inlet.

It is prosecuted in American built ships, under American colors, and with American registers. These papers generally protect them from molestation. The American Squadron rarely make a capture, because they are outsailed in a chase by the swift clipper slavers. But the swifter British steam-vessels of war catch them, and make a compromise, by which the slaver, to avoid being turned over to the Americans for punishment, under U. S. law, surrenders his vessel as a prize, and is let off scot free, with all his crew. They can afford to lose four vessels out of five, and still make a large profit."

A letter to the *Ledger* from the U. S. sloop-of-war Dale, on the coast of Africa, dated "Nov. 14th, 1857," says: "The slave trade is very active at present—in fact it seems to be all the rage out here. In the past three months the English cruisers have captured not less than twenty prizes. They, however, have a squadron of eighteen steamers employed on this station, whereas we have but three sloops of war, a force by no means adequate to perform the amount of cruising required."

Greatly would we rejoice in the adoption by our government of some pacific measures, if any such are practicable, for the lessening of this traffic; but its suppression can scarcely be hoped for while slavery exists. In a recent letter to the *London Times*, Dr. Livingstone expresses the opinion that the English cruisers, previous to the Russian war, had diminished the slave trade in certain parts of Africa, but he adds: "It is not to be supposed for a moment, that the present system of coercion will result in a radical cure of the evil."

If the slaveholders in our planting States could no longer resort to the home slave-trade to supply "the great and growing deficiency of agricultural labor in the said States," they would probably sacrifice the Union itself to the importation of slaves from abroad. Cuba annually re-

ceives its tens of thousands of slaves from Africa, in direct contravention of treaties between Spain and Great Britain. The necessities of a profligate court and the claims of commerce overreach honor, justice, mercy and humanity. The same spirit predominates in our Southern States. The *Charleston Courier* lately denounced as a "death bed folly," the noble act of George W. P. Custis, in directing by will that his slaves, between two and three hundred, shall be set free. "It is high time," says that paper, "that Virginia had some law on the statute book against this destruction of property;" "the power should be taken away from men, in their second childhood, of removing so much labor from the industry of the State."

It is gratifying to learn that the influence of the British Government has been exerted to induce the Emperor of the French to put an end to the "immigration slave-trade" now in operation under his sanction. On the 24th of Eleventh month last, a large deputation, embracing delegates from various parts of the kingdom, waited upon the Earl of Clarendon with a memorial from the British and Foreign Anti-Slavery Society, against the French immigration scheme, and was received with marked courtesy. He expressed his concurrence with the memorial, and said that representations had been made to the French Government on the subject, which he believed he could assure the deputation promised to be successful. "He was much pleased," says the *London Friend*, "to have the hands of the Government strengthened by so general an expression of the anti-slavery sentiment of the country, as was conveyed by the attendance of so numerous a deputation from so many parts of England; and he considered it was calculated to produce an excellent result in sustaining the efforts the Government were making to induce that of France to put a stop to a traffic which, though disguised under the name of free immigration, was only a slave-trade of the most unmitigated kind."

WILLIAM FORSTER.—Although several notices of the character and labors of this meek, faithful and devoted Christian minister and philanthropist, have already appeared in this journal since his decease in Tennessee nearly four years ago, yet it is thought a brief sketch of his life, which is written with great clearness and dis-

crimination, and was, recently circulated in England, will be read with peculiar interest and much instruction. A portion is therefore published this week, to be followed by the remainder in two successive numbers.

**DECEASE OF ISABEL CASSON.**—A letter received from England by a friend in this city, mentions the decease of our beloved friend Isabel Casson, on the 26th of 11th month last. Her memory will be precious to many who witnessed her Gospel labors in this country thirteen years since. Rachel Priestman, who was her valued co-laborer during much of that journey, died in Ireland, 16th of 7th month, 1854, having been engaged there in a religious visit.

Through the London and British *Friends* we have an account of the arrival of Grover Kemp and his son, and William Holmes, in the island of Antigua on the 19th of 10th mo. last. Meetings held at Piggott's Village and Parham the following week, were numerously attended by the colored people.

**MARRIED**, the 17th of 9th mo. last, at Friends' Meeting, Richland, Iowa, JAMES T. HUTCHIN, to MARY HADLEY, both of the same meeting.

**DIED**, in Cincinnati, on the 22d of 10th mo., 1857, EDITH JUDKINS, daughter of William and Mary P. Judkins, in the 3d year of her age.

—, in Rush Co., Ind., on the 1st of 12th mo. last, GULIELMA BINFORD, wife of Ashbel Binford, in the 53d year of her age, a member of Walnut Ridge Monthly Meeting; after a protracted illness of more than a year, during which time she suffered much physical pain, yet always maintained a cheerful and quiet spirit. She often spoke of her exit, and as she neared her close was heard to say, "That she felt no fears in passing the dark threshold to the valley of the shadow of death; that her work was done; peace was her portion, and she trusted, nay believed, that a crown was prepared for her in the mansions of purity."

—, in Bartholomew Co., Ind., on the 24th of 11th mo. last, WILLIAM PARKER, an Elder and member of Driftwood Monthly Meeting of Friends, aged nearly 66 years.

#### SOUP HOUSE.

The Society for supplying the poor of the city with Soup commenced its delivery of food on the 31st ult., and will continue open every day except First days.

Donations in meat, flour, rice or vegetables will be gratefully received at the House, No. 28 (new number) Green Street between Spruce and Pine and 4th and 5th streets; and in money, by the Treasurer, Jeremiah Hacker, 4th below

Spruce street, or Thomas Evans, 817 Arch street, or any other of the members.

Jan. 9—2 t.

#### CHURCH-RATE CONTEST AT TOTTENHAM.

No combined and systematic effort to abolish this oppressive impost has ever been made in this parish until the present week. The various bodies of Dissenters have considered themselves impotent to resist what they have hitherto deemed the overwhelming influence of the Church. The Society of Friends, after having vainly remonstrated with the vestry, in association with many of their Dissenting brethren and others who deprecated all compulsory payments for religious purposes, resolved, by a steadfast and temperate opposition to the rate, to test the sentiments of the inhabitants on the question. In conformity with this resolution, the rate-payers were visited at their own houses by deputations from the committee formed to conduct the operations, and pamphlets and hand-bills, affording information on the subject, effectively circulated. The result of the poll, which terminated on Sixth-day evening, the 4th of Ninth Month, was highly satisfactory, and it is believed will finally set the question at rest in this parish. The contest was conducted in a friendly, yet decided manner, and as it was felt that the triumph was that of a principle—not of a party, it is anticipated that the result will be the promotion of harmony and good neighborhood amongst all classes. For the rate, 242; against the rate, 459; majority against the rate, 217.—*English Paper*.

#### For Friends' Review.

#### A NEW TREATY WITH THE SENECA INDIANS AT TONAWANDA.

The readers of the Review may be gratified to learn that the litigation between the "Ogden Land Company," and the Tonawanda Band of Seneca Indians, which has been carried on for the last fifteen years, is likely to be terminated by a treaty which was entered into on the 5th of last month.

To those who are acquainted with most of the circumstances which have induced the litigation referred to, this treaty is particularly gratifying; and philanthropists will rejoice to hear, that a contract has at last been made with a band of Indians, which appears to have for its basis, an acknowledgement that the Red Man has rights which should be respected. That the readers of the Review may appreciate what has been gained for the Indians, I will endeavor, as briefly as possible, to give a synopsis of the principal matters bearing on the recent treaty.

Without tracing the matter further back than 1786, it appears the Commonwealth of Massachusetts ceded to the State of New York, the government, sovereignty and jurisdiction of four

parcels of land, situated in the last named State, amounting in all to 114,869 acres. And New York ceded to Massachusetts, *the right of pre-emption* of the soil from Indians, and all other titles of New York to the same.

By this latter cession, the State of Massachusetts only in fact acquired the *right to purchase, to the exclusion of all others, when the Indians should conclude to sell their lands.*

Subsequently Thomas L. Ogden and Joseph Fellows acquired from the State of Massachusetts its right to purchase the soil of the Indians.

In the year 1830, an act was passed by the General Government, providing "for an exchange of lands with the Indians residing in any of the States or Territories." We now come to the year 1838, when a treaty was made "with the New York Indians," and so far as the Seneca Tribe were concerned, it was a very unrighteous instrument, and one which a member of the Company expressed, in the latter part of his life, "covered each one of them with a cart load of infamy."

Without entering into a detailed account to show *how* the "Company" obtained the signatures of a majority of chiefs out of three Bands of the Seneca Tribe, which, if the testimony of Indians before our Courts is reliable, were nearly all obtained by bribery or fraud, we find that in this year, the Seneca Indians agreed to sell their lands, 114,869 acres, with their *improvements*, for the sum of 202,000 dollars, (49,920 acres of the above lie adjacent to the city of Buffalo.) The Indians agreed that the United States should receive the money from the "Company," and they, the Indians, were to receive 320 acres of land in the now Territory of Kansas, for each soul of their Tribe. Upon the "*sober second thought*" of the Indians, they became *decided* they would not willingly submit to its terms. For divers reasons, this treaty was never carried into effect. But on the 20th of 5th mo., 1842, another treaty was entered into, by the terms of which, the parties, with the exception of the Tonawandas, agreed to a "compromise," viz :

The Indians will give up the two Reservations of Buffalo and Tonawanda, (the latter situated in the county of Genessee,) amounting together to 62,720 acres of choice land, and receive therefor the two Reservations of Cattaraugus and Alleghany, containing 52,149 acres. That part of the former treaty, however, which granted to each Indian 320 acres of land in the territory west of Missouri, was again stipulated.

Under the above arrangement the Buffalo Band left the land of the graves of Red Jacket and Cornplanter, for their new home in the wilderness of the west. But before two years had elapsed, they saw that if they remained longer where they were, hunger and sickness would soon make an end of their once powerful Band, and most of those who remained alive

to this time, took up their toilsome journey, to return to their brethren in the State of New York. Of this number many died before they reached their former homes. Those of them who reached their former abodes, now reside on the three other Reservations, mostly on the Cattaraugus and Alleghany.

For several years the Tonawandas have been slowly but steadily advancing in the cultivation of the soil, and in general intelligence, and are fast assimilating to the customs of the whites.

Within a few years past, they have erected several very comfortable dwellings, with the conveniences which they observe in the houses of their white neighbors, by whom they are surrounded and with whom they mostly live on terms of friendship.

They have many good minds amongst them, and can point with a feeling of just pride, to their head chief, Ely S. Parker, who, for some years held a very responsible station, as Civil Engineer, in the employ of the State of New York, and now holds a post in the same capacity under the General Government.

All who heard their case argued before the Supreme Court of the United States, a few months since, will recollect seeing this same Indian, and that he was well posted on the points he desired his counsel to press upon the attention of the Court. He was also in attendance with his counsel and a few of his friends, when they waited on the President, a few months since, to make a final appeal to him for protection. And it will not derogate from any one in attendance at this interview, to believe his suggestions were worthy of consideration.

In fifth month last, the President sent a Commissioner, who formally ordered the Indians to leave their Reservation by the following Autumn, or the Government, as then advised, would after that take active measures for their removal. It was after this order that the Indians concluded to make a final appeal to the President for protection. And of his attention to their petition, his sympathy for them, and his determination to do justice in the case, his order for a new treaty is the best evidence.

By former treaties, and under the law providing for an "exchange of lands," the Seneca Nation, and of course, the Tonawandas, became entitled to a large tract of land in Kansas, it being 320 acres for each individual Indian; and any number of them had a right to remove there and take possession of such lands. The share of the Tonawandas would amount to about 208,000 acres. They are also entitled to their share of the sum of 400,000 dollars, set apart for the expense of their removal, and for their support for the first year of their residence in the far West. By the present arrangement, the Tonawandas agree, (all the chiefs signing except one who was "afraid of treaties,") to relinquish all the above rights to the government, which

allows them 256,000 dollars, which is at the rate of about \$1 25 per acre for the lands which the Band could have demanded in Kansas. They also get from the Ogden Company, the "improvement," and certain other monies, due under the treaty of 1842.

With this sum, they purchase of the Ogden Company not less than 6,500 acres of their Reservation, or a larger amount if the Indians choose to purchase, which the Company or its assigns are willing to sell at a price not far from twenty-five dollars per acre. But this quantity will be amply sufficient for the agricultural purposes of the Band, which now numbers about 650 souls, and is all they will make an effort to acquire.

The Company are to execute a deed with the usual covenants; said deed to be held in trust for their sole use and benefit. The balance of the money paid by the United States, not invested in the lands of their Reservation, is to be secured to them in stocks of the United States, or the State of New York; and the income arising therefrom, to be paid as other annuities are now paid them.

It will be seen therefore, that this is a bargain advantageous to both parties, for the government has the 208,000 acres immediately contiguous to Missouri,—saves the expense of removing the Indians thither, and a year's support; and the painful necessity that would have arisen, of a forcible removal.

The great advantage to the Indians in this treaty over others, it will be observed, is, that it *extinguishes the pre-emption right to purchase*, which has been an immense power in the hands of speculators, and has induced aggressions which the illiterate red man has been unable to resist. They also have a deed in fee, under which they will rest assured no one can dispossess them of their lands without their consent.

The Indians, and their many friends in this section, duly appreciate the special interest President Buchanan has taken in this matter; for to him and the Secretary of the Interior, Jacob Thompson, (Commissioner Denver concurring,) mainly belongs the credit of proposing, and of course of ordering, the present treaty to be based on the principle of securing both to the Government and to the Indians their just rights.

In this connexion should John H. Martindale, the principal attorney for the Indians, also be mentioned. He has for the last fifteen years devoted his best powers, in the meridian of life, to defending them, in the numerous suits brought against them, and also to protecting their interest from the aggressions of settlements under the Ogden titles. In all which cases he has been uniformly successful in all the Courts in this State, and in the Supreme Court of the United States.

By the above humane arrangement, if ratified by the Senate, which can scarcely be

doubted, the Tonawandas retain their old homes, to which they are so strongly attached; and a few years will determine whether it is their "manifest destiny" to "dwindle away" before the ameliorating influences of civilization.

*Batavia, 12 mo., 1857.*

W. H. P.

#### EXECUTIVE REPORTS.

##### REPORT OF THE SECRETARY OF THE INTERIOR.

Secretary Thompson's report opens with an exhibit of the operations of the Land Bureau. A historical sketch is given of the methods by which the public domain was originally acquired, and then follows a schedule of the organization of the surveying system. The whole surface of public domain is stated at 1,450,000,000 acres, of which, 57,442,870 acres have never been offered for sale, and 80,000,000 acres were subject to entry at private sale on the 30th September last. The number of acres thus far sold is 363,862,464 acres; leaving undisposed of, 1,086,137,536 acres. Last year, 22,889,461 acres of public lands were surveyed and reported; 5,300,550 acres were sold for cash; 7,381,010 were located with military warrants; and the railroad grants under the act of March, were 5,116,000 acres. The sum received on cash sales was \$4,225,908, a falling off of \$5,322,145, with a corresponding falling off in the location of lands with warrants of more than 20 per cent.

The Bureau of Pensions returns a satisfactory report. Up to June, 1857, a total of \$61,314,620 in money, and large donations of land, had been paid to Revolutionary soldiers or their widows. During the past year, 41,483 warrants for bounty land have been issued, requiring to satisfy them 5,352,160 acres of public land. The number of warrants issued under all the Bounty Land acts of Congress from the Revolutionary War to the present time is 547,260—requiring 60,704,942 acres of land. Frauds upon the Pension Office are numerous, and an extension of the statutory limit of two years is recommended, to remedy this evil. The report states, in detail, the condition of the public buildings at the capital, and then considers the subject of District Attorneys' fees, concluding this branch with a recommendation of an increase of the attorneys' salaries on an equitable basis. The wagon-road works have been commenced on the routes from Fort Kearney to Honey Lake, in California, from El Paso to Fort Yuma, at the mouth of the Gila, and from the Platte River to the Running Water. The Mexican Boundary Commission having concluded its labors, its maps and journals have been turned over to the Department.

The Patent Office reports, that from Jan. 1 to Sept. 30, 1857, 4,095 applications for patents were received, 820 caveats were filed, 2,066 patents were issued, and 2,287 applications were rejected. The receipts of this Bureau for three quarters of the year have been \$161,415; ex-

penditures, \$163,942; excess of expenditures, \$2,526. Of the expenditures, \$27,939 were made up of fees restored to applicants after the examination of their cases. The Secretary censures this practice, and urges the necessity of making the Bureau self-sustaining. The right of appeal to a District Judge is also censured, and a repeal of the law which authorizes the practice is earnestly urged.

The report concludes with a strong endorsement of the utility of the Agricultural Division of the Department.—*Nat. Era.*

#### THE HEDGEHOG.

The hedgehog is the only representative of the *Erinaceadæ* to be found in our latitudes, and his appearance and habits are so entirely different from those of the rest of our Fauna, that he has become surrounded with quite a little group of myths and wonderful stories. Among the ancient Egyptians, and in the Greek and Roman fabulists, we find him the emblem of craft and subtlety. Ælian has much to tell us about his warfare with the foxes, and Aldrorandus devotes many pages to the proverbs and symbolism connected with him. In the rural districts of our own country, he is the subject of many curious superstitions, which cause him to be remorselessly killed wherever he shews himself. His old English name, urchin, was also one of the popular names of the elves, many of whose attributes were believed to resemble his. The fairies sucked cows as they slept, and so did the hedgehog, and, like them also, he took especial delight in pilaging orchards. Pliny indeed informs us that he climbs up the trees, and after shaking off the choicest apples and pears, tumbles himself down upon them, and runs away with his booty sticking upon his back! but this is either one of Pliny's long shots, or the idiosyncrasy of some individual Tuscan, for at any rate it is not the custom of the English species. To hear his cry when one is starting on a journey, is reckoned very unlucky. "The hedgepig thrice hath whined," is one of the dismal omens which herald in the caldron-scene in *Macbeth*; and Prospero's spirits turned into hedgehogs to annoy Caliban. A little animal possessing such very negative means of defence, would seem to be harmless and pitiable; but, according to our rustics, he is the most astute creature in all creation, not excepting even the fox.

The hedgehog usually takes up his residence in woods or wide double hedgerows, where he can hide away beneath the underwood; but he is perhaps fondest of a little thicket of fern and bracken near a running stream. The best time to meet with him is on a summer evening soon after sunset, for he is then just roused from his day-sleep, and walks out to look after food. You may often see him stealthily creeping along a hedge-bottom, rooting with his long snout among the herbage, and every now and then stopping

to crunch, with extra gusto, some delicious *bonne bouche* in the shape of a savory cockroach, or plump earthworm. The moment he sees you, he begins to run; but his awkward legs are not meant for fleetness; and directly he sees there is no chance of escape, he tumbles upon his side, bows his head under his breast, draws in his legs and tail, and in half a second lies at your mercy, a ball of prickles. While in this position, it would be as easy to tear him to pieces, as to pull him open; he resists every effort, and possesses, moreover, a power of elevating and depressing his spines at will, which makes the attempt far from pleasant. So great are the strength and toughness of this covering, that Mr. Bell states he has seen a hedgehog in his possession run towards the precipitous wall of an area, and without a moment's hesitation, throw itself off, contracting at the same instant into a ball, in which condition it reached the ground from a height of twelve or fourteen feet, and after a short interval, it would unfold itself, and run off unhurt. The writer has seen them thrown from nearly three times this height, without any apparent injury.

For his size, the hedgehog is immensely fierce. He is a great gourmand, and will face almost any danger to please his palate. They are often known to enter poultry-houses, and after driving away the hens, devour the eggs. The young of birds which build their nests near the ground, are eaten by them, and they even attack the snake. This latter fact was often doubted, till Professor Buckland put it to the test by shutting up the two animals together in a large box. When first introduced, it was not apparent whether the snake recognised his enemy. It did not dart away, but kept creeping gently around the box while the hedgehog lay rolled up, and did not appear to see the intruder. The professor then laid the hedgehog on the snake, with that part of the ball where the head and tail meet, downwards, and touching it. The snake proceeded to crawl; the hedgehog started, opened slightly, and seeing what was under, gave the snake a hard bite, and instantly rolled itself up again. After lying a minute, it opened a second, and again a third time, repeating the bite; and by the third bite, the back of the snake was broken. This done, the hedgehog stood by the snake's side, and passed its whole body successively through its jaws, cracking and breaking it at intervals of half an inch or more, by which operation the snake was quite finished. The hedgehog then placed itself at the tip of his fallen enemy's tail, and began to eat upwards—as one would eat a radish—slowly, but without intermission, till half of him was devoured, and next morning he ate the remainder. A correspondent of *Notes and Queries* gives another instance of their voracity. He tells us that he once enclosed, in three separate hampers, a hedgehog, two starlings, and a wood-pigeon; the lids of each were securely fastened, and they were left in a garden-

house all night. Next morning the strings of all the hampers were severed, and only a few feathers were left of the birds, the hedgehog being found in the wood-pigeon's hamper. With all his hankering after flesh, however, it is pretty clear, from the make of his mouth and teeth, that nature intended him for a vegetarian. "The manner in which they eat the plantain-roots in my garden," says White of Selborne, "is very curious. With their upper mandible, which is much longer than the lower, they bore under the plant, and so eat the root off upwards, leaving the tuft of leaves untouched." The popular idea, that they suck the cows as they sleep, has been commonly denied by all scientific men; but it still remains an article of the farmers' creed, and they have certainly been found early in the morning in very suspicious vicinity to their udders. In all probability, the notion originated in the fact, that they are attracted to the animal by the smell, and sometimes come in for a share of the milk, which may have been squeezed out during sleep.

There is another peculiarity about the hedgehog which is very little known, but, if properly investigated, seems likely to lead to valuable discoveries. No poison of any kind will act upon its system. Pallas gave one a hundred cantharides, which the animal appeared to relish amazingly; while half of one of these acrid insects given to a dog or cat, would cause the most horrible torment. M. Leny caused one to be bitten several times in the throat and tongue by a viper, but without having the slightest effect; and Mr. Cuthbert Johnson, the well-known agricultural writer, states that prussic acid, arsenic, opium, and corrosive sublimate, have each been tried upon it without producing the slightest indisposition.

The home of the hedgehog is a curious little structure of moss and dried leaves, and is generally constructed with greater skill than that of any other of the nest-making mammalia. Sometimes he builds it under the shade of a thick furze-bush, or oftener still in the little caves hollowed out by the rain—

Under an oak whose antique root peeps out;

and this perhaps is his favorite den, as it affords him the most protection from the foxes and dogs. The care he takes in rendering his dwelling wind-and-rain proof, has given rise to a popular notion that he is able to foresee changes in the weather, and alters the situation of his house accordingly; hence, in many parts of England, a hedgehog's nest is looked upon as a kind of Murphy's *Almanac*, altogether infallible. Bodenheim, in his *Garden of the Muses*, published in 1600, alludes to this idea in the simile:

As hedgehogs doe foresee ensuing stormes,  
So wise men are for fortune still prepared.

Into this hibernaculum, when the nights become chilly, and his food scarce, he betakes himself

for his long winter's sleep; first, however, taking care to roll himself up in such a prodigious quantity of moss and dried leaves, that the severest snows will leave him warm and dry. Unlike the rest of the sleepers, he accumulates no provisions. The only store he takes with him is a goodly layer of fat about the viscera and under the skin, which is slowly absorbed, as the waste of his inactive life requires. With the first warm beams of spring he wakes up lean and hungry; and it is said that in this voracious condition he will attack almost anything, and has even been known to break his fast upon a hen.

The disposition of the hedgehog may be very considerably modified by taming. James Dousa, the celebrated Dutch scholar, had a pet one which followed him about, and evinced the greatest attachment for his person. In London, they are much used to destroy the black beetles which abound in the underground kitchens; and many instances are recorded of their becoming familiar with those who treat them kindly. The writer formerly had one who used to know his name "Spot" very well, and would directly uncoil himself at the sound of his master's voice. He had so far overcome his natural timidity, as to lie before the fire in company with a cat and dog. With the latter, he was on very friendly terms; but the cat and he always regarded each other with mutual aversion. Every now and then, without the slightest provocation, he would suddenly open and bite her leg or tail, and then instantaneously contract himself again with a touch-me-if-you-dare kind of an air, which was vastly amusing. This may have been the mere exuberance of hedgehog spirits, but it was a great deal too much like earnest to make it pleasant for pussy, who, however, never ventured to retaliate, for she had probably found that his prickles were more than a match for her claws. She placed her kittens upon a table, in order that they should be out of his reach; but one day, during her absence, he climbed up by the leg and pushed one of them off, and then rolling himself down after it, was proceeding to drag it away by the neck to his hole under the fire-place, when the mother happened to return. Then ensued a battle-royal. Utterly unmindful of her usual caution, the infuriated parent dashed herself three times against the enemy, and was each time received with fixed bayonets. Never, probably, was there such an expenditure of spitting and fuming; but all to no purpose, for the hedgehog clung to his prey like a ferret. Had not the writer interfered, and caused the hedgehog to drop the kitten, it would probably have been rent in two between the combatants. The cat was much pricked all over her face and shoulders, and the hedgehog had some ugly scratches under his throat. After this affair, they never lay together on the hearth.

The uses to which the hedgehog has been put are numerous. Among the peasantry on the

continent, and in many parts of England, it is used as food to a considerable extent. Hedgehog-dumpling is by no means an uncommon cottage-dinner in Buckinghamshire. The flesh of the young animal is very white, and not unlike rabbit. Among the Romans, the spines were extensively used in carding wool, and several decrees of the senate are extant against the rich wool-staplers, who were in the habit of buying them all up, and thus forestalling the market. In medicine, he was formerly much used. According to Albertus Magnus, the right eye of a hedgehog fried in oil, and kept in a brass vessel, imparts a virtue to the oil, so that when used as an ointment to the eye, it imparts such a wonderful clearness of vision, as to enable a person to see as well by night as by day! The fat is still believed by our country-folks to be very efficacious in deafness, and many a hedgehog falls a martyr to the delusion.

We were about to take leave of our hero without saying a word of his domestic relations. He chooses his mate early in the spring. She usually produces from two to four at a time. They are very pretty little animals, with soft white spines and hanging ears. As they approach maturity, the thorns become harder and darker, and the ears become erect.—*Chambers' Journal*.

*The Poetical Works of John Greenleaf Whittier.*—With a portrait. 2 vols. 18mo. Boston: Ticknor & Fields.

This beautiful, but cheap edition—in fact the first complete edition of Whittier's poems—needs only to be announced to be heartily and generally welcomed. For lyric fervor and intensity he is unexcelled, if equalled, by any poet with whose writings we are familiar. And this leading characteristic is combined with a glow of imagination, a tender and graceful fancy, and certain facile command of nervous English and the machinery of versification, which gratify the taste of the most fastidious critic, as well as the enthusiasm of those who are more affected by the generous sentiments from which the poet derives his inspiration. It would be, however, superfluous to descant minutely on the many beauties which characterize the writings of one so universally appreciated. The reader need only compare the vigorous lyrics entitled "Massachusetts to Virginia," "To Pius IX," "Our State," and "Leggett's Monument," with "Rafael," "Maud Muller," "Ichabod," "Forgiveness," and "Wordsworth," to understand the range and variety of Whittier's genius. The following introductory stanzas to this collection give the key-note of his poetry:

PROEM.

I love the old melodious lays  
Which softly melt the ages through,  
The songs of Spenser's golden days,  
Arcadian Sydney's silver phrase,  
Sprinkling our noon of time with freshest  
morning dew.

Yet vainly in my quiet hours,  
To breathe their marvellous notes I try;  
I feel them, as the leaves and flowers  
In silence feel the dewy showers,  
And drink, with glad, still lips, the blessing of  
the sky.

The rigor of a frozen clime,  
The harshness of an untaught ear,  
The jarring words of one whose rhyme  
Beat often labor's hurried time,  
Or duty's rugged march, through storm and  
strife, are here.

Of mystic beauty, dreamy grace,  
No rounded art the need supplies;  
Unskilled the subtle lines to trace,  
Or softer shades of Nature's face,  
I view her common forms with unannoyed eyes.

Nor mine the seer-like power to show  
The secrets of the heart and mind;  
To drop the plummet line below  
Our common world of joy and woe,  
A more intense despair or brighter hope to find.

Yet here at least an earnest sense  
Of human right and weal is shown;  
A hate of tyranny, intense,  
And hearty in its vehemence,  
As if my brother's pain and sorrow were my own.

O Freedom! if to me belong  
Nor mighty Milton's gift divine,  
Nor Marvell's wit and graceful song,  
Still, with a love as deep and strong  
As theirs, I lay, like them, my best gifts on thy  
shrine!

*N. Y. Evening Post.*

SUMMARY OF NEWS.

FOREIGN INTELLIGENCE.—Liverpool dates to the 19th ult. have been received. In London, the improvement in financial affairs continued. The weekly return of the Bank of England was considered very favorable, showing a further increase of bullion, both that and the reserve now exceeding the amount last spring, when the rate of discount was but 6½ per cent. The demand for discounts at the bank was limited, and a speedy reduction of the rate was anticipated. Some additional failures were announced. The crisis at Hamburg appeared to be partially subsiding. The Burgesses of the city had authorized a new loan, making the whole amount of loans contracted for, about 40,000,000 francs, (nearly \$7,600,000.) The crisis had extended to Smyrna, where it was described as aggravated, and it continued severe in the north of Europe. The Bank of France had reduced its rate of discount to 6 per cent.

ENGLAND.—A memorial, signed by influential persons, has been presented to Lord Palmerston, praying him to make provision for granting suffrage to certain classes, by virtue of their educational acquirements. The royal assent has been given to the Bank Indemnity bill. Parliament has adjourned to the 4th prox. The efforts to launch the Leviathan steamer were resumed on the 16th, but after moving it about three feet, the work was suspended *sine die*; three hydraulic battering rams, a powerful windlass, and the double chains which drag the vessel towards the water, having been burst and broken. It is supposed more hydraulic machines will be required.

FRANCE.—It is stated that instructions have been sent to the French Minister in China to co-operate effectively with Lord Elgin, and the English naval and military commanders.

TURKEY.—The Paris *Patrie* states that the Turkish government is about to bring the question of England's occupation of the island of Perim, at the mouth of the Red Sea, before the representatives of the great powers at Constantinople. Lord Stratford de Redcliffe, the British Minister, has quitted Constantinople, and gone to Vienna.

JAPAN.—The Consul General of the United States

for Japan has concluded a convention with agents of that government, containing the following provisions: The port of Nangasaki is to be opened to American vessels, for repairing damages, and procuring necessary supplies. American citizens may reside permanently at Simoda and Hakodadi, and a vice consul may be appointed for the latter port. The value of American coin is to be ascertained by weighing it with Japanese coin of the same metal, six per cent. being allowed to the Japanese for the expense of recoinage. The consul general states, as the effect of this, that where \$100 in American silver has been paid hitherto, \$34½ will now be paid. The relative value of gold to silver in Japan is 3 1-7 to 1, while in the United States it is 16 to 1. Americans committing offences in Japan, are to be tried by the American Consul General, or vice consul, and punished according to American law; while Japanese offending against Americans shall be tried by the Japanese authorities and laws.

MEXICO.—Great depredations have been committed by the Indians in the northern frontier States. The town of Querctaro is said to have been captured and pillaged by a company of banditti. The country appears to be in a distracted state, and life and property very insecure. The British Charge d'Affaires was recently attacked and robbed near the city of Mexico.

CENTRAL AMERICA.—The engineer corps on the Honduras railway had so far advanced in the work at the last advices, 11th month 25th, as to be able to report that the location of the road would probably be completed by the 1st of next month. Two lines have been surveyed over the summit, giving a maximum grade of sixty-five feet to the mile on the Atlantic, and seventy-four feet to the mile on the Pacific declivity. Col. Stanton, of the British Royal Engineers, had sailed from Panama for the Bay of Fouseca, to verify the survey in that quarter and report to the British government.

DOMESTIC.—Civil war appears to have again broken out in Kansas. Depredations committed on the Free State men in the neighborhood of Fort Scott, under pretence of collecting taxes, led to the organization of a vigilance committee to prevent them; and in an attempt to arrest some of its members, made by a U. S. Deputy Marshal with a posse of Missourians, a conflict took place, in which the Marshal and others were wounded and forced to retreat. A body of U. S. troops were subsequently sent against the free State men; but Gen. Lane, as commander of the territorial militia, appointed at the special session of the legislature, took command of them, enrolled them into the militia, and prepared to resist the troops. The act under which the arrests were attempted, was repealed by the late legislature, over the Governor's veto; but it is now asserted that both the repealing act and the one organizing a militia, failed to become laws, from not having been signed by the presiding officers of both houses. If this be true, the informality was evidently overlooked by the legislature, which elected a full militia board under the law; and the latter body appears to have sanctioned Lane's proceedings. The territorial legislature adjourned on the 17th ult. Gov. Stanton issued a proclamation on the 19th, directing the proper arrangements for the election to be held on the 4th inst., for and against the Lecompton constitution. The free State men generally abstained from taking part in the election on the slavery clause, on the 21st ult. In Johnson County the reported majority for slavery is 2000, Oxford giving 1300 votes. At Leavenworth, where the vote was 238 for slavery to 9 against, several Missourians were arrested for voting, but were released by Judge Lecompte on *habeas corpus*. Gov. Denver is said to have openly declared his approval of the course of Walker and Stanton, and his intention to follow their example.

LATER.—An engagement is reported to have oc-

curred between Lane's party and the U. S. dragoons, in which the latter were repulsed. They retreated, and sent for reinforcements. Gov. Denver ordered three companies of dragoons to proceed to the place. Many of the citizens were hastening to join Lane.

The Texas legislature has passed a bill which *allows* free negroes, who may desire it, to select masters and become slaves.

The Navy Department has officially advised C. W. Field of New York, that the U. S. steamer Niagara will be again furnished to assist in laying the Atlantic telegraph next summer.

The Mormons in California are said to have sold all their lands and property there, and set out for Salt Lake, pursuant to the orders of Brigham Young. It was supposed that within six weeks at least 1000 persons would leave their homes near San Bernardino, where many of them were in comfortable circumstances.

The official returns of the Minnesota State election show that the constitution was adopted almost unanimously. The entire Democratic ticket for State officers was elected. H. M. Rice and J. Shields have been elected U. S. Senators by the legislature.

According to official statistics, the present year, the number of children attending school in California is 30,487, but as the returns are very defective, the number is probably larger. The San Francisco Herald estimates the aggregate number of children in the State at 90,000.

Lieut. Beale, to whose expedition for constructing a military road from Texas to California, the camels recently imported were attached, reports that he has succeeded in locating a good wagon load from San Antonio, Texas, to the Colorado river. He states that the camels have been subjected to trials which no other animal could have endured, yet they reached the Colorado, not only without loss, but in as good condition as when they started. They sometimes carried water for the mules, for a week together, without receiving any themselves; traversed tracts covered with sharp volcanic rocks, without injury to their feet; and ascended and descended, with heavy packs, precipitous places where an unloaded mule could scarcely pass.

A writer in the *Boston Traveller* reports the average temperature of the first 24 days of last month as 38-19 degrees; being six degrees above the average of the same period during 33 years.

Congress resumed its sessions on the 4th inst. Senator Pugh introduced a bill for the admission of Kansas as a State, which he said he offered as a compromise. It provides for the admission of Kansas under the Lecompton Constitution; and requires the slavery section of that constitution to be submitted to a popular vote, on the 7th of 4th month next, the returns to be made to the Governor of the Territory instead of the President of the Convention, and the election to be pursuant to the laws in force in the 11th month last. It nullifies the provisions of the constitution relative to its own amendment and to the public lands.

In the House, the Committee on Foreign Affairs reported a resolution requesting the President to communicate all the information in his possession relative to the seizure of Walker in Nicaragua, with the instructions to naval officers; which was adopted with amendments to include the fitting out of Walker's expedition, and an inquiry whether any treaty has been made for a joint protectorate of the Transit route. A resolution was also passed, asking the President whether the Nicaraguan government has made any complaint of Com. Paulding's action; and one instructing the Committee on Territories to report whether the organic act of Utah ought to be repealed, and Utah attached to an adjoining territory.

yearly in advance, 13 cents per annum in Pennsyl-  
vania, and 26 cents per annum in other States.

## RELIGION AND SCIENCE.

We are taught by history and observation the weakness and folly of predicting or apprehending injury to Christianity from scientific discoveries. Such fears and predictions are not uncommon. On the one hand, the infidel, by a hasty inference, feels confident that the new discoveries will give a deadly blow to what he regards a false system; and he exults in the anticipated discomfiture of the Christian church. Some intelligent Christians also, become alarmed at the threatening aspect of the new views, and tremble for the result. But how vain are all such fears and predictions! It is the fiftieth time in which Christianity has seemed to the sanguine sceptic and timorous believer to be in great peril; and yet not even an outpost has been lost in this guerrilla warfare. Discoveries in astronomy, geology, chemistry and physiology have often looked threatening for a while; but how entirely have they melted away before brighter light and more careful study! Moreover, every new assault upon Christianity seems to develop its inherent strength, and to weaken the power of its adversaries; because, once discomfited, they can never rise again. It will be time for the infidel to begin to hope, when he shall see, what he has not yet seen, a single stone struck from one of the bastions of this massive fortress by his artillery. And strange that any believer should be anxious for the future, when the history of the past shows him that every science, which for a time has been forced into the ranks of the enemy, and made to assume a hostile attitude, has, in the end, turned out to be an efficient ally.

History and observation sustain us in going further than this; they show us that, as a general rule, the more threatening have been the

developments of any science in its earlier periods in respect to Christianity, the more strong and abundant have been its ultimate support and illustration of religion. The introduction of the Copernican system of astronomy seemed, to the divines of that day, utterly irreconcilable to revelation; and they contended against it as if the life of religion were at stake. Nevertheless, the demonstrations of physics triumphed over councils and decrees; but instead of proving the death of religion, what Christian does not rejoice in the rich illustrations and auxiliary support which revelation has derived from astronomy? especially in furnishing to the commentator the true principle of interpreting texts of Scripture that relate to natural phenomena. So, too, chemistry was employed for a time by the exulting sceptic, and to the alarm of the timid believer, in disproving the future conflagration of the earth. Yet not only has this envenomed arrow fallen harmless to the ground, but the science has furnished materials enough for at least one volume as a prize essay, entitled—“Chemistry as exemplifying the Wisdom and Beneficence of God;” and other similar volumes might easily follow. During the early part of the present century, no science excited so much of this false alarm as geology. But already, if I do not mistake public opinion, the tables are well nigh turned, and, save here and there a disconsolate few, the ministers of Christ now find among the religious applications of this science rich illustrations of divine truths; and from the disinterred relics of the deep-bedded strata there come forth a voice in defence of the peculiar doctrines of the Reformation, and a new argument for the divine existence. So that, in fact, this new field of religious literature is already becoming attractive and prolific in publications. To geology, therefore, may be applied the riddle of Samson: *Out of the eater comes forth meat, and out of the strong comes forth sweetness.* \* \*

I have time to derive only one other lesson from history and observation on this subject. They show us how unwise it is to denounce any new discovery, or theory in science, when first broached, as hostile to religion; and especially to take the ground that if the new views are true, the Bible must be false. There is a strong temptation to do this. Men of ardent temperaments, who love the Bible, when anything is ad-

vanced which can be construed into hostility to its statements, feel as we all do when anything is suggested derogatory to the character of a near friend. We rush to the defence without waiting for the dictates of prudence; and thus we may injure instead of assisting our friend. Much more liable are we to injure the Bible. There is no need of such haste. Christianity stands on too firm and broad a base to be overturned by one or a hundred such blows as have hitherto been aimed against it. The true policy is to wait for a time, to see whether we fully understand the new views, and whether they conflict with the letter or the spirit of revelation. Suppose the theologian should take ground which he is compelled afterwards to abandon, and to fall in with the new discovery. With how bad a grace will he come over to the new ground after severely denouncing as infidels those who adopted it! How likely to lose the public respect, and to make sceptics of those who were before only indifferent! How mortifying must it have been to the theologians who, one hundred and fifty years ago, denounced astronomy, to see its discoveries at length introduced into the almanac, and testifying of their bigotry to all classes! Who can doubt that many a man, in despising them, was led to despise the sacred cause which they were appointed to defend? Yet the theologians honestly believed that to admit the earth's annual and diurnal revolution would overthrow the Bible. But how much better to have waited a little before avowing their convictions.

*Hitchcock's Religious Truth.*

*A memorial of New York Monthly Meeting, concerning SARAH C. HAWXHURST.*

In taking a brief review of the life of our dear friend, Sarah C. Hawxhurst, (daughter of Isaac and Rachel Collins, late of New York,) it is instructive to remember her early dedication to the will of her Heavenly Father, and to follow her through a long life of devotion to the spiritual and temporal interests of her fellow beings.

She was an example in diligently and seasonably attending all our religious meetings, and of reverent waiting upon the Lord therein; and was concerned to encourage all to a faithful performance of this important duty.

For many years she acceptably occupied the station of a minister of the Gospel,—being sound in word and doctrine,—and through the conflicts and trials that have been permitted to assail our religious society, she continued firm in the faith and advocacy of those Christian principles which our forefathers in the Truth unflinchingly maintained.

In the year 1826 she was married to our late friend Nathaniel Hawxhurst, which union continued about twenty-one years, when this endear-

ing relationship was terminated by the death of her husband.

Early in life she united with others in the establishment of a school for the gratuitous instruction of the children of the poor, which was the precursor of the extensive public school system now in operation; and earnestly would she plead for the guarded but liberal diffusion of knowledge in our Society, whenever the subject engaged the attention of our meetings for discipline.

Our dear friend was an example of untiring diligence in the distribution of the Holy Scriptures, as well as of Tracts and other publications of a moral and religious tendency. Her faithfulness in this respect was a distinguishing trait in her benevolent exertions for the good of all classes and sects, usually providing herself with a supply when going out to attend to her various engagements, and giving them by the way, or dispensing them to those with whom she might be associated.

Her tender sympathies were ever alive to the cause of suffering humanity, and she devoted much time and personal service to the House of Refuge, and several other charitable institutions of our city. Distrustful of herself, yet firm in adhering to what she believed to be her duty, she desired to "follow peace with all men," and with remarkable simplicity of character filled up her appointed sphere of labor, "not slothful in business, fervent in spirit, serving the Lord."

Associated as she necessarily was in these public enterprises with persons of various religious persuasions, her uncompromising faithfulness in adhering to our testimonies, even in what might be considered by some, minor points, was strikingly apparent, and it is believed gained for her the approbation and respect of her fellow laborers.

The following obituary notice is taken from the minutes of the Colored Orphan Asylum:

"In the decease of their valued friend and coadjutor, S. C. Hawxhurst, the Managers recall with affectionate interest, one that was lovely and of good report.

"It was to her that the subject was first introduced, of attempting to raise means to shelter these neglected children of sorrow, and from her that the first words of encouragement were given to go forward in the work. 'Should it,' said she, 'only terminate in a day school, it will be worth the effort.' She cordially co-operated with the Managers from the establishment of the Asylum, in 1836, until her decease. All were won by her gentleness and engaging sympathy. Her heart overflowed with tenderness to all her fellow-creatures. In the cause of humanity her time and energies were largely devoted, and strikingly brought under the controlling and regulating power of religion, unbiassed by sectarian views; and her humble, consistent, Christian course, was beautifully exemplified in her 'daily

walk with God.' It was the privilege of the Managers to witness in her the ripened fruits of religion, and one that came to the grave in a good old age, 'like as a shock of corn cometh in his season.'"

For some months previous to her decease her bodily powers were much weakened, and she was unable to enjoy that social and religious intercourse with her friends which she so much valued; but we doubt not her solitary moments were oftentimes seasons of spiritual refreshment. While conversing with a friend shortly before the close of life, relative to her decease, she observed that she had no choice, but was ready to depart whenever it should please her Divine Master to call her away.

The day previous to her departure she walked a short distance to see a friend, without unusual fatigue.

Before the next morning the angel of death gently released the redeemed spirit, and her mind being centered on the great High Priest of our profession, Jesus the Mediator, she was ready at the summons. Having fought the good fight, and kept the faith, a comforting assurance accompanies our minds, that she has obtained the crown laid up for all those that love the appearing of our Lord and Saviour Jesus Christ.

Her decease took place on the 23d of Fourth month, 1855, in the eighty-first year of her age.

*A Tribute to the Memory of the late WILLIAM FORSTER.* By one who honored and loved him.

(Continued from page 276.)

It would seem to be impossible, in the nature of things, that one who was endowed with such gifts should have been wholly unconscious of them. Yet so high was his standard of what Christian ministry ought to be, and so deep his personal humility, that he was far more tempted to disparage his labors in the gospel, than to dwell upon them with feelings of complacency. Nor could anything be more remote from his character or practice than a disposition to put himself forward in the exercise of his gifts, when other ministers were present. On the contrary, he often seemed, at such times, but too ready to give place to those who should rather have given place to him. Eminently fitted too, as he was, for service on great occasions and in large assemblies, I think no one could be much with him, without seeing that his inclination led him far more to smaller and humbler spheres of labor. I remember one illustration of this, when we happened to be travelling together, and he had been ministering on a first day of the week in two meetings (though apparently not with much liberty, as if he felt that he was in an ungenial atmosphere)—how willingly he accepted the invitation of an elderly woman, in rather humble circumstances, with whom he had had some previous acquaintance, to spend the evening with

her; and with what liberty and affection he poured out his soul, during a season of worship that followed our simple meal, in addressing his aged hostess and a little adopted child, her only companion.

I alluded just now to a certain kind of timidity, as being one of the features of his character. Yet, in whatever degree this might manifest itself at other times, it certainly appeared to have no place in his public ministry. When he was engaged in his great Master's work, not only all thought about himself, but also all solicitude about the judgment of his hearers, and consequently all fear of man, seemed for the time to be banished from his mind; while all the powers of his soul were evidently concentrated on the one simple and sublime idea of following the guidance of that Divine Spirit, under whose influence he regarded himself as speaking. That he did so regard himself cannot be questioned; yet no one could be more exempt than he was from all disposition to put forward his claims to such an influence, or from any tendency to cherish extravagant ideas respecting the measure in which it was vouchsafed either to himself or to others.

It is almost superfluous to say of one whose character was so marked by modesty and humility, and so free from all tendency to egotism, that he was rarely heard to make any allusion to his own ministerial labors. Nor did he, so far as I had opportunity of observing, show more disposition to speak of those of others. The subject was evidently too sacred in his eyes to be lightly touched, either in the way of commendation or in that of censure; while the tenderness of his nature peculiarly indisposed him to the latter. It will be easily understood that the same cause led him to be specially indulgent towards the young and inexperienced; to deprecate all rough handling and hasty discouragement in their treatment; and to desire that the reality of their gifts and calling should be judged of in a hopeful, rather than in a jealous and distrustful spirit.

When he was engaged in any special service, his ministry was commonly frequent, and for the most part copious; but at other times, and especially when he was at home, it was generally rare, and often so much so as to be a source of great regret to his friends. I cannot say whether he himself was conscious of any blameworthy deficiency in this respect: for though I have sometimes ventured to bring the subject before him, I do not remember his ever giving utterance to such a feeling. Yet that, to say the least, he did at times "withhold more than was meet," was, I believe, the general opinion of his friends. Still, in judging of this matter, we must remember that ministry, so deep in its source and character as his was, could hardly be expected to be at all times very frequent. His silence in large meetings, and when many other ministers were present, which was so often noticed and regretted

by his brethren, was, I have reason to believe, sometimes caused by the singular delicacy of his spiritual perceptions. If (as we have seen) the largeness of his gifts peculiarly fitted him to move in "deep waters," this delicacy made him quickly perceive when the waters were troubled by the mistaken movements of others: and we may easily understand what would be the effect of such a perception upon a nature so sensitive as his. I have a very vivid remembrance of one particular occasion, in referring to which he himself acknowledged to an intimate friend, that his silence was owing to a cause of this kind.

But to whatever extent the infrequency of his ministry, under ordinary circumstances, may be justly ascribed to causes such as these, I must believe that it was far more largely the effect of that constitutional inertia which I have already noted as being so marked a feature of his mental character. It would indeed seem almost impossible that such a cause should have failed to produce some such an effect. As I have before observed, strong impressions of specific duty seemed to be in general necessary to overcome this obstacle; and when these were not felt, it would naturally often tend to keep him back from ministerial labor.

There is one aspect of his religious character to which I have not yet alluded, but which I must not pass by wholly unnoticed. Brought up, as he was, from his earliest years, in the closest connexion with the Society of Friends, and strongly attached to it and its distinctive views and practices throughout the whole subsequent course of his life, it was natural that both his social and religious intercourse should be, in general, very much confined to his fellow members. The chief exception to this was his intimacy with some pious members of the established church, to whom his marriage had brought him into near family relationship, and especially with his brother-in-law, the late Sir T. F. Buxton, to whom he was very strongly attached. But though his personal intercourse with Christians of other denominations was somewhat limited, his acquaintance with their religious literature was by no means small. He took, too, a deep interest in their various missions to the heathen, largely acquainting himself with the history of these efforts; and was, I believe, an active member of the Bible Society, in his own neighborhood. Of his zeal for the circulation of the Scriptures among the benighted inhabitants of other lands, I shall hereafter have occasion to speak. Both his mind and his heart were indeed truly catholic; and, though strongly attached to the particular community to which he belonged, he could both see and rejoice in the tokens of vital religion to be found in others, and was undoubtedly exempt from all disposition to judge those who, in godly sincerity, pursued a different Christian path from his own.

I have thus attempted to give a portrait (though

aware that it must be a very imperfect one) of my beloved friend, describing him such as he appeared to me, and noting the more prominent features of his character as a man, a Christian, and a minister of Christ. It is almost needless for me to add that his demeanor and conduct, in the various relations of private life, corresponded with that character; that, as a husband and father, a relative, friend and master, he exhibited a beautiful example of Christian kindness, tenderness, consideration and sympathy; and that his whole conversation (using the word in its larger meaning) was marked by watchfulness, circumspection and gravity, though without a particle of gloominess or austerity. No one could associate much with him, or share his hospitality, without seeing how truly his personal and domestic habits, as well as the employment of his outward substance, corresponded with his character as a disciple and servant of Christ. He was not indeed rich; but in his manner of using what he had, everything conspired to show that not self-indulgence, but the desire to serve his Master and to do good to his fellow-men, was the ruling principle of his conduct. What he was and did in relation to the poor and needy, the oppressed and down-trodden, will sufficiently appear in the brief sketch which I am about to give of his principal labors as a Christian minister and philanthropist.

Before, however, I enter on this part of my tribute to his memory, (the facts and dates of which will be mainly drawn from the "Testimony" before mentioned,) it is proper that I should say a few words respecting his early spiritual history. The document just referred to tells us that "he was from his childhood sensible of the convictions of the Holy Spirit:" a statement which confirms my own impression, derived from what I have heard him say, that he was one of those whom the Most High is pleased to call to himself in very early life, and to set apart as "from the womb" for his own peculiar service. How truly this was the case may be inferred from the public avowal which he was once induced to make, that, had he been faithful to his own impressions of duty, he believed he should have come forth in the ministry when he was about sixteen years of age. Though the "Testimony" of his Norwich Friends does not specifically mention this, it tells us that his seventeenth year was a very memorable period of his spiritual history; and further records the interesting fact, (specially so in relation to what will presently be seen,) that "a clear and strong sense was then granted to him of that redemption which comes by the Lord Jesus Christ, and of the inestimable value of that sacrifice for sin which he made on the cross."

About three years after this time, being then in his twentieth year, he first opened his mouth in public, as a minister of Christ; and the reality of his calling to that office having been, at the expiration of two more years, solemnly recognized

by his brethren, he forthwith began to travel about in his blessed Master's service. So evident had it now become that this service would be the main business of his future life, that, with the full consent of his father, he gave up all thoughts of pursuing the secular business for which he had been trained. The next ten years were, with little intermission, employed in labors from home; and during that time he travelled over most part of the British Islands, laboring both among his own people and the inhabitants at large. He now entered into the marriage relation with one of a kindred spirit, and, like himself, a devoted follower and servant of Christ. For a brief period he was permitted to enjoy some degree of rest from labor, and to taste the sweets of domestic life: but, ere long, the same constraining love of Christ which had already sent him forth, for so many years, among his own countrymen, impelled him to leave home and all its endearments, (he had now become a father,) and to visit countries beyond the Atlantic Ocean. For upwards of five years he travelled about in North America, proclaiming among the people at large, as well as those of his own community, "the unsearchable riches of Christ." It was now that the clear apprehension of the great doctrine of redemption through the blood of Jesus, which, as we have seen, had been given to him in early life, enabled him to discern and testify against that grievous departure from Christian truth, which, under the specious garb of a high spirituality, had begun to infect a large number of those who bore the name of Friends in that land. What he then witnessed of the pernicious consequences which are ever found to result from low views respecting the inspiration of the Holy Scriptures, had probably no small share in producing that exceeding sensitiveness to everything which seemed to have the least tendency to undermine their authority, which I so often observed in my intercourse with him.

After his return from America, a period of nearly twenty years elapsed before he again quitted his native land; nor was he, during this time, so much occupied in travelling from home, in the work of the ministry, as he had been in the earlier part of his life. He made, however, many journeys, in the service of the gospel, in various parts of Great Britain and Ireland: and when he was not thus engaged, he was often busily occupied with the internal affairs and interests of the church. During the latter years of this period he had become a resident of Norwich; and there the frequent and heavy pressure of poverty and want upon a great manufacturing population, whose employment often failed them, largely called forth that strong feeling for the sorrows and sufferings of his fellow-men which had been from his earliest years a marked feature of his character. Much of his time, at these seasons of wide-spread privation and distress, was occupied in visiting the dwellings of the poor,

and in devising and carrying out plans for their relief, in co-operation with other benevolent persons.

It was, I believe, several years after his removal to Norwich that he engaged in a religious service which remarkably illustrates both the wide range of his solicitude for the eternal well-being of his fellow-men, and the power which his feelings of Christian love and duty could exert in leading him to undertake services from which his nature must have peculiarly shrunk. I allude to an effort which he made, in the metropolis, for the spiritual good of a class of persons who are commonly regarded as hardly within the reach of Christian labor—the performers at the public theatres. I cannot find that much is generally known among his Friends of the circumstances and extent of this engagement; but I have been informed that, before he gave himself up to it, he had passed through very deep exercise of soul; that he obtained interviews with many of these persons; that he was, in almost all cases, kindly received by them; and that, besides speaking to them about their eternal interests, he sometimes put copies of the Holy Scriptures into their hands. The fruits of this labor of love may never be known till the day comes that shall bring all things to light: but we are surely warranted in cherishing the belief that it will then be found not to have been "in vain in the Lord."

We are now to think of him as having reached his sixtieth year, a time of life when men, far more robust than he had ever been, generally feel the desire, if not the need of repose. But this was not to be his allotment; for his Master had much service for him still to do. Many and long were yet to be his journeyings, both by land and by sea; and his last breath was to be drawn far away from his own home and his native country.

The first of his foreign services was a visit (in 1844) to France, chiefly confined to the provinces of Normandy and Brittany, where we are told he had "much spiritual enjoyment and true Christian fellowship with some Protestants, principally of the poorer classes." This was followed, in the next year, by a second journey in the same country, but embracing a somewhat wider field of labor. Not long after his return to England, he again left it, in company with some of his brethren, to pay a second visit to the continent of America. The immediate object of their mission was one for which his sound judgment and loving spirit seemed specially to fit him; being that of endeavoring to heal a breach among his fellow-members in one of the United States. But though his attention was, of course, chiefly directed to this object, the journey also afforded him many opportunities for laboring in the gospel of Christ.

(To be concluded.)

Interest has the security, though not the virtue of a principal. As the world goes, it is the surest side; for men daily leave both relations and religion to follow it.

## VALUE OF THE INSPIRED VOLUME.

How precious also are thy thoughts unto me, O God! how great is the sum of them!—*Bible*.

There are seasons in the life of all who have been taught to love and reverence the Bible, when its sacred truths become increasingly endeared, and more entirely rested on. In infancy and in childhood, was it not to us the Book of books? What stories were like its stories? what pictures like its pictures? Like the great and good Chalmers, many of us can say, "The pictures of Scripture scenes which interested my boyhood still cleave to me, and impart a peculiar tinge and charm to the same representations when brought within my notice." Like him, too, we have felt that, even in infancy, some of the sayings of the Bible have fallen upon our ear, and imparted to it all "the charm which dwells in the cadence of soft and tender words." How we gazed upon our mother's face as she told us of Abraham and Isaac, of Hagar and Ishmael, of beautiful Esther, and gentle Ruth. What images of beauty were traced upon our minds! How clearly and vividly we saw

"the camels' train,  
Winding in patience o'er the desert plain;  
The tent, the palm tree, the reposing flock,  
The gleaming fount, the shadow of the rock,"

with other images of patriarchal life!

We passed from childhood into youth, and "the seed of the Word," which had been planted by careful hands, began to germinate in our hearts. Earth was beautiful to our eyes, but we knew that it must fade. We said, "We are immortal spirits; how shall we secure eternal life?" We turned to the Bible, and there the question was answered: from it went forth,

"A light to shine upon the road  
That leads us to the Lamb."

The voice of Jesus came unto us in words like these: "Come unto me," "Whosoever will may come;" "Jesus Christ came into the world to save sinners;" "I am the way;" "He that spared not his own Son, but delivered him up for us all, shall he not with him freely give us all things?" O blessed words to the seeking soul! more precious than gold or costly stones; finger-marks to heaven; stars amidst the gloom. We trusted, and we were comforted: we believed, and we rejoiced.

A second period comes. A noiseless step, leaving anguish in its train, has entered our doors; and when the shadow of his wing has darkened our household, where shall we find comfort? In the Book that opens the windows of heaven, and shows our beloved ones before "the throne of God and the Lamb," beholding his face, with "his name in their foreheads." Oh, how such words are sought out and dwelt upon then! how every glimpse of the spiritual land is hailed! how we thank God for the Book that tells us of the state of those who have "died in the Lord!"

We turn from the speculations and guesses of theologians then. They may be mistaken: but here is truth—the truth of God, sent to us in his own words, and there can be no deception here. Yet when, with all these consolations, the heart still feels as if it must break with sad and weary longings for the departed, in what words can grief find utterance? We find them in the Psalms, and it is a relief to meet with expressions so exactly suited to our case. Others have suffered also; the pilgrim rejoicing in heaven, endured even as we, and "misery is robbed of its loneliness." And if, in infancy and childhood, and under the first awakening of the mind to the reality of eternity, and amidst sore bereavement, the Bible is so precious, what will it be to us when we stand in the awful attitude, which a modern writer has so solemnly sketched, "with the foot advanced, though the ground on which it is next to rest is quite unseen?" He furnishes the answer in the words of the Holy Book, when he bids us look to the Precursor to show us "the path of life." Yes, the Captain of our salvation has trodden the path before us, and the marks of his footsteps have indented the way. We know that He will come unto us again, and take up his abode with us, when we most require his aid, and amidst nature's weakness we will trust in his word. Our eyes will grow dim, but He will be our "light and salvation;" our Beloved will "look forth at the windows, showing himself through the lattice." And when we shrink at the thought of the dissolution of the body, again there is brightness and strength in the words of Holy Writ, "knowing that He which raised up the Lord Jesus shall raise up us also by Jesus."

## SERMONS WARLIKE AND PACIFIC.

ESTEEMED FRIENDS,—I was well pleased with the remarks in your last number, on "The Indian Mutinies; the Fast Day, and Warlike Sermons." Among the latter, you adverted to that delivered by C. H. Spurgeon at the Crystal Palace. This popular preacher, however, is not *always* warlike in his discourses; as you will, with myself, be pleased to observe, in the following extract from a sermon delivered in the Music Hall, Royal Surrey Gardens, on the 2nd of 8th month last, which a friend has kindly brought under my notice; and I send it for insertion in your columns, believing it will be interesting to many of your readers.

C. H. Spurgeon's text, on this occasion, was, "My soul, wait thou only upon God," (Psalm lxii. 5). After discussing his subject under various heads, he proceeds:—  
"Once again: My soul, wait thou only upon God, for protection in times of danger. A naval officer tells the following singular story concerning

the siege of Copenhagen, under Lord Nelson. An officer in the fleet says, 'I was particularly impressed with an object which I saw three or four days after the terrific bombardment of that place. For several nights before the surrender, the darkness was ushered in with a tremendous roar of guns and mortars, accompanied by the whizzing of those destructive and burning engines of warfare, Congreve's rockets. The dreadful effects were soon visible in the brilliant lights through the city. The blazing houses of the rich, and the burning cottages of the poor, illuminated the heavens; and the wide-spreading flames, reflecting on the water, showed a forest of ships assembled around the city for its destruction. This work of conflagration went on for several nights; but the Danes at length surrendered; and on walking some days after among the ruins, consisting of the cottages of the poor, houses of the rich, manufactories, lofty steeples, and humble meeting-houses, I desisted, amid this barren field of desolation, a solitary house, unharmed; all around it a burnt mass, this alone untouched by the fire, a monument of mercy. 'Whose house is that?' I asked. 'That,' said the interpreter, 'belongs to a Quaker. He would neither fight nor leave his house, but remained in prayer with his family during the whole bombardment.' Surely, thought I, it is well with the righteous, God has been a shield to thee in battle, a wall of fire round about thee, a very present help in time of need.' It might seem to be an invention of mine, only that it happens to be as authentic a piece of history as any that can be found. There is another story told, somewhat similar, of that Danish war. 'Soon after the surrender of Copenhagen to the English, in the year 1807, detachments of soldiers were, for a time, stationed in the surrounding villages. It happened one day that three soldiers, belonging to a Highland regiment, were set to forage among the neighboring farm-houses. They went to several, but found them stripped and deserted. At length they came to a large garden, or orchard, full of apple trees, bending under the weight of fruit. They entered by a gate, and followed a path which brought them to a neat farm-house. Everything without bespoke quietness and security; but as they entered by the front door, the mistress of the house and her children ran screaming out by the back. The interior of the house presented an appearance of order and comfort superior to what might be expected from people in that station, and from the habits of the country. A watch hung by the side of the fire-place, and a neat book-case, well filled, attracted the attention of the elder soldier. He took down a book: it was written in a language unknown to him, but the name of Jesus Christ was legible on every page. At this moment, the master of the house entered by the door through which his wife and children had just fled. One of the soldiers, by threatening signs, demanded pro-

visions: the man stood firm and undaunted, but shook his head. The soldier who held the book approached him, and pointing to the name of Jesus Christ, laid his hand upon his heart, and looked up to heaven. Instantly the farmer grasped his hand, shook it vehemently, and then ran out of the room. He soon returned with his wife and children laden with milk, eggs, bacon, &c., which were freely tendered; and when money was offered in return, it was at first refused; but as two of the soldiers were pious men, they, much to the chagrin of their companion, insisted upon paying for all they received. When taking leave, the pious soldiers intimated to the farmer that it would be well for him to secrete his watch; but by the most significant signs he gave them to understand that he feared no evil, for his trust was in God; and that though his neighbors, on the right hand and on the left, had fled from their habitations, and by foraging parties had lost what they could not remove, not a hair of his head had been injured, nor had he even lost an apple from his trees.' The man knew that 'He that taketh the sword shall perish by the sword;' so he just tried the non-resistant principle; and God, in whom he put implicit confidence, would not let him be injured. It was a remarkable thing that in the massacre of the Protestants in Ireland, a long time ago, there were thousands of Quakers in the country, and only two of them were killed; and those two had not faith in their own principles; one of them ran away and hid himself in a fastness, and the other kept arms in his house; but the others unarmed, walked amidst infuriated soldiers, both Roman Catholics and Protestants, and were never touched, because they were strong in the strength of Israel's God, and put up their sword into its scabbard; knowing that to war against another cannot be right, since Christ has said, 'Resist not evil; if any man smite thee on one cheek, turn to him the other also.' 'Be kind, not only to the thankful, but to the unthankful and to the evil;' 'Forgive your enemies;' 'Bless them that hate you, and pray for them that despitefully use you.' But we are ashamed to do that; we do not like it; we are afraid to trust God; and until we do it we shall not know the majesty of faith, nor prove the power of God for our protection. 'My soul, wait thou only upon God; for my expectation is from him.'"

I am, yours truly,

R. W.

#### THE SIGHT NEVER YET SEEN.

Dr. Miller, a Rector in Birmingham, England, recently addressed a congregation of about 3000 persons, in Leicester, who had been invited by a placard to come in their working dress. In the course of his plain and familiar discourse, he addressed them in nearly these words: "There is a sight in the world I have never seen, and I am sure there is not one among you who ever has

seen it or ever can see it. I have seen many sights, and I am sure all of you must have seen many sights, and yet I tell you there is one sight we have never seen and never can see—a drunkard's happy home."—*Bristol Temperance Herald*.

## FRIENDS' REVIEW.

PHILADELPHIA, FIRST MONTH 16, 1858.

"THE COUNTRY GENTLEMAN," AND THE "AMERICAN AGRICULTURIST."—A large portion of our readers being engaged in agricultural pursuits, and all more or less interested in their success, a brief notice of these periodicals seems appropriate. They come regularly to this office, and are always read with interest and pleasure.

As a weekly, agricultural "Journal for the Farm, the Garden and the Fireside," uncontaminated by tales, the *Country Gentleman*, so far as we know, has no competitor. Luther Tucker & Son, Albany, N. Y., are the editors and proprietors; J. J. Thomas, Union Springs, N. Y., is associate editor. To mail subscribers the price is \$2 per annum, if paid in advance; or \$2 50 if not paid in advance. The same publishers issue *The Cultivator* on the first of each month, price fifty cents a year. It is made up from the *Country Gentleman*, forming an annual volume of about 400 pages.

The *American Agriculturist*, Orange Judd, A. M., editor and proprietor, is a quarto *Monthly* of thirty-two pages, conducted with great care and ability, and devoted to the different departments of soil-culture, field crops, orchard and garden fruits, garden vegetables and flowers, and matters, generally, connected with the occupations, interests and enjoyments of rural life. Terms, *invariably in advance*, one copy one year \$1 00; six copies one year \$5 00; ten or more copies one year eighty cents each. Office No. 139 Water street, New York.

"BACON'S ESSAYS; with Annotations, by Richard Whately, Archbishop of Dublin. 1 vol. 8vo, 556 pp. C. S. Francis & Co., No. 554 Broadway, New York, and for sale by Parry & McMillan, Philadelphia." Price \$2.00.

To guard against the imputation of presumption in making additions to what Bacon has said, the annotator reminds us that in the days of Bacon, an *Essay* meant a slight sketch, to be filled up by the reader; brief hints, designed to

be followed out; thoughts thrown out without much regularity, but sufficient to suggest further inquiries and reflections. It must be admitted that the comments of Dr. Whately add largely to the attraction and interest of the volume; the foot notes, too, in explanation of the numerous obsolete words and phrases used by Bacon, will be found exceedingly valuable and interesting.

The tendency prevailing in the present day to regard with excessive admiration writers of a "mystical and dim, half intelligible kind of affected grandeur," is urged as an important reason for directing especial attention to certain qualities in Bacon's writings. He was a "striking instance of a genius who could think so profoundly, and at the same time so clearly, that an ordinary man understands readily most of his wisest sayings, and, perhaps, thinks them so self-evident as hardly to need mention. But, on re-consideration and repeated meditation, you perceive more and more what extensive and important applications one of his maxims will have, and how often it has been overlooked; and on returning to it again and again, fresh views of its importance will continually open on you. One of his sayings will be like some of the heavenly bodies that are visible to the naked eye, but in which you see continually more and more, the better the telescope you apply to them. The 'dark sayings,' on the contrary, of some admired writers, may be compared to a fog bank at sea, which the navigator at first glance takes for a chain of majestic mountains, but which, when approached closely, or when viewed through a good glass, proves to be a mere mass of unsubstantial vapors."

The progress of events during the two centuries and a half which have elapsed since Bacon wrote, has increased rather than lessened the estimation of his essays. "They treat of subjects," says the *London Quarterly Review*, "which, in his well known phrase, 'come home to men's business and bosoms;'" and the reflections which he offers upon these topics of universal concern are not obvious truisms, nor hackneyed maxims, nor airy speculations, but acute and novel deductions drawn from actual life by a vast and penetrating genius, intimately conversant with the court, the council-table, the parliament, the bar—with all ranks and classes of persons; with the multitudinous forms of human nature and pursuits."

MARRIED, At Friends' Meeting house, Limington, York County, Maine, OLIVER P. ALLEN, to SARAH, daughter of Joshua Cobb, both of Limerick.

—, At Friends Meeting at South China, Maine, on the 24th of 12th mo., 1857, WILLIAM PENN VARNEY to LYDIA G. COOK.

—, On the 23d of the 12th month, 1857, THOMAS WALTHALL, of Dover Monthly Meeting, to MARIA E. DOAN, daughter of William and Betsey Doan, of Center Monthly Meeting, all of Clinton County, Ohio.

DIED, In Wayne County, Indiana, after a protracted illness, which he was enabled to bear with Christian fortitude and patience, on the 29th of the 11th month, 1857, EZEKIEL HAYSLEY, an esteemed elder of Dover Monthly Meeting of Friends, aged nearly 64 years.

While his vital powers were sinking under the fatal disease, it was particularly encouraging to his friends to observe the peaceful serenity of mind with which he appeared to approach his solemn close.

From the commencement of his disease, he was impressed with a belief that it was his last sickness, and during his confinement, he gave much salutary counsel to his children, and uttered many expressions indicating that his mind was centered on that only sure foundation of faith and hope, which alone can give support in the trying hour. Having thus attained a state of peaceful resignation, he quietly departed, leaving his afflicted family and friends comforted with a hope that his end was peace.

—, In Randolph Co., Ind., on the 29th of 10th mo., 1857, DINAH FOUSE, wife of James Fouse, and daughter of Benjamin and Ruth Pickett, in the 45th year of her age.

She bore a lingering illness of many months with Christian patience and resignation. Her end was peace. She was a member of White River Monthly Meeting of Friends.

—, On the 11th of 11th mo., 1857, in Randolph Co., Ind., after a painful illness of many months, TAMAR COX, wife of Simon Cox, and daughter of George and Mary Shugart, in the 57th year of her age. A valuable member of White River Monthly Meeting of Friends.

—, On the 10th of 7th mo. last, in Limington, Me., JEDEDIAH ALLEN, in the eighty-seventh year of his age, a member of Limington Monthly Meeting.

—, On the 11th of 8th month last, in Parsonsfield, York County, Maine, suddenly, CYNTHIA W., wife of John B. Cartland, in the 23th year of her age, a promising member of Limington Monthly Meeting.

—, On the 1st inst., SARAH, wife of Nathan Stanley, in the 51st year of her age, an Elder of Mill Creek Monthly Meeting, Hendricks County, Ind. The departure of this dear friend has left a blank, not only in her family, but in her meeting and neighborhood. She was a regular attender of our religious meetings when her health would admit of it; faithful in the performance of duties assigned her by society, manifesting a religious concern for the advancement of Truth, and frequently encouraged others to a like faithfulness. During her illness she was favored with much composure of mind, often expressing a desire that she might be preserved in patience to the end which she thought was near at hand. Her love for and faith in the Saviour appeared very much to have weaned her from all earthly objects, saying she could now give all up, though she had once thought that such would be almost impossible; and notwithstanding the loss to her surviving friends is great, and the bereavement to her family very afflicting, we are comforted in the belief, that her end was peace.

—, In Clark County, Ohio, on the 2nd inst., after a protracted illness of many months, DEBORAH, wife of

Seth Smith, aged near 57 years, a member of Green Plain Monthly Meeting of Friends.

While we believe this dear friend ended her days in peace, we also feel that her unpresuming worth will have a place in the memory of those with whom she had been associated.

DIED, on the 5th of 12th mo. last, at the residence of his son, WILLIAM HARVEY, an Elder of Springfield Monthly Meeting, Ohio, in the 89th year of his age.

In the latter part of his life he endured much affliction of body, through all of which he often broke forth in praises to the Lord "for his mercy and goodness to him, a poor unworthy creature, even to his last moments."

A short time before his death he was visited by the dear English friends, P. G. & M. N., the comfortable remembrance of which remained with him to the last, often drawing forth his prayers "for their preservation, and for all that were called upon to declare the glad tidings of the gospel;" and that "the glorious kingdom of the dear Redeemer might spread more and more in the earth, to the praise of his ever blessed name," declaring his "love not only to his own children, but to every creature the world over."

He was one of the early settlers, and helped to rear log meeting houses and blaze paths through the almost unbroken wilderness, to direct the way to and from them.

—, Near Liberty, Union County, Indiana, on the 2nd of 10th mo. last, after a protracted illness of several months' duration, which he bore with Christian fortitude and patience, HENRY DAVIS, an esteemed Elder of Salem Monthly Meeting, leaving a large circle of friends and relations to mourn his loss. But they sorrow not as those without hope, having the comfortable assurance that their loss is his eternal gain.

—, In Union County, Indiana, on the 7th of 9th mo. last, DEBORAH PADDACK, widow of Samuel Paddack, in the 74th year of her age, an esteemed member of Salem Monthly Meeting.

—, In the City of Baltimore, Maryland, on the 15th of 12th month last, DOROTHY, relict of the late Gerard T. Hopkins, aged 81 years.

Throughout her long and useful life she was a consistent member of Society, serving in the capacity of Elder for more than 40 years. She was a meek, and humble follower of her Lord and Saviour, a devoted wife and tender mother; and her affectionate and pleasant manner had endeared her to a large circle of relatives and friends. Her last sickness was short, her mind being preserved in a remarkably calm and peaceful state, retaining her faculties to the last; passing away without a sigh or struggle; and we reverently believe her redeemed spirit hath passed through the pearl gates into that celestial city, and joined the innumerable company of all generations, who surround the throne of the Lord God and the Lamb forever.

—, At the residence of her son-in-law, in Fayette County, Ohio, 12th month 23rd, 1857, CATHERINE MOONEY, widow of our late friend James Mooney, in the 93rd year of her age; a member of Fairfield Monthly Meeting.

She moved to Ohio in 1802; was received into membership with Friends from conviction in 1811, and was a consistent and faithful member to the end of her days. Shortly before her decease, she informed her children and friends that her day's work was fully done, and that all was peace.

[The decease of SMITH BATTERY occurred on the 16th of 11th mo., and not in the 12th mo. as would be inferred from the notice published in the Review of the 2nd inst.]

A member of the Society of Friends, now in the third year of the Haverford College Course, wishes a position as Teacher at the close of the present Term on the 27th inst.

Applications addressed to the Editor will reach him.  
1st mo. 9th.—2t

#### HAVERFORD COLLEGE.

The Semi-Annual Examination will begin on Second day the 25th inst., and close on the next Fourth day.

The SUMMER TERM will open on Fourth day the 10th of the Second month, at 9 o'clock, A. M. Students admitted at this term must be present on the morning of the previous day.

Applications, accompanied in all cases by certificates from the last Teacher, of moral standing, and a list of books studied, may be made to the undersigned, Secretary of the Board.

CHARLES YARNALL,  
No. 126 South Twelfth Street.

1st mo. 1858.—3t.

#### WESTERN SOUP SOCIETY.

This Association, located at the corner of George and Seventeenth streets, is now in active operation, supplying the Poor residing within their district with Soup and Bread. During the past winter they distributed 42,368 quarts of Soup and 16,300 loaves of Bread, to 562 families, embracing 854 adults and 1,509 children, at an expense of \$1,868.50, showing conclusively that this method of helping the Poor is one of the most effective, accomplishing more with the same means than in any other way. And as the necessities of the Poor are likely to be greater, owing to the state of the times, we again call upon our friends to aid us in carrying on the object in which we are engaged. Donations may be to sent either of the following Managers:—

MORDECAI L. DAWSON, N. E. corner of Seventh and Walnut streets.

WM. BIDDLE, Franklin Institute Building.

FREDERICK COLLINS, N. W. corner of Tenth and Filbert streets.

GEORGE VAUX, corner of Seventeenth and Cuthbert streets.

SAMUEL L. BAILY, No. 920 Chesnut street.

#### SOUP HOUSE.

The Society for supplying the poor of the city with Soup commenced its delivery of food on the 31st ult., and will continue open every day except First days.

Donations in meat, flour, rice or vegetables will be gratefully received at the House, No. 28 (new number) Green Street between Spruce and Pine and 4th and 5th streets; and in money, by the Treasurer, Jeremiah Hacker, 4th below Spruce street, or Thomas Evans, 817 Arch street, or any other of the members.

#### CHINA.

The following extracts from a letter written by S. W. Bonney, from Macao, China, to pupils in Mt. Holyoke Female Seminary, will give some idea of the religious condition of China:

"There are three religious sects in China: the Boodhist, Confucian and Touists. The Boodhist is an offshoot of Brahminism, and was introduced into China from India, about A. D. 63. Boodhist temples are found in every part of China, in

which are priests and nuns, with shaven heads and clothing peculiar to their order. The Confucians are followers of Confucius, who lived about 550 years before the Christian era. They do not practice as many ceremonies as the Boodhists, but trust in what *they* call good acts and deeds of justice, to be accepted by Heaven. Of the soul of man and a future state of existence, they know, say and care very little, as the founder of the sect taught them. The Touists believe in a certain Power, very undefined, which formed all things. They also set up many idols, which they worship. They worship they know not what. The Chinese ceremonies of worship are, morning and evening, burning three incense sticks at the side of the front door, or in a little shrine in some prominent place in the front room. On the 1st and 15th of each month, red gilt paper and red candles are burned, dishes of meat and vegetables offered to their idols, with many prostrations and bowings. On marriage and funeral occasions the same ceremonies are performed, but on a costlier scale, and accompanied with instrumental music. On other occasions, as going a journey, commencing business, building a house, etc., they have idolatrous ceremonies.

All the unconverted Chinese worship the departed spirits of their ancestors; but I am not aware that each one has a particular deity. They sometimes worship one idol, and sometimes another, as fancy leads them. They worship demons, devils and genii, in great numbers.

There are now one hundred and one Protestant missionaries in China. One hundred and ninety have been sent to China since Dr. Morrison came, in 1807. These one hundred and one missionaries are the agents of seventeen societies: English, European and American.

How long is required to learn the Chinese language? Two years are quite sufficient to learn to speak readily on all common subjects; but a person of superior talents for language, and undivided application, would acquire it in a year. There have been missionaries who began to preach in China within a year after their arrival. Roods, Blodget and Burns are examples. The facilities for learning the language are constantly increasing by the publication of new lexicons, dictionaries and vocabularies, so that the time of learning it is shortening. It requires a much longer time to learn to read Chinese, because of the great number and variety of characters. The New Testament may be mastered in four years.

What are the greatest obstacles in the way of establishing a mission there? Heretofore, the greatest obstacle has been the exclusive policy of the Chinese Government towards all foreigners, especially at Canton. The attachment of the Chinese to their ancient customs is another obstacle. The antiquity and vast population of China have cherished in the heart of the Chinese a self-conceit which is hard to remove. The obstacles to the establishment of missions in those parts of

China that are open to foreign intercourse, are not so great as the obstacles to their progress and success. Our missions have met with more success at Amoy than at any other place.

#### LETTER ON AMERICAN SLAVERY.

To the Editor of the Torquay Directory, (England.)

SIR,—From personal observation and inquiries during repeated visits to the Southern United States, I am able to express the opinion that, in the interesting lecture which Mr. Craft (the fugitive slave from America) has thrice repeated in this place, and is also delivering in other parts of England, he does not exaggerate the evils of that system of bondage from which he has escaped, but rather that he presents a mild and moderate statement respecting them. Indeed, I am fully persuaded that the evils connected with the slave system in the United States have not been overdrawn; nor do I believe it within the power of language to convey a full impression of the dark and fearful realities of American slavery to those who have not witnessed them.

Is the question asked,—how is it that American and even English travellers sometimes report that there are no great evils connected with the slave system in America? I reply, it is probably owing to imperfect information. There are millions of Americans in the Northern States who have never visited the Slave States, and have no personal knowledge of slavery; others, perhaps, have travelled there hastily, and have had no adequate opportunity of becoming acquainted with the actual condition of affairs. Again, it must be remembered that there are many kind slave masters who treat their slaves with kindness, and it is quite possible for a traveller to visit the Slave States conducted by letters from one such family to another, without witnessing the most cruel and revolting features of slavery. If the traveller wishes to obtain a passing glimpse of the true character of the slave system, let him go among the laborers on the great plantations, or to the slave markets in the cities, where he may constantly see families bought and sold as objects of merchandise—affectionate wives, husbands and children sold to different masters and separated forever! Let no one imagine the condition of even those favored slaves who have kind masters, to be a happy one; for they are constantly liable to be sold at, or it may be previous to, the decease of their kind masters, to others who will prove tyrannical.

It is important that the people of this country should be made acquainted, as far as possible, with the actual evils of the American slave system, inasmuch as they are contributing materially to support and extend that system, and to perpetuate all the evils connected with it. Is the question asked, in what manner are the people of Great Britain aiding to support American

slavery? I reply, they are doing so by patronizing the slave masters in purchasing from them the products raised by the slaves. I refer particularly to the article of Cotton. The profit which the slave masters derive from the production of cotton for the English market is one of the chief sources of income and support to the slave system in the United States. Cotton composes four-fifths of the whole exports of the slave states, and an enormous proportion of the amount is shipped to England, or (as statistics prove,) an amount far exceeding that sent to any other foreign country, and even greater than is sent to all the rest of the world besides. Many millions of capital here are profitably invested in the trade, commerce and manufacture of cotton; thousands are enriched by it; and at least hundreds of thousands of the poor here are thus supplied with employment. It is thus perceived how materially the industrial and commercial prosperity of this country depends upon cotton, and, as no less than *“five-sixths of the whole yield of cotton”* is produced by American slaves, how greatly the people of England are indebted to, and benefited by, their labors.

The *Times* of the 30th January last, in referring to this subject, states:—

“We all live by the cotton tree. It is the British heart of oak. Many a baronial hall, many a church, many a guild, cities, navies, and other noble works have been made from cotton wool, and from the sweat of the African who watered it, and plucked the flossy pod, and cleaned it, and packed it in bales. A failure of the crop is to a large part of our people a virtual famine. Should the cultivation of the plant find its limits, that is, should it not increase in equal proportion to the multiplication of the human race and its growing wants, we shall find ourselves more hide-bound, in our means of life, than we are by the narrowness of these isles. We know all this. We know that the thread of our national destiny is cotton.”

The intimate relation existing between the people of England and the slave masters, and their participation in the slave system, are thus referred to in the same article:—

“We know that for all mercantile purposes England is one of the States, and that, in effect, we are partners with the Southern planter: we hold a bill of sale over his goods and chattels, his live and dead stock, and take a lion's share in the profits of slavery. Yet, as a nation, we are staunch abolitionists; we *fête* Mrs. Stowe, cry over her books, and pray for anti-slavery Presidents; we thank God that no slave can exist on British soil; but all this time we are clothing, not only ourselves, but all the world besides, with the very cotton picked and cleaned by ‘Uncle Tom’ and his fellow sufferers. It is our trade. It is the great staple of British industry. We are Mr. ‘Legree’s’ agents for the manufacture and sale of his cotton crop.”

The immense patronage which the people of Great Britain bestow on the slave masters, not only materially sustains the system of slave-holding, but directly increases the labors and augments the sufferings of the slaves, and ever stimulates unkind masters to compel their helpless victims to labor most severely. They know that England will receive and pay them for every extra ounce they can force from their slave's agonising toils. Thus, unconsciously, the people of this country are stimulating and rewarding the cruelty of the slave masters and adding to the miseries of the unfortunate slaves.

Unhappily the patronage which the British public are bestowing upon the slave masters is rapidly increasing: the consumption of cotton, here is computed to have more than doubled within the last fifteen years, and the demand for it is advancing so rapidly that it is estimated that in a few years the entire number of available slaves in the United States will not be sufficient to produce the amount required. Lord Stanley, in referring to this subject at a recent meeting of the Society of Arts, observes:—

“Our dependence on America not only remains but yearly increases. In 1801, 45 per cent. of our entire consumption, (of cotton,) was derived from the United States; in 1826, the ratio rose to 72 per cent., while according to the last returns it has now actually reached 80 per cent. How does this bear upon slavery? At the beginning of the century there were 220,000 slaves in the cotton growing States of America. The number is now 2,000,000; two-thirds of whom are employed in the production of this one article, an enormous proportion of which is shipped to England. The stimulus thus given to the system of slave holding in America is too obvious to need to be stated.”

One direct result is, that it is rapidly enhancing the value of the slaves, and thus augmenting all the difficulties in the way of their emancipation.

The direct effect of all this, is to stimulate the slave masters to endeavor to extend their dominion over Cuba, Mexico, and Central America, and even to re-open, publicly or privately, the African slave trade, to obtain more slaves. It is rapidly increasing the value of the present slave lands, and is therefore at this moment causing them to extend slavery over vast and previously free territories.

Thus the people of this country, by purchasing American slave-grown cotton, not only augment the toils and miseries of the slaves, and nourish the slave system there to its present extent, but they are applying a most effective stimulus to increase and vastly extend the system, and to perpetuate all the evils with which it is connected.

Unquestionably, if the people of this country were generally aware of the enormous evils resulting from their present course, they would not desire to maintain it; especially as there is a

feasible and most advantageous method by which they may avoid doing so. This is to promote the cultivation of cotton by free labor in the British colonies, and other lands, and thus supply themselves with cotton raised by free laborers. By adopting this course various beneficent results would be accomplished. It would effectually arrest the increasing demand for slave grown cotton, which is now directly promoting the extension of slavery. It would render slave labor less remunerative to the masters, depreciate the present rapidly increasing value of the slaves, and thus facilitate their emancipation. The extension of the cultivation of cotton over different countries, would also prove most advantageous to Great Britain. It would remove the recognized serious danger to which the industrial and commercial classes here are at present liable, in consequence of the cotton crop being now confined chiefly to one country, which renders nearly the whole crop alike exposed to the same vicissitudes and chances of failure, or to hostile interruptions of the supply from thence. The promotion of the cultivation of cotton in various countries would also confer great benefits on all those countries, by extending to them British skill, capital, and enterprise, furnishing employment to their poor, and advancing the prosperity of all classes. Dr. Livingston and others mention, among the great advantages which the promotion of the cultivation of cotton would confer on Africa, that it would supply employment to the natives, and their Chiefs would no longer be induced to sell their people into slavery.

In Syria and Palestine, experiments have proved that an excellent quality of cotton may be raised, on the fertile *plains* of those countries, and by promoting its culture there, a special benefit would be conferred on the unemployed and peculiarly destitute people of those lands. The devout and afflicted Jews there are now permitted, and are anxious to cultivate the soil of their fathers; and the experiments recently made there indicate clearly that assisting them to do so will prove the most practicable method of ameliorating their condition, and of restoring their much beloved land to its ancient fruitfulness and beauty.

Various countries possess the soil, climate and laborers requisite to supply England with an abundance of excellent cotton by free labor; but the people of those countries are destitute of a few things essential for this purpose. In India they require capital for the establishment of improved means of irrigation, and for the construction of roads for transportation; and also, in some parts, the removal of certain legislative restrictions which it is in the power of the British government to procure for them. In other countries, as in Syria and Palestine, they require an improved quality of cotton seed, information and suitable machines for separating the seed from the wool, and preparing it for the English

market. They require, however, in these and other lands, merely those things which British skill and capital can furnish them, and in order to increase the supply of free labor cotton here, it is necessary that the people of this country should send to the destitute lands, the few things which are essential there to its production.

It is therefore, desirable that public attention here should be extensively directed to this subject. Commercial men are beginning to regard it with interest; they recognize the practicability of promoting the culture of cotton by free labor in various lands, and those who are most familiar with the matter state that it is scarcely possible to over-estimate the importance to this country of extending the cultivation and increasing the supply of this invaluable article. Already, a few leading commercial men, appreciating the importance of the subject, have recently formed an association at Manchester to promote the growth of cotton by free labor in various parts of the world. Political men are also beginning to take an interest in this question. Without reference to other reasons, the simple consideration that Great Britain is now almost wholly dependent upon a single foreign country for a great necessary staple of her industrial and commercial prosperity, should certainly be sufficient to induce them to assist in extending its cultivation over other countries. There are unquestionably strong political and commercial, as well as benevolent reasons which should cause the promotion of this important and beneficent work. Let then British philanthropy and capital unite, as they have often done before, to seek a common object in the extension of cotton cultivation without the aid of slavery. It is a work, as the *Times* has truly remarked, for both the benevolent and the commercial classes:—

“It is a work for missionaries and millionaires; it has just that combination of physical and spiritual objects that is most consistent with the general order of this world. We shall be able to know the good we are doing by the good we receive; and the annual delivery of so many hundred thousand bales of cotton on our wharves will constitute a more trustworthy report than five hundred pages of twaddling correspondence.”

By engaging in this work the people of Great Britain will directly promote the welfare of their own country, advance the best interests of America, and also confer great benefits on other lands; by one and the same measure maintain and increase prosperity at home, extend employment to the destitute people of the East, and relieve and facilitate the emancipation of the slaves of the West. \* \*

In order to render this work more generally accessible, it has been proposed that associations be formed wherever practicable, to be auxiliary to the organization at Manchester, which will endeavor to execute the most effective measures for promoting the cultivation of cotton by free

labor in different countries. And in view of the important advantages which this work would accomplish for Great Britain and other lands, and the enormous evils that it would at the same time arrest in America, it is sincerely hoped the people of this country will cheerfully make the efforts requisite to carry it to a speedy successful conclusion.—I am, &c.,

C. A. MINER.

Abbotsford, Torquay, June, 1st. 1857.

#### GO FORWARD.

“Speak unto the children of Israel, that they go forward.”  
—EXODUS xiv. 15.

That was a strange and startling command, when first given to Moses and the people. The angry Egyptians were just behind, the high rocks on each side, only the Red Sea before, and no boats ready to cross its waters,—*how* could they “go forward?” Yet it was their plain duty to obey, to make the trial; and when they did so, He to whom nothing is impossible opened a way for their feet, so that they went through “as on dry ground.” And still the command to each one of His people is, Go forward; do not stand still, do not turn aside, do not fall back. Go forward in the path of duty, whatever difficulties seem in the way, and trust to me to help you through. Many, many a time have His children obeyed, often with trembling hearts and weak faith, and without a miracle they have found the promise stand sure, “As thy day is, so shall thy strength be.”

When the soul is in a good state, and the heart warm with love to Jesus, it sounds a cheering, animating word of command, Go forward. The young Christian should gladly hear it, and go joyfully and hopefully forward in his way, looking for help and direction, at every step, to the Captain of his salvation.

“Forward let the people go,  
Israel's God will have it so;  
Though the path be through the sea,  
Israel, what is that to thee?  
He who bids thee pass the waters,  
Will be with his sons and daughters.

Deep and wide the sea appears;  
Israel wonders—Israel fears;  
Yet the word is “forward” still,—  
Israel! 'tis thy Master's will;  
Though no way thou canst discover,  
Not one plank to float thee over.

#### LUXURIES OF A FRUIT GARDEN.

A friend of ours, in whose reliability we have implicit confidence, has a small plat of ground, of which he tells us the following facts:

From a row of currant bushes, about 8 rods long, he and his neighbors gathered over two bushels of currants this year. The currant season, from the first picking to the last, was from June 1st to August 15th, 2½ months.

From a row of gooseberry bushes, 2 rods long, he gathered about a bushel of gooseberries.

From a plat of strawberry vines, 4 rods long and 1 rod wide, he gathered nearly three bushels of strawberries. The strawberry season lasted about three weeks, ending about the middle of July.

Then his raspberries came on, and lasted about three weeks. Of these he had about half a bushel. They stood next to the strawberries in point of delicacy.

He has a number of cherry trees. They yielded well this year. His family and friends used a bushel or so, and the children of the neighborhood fed themselves upon them, without stint, for two weeks.

Soon after the raspberries were gone, his peaches began to ripen. One of the trees ripened its fruit late, and it has lasted till within a few days past; of these he has had two or more bushels.

All along since the first of August, his apples and pears have been ripening, and have furnished an abundant supply for his family, for the cow, and pig, and some to sell or give away besides. He will have a large quantity of excellent winter apples. He has just gathered from two or three grapevines as many bushels of fine grapes. Some of these his wife made into marmalade, and some she has preserved in paper, for use hereafter.—The best, and greater portion of the whole, were eaten as a dessert, or given to children or friends, all of whom enjoyed them much.

These are some of the enjoyments drawn from a small plat of ground during the season just closing. They were at small cost, but they sweetened many a meal, ministered to health, and added to the comfort of many guests.

Why may not nearly every man have as large a plat of ground, and as many comforts? Simply because he is negligent.—*Ohio Farmer.*

There is one other reason, friend Brown.—Many are deterred from planting, because they know the "boys," (thieves,) will steal the best fruit; and many not willing to be called thieves have very loose morals as to the sacredness of this kind of property. However, a good Osage hedge will prove a strong protection, if planted when the trees are, and well cultivated and pruned.—*Country Gentleman.*

#### EVENING HOURS FOR MECHANICS.

What have evening hours done for mechanics who have had only ten hours toil?

One of the best editors the Westminster Review could ever boast, and one of the most brilliant writers of the passing hour, was a cooper in Aberdeen. One of the editors of the London Daily Journal was a baker in Elgin; perhaps the best reporter of the London Times was a weaver in Edinburgh; the editor of the Witness was a stone mason. One of the ablest ministers

in London was a blacksmith in Dundee, and another was a watchmaker in Banff. The late Dr. Milne, of China, was a herd boy in Ryne. The principal of the London Missionary Society's College at Hong Kong was a saddler in Huntley, and one of the best missionaries that ever went to India was a tailor in Keith. The leading machinist on the London and Birmingham Railway, with £700 a year, was a mechanic in Glasgow, and perhaps the very richest iron founder in England was a working man in Morap. Sir James Clark, her Majesty's physician, was a druggist in Banff. Joseph Hume was a sailor first, and then a laborer at the mortar and pestle at Montrose; Mr. McGregor, the member from Glasgow, was a poor boy in Ross shire. James Wilson, the member from Westbury, was a ploughman in Haddington, and Arthlur Anderson, the member for Orkney, earned his bread by the sweat of his brow in the Ultima Thule. These men, however, spent their leisure hours in acquiring useful knowledge. They could not have reached the eminence they did, hanging around hose and engine houses, or wasting hours away in taverns.

#### THE NEST OF THE TARANTULA.

A very curious thing, indeed, is the nest of the Tarantula—the big, hairy and poisonous spider. He first bores a hole into the ground, about five or six inches deep and big enough to admit his body in a resting position. He then plasters it well with clay on the sides, so as to make it smooth and hard. He then makes a trap door at the top, which he fastens with a hinge of silk and gelatine, and fixes it so that it will open and shut at pleasure. The outside is just the color of the ground and purposely made to look rough and unnoticeable. The Tarantula, which the microscope will show to be a most terrible looking monster, armed from head to feet "that no one should him wrong"—a pirate and free booter in his particular sphere in the kingdom of nature—when he desires to enter his subterranean stronghold, or rather hiding place, lifts the trap door with one of his claws, and springs in. Its own weight causes it to drop again instantly, and thus is the hirsute terror of the insect tribes snugly hid away from all possible danger. Nothing can get into where he is.—*Maysville Express, (Cal.)*

#### LOVE US AT HOME.

Ah, yes! we can bear the day's burden and heat,  
The dust and rude jostlings we find in the street,  
And censuring whispers that float till they meet  
The ears they were never intended to greet,

If they love us sincerely at home.

We can bear by the crowd to be hurried along,  
Down-trodden, supplanted, oppressed by the strong;  
We can bear even lasting and unprovoked wrong,  
If our hearts through it all can chant truly the song,

Oh, they love us most dearly at home.

We can bear a wild storm, be it snow, hail or rain;  
Heavy losses, instead of the long-looked-for gain;

Upbraidings and shadows that creep round our name,  
And threaten its brightness to hide or to stain,  
If they love us sincerely at home.

Oh, love us at home! For this treasure we plead.  
With all else, this withheld, we are poor, poor, indeed!  
Take all, but leave this, and with voices agreed  
We will sing with glad hearts, whatever our need,  
"They still love us—they love us at home."

N. Y. Evening Post.

### THE RURAL LIFE.

BY JOHN FISHER MURRAY.

Ye who would serve the rural life,  
Eschew  
Contentions wearisome—life's wear and tear,  
Town-bred ambitions—thoughts of gain or loss  
Of worldly dross;  
All wild unreasonable hopes of thine,  
Straightway resign;  
Satisfied in these meadows to possess,  
Like innocent little children, happiness;  
All debts of hope deferred, or wealth's increase,  
Glad to compound and liquidate for—PEACE!

Ye who would serve the rural life,  
Forbear  
To trust implicitly in man-made laws,  
Nor urge the justice of the justest cause  
Too far.  
Thou, rather, loving-kindness ever strive  
To keep alive.  
Annoyances and trespasses will be,  
Which 'twere as well thou didst not choose to see;  
By gentle bearing prove thy gentle blood—  
Shine, thou, the mirror of good neighborhood.

Ye who would serve the rural life,  
Take care,  
Whate'er thy duty, be that duty done,  
Nor shun it, if thyself thou wouldst not shun.  
Easy—Not thee!  
At ease, and slothful—indolent and free,  
God will not let man be!  
Up, and be doing, then—the wilderness  
Invites thy hand to conquer and to bless;  
Deserts are but the earth at liberty—  
'Twas Chaos when the universe was free!

Ye who would serve the rural life,  
Declare  
Th' eternal truth of nature, and be free  
Of old simplicity. With reverence store  
Unwritten lore.  
Lo! the First Cause, benevolent and great,  
In all we contemplate.  
Nor let seclusion dull the social mind,  
For friends estranged are kin to friends unkind;  
Be sedulous of hospitable cares,  
Angels have thus been cherished unawares!

Ye who would serve the rural life,  
Despair  
Of finding heaven on earth—days void of care,  
Exemption from the miseries of life,  
And unsought strife.  
Thy heaven on earth is but a heaven of clay,  
Passing away.  
Tenant at will of evanescent hours,  
Joys unsubstantial, transitory powers;  
Steward of these lands, and this life of thine,  
Commanded to improve, and to resign!

### SUMMARY OF NEWS.

FOREIGN INTELLIGENCE.—Liverpool advices are to the 26th ult. The financial improvement continued. The Bank of England had reduced its rate of discount from 10 to 8 per cent., and simultaneously with this, repayment was made of the £2,000,000 of over issues. After the reduction of the rate, there was an active demand for money at the bank. The discount houses and joint stock banks had reduced their rates also. Cotton had slightly advanced in price. On the continent, commercial prospects were generally brighter, though the crisis continued severe at Stockholm. The Bank of Prussia had reduced its rate of discount to 6½ per cent.

ENGLAND.—The East India Company has been notified that it is the intention of ministers to introduce into Parliament a bill for bringing India under the direct government of the Queen, abolishing the administration of the Company.

President Buchanan's message was favorably reviewed by most of the London papers. The *Post*, stimulated by its recommendations, advocates the construction of a railroad to the Pacific, through the British possessions.

The London *Times* contains its agitation in favor of importing free laborers into the West Indies.

FRANCE.—A further reduction of the army has been decided on. The French ships of war intended for China were to leave Toulon in the latter part of last month, for Hong Kong, with 500 troops on board.

It was reported (but contradicted by the *Patrie*) that the Emperor, in consequence of the representations of England, had consented to submit the question of exporting Africans to the French colonies, to a conference to be held in London.

SWITZERLAND.—The Swiss Federal Council has officially laid before the authorities of the Canton de Vaud the question of ceding the valley of Dappes to France.

ITALY.—An earthquake was felt throughout the kingdom of Naples, on the 17th ult., its effects being most severe in the towns of Salerno, Potenza and Nola. Numerous buildings were destroyed in various places, and many lives lost. The city of Naples experienced three violent shocks, and the population encamped in the open country for a day. The telegraphs being destroyed, no accounts had been received from Sicily.

TURKEY AND THE PRINCIPALITIES.—The European Commissioners were to assemble on the 26th ult., to prepare their report to the Congress, on the subject of the Principalities. They would then return to their respective countries, and it was supposed the question would be arranged soon after. Considerable agitation was said to prevail in Wallachia, and the Commissioners were divided in their views.

The Turkish government has provided for the establishment of a caravan road from Aleppo to Bassora, over the route which the English desired for a railroad.

PORTUGAL.—The fever at Lisbon was abating at the last accounts, the cases being fewer and milder. It is attributed by some to the filthy and neglected condition of the sewers. Many of the inhabitants had fled from the city, and business was almost paralyzed. The young King remained on the spot, exerting himself to cheer and assist his subjects; and his example had a happy effect.

RUSSIA.—An imperial decree has been promulgated, providing for the establishment of a commission in each of the three governments of Vilno, Kovno and Grodno, to prepare schemes for ameliorating the condition of the peasants, or serfs, preparatory to emancipation. The local commissions are to report to a general one, which will draw up a regulation common

to the three provinces, with variations suited to the circumstances of each. The decree prescribes, as part of the basis of the plan, that while the proprietor retains the right of property over his land, the peasants shall retain the inclosures belonging to their habitations, which they may acquire as freehold property on payment of a redemption price within a fixed time. They are to have also the use of such a quantity of land as is necessary for their subsistence, for which they must compensate the proprietor either by paying rent or by working for him. The instructions from the Minister of the Interior, accompanying this decree, intimate that similar measures may soon be adopted in other provinces. The abolition of serfdom, however, is not to be immediate. The peasants are to continue more or less attached to the land, for a period not exceeding 12 years, after which they will become free; but the proprietor's right to sell or transfer the peasants belonging to his land, to remove them against their will, or to convert them into domestic slaves, is to be immediately abolished. The peasants, under the superintendence of the proprietors, will take part in the communal assemblies and elective tribunals for the administration of justice, though not in the rural police. The decree attributes the proposal for a change in the condition of the serfs, to the proprietors and nobles themselves.

Scientific schools of medicine and of jurisprudence, hitherto wholly wanting in Russia, are to be established throughout the empire. Great exertions are made by the government to have the Asiatic languages taught in the colleges, so as to furnish competent interpreters. A college for the special study of languages was founded in 1851 in Southern Russia, and has upwards of 400 pupils. The river Amoor is navigated by a number of steamers.

INDIA.—Lucknow was relieved by the force under Gen. Campbell, on the 17th of 11th month, after six days of severe fighting. The sick and wounded, the women and children, were sent next day to Cawnpore. Twenty-four inferior members of the royal family of Delhi were executed on the sentence of a military commission. The army of Gen. Campbell was supposed to be sufficient for the entire subjection of Oude, though it would probably require considerable time. The British troops were successful in various quarters, and large reinforcements were arriving.

JAPAN.—The U. S. sloop of war Portsmouth has recently visited the ports of Simoda and Hakodadi, and the commander reports that he was kindly received. The harbor of Simoda is very small, and it offers few inducements to trade; but the bay of Hakodadi is completely land-locked, and capable of sheltering at least 200 vessels, while the coal mines in the neighborhood, and the other resources of the country, render it a desirable resort for whalers and other vessels.

DOMESTIC.—The report of a collision between the U. S. troops and the territorial militia in Kansas, proves to have been incorrect. The Missourians, whose aggressions led to the first conflict, having dispersed on receiving Lane's proclamation, warning them that while peaceful settlers would be protected, Missourians taken in arms would be hung, and the prisoners taken under the "rebellion act" having been released, the militia disbanded before the arrival of the troops, and quiet was restored. The territorial convention of free State men rejected the proposition to vote for State officers under the Lecompton constitution, but a considerable number of the delegates, dissatisfied with this, seceded, organized another convention, and nominated a full ticket, to be voted upon at the election of the 4th inst. The vote on the Constitution, ordered by the legislature, was taken on the same day. Gov. Denver issued a proclamation

on the 26th ult., stating that having been informed from various quarters that serious difficulties were apprehended on that occasion, he had distributed the troops over the territory, to preserve order, and insure a fair opportunity of voting to every one entitled to do so; and warning all persons, not real inhabitants of the territory, that the act of the legislature making fraudulent voting a felony, would be strictly enforced. A dispatch from St. Louis, dated the 12th, says, that at the election a majority of 10,000 was given against the Lecompton Constitution. About half the vote of the territory was cast for State officers, and the free State ticket was probably elected. The returns are yet imperfect.

CONGRESS.—Among the petitions presented to the Senate last week was one from Portsmouth, Ohio, praying for the charter of a National Bank for 30 years, with a capital of \$60,000,000; also one from Canandaigua, N. Y., for the adoption of some practical measure for co-operation of the North with the South in extinguishing slavery, by making compensation to the slave-holders. The Committee on Foreign Relations was instructed to inquire into the expediency of making an appropriation for a Minister to Japan, and for the support of U. S. officials in that country. A message was received from the President in response to the call for information relative to the capture of Walker, together with the documents required. He expresses the opinion that Com. Paulding committed a grave error in capturing Walker's party after they had landed in Nicaragua, but that it was done from pure and patriotic motives, and in the sincere conviction that he was promoting the interests and vindicating the honor of his country; and that Nicaragua, which alone could have the right to complain of the violation of her territory, is not likely to do so, having received benefit instead of injury therefrom. Walker was released, because it was only by the action of the Judiciary that he could be held in custody. A determination is expressed to execute the neutrality laws within the jurisdiction of the government. In the debate on a motion to refer this message to the Committee on Foreign Relations, Senators Davis, Pugh, Toombs and others, censured the action of Com. Paulding as a transgression of his legitimate powers, and opposed the views of the message, while Seward, Pearce of Ind. and Doolittle of Wis., defended the President's course. A resolution was adopted on the 11th, asking the Treasury Department for a report of the amount of revenue collected in each district for each year from 1852 to 1857, the amount expended, and the number of persons employed in the collection; also one instructing the Post Office Committee to inquire into the expediency and best mode of establishing mail lines to Brazil and the South American republics.

In the House of Representatives, warm debates on the neutrality laws have taken place, on a motion by Quitman of Miss. to refer the portion of the President's annual message relating to that subject, to a select committee. Quitman advocated a repeal of those laws. Several Southern members condemned the arrest of Walker, while Sickles and Haskin, of N. Y. and others, defended it. On the 7th, Thayer of Mass., the President of the Kansas Emigration Aid Society, made a speech declaring that organized emigration is the only feasible mode of Americanizing Central America, and that this can be done only by the people of the North, as the population of the South is too sparse to afford a surplus.

The Pennsylvania Legislature commenced its sessions on the 5th inst. Wm. H. Welsh was elected Speaker of the Senate, and A. B. Longaker, of the House. The other usual officers were chosen. The Governor's message was delivered on the 6th.

*A Tribute to the Memory of the late WILLIAM FORSTER.* By one who honored and loved him.

[Concluded from page 293.]

Only a few months of rest and quiet in his peaceful home had followed his return to England in the succeeding year, when he found himself called into a new field of labor, and one from which his sensitive nature must have greatly shrunk. When the terrible famine which visited Ireland in the winter of 1846-7 began its ravages, the Society of Friends, ever forward in works of charity and beneficence, were among the first and most active, both in that country and in England, in exerting themselves to supply the famishing population with food. The warm feelings and practical benevolence of William Forster's character prompted him at once to take an active part in the efforts of his brethren; but, ere long, impelled by a strong sense of duty, he could not be satisfied with doing this in his own land, but resolved personally to visit the scene of misery and death, to ascertain the actual state of things on the spot, and there to devise and carry out measures for its relief. For upwards of four months, in the depth of an inclement winter, and deprived of many of those comforts to which he was accustomed, he traversed the famine-stricken districts of Ireland, visiting the cabins of the famished and dying peasantry, instituting inquiries in all directions into the nature and extent of the calamity, conferring with magistrates, clergymen and other influential persons, and stimulating and encouraging their exertions, not only by his counsel and sympathy, but also by the liberal distribution of those funds which the munificence of his friends in both countries enabled him to dispense. As the compassionate feelings of his heart prompted him to engage in this arduous

work, so his large capacity and sound judgment, aided by the experience which he had acquired at his own home, in no inconsiderable degree fitted him for its performance.

The document which serves as our guide is silent as to his engagements during the next two years. If, as I conclude, this period was, to a considerable extent, one of repose, it was only as a prelude to his entering on that new and arduous field of labor to which the remainder of his days and strength was to be chiefly consecrated, and in which he was to finish his earthly pilgrimage. We are told that "in his youth he was greatly affected by the cruelties inflicted on the slave, and that this early impression deepened with increasing years." His visits to America would naturally have the effect of still further calling forth his sympathies with the oppressed and down-trodden children of Africa; while his family connexion and intimacy with Sir T. F. Buxton could not fail to strengthen his interest on their behalf. After the prayers and labors of British abolitionists had prevailed to free their own country—first, from the guilt and curse of the Slave Trade, and then from that of Slavery—they began earnestly to address themselves to the arduous task of inducing other nations and governments to follow the example of England. This subject took a strong hold of William Forster's mind; and it was, I believe, chiefly at his suggestion, that the "Yearly Meeting" of the Society of Friends in Great Britain, which had often before given its aid in various ways to the cause of abolition, resolved, in 1849, to issue an address to the sovereigns and governments of every part of the world in which the Christian religion is professed, for the purpose of urging upon their attention the flagrant violation of its spirit and precepts which both the Slave Trade and Slavery involve.

The idea itself—that of a small and comparatively insignificant Christian community thus standing forth to plead with the great ones of the earth on behalf of those who could not plead for themselves—was truly a noble one. Nor was the mode in which it was resolved to carry it out less so;—that of two or three private Christian men, whose appearance and habits might well seem but little fitted for the atmosphere of courts and cabinets, undertaking the task of personally presenting the address. On this embassy of

Christian mercy, William Forster, though now far advanced in life, and feeling the infirmities of age fast growing upon him, yet, believing it to be his appointed path of duty, freely offered himself to go; and his brethren gladly accepted the offer. During the ensuing twelve months he was busily engaged in this work, visiting "the capitals of nearly all the northern and central States of Europe, and many other cities and towns; and with but one or two exceptions, he obtained interviews with the reigning sovereigns and other persons in authority, besides having effected a large distribution of the address to those in official stations." The published narrative of this long and laborious journey shows that it extended from Holland and Belgium in the west, to Austria and Bohemia in the east; and from Sweden and Denmark in the north, to Piedmont and Tuscany in the south. A visit to Spain in the following year finished his own share in this work, so far as related to the continent of Europe; though, as we shall presently see, the yet more arduous duty of pleading the cause of the oppressed, in the very scene of their bondage, still awaited him.

Here, however, he was called to make this last and greatest sacrifice to the service of his Master and the good of his fellow-men, a duty of another kind, and one far more congenial to his feelings, was laid upon him. His visit to Turin, in 1850, had brought him into the near vicinity of those secluded valleys of Piedmont, in which the churches of the Vaudois have held their ground, through so many centuries of persecution and slaughter, to taste at length, in our own days, the blessings of religious liberty. This circumstance was no doubt a chief means of drawing forth his Christian sympathies towards them; and the result was that, in the summer of 1852, believing himself called by his Master to this service, he paid them a visit in the character of a Christian minister. A testimonial letter respecting this visit, which was subsequently addressed by some of them to his fellow-members in England, showed that they had highly appreciated his gospel labors. "We cannot," say they, "avoid assuring you that we have been abundantly refreshed, cheered, encouraged, and strengthened by the words and deeds of Christian love of our dear brother William Forster. Our feeling is, that it is certainly the Lord who has brought him amongst us, that his Spirit has kept and strengthened him, has put the thoughts into his heart, and the words upon his lips." Another minister of his own community, who has recently visited these valleys, reports that his name is often mentioned there with grateful veneration, and that both the pastors and their flocks testify to the abiding effects of his ministry. One of the fruits of his visit is likely long to remain, whether his name and connection with it be remembered or not. I allude to the Orphan House at La Tour, the first suggestion of which was

publicly ascribed to him, when the foundation stone was laid a few months since.

The last of his earthly labors now drew nigh. In the following year he freely surrendered himself to the service of which I have already spoken,—that of delivering the brethren's "Address" on the Slave Trade and Slavery, to "the President and others in authority in the United States of America." What this sacrifice must have cost him, none but the Searcher of hearts can fully know; but it may be safely said, that the prospect of bodily fatigue and suffering, however formidable to one so advanced in age and so feeble in health, was the least part of that which he saw before him, and which he yet shrank not from encountering.

It was while he was preparing for this journey, and only a few weeks before he left England, that I received his last letter. Its contents were at the time deeply touching to me; and what so soon afterwards followed made them yet more so. After speaking of those services in the gospel which he had in prospect in America, but only a part of which it was his Master's will that he should live to accomplish, he goes on to say:—"This exercise of faith and obedience has brought me *very* low. I am an old man, [he had now reached his seventieth year,] and have many of the infirmities incident to old age; and often they press heavily upon me. And it goes hard with me, very hard with me, to separate myself from my poor dear wife in her latter days. Through the grace of our Lord Jesus Christ, I am, to a great degree, preserved from a murmuring mind. His love helps me to look forward in hope, and from one time to another to offer up myself, even in willing-heartedness, to his service."

It was not, however, for the purpose of thus giving utterance to his feelings, that he wrote this letter, but for another which was of far deeper interest to himself, and which his friends may well contemplate with delight, as showing how ardent a love for Christ and his truth, and for the eternal salvation of men, burned in his soul to the last. It mainly had reference to some compilations from the Holy Scriptures,—*"The Discourses of our Saviour," "The History of John the Baptist,"* and *"The Life and Labors of the Apostle Peter,"*—which he had already largely circulated on the continent in French and Italian, and which he was desirous to have printed in Spanish, Portuguese, Polish, Armenian, and modern Greek. That this thought of his heart, though it was not permitted to be realized, was an acceptable evening sacrifice to the God whom he served, we cannot doubt; and I would venture to express my own earnest hope, that his brethren of the Society of Friends may regard the fulfilment of his purpose as a sacred legacy of duty, bequeathed to them by one whom they so justly loved and honored.

In the autumn of 1853, accompanied by a be-

oved brother and two attached friends, he for the fifth time crossed the Atlantic ocean. Having landed safely at Boston, he and his companions at once proceeded to the work of their mission; and having first presented the "Address," of which they were the bearers, to the President at Washington, they then travelled through a large number of both the free and slave States, obtaining interviews with the Governors whenever this was practicable; William Forster himself laboring at the same time among his Friends, as he found opportunity, in the gospel of his blessed Master. The opening of the following year found them in the State of Tennessee; and there it pleased the all-wise Disposer of events to bring the labors of his faithful servant to a close. Seized with illness at a lone ferry-house, in the depth of winter, and in a land of slaves; far from his beloved wife and son; destitute of many of the comforts of which he stood so much in need; and only able to obtain occasional and imperfect medical aid;—the outward circumstances in which he was placed were in many respects sad and painful. Yet there was a bright side even to these; for his closely attached brother and devoted friends surrounded his bed, ministering to his wants, and doing all that Christian love and assiduity could do to alleviate his sufferings. But far beyond every outward help and solace was that which he had within, even "the peace of God" in his soul. Oppressed as he was with illness and pain, he could hardly have given much utterance to his thoughts and feelings, even had he wished to do so; but (as he remarked to those about him) it had never been his habit to say much respecting himself. The little that he did say, however, sufficiently indicated what was passing within. Meekly and patiently submitting himself to the Divine will, his heart filled with love to God and man, deeply feeling his own unworthiness, and yet steadfastly relying on that Saviour whom he had so long trusted and served, he quietly fell asleep; his emancipated spirit quitting its earthly tenement to enter on the blessedness of "the dead who die in the Lord," and therein to wait the day of that glorious resurrection, when "this corruptible shall put on incorruption, this mortal immortality, and death shall be for ever swallowed up in victory."

The scene which followed, two days after, when his body was borne to its last resting place, presents many features of touching interest. The difficult passage of the ice-encumbered river; the little band of kindred and friends following his humble bier; the simple meeting-house, in which his voice had so lately been heard; the equally simple burial-place adjoining it; the quiet gathering round the grave; the solemn silence, followed by the utterance of human sorrow, mingled with Christian rejoicing; the lowering of the unadorned coffin; the silent parting look:—as I picture the whole scene to my mind, I feel how

meet were such obsequies for one whose spirit was so lowly; and how fit an emblem may be found in them of the Christian's blessed transition from the toils and conflicts of earth to the rest and peace of heaven.

I have thus given such a sketch as I was able of the character and labors of my beloved friend: but I have yet a few words to say. To some of my readers I may, perhaps, have seemed, in the earlier part of this little memorial, to dwell more than was needful upon what I have described as the constitutional inertia of his mental character. But, as I then intimated, I had reasons for doing as I did, which I will now explain. I knew how generally it had been lamented among his friends and fellow members that his eminent gifts as a minister of Christ were oftentimes so comparatively little exercised; and I was desirous to show how largely this should be ascribed to causes of a constitutional nature, and probably of a physical origin. But I was yet more desirous to let it be seen how great must have been the power of divine grace and of the constraining love of Christ in his soul, that it should have overcome, to so large an extent, a natural infirmity so strong as the one of which I have spoken evidently was. Nor was this by any means the only way—perhaps, indeed, it was not the most remarkable one—in which the power of the supernatural to overcome the natural was seen in his case. Even his bodily infirmities and his consequent need of those comforts which his Christian labors so often obliged him to forego, and still more the inconveniences and sufferings to which these labors continually exposed him, were difficulties in his way of no trifling account, and such as many, even Christian men, are found unwilling to encounter. But these were small obstacles when compared with those which had their origin in his moral nature. When we think of one so shy and retiring (not to say so timid) in his natural character, month after month seeking admission into the audience chambers of princes, and the cabinets of their ministers; and still more, perhaps, when we contemplate the spectacle of one to keenly, not to say morbidly sensitive to human suffering and woe, at one time penetrating, for months together, into the very depths of misery, when famine and death were stalking through the land; and at another deliberately throwing himself (so to speak) among those scenes of oppression and degradation from which his righteous and pitiful soul so deeply revolted;—then, and not till then, shall we be prepared fully to estimate the power of that divine grace which wrought in him, and enabled him to do what he did. If this memorial should have the effect of stirring up any of God's dear children to believe that the same grace can enable them to overcome their own infirmities, of whatever kind they may be, it will not have been written in vain.

Yet a few words more. The last labors of this

devoted servant of Christ were, as we have seen, on behalf of the enslaved sons of Africa; and to their cause he may truly be said to have been a martyr. It was in the land of their bondage that he drew his last breath; and there his ashes repose, as if in silent testimony against those iniquities, for the removal of which his lips had so often pleaded. They who witnessed and shared his public labors in this righteous cause, can tell what they were: but who shall tell us of that deep travail of soul; of those prayers, and sighs, and tears, of which none but He "who seeth in secret" was witness? To Him, we may assuredly believe, they ascended as a sweet incense; with Him they are registered on high; and from Him their answer will, without doubt, come, in his own good time. To human reason that time may now seem far distant; but it may only seem. Who knows but that, even now, when the chains of the oppressed seem to be more closely than ever riveted upon them, the Almighty Disposer of events may be secretly preparing the means of their deliverance? But however this may be, the day assuredly will come when the yoke of the oppressor shall be broken, and Africa's enslaved children be set free. The Lord hasten it in his time!

*A Testimony of Hardshaw West Monthly Meeting, [England,] concerning SUSAN MORRIS THOMPSON, deceased.*

This our dear friend was the daughter of Joshua and Sarah W. Longstreth, of Philadelphia, and was born there the 13th day of Eleventh month, 1802. From the private memoranda which she has left, it appears that in early life she was made sensible of the tender visitations of Divine love, but from want of faithfulness was drawn aside from that path of humility and self-denial which she believed had been required of her. In the year 1824 she was united in marriage with our friend Francis Thompson, and in 1835 they removed with their family to this country. At that time a residence of two or three years only was contemplated; but, in the ordering of Divine Providence, it was otherwise appointed. In 1838 they settled in Liverpool, and became members of this Monthly Meeting.

It pleased our Heavenly Father, in love and mercy, as we reverently believe, to lay his chastening hand upon them, and trials and afflictions were permitted to attend them. The protracted illness, severe sufferings, and death of a precious child in 1842, and of a beloved sister in a distant land the following year, were instrumental, in the Divine hand, in solemnly impressing the mind of our dear friend with the uncertainty of life and the unsatisfying nature of all earthly enjoyments; and, through the renewed visitations of a Saviour's love and the quickening influences of his Holy Spirit, she was mercifully enabled more and more to set her affections on heavenly

things. Alluding to the decease of her dear child, she remarks:—"Truly it has been a season of deep trial of my faith; and Oh! that it may prove a lesson of lasting instruction to each member of our family; that it may be sanctified unto us is the sincere and earnest prayer of my spirit." It led to deep searching of heart, and fervent prayer unto the Lord that He would be pleased to qualify her rightly to discharge her duty towards her children, strengthen her to bring them up in the nurture and admonition of the Lord, and direct their minds to the blessed Saviour. The language of the Most High, by the mouth of his Prophet, seemed applicable, "I have refined thee, but not with silver; I have chosen thee in the furnace of affliction."

At this period her spirit was often humbled under a sense of the unutterable love and mercy of "God in Christ Jesus" to her soul, whilst esteeming herself unworthy of the very least of his mercies. "Having tasted that the Lord is gracious, and felt that Christ is indeed precious to them that believe," she believed it would be required of her to declare unto others what the Lord had done for her soul. Many were the conflicts, and deep and humbling were the baptisms of spirit, which she had to endure before she was made willing to yield to this apprehended duty.

She first spoke publicly as a minister at a funeral in Warrington, in 1844, when she was strengthened to bow the knee in solemn supplication for the widow and the fatherless; and for this act of obedience, she says, "The overflowing of peace which filled my soul cannot be set forth in words. The incomes of redeeming love which were granted me during the meeting were worth all the sufferings I had experienced. I was indeed permitted to know something of that peace which the world can neither give nor take away. May I render all the praises unto God and the Son of his love, worthy for ever and for evermore."

She was recorded a minister in 1848. Her communications generally were short, but were delivered under a deep sense of the solemnity of the engagement; and, being concerned to wait for the influence of the Holy Spirit, they were accompanied with a measure of holy anointing, to the edifying of the Church. She was often engaged to inculcate the spiritual nature of the Gospel dispensation, and to impress upon all the necessity of an individual and experimental knowledge of the "truth as it is in Jesus." Her spirit was deeply exercised for the welfare of the young and rising generation, that their minds might be imbued with the love of God and of the blessed Saviour, and that they might "learn of Him who was meek and lowly in heart, that they might find rest unto their souls." The exercise of her gift was chiefly within the limits of her own Monthly Meeting. With its concurrence, however, she paid a visit, in the love of

the Gospel, to the meetings constituting Cumber- and Quarterly Meeting, which she was favored to accomplish to the peace of her own mind. She was likewise engaged with the Committee of this Quarterly Meeting in visiting some of its subordinate meetings, and a few of the afflicted families therein. She tenderly sympathized with the sick and afflicted, and was exemplary in visiting them, being often enabled to hand them a word of counsel and encouragement, and to comfort them "by the comfort wherewith she herself was comforted of God."

The health of our dear friend was delicate; but the attack of sickness which, after many months of suffering, terminated her life, was sudden and alarming. Her mind was mercifully preserved in much calmness and resignation. The compassionate Saviour, in whom she had believed, did not forsake her in this time of need. When a little relief from exhaustion and pain was mercifully granted, she diligently improved such seasons in fulfilling those acts of Christian duty which had rested upon her spirit. She felt and expressed much love for all her friends, and was grateful for the kindness which had been so abundantly manifested towards her, giving God the praise. It was very instructive, to those who waited upon and visited her, to witness her peaceful serenity and cheerfulness of spirit under acute suffering; and she was frequently concerned to encourage them to dedicate their all to the service of so good and merciful a God. In addressing an absent friend she writes:—"I could tell thee of the marvellous tender mercy of the Saviour towards his unworthy child. Oh! the condescension which has been manifested is beyond all words; a poor doubting creature, as I have often been, so wonderfully cared for and supported in the hour of deep trial! Truly I was brought low and the Lord helped me. I trust I am not deceiving myself when I say I have felt, for days together, to rest sweetly in my Saviour's arms, having nothing of my own to trust to, but all in the free, unmerited mercy of God in Christ Jesus, who hath loved me and given himself for me."

A few weeks before her decease she was removed to Southport, at her own request. The change was refreshing; but the disorder made steady progress, of which she was fully sensible. She was often engaged in secret prayer that faith and patience might hold out unto the end, which was mercifully granted; and we consolingly believe that, through the atoning blood of the Lamb of God, her ransomed and sanctified spirit has been permitted to enter into his kingdom of eternal rest and peace.

Under a deep sense of the loss we have sustained, we have felt it right to issue this testimony in remembrance of her, and to encourage one another to follow her as she endeavored to follow Christ.

She died on the 15th day of Twelfth month, 1856, and was interred in Friends' burial ground,

Hunter St., Liverpool, on the 21st of the same; aged about 54 years; a recorded minister 8 years.

## PROVERBS.

[Concluded from page 278.]

It is a very rare thing, indeed, that occasions do not arise to most people, in which they are beset by difficulty. "There is a rut in every lane." Some people are especially prone to lose heart. They see no way of working through, and so they sit down and weep in moody melancholy, or else give up in despair. "Time heart," says a Scotch proverb, "and a's gane" ("lose heart, and all's gone"). Many a gallant vessel, which might have been saved, has gone down to the bottom, just because her crew "lost heart." Many a man has been involved in bankruptcy just because he "lost heart." Many a well-planned scheme has been frustrated just because its projectors "lost heart," at the very time when it needed but another effort to carry it through. "He's worth nae weel," says another proverb from the other side of the Border, "that can bide nae wae." "Aye be as merry as you can," is the sentiment of another Scotch proverb. "All very well," you may say, "but how is it to be done?" Call in *faith*. You saw that black cloud which hid so much of the sunlight from you, and cast such a deep shadow over your path. If you thought about it, you would possibly remember that whilst the side turned to you was dark, the other side was radiant with glorious sunbeams; and just as you looked at it, the cloud shifted its position a little, and it became fringed with a beautiful silver border, which you saw must certainly extend along the whole interior of the cloud. "There's a silver lining to every cloud"—a bright side to everything. Believe that there is a bright side, and try to get a sight of it as soon as you can. Call in *hope* also. "It's a long lane that has no turning." "After the night, the morning." "When things get to the worst, they begin to mend." But let faith and hope be both in God, reconciled through Christ. The difficulty and the trial will then be felt to be a loving Father's discipline; and then, too, there will be all the comfort which springs from the persuasion that, though the desired relief may not come on earth, he has prepared for his children a home in the skies, where there is no sorrow. Mark, too, how others, God's true heroes, have passed through the heaviest trials, without "bating one jot of heart or hope;" and resolve, like them, in God's strength, to surmount the difficulty and withstand the storm.

Lord Bacon says, "Men ought to find the difference between saltness and bitterness. Certainly, he that hath a satirical vein, as he maketh others afraid of his wit, so had he need be afraid of others' memory." Such people, often without a thought of real unkindness, will crack their jokes at the expense of their best friends. This

is a bad policy. Many a good friend has thus been alienated for ever. Burns' biographer says that the poet paid for his mischievous wit in this respect, as dearly as any one could do. "'Twas no extravagant arithmetic to say of him, as was said of Yorick, that 'for every ten jokes he got a hundred enemies.'" The proverbs of the Bible dwell strongly on the government of the tongue: "In the multitude of words there wanteth not sin; but he that refraineth his lips is wise." "A man hath joy by the answer of his mouth, and a word spoken in due season, how good is it!" The apostle James speaks even more strongly: "If any man offend not in word, the same is a perfect man, and able also to bridle the whole body.—Who is a wise man, and endued with knowledge among you? let him show out of a good conversation his works with meekness of wisdom."—James iii. 2, 13. And nothing can be more stern and emphatic than the condemnation which he pronounces in the same chapter on the misuse of the precious gift of speech. How much do we all of us need to crave forgiveness, both of each other and of God, for such misuse!

There is, we may observe, in all societies, a sort of implied confidence. We don't expect that when people enter our houses, they are taking note of everything they see, for the purpose of telling it in the next house they visit; nor do we expect that what we say in the freedom of genial intercourse across our dinner or tea table, or during a morning call, will be published to the world. A modern esteemed essayist speaks very strongly in enforcement of the duty of what he calls *reticence*, and on the wrong involved in its violation. And yet, what a common thing such a violation is! It would not be so bad, if the thing were reported just as it was; but how often does it acquire such extraordinary additions, that those who first said or heard it can scarcely recognise it. Like a snowball, it gathers at every turn. So it is said, "A tale never tines (loses) in the telling." We have heard of a German game, which very well illustrates this. A party sit round the room. The first of the number whispers a story to his neighbor, taking care, of course, that no one overhears him. It is then transmitted to the next, and so it goes on till it reaches the last. The story as it began and the story as it ended its course are then compared, and, as may be easily supposed, they are frequently found two very different things. It is a good thing to stop the tale as it goes; a better, not to start it on its travels. We should feel that in the open, unsuspecting intercourse of friendship we are safe from misrepresentation, and to a great extent even from report.

Not only is it a little thing to be soon angry, but often it is both useless and injurious to the man himself. "Anger is like rain," says an old proverb; "it breaks itself against that on which it falls." "It costs more to revenge injuries than

to bear them." "A hasty man," say our Scotch neighbors, "never wanted wae." It is good advice which comes from the same side of the Border: "Take wit i' your anger;" and very appropriate to such times that which we hear on this: "Least said, soonest mended." Better still that which we find in the good old book: "Be not hasty in thy spirit to be angry, for anger resteth in the bosom of fools;" "The beginning of strife is as when one letteth out water; therefore leave off contention before it be meddled with;" "He that is slow to anger is better than the mighty, and he that ruleth his spirit, than he that taketh a city." And, by the help of God, the victory is possible. Some people are naturally so gentle and amiable that nothing ruffles them; but it will be found more frequently that those who are especially admired for their calm self-possession, both under the little fretting annoyances of every-day life, and under the greater provocations which occur only now and then, are men not naturally incapable of anger, but men who have a spirit to rule, and who rule it. The pupils of Socrates laughed at the physiognomist who said he saw from their master's countenance that he was a man of choleric temperament. Socrates inquired the cause of their laughter. "The man is perfectly right," said he; "what you see is the result of careful discipline." If a heathen could acquire such an ascendancy over himself, how much more should we, with the mighty motives, and the precious teachings, and the beautiful examples of the Bible, and most of all, with the grace of that Holy Spirit whom our heavenly Father gives to all them that ask him!

We are all mortal, and all liable to err: we all need, therefore, each other's forbearance and forgiveness. If to be soon angry shows littleness, to cherish a grievance, to remember the hasty word, and to let it fester and rankle in the soul, shows at least as much if not more. If two parties have quarrelled, and one of them be especially unforgiving, it is very probable that the blame rests chiefly with him. "The offender never pardons;" "He that has done you an ill-turn will ne'er forgie you." Some people have an especial facility for recalling old grievances. "Forgive—and forget." If memory refuse to bury it altogether, let it be as though it were forgotten. "Let by-ganes be by-ganes;" "Do not rip up old sores." "It is the glory of a man," says Solomon, "to pass over a transgression;" and he is then most like God, who forgives freely, heartily, and remembers the sin no more!

It is a strong temptation, when you get an angry or unreasonable letter, to sit down in hot haste and reply to it. Your fingers itch to be at work at once. There is an old Latin proverb which occurs in Horace: "*Littera scripta manet*"—"that which is written remains." What we say often remains in people's memories quite long enough, especially when it is something we are particularly wishful they should

forget; but most commonly it gradually fades away. But write, and there it is. The person to whom you send it can nurse his own wrath by every now and then bringing out your letter and looking at it; or, which even answers the purpose still more effectually, by showing it to others, who are sure, in nine cases out of ten, to sympathise with him, for the obvious reason, that he is not very likely to show it to any one about whom he is tolerably sure that they will not do so. A Tuscan proverb gives sound advice: "Think much, speak little, write less." We know a judicious and distinguished man, who makes it a rule never to reply to any letter which occasions him angry feeling, under four-and-twenty hours, provided, of course, the case will admit of delay. If any of our readers have written an immediate reply to such a letter, and kept it till the next morning, which we hope he did if he wrote it, are we not right in saying that he had so far cooled down as to find that the best place for the letter would be, not the *post*, but the *fire*, and that something a great deal calmer would answer every purpose much better?—*Leisure Hour*.

For Friends' Review.

#### THE FRUITS OF SLAVERY.

Although at various times much has been said in the *Review* respecting the inconsistency of using the products of slavery by persons professing to bear a testimony against the cruel system of oppression, yet I hope a few remarks from one who has never before ventured an expression of his feelings upon this subject may do no harm. The writer of this may acknowledge himself to be one, probably with many others, who have long since been convinced that slavery is *wrong, cruel, and antichristian*, and earnestly desire its extinction, but beyond this, have hardly felt strength to move. Although, when the query has presented, whether, whilst using its products, we are bearing a faithful testimony against so great an evil, we may have felt our selves constrained to make a similar acknowledgment with that of Felix, when he replied to Paul, "Almost thou persuadest me to be a Christian," yet we may have reasoned upon it, and come to the conclusion that it could avail nothing for us to make the sacrifice which would be necessary, were we to refrain from using the products of the hard and unrequited labor of the slaves. Such has been the halting and unsatisfied condition of some, and it may be of many, who may yet find relief by faithfully and meekly taking up the cross. I would not be understood as directing the way for others, but only add, that for myself it was best to attempt, although in the cross, to make the sacrifice, and I think I can say that the result has had a softening, humbling, and satisfying effect, which with me quite overbalances any inconvenience I may undergo.

#### PRAYER.

The following extract from a letter addressed by Dr. John Fothergill to his brother Samuel Fothergill, appears to me to express so exactly the nature and manner of true prayer, that I have been induced to send it to the Review:

"May a person who needs advice as much as most, and at the same time does not profit by it so much as he ought, presume to give any? Thy affection for me will throw a mantle of oblivion over me, if I say anything that does not correspond with thy own reflections. Be short in supplication; use no words not of common use, and the same words as seldom as possible. The ineffable majesty of Heaven is enough to dazzle all human conception; yet the 'Our Father which art in Heaven,' is indeed a complete model. Stray from its simplicity as seldom as possible; but I speak with unhallowed lips, and therefore forgive me. My wish is strong, that the Father of all mercies may long preserve thee a choice instrument, a silver trumpet, that gives a certain sound as thine is; that I may be conducted wisely through a thorny, slippery, arduous track to safety and happiness at last. So let it be for us both, saith all within me. J. F."

#### THE ENGLISH COURT OF CHANCERY AS IT IS.

It has been truly remarked, that the Court of Chancery is an admirable illustration of "the dog with the bad name." The expression, "like being in Chancery," and others of a similar nature, are often used by people who wish to impress upon their hearers that which is tedious, expensive, and almost endless. If property is "thrown into Chancery," to use a popular phrase, all hope of its ever being of any further benefit to the parties interested in it is abandoned. The Court of Chancery has won for itself an evil reputation which still clings to it, although no longer deserved.

The Court of Chancery has been thoroughly reformed. The changes began in 1850; and in 1852 an entire revolution was effected in its mode of procedure. The various times for taking the necessary proceedings were considerably shortened, printed pleadings were substituted for written ones, and unnecessary offices, such as those of the masters in Chancery, which had long been causes of delay and expense to suitors, were abolished. In many cases, too, relief may now be had by a summary mode of procedure. Also fees are paid by stamps, and officers of the court are remunerated by salaries instead of fees, so that greater fees than those prescribed by the orders of the court can no longer be taken. Thus, and in a great many other particulars, which it is unnecessary here to detail, has the Court of Chancery been reformed and its procedure simplified, with a saving of time and cost to the suitor; yet

no one believes it. Works like Mr. Dickens's still continue to gain credence, although written long ago, and before Chancery reform began; novelists and newspaper writers still speak of it as it was years ago; and because they do not know of, or cannot comprehend its vast changes and improvements, will not admit that any have been made. This is most unfortunate; for not only are the people of England thus misled, but foreigners get these absurd notions into their heads, carry them home to their own countries, and represent our highest court in the realm as a monstrosity of iniquity!

There is also another class who rail against the Court of Chancery, who wish all forms and modes of procedure to be done away with, and would, no doubt, like justice to be administered after the manner of a Turkish pacha; but this is, in England, we are glad to say, an impossibility. Forms are, to a certain extent, actually necessary to prevent injustice being done by the law; for if the process of the law could be used without knowledge, cost, or trouble, by any one who might fancy himself wronged by another, then would it become an engine of tyranny and oppression, and not of justice and equity.

Let us hope that the Court of Chancery, which, by reason of its reforms, has, from being the slowest, become one of the speediest tribunals in the kingdom, may be regarded in its proper light, and become as popular as it has hitherto been unpopular.—*Chambers' Journal*.

## FRIENDS' REVIEW.

---

PHILADELPHIA, FIRST MONTH 23, 1858.

---

EMANCIPATION IN MISSOURI.—We give this week the first portion of some extracts from a late speech delivered at a public meeting in the Hall of the House of Representatives at Jefferson City, Missouri. Like that of B. Gratz Brown, in the Missouri Legislature a few months since, it reveals the prevalence of a sentiment, not only adverse to the growth of slavery in that State, but clearly favorable to its extinction. The fact that the subject of emancipation can be publicly discussed and advocated in the capital of Missouri is an indication, too, that the slaveholding influence is not so powerful and crushing in that State as in most of the other Slave States. Still it is evident that strong efforts are constantly made by the pro-slavery party to control State affairs, and to oppose every measure which seems likely to lessen the political power of slaveholders. The recent agitation at Jefferson City arose from an attempt of this kind.

It appears that a number of the oldest and

most respectable citizens of the State, owners of property in that city and its vicinity, have organized a company to promote the growth of trade and manufactures, invite immigration and settlements on their lands, and establish a University. This scheme might reasonably be expected to prove a public benefit, as well as a pecuniary advantage to its projectors; but as its success was supposed to depend mainly upon the introduction of a free-labor population, an attack was made upon it by a member of the State Senate, who, in a public address, asserted that Slavery is a moral, social, political and religious blessing, and that agitation against it is a wicked conspiracy. Subsequently, at an educational convention in Jefferson City, James B. Gardenhire, the President of the Company, submitted a plan for establishing and endowing a State Normal School. This was warmly opposed by the late Speaker of the Missouri House of Representatives, who also denounced, as an emancipationist institution, the Company's University, towards the establishment of which some progress had been made. To counteract the influence thus exerted against the Company, J. B. Gardenhire invited his fellow-citizens to a public meeting, and on this occasion he made the speech from which our extracts are taken.

It will be observed that he introduces what purports to be an address delivered by a member of the Divan of Algiers in 1687, in favor of enslaving Christians, but it was, in reality, a parody, understood to be written by Dr. Franklin, on a speech in Congress, at the session of 1790, by a member named Jackson, from Georgia, in a debate on the abolition of the foreign slave trade.

At the Yearly Meeting of Friends held in Philadelphia, in 1783, an Address to the Congress of the Confederation was agreed upon and signed by 535 Friends, asking the attention of that body to the African slave trade, under a fear that, peace being restored, the iniquitous traffic might be resumed, unless prevented by the interference of Congress. The memorial was respectfully received, but no action resulted, inasmuch as that body, as then constituted, possessed no legislative powers.

The subject was renewed in 1789, and another petition from the same meeting, together with two memorials of a similar character, one of them having the signature of Benjamin Frank-

lin, as President of the Pennsylvania Society for the Abolition of Slavery, was presented to the Congress, sitting under the newly organized government of the United States. A committee was appointed, and subsequently offered a report consisting of seven resolutions, "chiefly expressive of the powers and the limitation of the powers of Congress, in relation to slavery and the slave trade, and declaring that, in all cases to which the authority of Congress extended, they would exercise it for the humane purposes of the memorialists, so far as they could be promoted on the principles of justice, humanity and good policy." While this report was under consideration, an amendment was offered: "that the several memorials propose to this house a subject on which its interference would be unconstitutional, and even its deliberations highly injurious to some of the States." It was in support of this amendment that the speech was made which brought forth, a few days afterward, the parody by Franklin. The following sketch of Jackson's speech will enable our readers more fully to comprehend the point of the parody:—

"Slavery is an evil habit—but in some situations, such as South Carolina and Georgia were in, it was a necessary habit. Large tracts of fertile lands were uncultivated for want of population. The climate was unfavorable to northern constitutions. What is to be done with this land? Is the rice trade to be banished from our shores? Will Congress give up the revenue arising from it? And for what? To gratify the supposed feelings, the theoretical speculations or humanity of the Quakers? The Africans were ruled by despots in their own country. All the people are bound to appear in the field when required by their sovereigns. The slaves there are not protected by law; but here, in addition to the ties of humanity, the law interposes in favor of the aged and decrepid. With respect to emancipation, what is to be done with the slaves when freed? They must be incorporated with the white citizens or colonized." [Here Jefferson's Notes are cited to show the difficulty and danger of incorporation.] "Though the Quakers may choose to intermarry with them, there are others among us who will choose to preserve their race unsullied. Where will you colonize them? To send them to their own country would be to exchange one slavery for another. If we colonize them at home, will not the danger of their natural dispositions exist? Would they be able to support a government to advantage? The Indians would either destroy or enslave them. What people ever engaged in the slave trade have abolished it? England dare not touch it. Shall we undertake it, to

gratify a volunteering society of Quakers? for the gratification of a man\* who, trembling under the lash of an evil conscience, to atone for his numerous hoard of former sins, emancipated his negroes? I call it not an act of humanity. It was a death-bed repentance; the fear of torments in another world, and the terrors of eternal damnation. Christianity is not repugnant to slavery. This may be seen by several passages. The case of Onesimus is one. The apostle did not require Philemon to set him free. Neither was slavery prohibited by Moses. Justice forbids interference. I hold one thousand acres of rice land on the Altamaha. Importations [of slaves] being expected, this land is worth three guineas an acre; take away this expectation and you destroy the value; restrict importations, and you diminish that value one half. Numbers in South Carolina and Georgia are in that predicament. How are they to be compensated? Have the Quakers a purse sufficient? Are they willing to carry justice and humanity so far as to give it? Has Congress a treasury sufficient for this purpose?"

For the information of Friends and others we insert the following card, giving the rates at which the various editions of the Holy Scriptures, published by the Bible Association of Friends in America, are sold. It will be observed that the prices are very low.

Where example keeps pace with authority, power hardly fails to be obeyed, and magistrates to be honored.—Penn.

\* The speaker here named a Friend, then present, who in early life had emancipated his slaves, and was distinguished for his general philanthropy.

DIED, in the eighth month last, HANNAH, wife of Jesse Talbot, aged seventy-one years.

This dear friend's health had been declining for some years, but at times she was able to attend meetings. A few days before the closing scene she was quite as well as usual, but was ever on the watch, feeling that the shades of evening were drawing near, and that her earthly pilgrimage would soon be ended. She often expressed to her beloved family that all was peace within, or words to that effect, for she had endeavored to do her work in the day time. She was Clerk to the Yearly Meeting of Baltimore, for many years, a station she was particularly qualified for, being of quick perception, and also feeling a deep interest in the prosperity of the church; she also filled the station of Elder acceptably. Her loss has been deeply felt, she being of a meek and humble spirit, and ever ready to exercise that charity which suffereth long and is kind. She stood firm through the many changes which our Society has passed through, but her faith and confidence were in that power which will sustain in seasons of trial. Often did she experience that the Lord was as a covert from the storm, and as the shadow of a great rock in a weary land.

—, On the 2nd of 12th month last, in Henry Co., Ind., STEPHEN MACY, aged nearly 79 years, a member of Duck Creek Monthly Meeting.

—, At Clintondale, Ulster Co., N. Y., on the 14th of 12th mo., 1857. NATHANIEL THORN, aged 73 years, an esteemed member of Marlborough Monthly Meeting.

This beloved friend was of a feeble constitution from youth, often enduring much physical suffering, which, through the sanctifying power of Divine grace, was, we believe, a means of causing him early to "seek an inheritance incorruptible, undefiled, and which fadeth not away."

By thus submitting himself to the refining operations of the Holy Spirit, he was at times enabled to rejoice in the God of his salvation; and feeling a living concern that others should come, taste, and see that the Lord is good, his voice was frequently heard in our religious assemblies, in exhortation or in commemoration of the mercy and goodness of Israel's Shepherd.

His last illness was short, yet having long desired to be in readiness for the final change, he appeared like one fully ripe for the Heavenly garner, expressing at different times, "All is peace." The sweet and tranquil state of his mind, with his dying counsel, was very impressive and consoling; urging upon his sorrowing friends the necessity of greater dedication of heart to their Lord and Master, that there may be posts and pillars, burden and standard-bearers raised up in the Church.

—, In Dublin, Ind., on the 12th inst., CHARLES M. WILSON, son of Timothy and Elizabeth A. Wilson, in the 2d year of his age.

#### THE PROFITS OF FARMING.

I notice that the old question is occasionally mooted in *The Cultivator*, whether farming is profitable. It seems to me a very short argument, or rather no argument at all; it is a very simple question of fact. Look the land over, cast west, north and south; everywhere you see evidences that farming is profitable. On every hill, and in every valley of this wide land, you see good roads, commodious and handsome houses, orchards, gardens, carriages and horses, and an abundant supply of all things necessary for the comfort, convenience, and pleasure of the whole

rural population, and almost all are the fruits of agricultural industry. It is true there are few, if any, very rich, as some in the cities and large villages; but this is one of the beauties of it, that this great aggregate of wealth is so nearly equally distributed. Seldom one becomes very rich by farming, but tens of thousands obtain all that wealth can give. It is worthy of note also that seldom one fails of a competence who exercises ordinary industry and economy; while in many other branches of business a small proportion only become very rich, and the others come to poverty.

I know that it takes many years of toil and careful frugality to reach an independence; the gains of the farmer are moderate, but they are sufficient, except for those with whom riches are the principal thing. It can be easily demonstrated that capital, judiciously invested and well managed in farming, will return to the owner six per cent. per annum, and a moderate reward for his skill and labor. It is unnecessary in these times to say much in favor of the security of the investment. It may be well to note that the farmer does not need, as some do, to make a great fortune before he begins to enjoy it. So soon as a young farmer plants himself upon a farm, though new and unpaid for, he begins to have all that wealth can purchase. He already has attained what the merchant spends years of doubtful toil to acquire.

What is it that the most anxious tradesman, or mechanic, or professional man looks to as the happy end of all his labor? It is that he may have an independent home in the country; and all this the young farmer begins with.

"Oh, knew he but his happiness!"

*Country Gentleman.*

#### SLAVERY AGITATION.

HOW MISSOURI IS TO BECOME A FREE STATE.

[From a speech delivered in the Hall of the House of Representatives at Jefferson City, Missouri, by JAMES B. GARDENHIRE, President of the Jefferson City Land Company.]

Much of the evil of slavery agitation has resulted from erroneous positions assumed in the South. Some of these I propose to consider. When right at home, the North has never failed to sustain us, and sometimes even when we were wrong. If we would take just positions at home, and maintain them through our Representatives in Congress, the flood of agitation would be consumed, and the dangerous occupation of sectional agitators would be gone. Extremes might do their worst, but none would fear for the Union, or dread the terrible scourge of civil strife.

The first of these errors I shall notice is one advocated here by Mr. Green the other night, that slavery is a moral, social, political and religious blessing, and to be treated as such. A doctrine so utterly at war with humanity, and with the opinions of our most eminent statesmen, invites refutation, especially when the prejudices

it engenders are turned to political account, at the sacrifice of individual enterprise and social progress.

Slavery existed, it is said, when our Saviour was upon earth, and he did not condemn it. What sort of slavery? Negro slavery? Say? The argument proves too much. It enslaves the white man as well as the negro. The slavery then existing was of the white man—the vanquished, the victim of a superior force, of conquest, of war. If the argument is right, the freedom of the white man is left to the mercy of the strong. But, without troubling you with theology, I will add that it has been thought our Saviour did condemn slavery, when he said, “All things whatsoever ye would that men should do to you, do ye even so to them.” A broad rule, and, applied to slavery, means, if you catch and enslave other men, you must let other men catch and enslave you. Mr. Jefferson may have been thinking of some such just rule when he said, as heretofore quoted, that an exchange of situations was among possible events, and might become probable by supernatural interference, and that the Almighty had no attribute which could take side with us in such a contest.

It is said that our slaves are better fed and clothed and cared for than the white laborers of the North. This argument, also, proves too much, and enslaves the white man. If true, and, being true, slavery is therefore right, these poor laborers ought to be caught and enslaved, and comfortably fed and clothed and cared for, as our slaves are. The poor fellows could hardly be made to appreciate the advantage of the change, without the unanswerable Portuguese argument—brute force—which convinced the African at the beginning of the slave-trade.

It is again said that we enslave our children and apprentices, until twenty-one years old, and the right to do this includes the right to enslave the negro. This argument is of the same class with the others, and affects the white man in the same way. The right to enslave one race includes the right to enslave all races, and the right to enslave all races includes the right to enslave any individual of any race. This rule would set us to catching and enslaving one another, and force alone, as between the Portuguese and African, could determine who should be the master and who the slave, reducing slavery to its known origin and argument—brute force.

The civil law defines slavery thus: “Slavery is an institution, by the laws of nations, by which one man is subjected to another man, as master, contrary to nature.”

And Chief-Justice Marshall, expounding this, says: “That slavery is contrary to the laws of nature, will scarcely be denied; that every man has a right to the fruits of his own labor, is generally admitted; and that no person can rightfully deprive him of these fruits, and appro-

priate them to his will, seems the necessary result of that admission.”

It is a well-known historical fact that the Barbary States, commanding the navigation of the Mediterranean, were in the constant habit of catching and enslaving Christians. Treaty stipulations, and the combined efforts of civilized Europe, were not sufficient to prevent it. To protect our citizens from the Barbary argument, which always convinced, when presented by the orators of the Mediterranean—the Algerine pirates—the United States, in 1815, sent out a squadron under Decatur, and, by his bombardment of Algiers, he convinced them that the question of Slavery was debatable, and that he was in favor of agitation.

Now, however plausible the argument in favor of negro slavery, submitted to us the other night, I have a much better one in favor of enslaving Christians, made a hundred and seventy years ago, by Sidi Mehemet Ibrahim, a member of the Divan of Algiers, and which may be seen in Martin's account of his consulship, anno 1687. It was against granting the petition of the sect called *Erika*, or Purists, who prayed for the abolition of piracy and slavery as being unjust. The African's speech, as translated, is as follows:

“Allah Bismillah, &c. God is great and Mahomet is his prophet.

“Have these *Erika* considered the consequences of granting their petition? If we cease our cruises against the Christians, how shall we be furnished with the commodities their countries produce, and which are so necessary for us? If we forbear to make slaves of their people, who in this hot climate are to cultivate our lands? Who are to perform the common labors of our city, and in our families? Must we not then be our own slaves? And is there not more compassion and more favor due to us as Mussulmans than to these Christian dogs? We have now about fifty thousand slaves in and near Algiers. This number, if not kept up by fresh supplies, will soon diminish, and be gradually annihilated. If we then cease taking and plundering the infidel ships and making slaves of the seamen and passengers, our lands will become of no value for want of cultivation; the rents of houses in the city will sink one-half; and the revenue of government, arising from its share of prizes, be totally destroyed! And for what? To gratify the whims of a whimsical sect, who would have us not only forbear making more slaves, but even manumit those we have.

“But who is to indemnify their masters for their loss? Will the State do it? Is our treasury sufficient? Will the *Erika* do it? Can they do it? Or would they, to do what they think justice to the slaves, do a greater injustice to the owners? And if we set our slaves free, what is to be done with them? Few of them will return to their countries; they know too well the greater hardships they must there be subject to; they

will not embrace our holy religion; they will not adopt our manners; our people will not pollute themselves by intermarrying with them.

"Must we maintain them as beggars in our streets, or suffer our properties to become the prey of their pillage? For men accustomed to slavery will not work for their livelihood when not compelled. And what is there so pitiable in their present condition? Were they not slaves in their own countries? Are not Spain, Portugal, France, and the Italian States governed by despots who hold all their subjects in slavery without exception? Even England treats its sailors as slaves; for they are, whenever the government pleases, seized and confined in ships of war, condemned not only to work, but to fight, for small wages, or a mere subsistence, not better than our slaves are allowed by us. Is their condition then made worse by falling into our hands? No; they have only exchanged one slavery for another, and, I may say, a better; for here they are brought into a land where the sun of Islamism gives forth its light, and shines in full splendor, and they have an opportunity of making themselves acquainted with the true doctrine, and thereby saving their immortal souls. Those who remain at home have not that happiness. Sending the slaves home, then, would be sending them out of light into darkness. I repeat the question. What is to be done with them? I have heard it suggested that they may be planted in the wilderness, where there is plenty of land for them to subsist on, and where they may flourish as a free State; but they are, I doubt not, too little disposed to labor without compulsion, as well as too ignorant to establish a good government; and the wild Arabs would soon molest and destroy, or again enslave them. While serving us, we take care to provide them with everything, and they are treated with humanity. The laborers in their own country are, as I am well informed, worse fed, lodged and clothed. The condition of most of them is therefore already mended, and requires no further improvement.

"Here their lives are in safety. They are not liable to be impressed for soldiers, and forced to cut one another's Christian throats, as in the wars of their own countries. If some of the religious, mad bigots, who now tease us with their silly petitions, have, in a fit of blind zeal, freed their slaves, it was not generosity, it was not humanity, that moved them to the action; it was from the conscious burthen of a load of sins, and a hope, from the supposed merits of so good a work, to be excused from damnation. How grossly are they mistaken, to suppose slavery disallowed by the Alcoran. Are not the two precepts—to quote no more: '*Masters, treat your slaves with kindness. Slaves, serve your masters with cheerfulness and fidelity*,'—clear proofs to the contrary? Nor can the plundering of infidels be in that sacred book forbidden, since it is well known from it that God has given the

world and all it contains to his faithful Mussulmans, who are to enjoy it of right, as fast as they conquer it. Let us, then, hear no more of this detestable proposition, the manumission of Christian slaves, the adoption of which would, by depreciating our lands and houses, and thereby depriving so many good citizens of their properties, create universal discontent, and provoke insurrections, to the endangering of government and producing general confusion. I have, therefore, no doubt that this wise council will prefer the comfort and happiness of a whole nation of true believers to the whim of a few Erika, and dismiss the petition."

The result was, as Mr. Martin tells us, that the Divan came to this resolution:

"The doctrine that plundering and enslaving the Christians is unjust, is, at best, *problematical*; but that it is the interest of this State to continue the practice, is clear; therefore let the petition be rejected. And it was rejected accordingly."

Franklin, in commenting upon this speech, twenty-four days before his death, said that it showed "that men's interests and intellects operate and are operated on with surprising similarity, in all countries and climates, whenever they are under similar circumstances." I give the speech and comments as I find them in Franklin's Works, vol. 2, pp. 517, 518, 519, 520, 521.

(To be concluded.)

#### DR. JOHN DALTON—THE ATOMIC THEORY.

It was a cold December morning, and the snow lay deep on the ground, when a man, already somewhat advanced in years, and carrying a lantern, might have been seen to emerge from the house of W. Johns, in George street, Manchester, and proceed towards the Literary and Scientific Institution of that city. He was rather above the middle size, tall and bony. His features were hard, though not harsh; his eyes deeply set and thoughtful. His body was slightly bent—not conveying an idea of infirmity, but rather that sort of bending forward sometimes met with in pedestrians, and which creates the notion of a desire to hurry along. He wore the dress of a member of the Society of Friends, somewhat the worse for wear, but still not shabby from age. The day had barely dawned; but, guided by the beams of his lantern, you might see, if observant, that his habiliments were spotted and stained; while a closer inspection would prove that not a few stains had become holes, as if burned by sparks of fire, or some corrosive fluid.

The active life of Manchester is not like an ocean flood which ebbs and flows, but like the current of an impetuous river which ever hurries on. It was difficult to regard the tall factory chimneys belching forth their smoke that morning, to gaze on the crowded streets, and to hear

the busy click of machinery mingling with the hum of men, without feeling convinced that Manchester was a city of action, not of contemplation—that the worker out of abstractions could find no place there. Silently, amidst this din and throng, the tall, hard-featured lantern-bearer moves on. He goes towards the Literary and Philosophic Institution. Suppose we follow.

Is the man a lunatic? Unmoved by the hum of passing wayfarers, the lantern-bearer talks to himself. He talks of Plato, of Pythagoras and Thales; he mentions also Lucretius; then whimsically mixes up those antique names with others of modern date. No, he is no lunatic, but a thinker aloud, a reverist. Arrived at the door of the Institution, he gives his lantern a shake, as much as to say, "I have it now," then opens the door and enters. He next proceeds at once to the laboratory, and deposits his lantern on the table. He then lays and lights the fire, according to the most approved rules of fuel economy—a perfect model of a servant in the matter of saving fire-wood, for, of course, a servant he must be.

Manchester has long been celebrated for her resident chemists. Calico-printing involves some of the highest branches of applied chemistry; and every new color, and almost every new pattern, which may appear from time to time on a piece of Manchester printed goods, is the fruit of some new chemical discovery. In our curiosity, we wait. We like to see clever men at work in their retreats. We are in no hurry: the chemical professor will by and by walk in. But that lantern-bearing Plato and Lucretius-quoting fire-lighter, we are getting tired of him. There, he will go soon. He sweeps the laboratory clean, and dusts the bottles. He goes, but not away. He proceeds to an adjoining room, and taking his stand in front of the wall, whereon hang several barometers, thermometers and hygrometers, he opens a book. He now enters particulars of temperature, atmospheric moisture and barometric height, like a philosophic painstaking observer. He does not work like one unacquainted with his toils. He is an adept. Looking at the barometric mercury, for instance, no chattering of mere inches, or quarters, or even eighths of inches serves his turn. He estimates the variation from yesterday by a Vernier scale, as an accurate philosopher would have done. He compares the barometers one with another, and finding that the mercury contained in one stands lower than the mercury of the others, he says, (for he appears to be in the habit of talking to himself,) "bad, bad." Then referring to a memorandum book in which the date of the construction of that barometer stands recorded, he finds the tube was neither dried nor was the mercury boiled. He makes a note of these facts. If the Professor's servant be thus wise, how much wiser must the Professor be?

A knock—a double knock! Does the Profes-

sor come at last? The lantern-bearer opened the door without delay, and an old gentleman entered. His face was radiant with joy, and he seemed to be out of breath. The lantern-bearer had no time to say a word, before the stranger seized him rapturously by the hand, and shook it heartily. "Friend," said he, "I bring you good news. Good morning, Doctor Dalton."

The lantern-bearer opened his eyes as if arousing from a reverie, but he made no remark; his ideas were apparently in another channel.

"Good morning, *Doctor Dalton*," repeated the stranger, laying peculiar stress on the word "doctor."

If his object had been to surprise the lantern-bearer, he was disappointed. The word "doctor," though strongly emphasized, seemed to have made no impression. The lantern-bearer was apparently thinking too much about his barometers, for, having bid his friend good morrow, he turned towards his instruments again.

"I call you *doctor*," repeated the new-comer. "Do you hear me?"

"Did you indeed?" replied Dalton.

The stranger laughed.

"On some people," said he, "honors fall unthankfully, like drops of water into a thankless sea; whilst others would give their ears for honors. The Oxford people are going to make you D. C. L."

"D.C.L." said Dalton, "and what is that?"

"Doctor of Civil Law," replied the friend."

"Doctor of Civil Law!" repeated Dalton, musingly, in a falsetto pitch of a naturally gruff voice; and burst into an incipient laugh, not loud, roistering laughter, but a subdued cackling laugh—a proper laugh for a philosopher. "What do I know about law, friend?" demanded he, as soon as he could speak—"law civil or law criminal."

"Pshaw! it is a very great honor," replied the friend—"the highest that can be given by the University."

"Honor! but I say I know nothing about civil law; and if I don't know it, how can I teach it? and if I can't teach it, why am I to be called doctor?"

"It is simply a compliment," repeated the stranger, smiling.

"Well, I could call it something else, if I liked," was Dalton's sly remark. "Doctor of Civil Law! Well, that is odd. If they would call me doctor of the laws of atomic combinations, there would be sense and truth in it; but doctor of civil law is neither sense nor truth."

"Now I have it," was the friend's remark. "The Oxonians are determined to have you; and I have no doubt, as a special favor, they will allow the initials D.C.L. to stand for Doctor of Combination Laws. There, will that suit you?"

Perhaps by this time the fact will be evident that the elderly lantern-bearer, who came forth

so early in the morning to light the laboratory fire, was no other than the illustrious Dalton himself, the philosopher whose name is associated with one of the most remarkable scientific discoveries of modern times—one second only in importance perhaps to the discovery of gravitation. Yes, it was Dalton who thus, day by day, lighted his laboratory fire. That great man would perform an analysis for half-a-crown, or give a lesson for eightpence, and thank you, in either case, for the trifle; whilst many an inferior chemist would have thought himself dishonored by touching any but a golden fee—so little connection is there between self-respect and self-conceit.

[To be concluded.]

#### THE INDIANS.

With regard to the Indians, the Secretary of the Interior says:—

The members of the Indian tribes within our limits, while they are not citizens, cannot, with strict propriety, be termed foreigners. "Domestic dependent nations, their relations to the United States resemble those of a ward to his guardian. They look to our government for protection, and appeal to it for relief to their wants." While we negotiate treaties with them, which are ratified with all the solemnity befitting a contract to which nations are parties, we undertake to construe and execute their provisions, acknowledging no responsibility but such as we may owe to truth, honor and justice. As the limits of our civilization have been extended, the number of these children of the forest with whom our people are brought into immediate contact, is greatly increased. Treaties multiply; rights are acquired; mutual obligations are assumed; obedience is promised on the one part, protection is guaranteed on the other. The Indian Bureau is grown to be a great foreign office, conducting the correspondence and adjusting the relations of more than sixty interior governments; while it is at the same time charged with the control, regulation and protection of the rights of the individual members of these governments.

Subsequently, the Report proceeds thus:—

The plan which has suggested itself as the most likely to arrest the demoralization now rapidly increasing, and, at the same time, lay a solid foundation for their ultimate civilization, may be briefly outlined thus:—

They should be gathered on smaller reservations and in denser settlements. They must be familiarized with the idea of separate property, by encouraging them to erect houses as homes for themselves and their families. For this purpose the reservations should be divided into farms of suitable size, and distributed among the individuals of the tribes to hold, in severalty, as their separate and private estate, but without the power of selling, mortgaging, leasing, or in

any manner alienating the same, except to members of the same tribe with themselves. Settlements by white men within the reserves should be prohibited, and the *prohibition rigidly enforced*; and increased efforts should be made to suppress the sale of ardent spirits, to effect which the co-operation of the Indian authorities should be secured. Farms should be established in central positions, at which all the children of the tribe should be collected and required to labor, and where they could be taught the rudiments of an education. A certain portion of them should be apprenticed to useful trades, and the surplus of the proceeds of their labor, whether on the farm or in the workshop, should be divided among their parents. Here they would be taught the great truths—that labor is honorable, and that want and suffering inevitably follow in the train of improvidence and idleness. Implements of husbandry, blankets and clothing, useful articles of furniture, books, and, indeed, everything which promises to give comfort to their homes, should be purchased and divided *per capita*.

Should their income be more than sufficient to meet the outlay required for these purposes, then the remainder might be paid in money. Now the annual indiscriminate distribution of their national funds among the Indians is gradually working their ruin; whereas a wise policy, such as any parental government should adopt, would necessarily produce the happiest results.

The details of the system should, of course, be modified to suit the varied conditions of the several tribes; but the uniform application of its leading ideas to the government of the tribes in the central and northern superintendencies is, I conceive, indispensable.

The conditions of affairs in the southern superintendency presents a gratifying spectacle. The four great tribes of Choctaws, Chickasaws, Cherokees and Creeks, with the kindred bands of Seminoles occupying the territory west of Arkansas, have steadily improved in morals, in education, in the comprehension of, and respect for, the rights of persons and of property, and in a knowledge of the theory and principles of government. They have regularly organized governments, constructed upon the model of our own State constitutions, governors, legislatures, codes of laws and judicial magistracies to expound them. There the path of duty is plain. Every encouragement should be held out to them to persevere in well-doing, until the period arrives when, ripe for citizenship, they shall be admitted to the full enjoyment of its rights and privileges.

One grievance, however, to which they are subjected, and of which they justly complain, deserves the consideration of Congress. While the Constitutions, laws and treaties of the United States are in force over this territory, there is no local tribunal empowered to take cognizance of the causes which arise under them; which, therefore, are sent for trial to the United States

District Courts in the State of Arkansas. This not only causes great expense and inconvenience to the suitors, but, in criminal cases especially, interferes with the impartial administration of justice. A Choctaw or Chickasaw, accused of an offence against the laws of the United States, is hurried away from his friends, to be tried at a remote point, in a community which has no sympathy with him. Unable to compel the attendance of his witnesses, and deprived of the aid and comfort extended to the white man similarly situated, he defends himself under great disadvantages. There is a manifest injustice in this which should be remedied at once; and I would suggest the establishment, by Congress, of a District Court of the United States for this territory, to hold at least one term annually for each of the four tribes of Cherokees, Creeks, Choctaws and Chickasaws. Among these tribes there are educated, well-read lawyers, and the holding of a court in their country would create, in the minds of the people, respect for the laws, and give dignity to the administration of justice.

#### A VOICE FROM HEAVEN.

I shine in the light of God,  
His likeness stamps my brow,  
Through the shadows of death my feet have trod,  
And I reign in glory now!

No breaking heart is here,  
No keen and thrilling pain,  
No wasted cheek, where the frequent tear  
Hath rolled and left its stain.

I have found the joys of heaven,  
I am one of the angel band;  
To my head a crown of gold is given,  
And a harp is in my hand!

I have learned the song they sing  
Whom Jesus hath set free;  
And the glorious walls of heaven still ring  
With my new-born melody!

No sin, no grief, no pain,  
Safe in my happy home!  
My fears all fled, my doubts all slain,  
My hour of triumph come!

O friends of mortal years,  
The trusted and the true!  
Ye are walking still in the vale of tears,  
But I wait to welcome you.

Do I forget?—Oh no!  
For memory's golden chain  
Shall bind my heart to the hearts below,  
Till they meet to touch again.

Each link is strong and bright,  
And love's electric flame  
Flows freely down like a river of light  
To the world from which I came.

Do you mourn when another star  
Shines out from the glittering sky?  
Do you weep when the raging voice of war,  
And the storms of conflict die?

Then, why should your tears run down,  
And your hearts be sorely riven,  
For another gem in the Saviour's crown,  
And another soul in heaven?

#### SUMMARY OF NEWS.

FOREIGN INTELLIGENCE.—Dates from Liverpool are to the 2d inst. No further reduction in its discount rate had been made by the Bank of England. The demand was moderate. Few additional failures had occurred, and the year closed more favorably than had been anticipated. The joint stock banks had reduced their rate of allowance on deposits to 7 per cent. The demand for silver for exportation to India had somewhat increased. At Hamburg, the rate of discount had declined to  $4\frac{1}{2}$  per cent. Cotton had slightly advanced at Liverpool, the price being from 6d. to 6 $\frac{1}{4}$ d. Stock in port at the end of the year, 400,000 bales, of which 199,000 were American. Breadstuffs and provisions were generally dull, but prices steady.

The British revenue returns for the year show a decrease of receipts for the last quarter of about £800,000, and in the year of about £1,800,000. This decrease arises principally from diminished taxation, although the commercial depression had considerable influence towards the close of the year.

The steamer Sarah Sands, bound for India with troops, took fire and burned for fifteen hours, but by extraordinary exertions the flames were at length subdued. An explosion took place in one of the magazines, and the after part of the ship was almost completely destroyed. She put into Mauritius for repairs with fifteen feet of water in the hold.

FRANCE.—The Paris *Constitutionnel* boldly defends the virtual revival of the African slave trade under the sanction of the French government, and ridicules the opposition of English philanthropists. It is asserted, however, from other quarters, that there is no doubt that the Emperor will not renew the contract for supplying the French colonies with negroes.

It is said that all the exiled Generals have received an unconditional permission to return to France.

ITALY.—The official report of the recent earthquake in Naples states that twelve villages have nearly disappeared, and all the buildings of Potenza are in ruins. Four hundred lives were lost at Castilla, and thirty at Palla. Sicily had wholly escaped. Shocks were felt at Naples on the 19th and 20th, but had little effect.

GERMANY.—It is reported that the European powers are about to make an energetic attempt to get rid of the State duties levied by Hanover on the navigation of the Elbe.

INDIA.—Accounts from Calcutta are to 11th mfo. 25th. The rebels had not evacuated Lucknow. Gen. Campbell had asked for reinforcements, although his force was computed at 12,000 men, in good order. Serious disorders were anticipated in Rajpootana.

CHINA.—At the last accounts, the English fleet was about to enter the Canton river. It was the design of the English commander to make the dispute entirely local, but it was not known what course the Chinese government would adopt relative to English traders in the other ports. The French naval commander was about to join in the attack on Canton, though without any formal convention or alliance. The American Minister, William B. Reed, had arrived at Hong Kong.

MEXICO.—The recent revolutionary proceedings in the city of Mexico, by which Comonfort was made Dictator, have not been received with favor in the interior, and several States have openly declared against them. Vera Cruz has withdrawn from its adhesion to Comonfort, a formidable military coalition is forming against him, and another civil war appears probable.

one of which states that Walker never could have been President of Nicaragua, as he claims, because the constitution of that State restricts the office to

**NICARAGUA.**—Col. Anderson, who held possession of Fort Castillo with a portion of Walker's party, was taken prisoner, with all his men, by a force from the U. S. frigate *Susquehanna*, on the 24th ult. He had previously burned the fort, and destroyed some of the steamboats on the river. The prisoners were sent to the United States.

**CANADA.**—At the beginning of the present year, the method of reckoning currency by pounds, shillings and pence was abolished, and a decimal system substituted.

**WEST INDIES.**—The yellow fever is reported to be very virulent both at Havana and Port au Prince.

**DOMESTIC.**—Accounts from the Utah expedition are to the 1st ult. Most of the troops were in winter quarters at Fort Bridger, which was being rebuilt. A portion were posted forty miles distant. They were in good health, and had provisions to last till next summer, on short allowance, but additional supplies had been sent for. Nearly two-thirds of the animals had died, the grass on the road having been nearly all burned. Governor Cumming, who was with the troops, had issued a proclamation, declaring that persons guilty of the acts of violence supposed to be countenanced by Ex-Governor Young, were in a state of rebellion, and stating that a Court for the trial of offenders would be organized near Fort Bridger. A posse of the well-disposed inhabitants of the territory would be first used to enforce the laws, and that failing, military force would be used. The proclamation commands all armed bodies to disband and return home, on peril of punishment as traitors.

On account of a dispute relative to the legality of the removal of the capital, the territorial legislature of Nebraska has divided into two bodies, the majority going to Florence, the new capital, while the minority remain at Omaha, in possession of the records.

The advices from Kansas, respecting the late election, are still so contradictory that the result cannot be ascertained. J. Calhoun, President of the Lecompton Convention, who had fled to Missouri, to escape threatened injury, has been escorted back to Lecompton by U. S. troops. The State legislature, elected under the Topeka organization, met at Topeka on the 4th inst., and after receiving a message from Gov. Robinson, adjourned to Lawrence. The Territorial legislature was also in session, and had removed from Lecompton to Lawrence. The message of Gov. Denver to the latter body advised the avoidance of legislation till the action of Congress relative to the Lecompton constitution is known, since the acts of the legislature will be nullified, should Kansas be admitted under that constitution.

The Minnesota constitution which has been sent to Congress by the President, is the one signed only by the members of the Democratic, or minority division of the convention, the copy signed by both divisions not having then been forwarded. It has since been received, certified by the Secretary of the territory, but Gov. Medary refused his signature, having previously attested the other copy.

Both branches of the Ohio legislature have passed resolutions instructing their Senators and Representatives in Congress to oppose the admission of Kansas under the Lecompton, or any other constitution, not the clear expression of the will of the majority.

Forty-two llamas, from South America, arrived at New York recently, consigned to a Baltimore firm. The object of their importation is to distribute them in wool-growing districts, with a view to naturalizing the species. Nineteen Angora goats, and three sheep, imported by government, arrived at Boston a few days since, from Constantinople.

Among the documents relating to Central America, transmitted to Congress by the President, are several letters from the Nicaraguan Minister at Washington,

and natives. Another returns thanks to our government on behalf of Nicaragua, Guatemala, and Salvador, for the arrest of Walker by Com. Paulding, saying that the point whence he was taken is an almost deserted one, where no Nicaraguan authorities exist who could have dealt properly with the invaders; and that, therefore, the Minister considers the proceedings of Com. Paulding as entirely justifiable.

An agreed case has been made up and submitted to the Supreme Court of California, for testing the right of the people to legalize the payment of the State debt by a vote, as was done at the late election. A speedy decision is looked for, and it is not doubted that it will be affirmative.

**PENNSYLVANIA LEGISLATURE.**—The report of the State Treasurer, showing where the money of the Commonwealth is deposited, was presented to the lower House on the 13th. The balance in the treasury was \$709,141, of which \$487,063 was deposited in banks. The two Houses met in joint convention on the 15th, to count the vote for Governor, which was officially announced as follows: Wm. F. Packer, 188, 846; David Wilmot, 146,139; Isaac Hazlehurst, 28, 096. A petition was presented to the Senate from stockholders of the Bank of Pennsylvania, asking for the passage of the pending bill, authorizing the sale or assignment of the charter of that institution. A bill passed both houses, making an appropriation to purchase a house for the residence of the Governor. Gov. Packer was inaugurated on the 19th inst.

**CONGRESS.**—The Senate has passed a bill repealing the act which authorized the Secretary of the Navy to change the names of vessels in certain cases. On the 14th, a resolution was adopted asking the Interior Department for an estimate of the quantity of land granted to Minnesota for railroad purposes, by the act of last session; and one calling on the War Department for the report of the commission on war claims in Oregon and Washington territories. On the 19th, the committee on the Pacific Railroad reported a bill, authorizing the President to receive bids, and to make a contract for locating the road, having a view to economy and the best route. Alternate sections of land on each side of the road shall be granted, and \$12,500 per mile advanced on the completion of every 25 miles, till \$25,000,000 shall be reached; the sums thus advanced to be returned in mail service and the transportation of troops and munitions of war.

The capture of Walker, and the questions connected therewith, constituted the principal topics of debate in the House of Representatives during the past week. The President's message on the subject, with accompanying documents, and one stating, in response to a resolution of inquiry, that Nicaragua had made no complaint of Com. Paulding's violation of her territory, were received on the 12th. Blair, of Mo., on the 14th, gave notice of his intention to offer a resolution providing for the appointment of a committee, with instructions to inquire into the expediency of acquiring territory, either in Central or South America, for colonizing free blacks, to be protected by the United States; and denounced the aggressive movements against Central America, as designed to extend slavery. The part of the President's annual message relating to military expenditures, was referred to the Judiciary Committee, with instructions to inquire into the expediency of amending the neutrality laws. On the 15th, a resolution was adopted providing for a select committee to investigate the charges preferred against the members and officers of the last House, growing out of the disbursement of money by Lawrence, Stone & Co., of Boston, or others, and report the facts, with such recommendations as they deem proper. The Senate bill, making appropriations of indemnity for slaves carried from the Southern States during the last war with Great Britain, was taken up.

# FRIENDS' REVIEW.

A RELIGIOUS, LITERARY, AND MISCELLANEOUS JOURNAL.

VOL. XI.

PHILADELPHIA, FIRST MONTH 30, 1858.

No. 21.

SAMUEL TUKE.

Died 14th of Tenth Month, 1857, in his 74th year.

It is not intended, in the following sketch to attempt more than what must necessarily be a very bare and imperfect outline of our departed friend's life and character.

The sphere of his thoughts and actions was so extended, the traits of his character were so varied, and the retrospect of his active life revives so many associations, both of a religious and civil nature, that to attempt any thing deserving the name of biography in this notice, would be unsatisfactory to the writer, and disappointing to the reader. Those who knew him intimately, will, with willing hearts, fill up the lineaments which are wanting, to complete the more finished picture of one whom they so justly loved and honored.

Samuel Tuke was the son of Henry and Mary Maria Tuke, and was born at York, in the year 1784. From early childhood he appears to have manifested many of the mental and intellectual characteristics which so remarkably belonged to him in his riper years.

In many of the letters written by his loving mother, references are made, and incidents recorded, which indicate, even in the boy, a tendency to reflection and seriousness much beyond his years. Few have been more favored than he was in the possession of parents, who, in the management of their children, combined qualities too often separated—judgment and the most tender affection, with fervent piety.

With his removal from school to business, at the early age of thirteen, his education did not terminate. His evenings were devoted to careful study; and in the counting-house, so well known to Friends in Yorkshire, the influence of his

grandfather and father must have materially aided in moulding his mind, and have led to that early devotion of his time and talents to the service of his fellow creatures, which formed so conspicuous a feature of his after life.

Thus it is interesting to trace, in the formation of Samuel Tuke's matured Christian character, not only the result of natural endowment, but of the guarded training and bright example of parents who illustrated and enforced, by their daily lives, the doctrines which they professed. There appears scarcely to have been a period when the subject of this sketch was not, to a considerable degree, under the influence of Divine grace; without which all other advantages would have availed little. Although he was at times, in his earlier life, disturbed by doubts and temptations, and very often made to feel the evil propensities of his nature, he was not permitted to be drawn away from his allegiance to the God of his fathers, whom he had so early been taught to love and to serve. He has himself stated that the doubts which occasionally distressed him, at this period, were most effectually removed when "*I came to believe that God was round about my path, and that he did know all my secret ways and thoughts*"; this belief did more thoroughly solve all my doubts respecting the Divine Being, than any arguments or reasons which I ever heard."

The following memoranda of "Resolutions to be observed," were made at an early period of life:—

"1st. To read some portion, both of the Old and New Testaments, daily.

"2d. To endeavor to obtain, and fix in my mind, a *just estimate* of things, and to regulate my pursuit of them accordingly.

"3d. To continue my present pursuits, and use more diligence.

"4th. To endeavor rather to *shun* than conquer evil; 'and, since 'tis hard to combat, learn to flee.'"

After glancing at these interesting indications of character, it will not be attempted here to delineate the deepening growth of that Christian life, which, as the heart and intellect came under the full power of the Gospel, brought him savingly to accept the message of salvation through Jesus Christ; and, in after years, to proclaim the glad tidings of his Saviour's love.

At the age of twenty-six, he married Priscilla,

daughter of James Haek, of Chichester, to whom he was united by the closest bonds of affection for eighteen years. To his mind, as remarkable for tenderness as strength, the severance by death of this union, left behind it deep and lasting effects. The loss indeed was great, and *his* was the mind to feel it most intensely. Less hopeful naturally than many, the traces of this affliction remained throughout his future life; but not less so the evidence of the Lord's work in pruning "the branch which beareth fruit," and in preparing the vessel for his house, as "silver is tried."

This event threw doubly upon him the care and oversight of the numerous family thus left to mourn the loss of their beloved mother. In this work he was aided by his devoted sister, Maria Tuke, who, to the close of her valuable life, was to him a true sympathizer in his cares and sorrows, and a tender and judicious friend, to whom he could confide the various anxieties which he was naturally too prone to shut up in his own breast.

Amidst the incessant labors in which he was engaged, the right training and welfare of his children were always uppermost; and few parents have been regarded by their families with greater reverence, or loved with deeper affection. The periods of religious retirement with them, and the fervent earnestness and humility of his petitions to the Throne of Grace, at the evening family readings, have left behind them impressions which can never be effaced.

The interest which Samuel Tuke took in the care and humane treatment of those afflicted with mental disorders, especially in connection with the Retreat, is well known to all our readers, and cannot be more than cursorily referred to in this notice. One extract, however, from his memoranda, alluding to his exertions on behalf of the insane, so clearly and beautifully illustrates the motives which influenced him, not only in this, but in all his labors for the good of others, that it may not unsuitably be inserted here. On receiving from the printer an impression of his work, "A Description of the Retreat," published in 1813, when the author was in his twenty-ninth year, he makes the following entry in his journal:

"This work was commenced under a deep sense of the sufferings of the insane. Their afflictions have often been present with me in my retirement before God, and my prayer has been that, for the cries of the poor and needy who have no helper, he would arise. May he prosper this imperfect effort to awaken the public sympathy towards them." This work, reviewed in many of the leading publications of the day, excited an amount of attention to the subject which its author had never ventured to anticipate; and the "imperfect effort," under the Divine blessing, was instrumental, to a great extent, in promoting that change in the treatment of the insane which he had so earnestly longed for.

His efforts in this direction formed, however, but a small portion of the engagements of his active life. He early took a deep interest in the Bible Society, the Anti-Slavery, and British and Foreign School Societies; and, for many years, he labored assiduously to promote the cause of education amongst the industrial classes in his native city; whilst his expansive benevolence, and his warm-hearted philanthropy, called forth his sympathy with human suffering of every kind, and led him to active exertion for the moral and religious improvement of his fellow men, of all classes of the community.

In his own Society it is needless to speak of the position which he held. His steady onward course of practical usefulness has left too many permanent results to require much comment. Even from this more sectional point of view, his early connection with the history of the Retreat, and the subsequent development and administration of that Institution, was productive of incalculable good; and the value of his untiring devotedness to the interests of Ackworth School, and the educational establishments under the care of the Quarterly Meeting at York, as well as the promotion of a sound Christian education throughout the Society, is well known. There are many who will vividly recall his opening addresses at the meetings of the Educational Association, and remember with how deep an interest they listened to the exposition of his matured views upon these important subjects, as embodied in the "Five Papers," which he read at their Annual Meetings at Ackworth.

Whatever tended to the spiritual advancement and healthy progress of the Christian community to which he belonged, lay near to his heart; and it would not be doing justice to our dear departed friend, to omit giving due prominence to his warm attachment to the religious views of his own Society.

In connection with this subject, it will be recollected that he edited several works relating to the history and principles of the Society of Friends. The principal of these are: "Memoirs of the Life of Stephen Crisp," and "George Whitehead;" and "Selections from the Epistles of George Fox." The concluding paragraph of his introduction to the first of those works exhibits at once his high estimation of the "Early Friends," and his true appreciation of those who, in some respects, differed from them, and from himself, in religious opinion.

"We are not to forget," he remarks, "that the Episcopal Churches of England, Ireland, and Scotland, boasted, about that time, some of the most illustrious names in the galaxy of Christian worthies,—Usher, and Beveridge, and Leighton, and Taylor, and Cudworth, and Tillotson; nor must we forget the not less excellent names of Owen and Baxter. If we add to these the names of Fox, and Barclay, and Penn, and Crisp, some would probably startle at the alliance; but we

trust all these worthies have long since forgotten their earthly discrepancies, and learned to tune their harps together, to the praise of their common Redeemer,—hymning,

'Him first—Him last—Him midst and without end.'

It was not, indeed, in the narrow-mindedness of sectarian partiality, but from the deep conviction of a large and enlightened understanding,—a clear and comprehensive view of the scriptural soundness, and the consequent value and importance of its essentially and directly theocratic principles and polity—that, with the full heart of a truly catholic Christian, Samuel Tuke so sincerely loved the Society of which he was a member, and so largely devoted the energies of his capacious mind to the advancement of the cause of Christ within its borders. When, in the vigor of his meridian strength, his Christian graces became more fully expanded, the mellow richness of his personal experience could not be concealed; and, rooted as that evidently was, in humility, and faith, and love, those who knew him most intimately, could not doubt that he lived very near to the Saviour whom he adored,—that by the grace of God he was what he was,—that the fruits which he bore were “the fruits of the Spirit.” About his fortieth year, he first spoke as a minister of Christ. The hearts of many will respond to the testimony of a much loved and honored Elder in the Church, who thus alludes to it—“There is certainly something of zeal and religious exercise spreading amongst the younger part of our large Quarterly Meeting, and in no instance of dedication have I felt more satisfied and comforted than in that of S. T., who closed the last sitting for business on Fourth-day evening, by an offering of thanksgiving and supplication; under a covering of awful solemnity, equal, I think, to most, if not any, that I have witnessed. The effect was indeed very striking, and to some, I suppose, rather astonishing. I cannot but often think, how some would have rejoiced to have witnessed it, whose spirits are now at rest. I say *would have*; but we are left in great darkness as to the connection between the church militant and the church triumphant. It is said that ‘there is joy in heaven over the sinner that repenteth;’—and how do we know what may be experienced there, when spirits, still in conflict, catch the mantle of departed worth, cast down their crowns at the feet of the Saviour, invoke his strength, and rise to anoint the shield of their faith. It is, however, a consoling evidence to those who witness it, that the ‘one body,’ composed of the true church under every name, is not forsaken of her Lord and Master.”

(To be concluded.)

Avoid, all thou canst, being entrusted; but do thy utmost to discharge the trust thou undertakest; for carelessness is injurious if not unjust.

Penn.

For Friends' Review.

[In looking over some papers lately, I found an Epistle of London Yearly Meeting of 1823, and was so much interested in its perusal that I have thought it would be interesting to the readers of the *Review*. That portion on the due observance of the first day of the week, is worth the serious consideration of every one. I have often had to remark, that where there is a disregard for this observance, there is also a manifest indifference to vital Christianity. F.]

*The Epistle from the Yearly Meeting held in London, by adjournments, from the 21st of the Fifth Month to the 29th of the same, inclusive, 1823; to the Quarterly and Monthly Meetings of Friends in Great Britain, Ireland and elsewhere.*

DEAR FRIENDS:—We have again been made thankful in the belief that the Lord is not unmindful of us, and we reverently trust that this meeting has not been held in vain. We may inform you that the current of Christian love has renewedly flowed amongst us, and it has extended to our absent friends. Under this precious influence we offer you our endeared salutation, desiring your advancement in the way which leadeth unto eternal life, and that you may ever bear in remembrance that, “other foundation can no man lay, than that is laid, which is Jesus Christ.” 1 Cor. iii. 11.

Beloved Friends, we have no new doctrines to communicate, no fresh precepts to enforce; it is a peculiar excellence of the Gospel that its character is always the same. To those who desire to have their hearts cleansed from the defilements of sin,—yea, to all—the grace of our Lord Jesus Christ continues to be freely offered. The cross must be daily borne by all who would become his disciples. If we would attain unto that holiness, without which no man can see the Lord, we must apply in faith unto Him who “taketh away the sin of the world,” who was “wounded for our transgressions,” who was “bruised for our iniquities,” and by whose “stripes we are healed,” who being in glory with the Father “before the world was,” condescended, in order to effect our redemption, to come down from heaven and take upon him the nature of man. In contemplating the infinite importance of these solemn truths, and in publicly acknowledging our belief in the Divinity of our blessed Saviour, we desire most clearly to convey the sentiment, that it is not the mere assent of the judgment to the truth of Holy Scripture, however desirable such an assent may be, that is sufficient to make us real Christians. It is only by the sanctifying operation of the Holy Spirit that we come fully to partake of the benefits of the mediation and propitiatory sacrifice of the Son of God.

It is our earnest solicitude that all whom we are addressing may be enough concerned for the salvation of their souls. Dear friends, we believe

that for the advancement of this most necessary work, it is good for us frequently to seek after retirement in spirit before the Lord, and to wait in reverent silence for the secret intimations of His will. If this be not immediately manifested, let not any be discouraged, but let them persevere in faith. Then we believe that in the Lord's time that evidence of his care will be granted, which will prove consoling to the mind. On such occasions the precepts of holy writ will at times be brought instructively to our remembrance. With these invaluable writings, it becomes every one who bears the name of a Christian to endeavor to be well acquainted. In order to acquire this knowledge, we wish that all our members may observe the good practice of a daily serious reading of the Scriptures in their families when collected, and also that they frequently read them in private, in a pious disposition of mind, even though it be but a small portion at a time.

In the sacred writings no duty is more clearly set forth than that of prayer. Prayer is the aspiration of the heart unto God; it is one of the first engagements of the awakened soul, and we believe that it becomes the clothing of the minds of those whose lives are regulated by the fear and love of their Creator. If, in moments of serious reflection and when communing with our own hearts, we are sufficiently alive to our helpless condition, we shall often feel that we may pour forth our secret supplications unto the Lord. And as we believe that it is one of the greatest privileges a Christian can enjoy, thus to draw nigh in spirit unto the Father of mercies, we earnestly desire that no one may deprive himself of so great a blessing. But let all, on such occasions, remember the awful majesty of Him who filleth heaven and earth, and their own unworthiness in His pure and holy sight. If these considerations ought to possess the mind in our secret aspirations unto the Almighty, how incumbent is it on those who publicly approach the Throne of grace, to cherish them in their hearts, and to move only under the influence of that Spirit which enables us to pray aright.

Whilst he who would be a real and not a nominal Christian, is duly impressed with the necessity of striving to become a meek and humble disciple of Jesus,—whilst he bears in mind that he is constantly liable to fall, and that he must therefore be waiting for the renewal of his spiritual strength and at all times be placing his dependence upon Divine aid,—there is safety. But we fear for some who have run well for a time, that either through the friendship of men or outward prosperity, or through unwatchfulness, they have gradually fallen away from that to which they had once attained, and that others, from similar causes, are not advancing to that state of purity and simplicity in which they would become useful members of the church of Christ. Dear friends, permit us in Christian love to remind you of the ever important injunc-

tion of our Lord:—"Watch and pray that ye enter not into temptation; the spirit indeed is willing, but the flesh is weak!" If you endeavor to prove by your actions the sincerity of your profession, if in your intercourse with others you show that you have an honest and upright heart, if your lives are ordered in the fear of the Lord, you may by your daily walk through life commend and adorn your own religious principles. But if there be a want of consistency of conduct, it may lead those around you lightly to esteem those very principles which their judgment has at one time approved; nay, it may cause the way of Truth to be evil spoken of.

There are many ways by which our attachment to religion and virtue may be made manifest to others. One of these is the due observance of that day which is publicly set apart for the performance of divine worship. Our care for the due attendance of our religious meetings, both on first days and on other days of the week, has been repeatedly expressed, nor have we at this time been unmindful of this primary obligation. We earnestly entreat every one, when thus met, to consider the worship of the Almighty as a solemn act. Under this impression his demeanor will bespeak a serious thoughtfulness, and let all remember that at such times an indolent state of mind is offensive in the sight of Him whom we are met to serve. But the duties of the day to which we have adverted, are not confined to the time allotted to assembling with our brethren. Our spiritual growth may be advanced by habits of quietness and retirement, and by suitable reading in the course of the day. On the other hand, great care is necessary that we do not, by unprofitable visiting or conversation, by travelling on our outward avocations, or by otherwise engaging in them, dissipate those good impressions with which we may have been mercifully favored.

The accounts of the sufferings of our members in Great Britain and Ireland, in support of our well known testimony against tithes and all other ecclesiastical claims, including the costs and charges of distraint and a few demands for military purposes, have been brought up in the usual course. The amount is upwards of thirteen thousand two hundred pounds.

We rejoice with gratitude that this country has continued to be favored with the blessing of peace, whilst we lament that other nations, at no great distance from us, have been involved in contention and bloodshed. We desire that we may all so live under the influence of that Spirit which breathes peace on earth and good will towards men, that, whenever occasions occur, we may be prepared by our conversation and conduct in meekness and wisdom to show forth our precious testimony to the peaceable nature of the gospel dispensation.

Our friends in Ireland, and those of all the Yearly Meetings on the continent of America, have at this time been brought to our remem-

brance, with the feeling of much brotherly love, by the continuance of our usual exchange of epistles. This meeting has again felt deeply interested on behalf of the natives of Africa, who continue to be torn from their homes, and consigned to cruel bondage, as well as for those who are held in slavery in the colonies of this country. And we desire that Friends, everywhere, may not fail to remember all who are thus deprived of their liberty, with feelings of sorrow, and to pity them in their degraded condition, and also to embrace every favorable opportunity that may present itself for pleading the cause of these our oppressed fellow men.

"Now unto Him that is able to keep you from falling and to present you faultless before the presence of His glory with exceeding joy, to the only wise God our Saviour, be glory and majesty, dominion and power, both now and ever. Amen."

Signed in and on behalf of the Meeting,

JOSIAH FORSTER,

Clerk to the Meeting this year.

#### AFRAID OF THE WAGES.

"I want your boy in my shop," said a shopkeeper to a poor widow; "I have had a great deal of trouble with clerks, and I want your Seth, because I know he's honest."

The widow was glad, for it was time for him to be earning something, and she thought it would be quite a lift in the world to have him go in with Mr. Train, and she knew he would suit Mr. Train, for Seth did well everywhere.

When Seth came home from school he was almost as much pleased with his good fortune as his mother was. Neither mother nor son knew anything about Mr. Train's store; it was in the lower part of the town, but his family lived near the widow's, in fine style. Seth was to go the next Monday morning, and at the time he was punctual at his new post.

The week passed away. When he came home to dinner or supper his mother asked him how he liked it. At first he said pretty well, and then he didn't exactly know, then not very well; and Saturday he told his mother plumply that he didn't like it at all, and wasn't going to stay. "Well, Seth," exclaimed his mother, grieved and mortified at the change, "are you so difficult to suit as all this comes to? Do you know how important it is to stick to your business? What will Mr. Train say?"

"Mother," answered the boy, "the shop is a grog shop, and I cannot stay there!"

The mother's mouth was stopped; indeed, after that, she had no wish to have him remain,—but she was very sorry the case was so.

When Mr. Train paid the boy on Saturday night, Seth told him he could not stay.

The shopkeeper was surprised. "How is this," said he, "haven't I done well by you this week?"

"Yes, sir," answered the boy, "I never expect to find a kinder master."

"Do you find fault with the pay?"

"No sir," answered Seth, "it is good pay."

"Well, what's the difficulty then?"

The poor boy hesitated to give his reason. Perhaps the man guessed what it was, for he said:

"Come, come, Seth, you won't leave me I know. I'll raise your wages."

"O, sir," answered the brave boy, respectfully, "you are very good to me, very good, sir; but I cannot be a dramseller. I am afraid of the wages,—for I cannot forget that the Bible says, *the wages of sin is death.*"

Seth left; the man afterward said it was the greatest sermon he ever had preached to him; and it set him seriously to thinking about giving up the business. But he did not, and his own family bore awful testimony to the Bible declaration. A few years afterward he died the miserable death of a drunkard, and within six months his son, in a fit of intoxication, fell into the river and was drowned. Is it not dangerous to tamper with the wages of sin on *any terms?*

From the New York Evangelist.

#### HOW TO STUDY THE BIBLE.

If all Scripture is given by inspiration of God, and is profitable for doctrine, for reproof, for correction, for instruction in righteousness, then it cannot be too devoutly read and studied. The remarks which I am about to offer are not for the learned, but for the common readers of the received English version. The great mass of the people cannot study the original Greek and Hebrew. They must read the Scriptures "in their own tongues, wherein they were born."

There are many Bible readers who do not know how to read it to the best advantage. Several methods may be adopted, each of which has its advantages, but not to the exclusion of others.

The Bible may be read through in course, so many chapters in a day, from Genesis to Revelations. It ought to be read through very early, by the children of every family; and once a year, ever thereafter, is not too often. It would give such a familiar knowledge of its contents, that the careful reader would be able at once to turn to almost any passage without the help of a concordance; and to this end we should always use the same Bible, as we are often very much helped by recollecting just where, on the page, the passage we wanted is to be found.

But these daily Bible readings, in course, and spending no more time upon one part than another, are not enough. Some things are much harder to be understood than others. The historical Books of the Old Testament, for example, may be passed over much more rapidly than the Epistles of the New. The right understanding

of the cardinal doctrines of the Bible requires *study*.

Another, and a very profitable way of reading the Scriptures, is to take up a Gospel or an Epistle, and read it carefully through, from beginning to end, at one or two sittings, so as to take in the whole scope of the writer. This, I believe, is scarcely ever done by common readers. I suppose there are many who, though they read the Bible every day, never yet sat down to read one of the Gospels, or the Acts of the Apostles, or one of the longer Epistles through, as they do other books. All their reading is desultory—a chapter here and a chapter there—without much regard to the connexion. Hence, though they may study isolated passages, and be able to quote them, they get no comprehensive views of the main drift of the history or the argument. What proportion of professors of religion, even, spend much time in such continuous reading of the Sacred Books?

If any should offer the excuse that they have not time for it, they must allow us to question them a little. Do they not find time to read forty or fifty pages of history, or a long article in some favorite Quarterly, without rising from their seats? The longest Books in the New Testament can be read through, deliberately, in two or three hours. The Epistles will not, upon an average, require half that time. Many spend more time, every day, in reading the secular newspapers, than it would take to read the whole of the Gospel of John, or the Acts of the Apostles.

But here let me say, I have no doubt that whole Books of Scripture would be read through much oftener than they are, if they were printed as other books are. It is known to every one, who has paid the slightest attention to the subject, that the divisions and subdivisions throughout the whole Sacred Volume are extremely arbitrary. In numberless cases the divisions into chapters are made without any regard to the natural transitions from one topic, or train of thought, to another. The chapter leaves off abruptly, without any conceivable reason, just where you expected something more to carry out the argument—or it begins as abruptly in the midst of a subject. The subdivisions of chapters into verses are still more arbitrary. Sentences are so cut up into fragments, as it were, or so run together into verses, which ought to have been kept separate, as to deprive them of half their force. Instead of presenting to the eye a symmetrical articulation of joints and bands, there are often such violent distortions, as almost deter a great many readers from trying to put the parts together. By whom this hap-hazard work was done, it were of no use now to inquire. Nothing of the kind is to be found in the original Scriptures. Nevertheless it will be the reader's own fault, if he is hereby deterred from reading the Books carefully through, one at a time.

Nor, if he would be well instructed into the "things of the kingdom," must he stop here. He must "search the Scriptures." He must study them, to learn what is "the mind of the Spirit," with regard both to the doctrines and duties of religion. Where any thing is hard to be understood, instead of rejecting it, he must endeavor to get the true meaning, by comparing Scripture with Scripture. Other helps may be resorted to, but the Bible is its own best and safest interpreter. Who that has been at first perplexed by obscure passages, has not also often been agreeably surprised to find, in turning to other parallel texts, how much light they reflect upon each other? The further this method of studying the Bible is pursued, the fewer difficulties will be left to solve. The great reason why so many persons, who are ever learning, are never able to come to the knowledge of the truth, is that they rest upon insulated texts, without taking the trouble to inquire how they agree with other texts, and with the general scope of the Bible. I repeat, that the Bible must be studied and compared with itself, or it will never be rightly understood. As the richest pearls are brought up by the deepest diving, so, to bring out some of the most precious truths of the Scriptures, we must go down into the mine. We must search for wisdom as for silver, and dig for it as for hid treasures.

I would not condemn the use of concordances and marginal references as helps, but the best way is to get the Bible so much by heart that we can readily turn to any passage we want to find without their aid. They may be sparingly used to good advantage, but the more you depend upon them, the more you will; and the less familiar will your knowledge of the Sacred Oracles be. It were better, in most cases, to search a good while upon the sacred page itself, for what you want, than to ask Cruden where you can find it. Here, as well as everywhere, the more you rely upon your own memory, the better it will serve you.

About the use of commentaries I have only room left for a word or two. They are not to be rejected, as of no advantage, in studying the Holy Scriptures. They are important helps to common readers. But before referring to them for the meaning of a passage, it should be studied patiently, in its connexion. To take the opposite course—to ask Henry or Scott what the true meaning may be, is very much like studying any Greek or Latin classic with a translation, and constantly referring to it, instead of studying the text itself. As such a student will never make an accurate scholar, no more will he who depends upon an expositor to save him the trouble of finding out the meaning himself, gain a thorough and familiar knowledge of the Scriptures. It is searching the commentator, and not the Bible.

But, after all, read and study the Bible as we will, we shall never understand it without the

teaching of the Holy Spirit shining upon the sacred page; and that we may not expect without prayer for the needed aid. God delights to see us devoutly reading and studying his words, and we have the most abundant assurances that he will teach us if we ask light from above. "If any man lack wisdom, let him ask it of God, who giveth unto all men liberally, and upbraideth not." May we all so read and understand and obey the Scriptures, as to be wise unto salvation, through sanctification of the Spirit, and belief of the truth.—*Dr. Humphrey.*

#### DR. LIVINGSTONE'S EARLY LIFE.

The following passages, from Dr. Livingstone's work on Africa, will be read with particular interest by those who would know the secret of his wonderful power to endure hardships and overcome obstacles:

"The earliest recollection of my mother recalls a picture so often seen among the Scottish poor—that of the anxious housewife striving to make both ends meet. At the age of ten, I was put into the factory as a "piecer," to aid by my earnings in lessening her anxiety. With a part of my first weeks's wages, I purchased Ruddiman's "Rudiments of Latin," and pursued the study of that language for many years afterward, with unabated ardor, at an evening school, which met between the hours of eight and ten. The dictionary part of my labors was followed up till twelve o'clock, or later, if my mother did not interfere by jumping up and snatching the books out of my hands. I had to be back in the factory by six in the morning, and continue my work, with intervals for breakfast and dinner, till eight o'clock at night. I read in this way many of the classical authors, and knew Virgil and Horace better at sixteen than I do now.

My reading while at work was carried on by placing the book on a portion of the spinning-jenny, so that I could catch sentence after sentence as I passed at my work; I thus kept up a pretty constant study, undisturbed by the roar of the machinery. To this part of my education I owe my present power of completely abstracting the mind from surrounding noises, so as to read and write with perfect comfort amid the play of children, or near the dancing and songs of savages. The toil of cotton-spinning, to which I was promoted in my nineteenth year, was excessively severe on a slim, loose-jointed lad, but it was well paid for; and it enabled me to support myself while attending medical and Greek classes in Glasgow in winter, as also the divinity lectures of Dr. Wardlaw, by working with my hands in summer. I never received a farthing of aid from any one, and should have accomplished my project of going to China as a medical missionary, in the course of time, by my own efforts, had not some friends advised my joining the London Missionary Society, on account of its

perfectly unsectarian character. It 'sends neither Episcopacy, nor Presbyterianism, nor Independency, but the gospel of Christ, to the heathen.' This exactly agreed with my ideas of what a missionary society ought to do; but it was not without a pang that I offered myself, for it was not quite agreeable to one accustomed to work his own way, to become in a measure dependent on others; and I would not have been much put about, though my offer had been rejected.

Looking back now on that life of toil, I can not but feel thankful that it formed such a material part of my early education; and, were it possible, I should like to begin life over again in the same lowly style, and to pass through the same hardy training.

Having finished the medical curriculum, and presented a thesis on a subject which required the use of the stethoscope for its diagnosis, I unwittingly procured for myself an examination rather more severe and prolonged than usual among examining bodies. The reason was, that between me and the examiners a slight difference of opinion existed, as to whether this instrument could do what was asserted. The wiser plan would have been to have had no opinion of my own. However, I was admitted a Licentiate of the Faculty of Physicians and Surgeons. It was with unfeigned delight I became a member of a profession which is pre-eminently devoted to practical benevolence, and which with unwearied energy pursues from age to age its endeavors to lessen human woe.

But though now qualified for my original plan, the opium war was then raging, and it was deemed inexpedient for me to proceed to China. I had fondly hoped to have gained access to that then closed empire by means of the healing art; but there being no prospect of an early peace with the Chinese, and as another inviting field was opening out through the labors of Mr. Moffat, I was induced to turn my thoughts to Africa; and after a more extended course of theological training in England than I had enjoyed in Glasgow, I embarked for Africa in 1840, and, after a voyage of three months, reached Cape Town. Spending but a short time there, I started for the interior by going round to Algoa Bay, and soon proceeded inland, and spent the following sixteen years of my life, namely, from 1840 to 1856, in medical and missionary labors there, without cost to the inhabitants."

#### "SHE WAS ENCOURAGED."

A PRACTICAL ILLUSTRATION FOR TEACHERS.

The teacher of a large school had a little girl under her care who was exceedingly backward in her lessons. She was at the bottom of the class, and seemed to care but little about what passed in it. During the school hours, singing was sometimes employed as a relaxation, and noticing that this girl had a very clear, sweet voice, her teacher said to her, "Jane, you have

a good voice, and you may lead in the singing." She brightened up, and from that time her mind seemed more active. Her lessons were attended to, and she made steady progress. One day as the teacher was going home she overtook Jane and one of her school-fellows.

"Well, Jane," said she, "you are getting on very well at school; how is it that you do so much better now than you did at the beginning of the half year?"

"I do not know why it is," replied Jane.

"I know what she told me the other day," said her companion.

"And what was that?" asked the teacher.

"Why, she said she was encouraged."

Yes, there was the secret—she was *encouraged*. She felt she was not dull in everything; she had learned self-respect, and thus she was encouraged to self-improvement.

Take the hint, dear fellow-teacher, and try to reach the intellect through the heart. Endeavor to draw out the dormant faculties of your children by discriminating culture and well-timed praise. Give them credit whenever you can, and allure them on with hopeful words. Many a dull-minded child has been made irretrievably stupid by constant fault-finding or ungenerous sarcasm. And, on the other hand, how often has a genial smile or an approving remark wakened into new life some slow learning scholar.

## FRIENDS' REVIEW.

PHILADELPHIA, FIRST MONTH 30, 1858.

ANNUAL MONITOR FOR 1858.—A copy of this instructive publication has been received from England, and we, this week, copy from it the first part of a notice of the life of the late Samuel Tuke, intending to publish the remainder next week, and also to insert occasionally other interesting obituaries. In the Preface, the editor says:—

"The memorial of our late dear friend, Samuel Tuke, whose decease took place subsequently to the close of *our* year, will be dwelt upon with deep interest by the readers of the *Annual Monitor*. They will remember the part he took in remodeling this little periodical, and how much they owe to him for the instructive tone of the work in the first ten numbers of the 'New Series.' Deeming it desirable that some record should be preserved of the 'steps in life of Friends *well known* and esteemed in the Society,' he felt at the same time, to use his own words, 'more than willing to give the right place to the character of those steady pilgrims who have walked in their Lord's steps, though they may have been but *little known*, and have had but few talents.' Far from wishing to limit 'the freedom of Divine mercy at the latest mo-

ment of life,' he felt a godly jealousy, in connection with these records, 'lest our estimate of Christian attainments should be at all lowered by anything which has a tendency to make the getting to heaven *too much* a death-bed affair.' Those who are anxious that the *Annual Monitor* should exercise no other than a healthy influence in the Society will fully appreciate the practical bearing and value of these sentiments, and unite in the desire that they may be steadily kept in view."

We referred, a few months since, to the statistical tables given in the *Annual Monitor*, as showing the unusual average age attained by the members of the Society of Friends, when compared with that of the community at large. The table this year shows a higher average than either of the two preceding years, being *fifty-three years and nearly three months*. The number of deaths was three hundred, or one in sixty-seven of the members, and about one half the rate of the whole of England.

"The causes of this remarkable immunity from disease," says a writer in the *London Friend*, "must be looked for partly in the fact that our Society consists chiefly of individuals of the middle rank of life, neither the very poor nor the luxuriously wealthy; and secondly, in our freedom, generally speaking, from habits of drinking and other forms of intemperance. These are two potent causes; but perhaps the most important of all is the more rational mode of treating young children that prevails among us, than in society at large."

### FRIENDS TRAVELLING IN THE MINISTRY.—

We learn by a letter from England that Susan Howland and her sister were engaged, the latter part of last month, in visiting the families of Hardshaw West Monthly Meeting. They commenced the service in Liverpool on the 20th ult.

Daniel Williams, at the same time, was in Yorkshire. He attended the Quarterly Meeting at York on the 16th and 17th, and on the 27th ult., the latest date, was at Bradford.

Grover Kemp and his companions, after a visit of four weeks on the island of Antigua, where numerous meetings were held and largely attended, principally by the colored population, proceeded to Montserrat and Nevis, and expected soon to reach St. Christopher's. They had visited many schools and public institutions, and met with great kindness and attention from persons of all denominations.

Robert and Sarah Lindsey having returned to North Carolina, after their visit to Tennessee, started thence for Charleston, Mobile, and New Orleans.

**AN INDIAN'S TESTIMONY.—FRIENDS IN KANSAS.**—We are informed by a western correspondent, of the following interesting incident in Friends' Meeting at the Shawnee Mission, Kansas. It may probably be regarded as an evidence that the labors of Friends are not fruitless of good, but, under the Divine blessing, may lead the poor, benighted red man to a knowledge of the truth as it is in Jesus.

A minister having spoken in the meeting, a Shawnee Indian rose and said:—"Friends, it seems to me this gospel I hear to-day, touch my very heart. I believe this I hear to-day is living gospel preaching; and it seem to me that last part about narrow way and straight gate—how it lead to peace and happiness; and oh, that broad way and that wide gate—how it lead so many down to misery and destruction. And when you refer to those before me, and tell us you leave all friends behind, and everything behind, and come to help us, oh, how it cut my heart up in little pieces! It make me weep. I weep with them that weep. I long time see, I must trust in God and not in man. Friends, it seem to me I can't help acknowledge this time the goodness of the Lord in caring for the Red man. I hope He will touch our hearts, and He *will* touch our hearts, and we will know it, and we will feel it; and I do believe He will be with you too, and preserve you, and take care of your friends at home."

In connection, we may add some extracts from a letter recently received from a valued correspondent in Kansas, on the number and position of Friends in that territory. He says:

"There are about seventy members of our Society in this neighborhood, [Osawatomic,] including children, and we expect considerable additions to our number in the spring. We hold meetings on First-days, which are sometimes pretty largely attended; several who are not members attend quite regularly. There is a settlement of Friends on Stranger Creek, about seventy miles northward from here. They hold meetings on First-days. Families are located singly, or two or three in a neighborhood, in several different parts of the territory, and I think the number of Friends now in Kansas may be safely set down at two hundred. I look forward with pleasure to the early establishment

of meetings here. I have not had the privilege of sitting in a meeting for discipline for nearly five years." "It has required much close watchfulness in this peculiarly afflicted country, to maintain our Christian testimonies for peace; yet we have been led to marvel at the preserving hand of Providence, when prowling bands of marauders have been laying waste the country and passing within sight of our dwellings."

**HOME FOR THE MORAL REFORM OF DESTITUTE COLORED CHILDREN.** The third annual report of the Managers of this Institution is before us. They give assurance of its continued usefulness, and speak in the most favorable manner of the exertions of the Matron, who has taken the whole charge of the school and family during the winter. The pupils strive to improve, and those who reside in the family perform many services in household work.

Generous contributions have been made, though not yet to a sufficient amount, for the purchase of a more convenient house, and it is hoped the object will ere long be attained. The number of children in the family on the 1st inst. was 12. On the school list the number is 69, and the daily average attendance is 43. Several children have been placed in the country during the past year.

Subscriptions and donations are respectfully solicited by the Managers: Deborah Williamson, Mary S. Jenkins, Caroline R. Yarnall, Eliza C. Collins, Emma C. Yarnall and Sarah W. Cope.

**ASSOCIATION OF FRIENDS FOR INSTRUCTING POOR COLORED CHILDREN.**—From the report of the Managers it appears that the schools under their care are in an improved condition. An addition of 78 volumes has been made to the Library, and 876 books were borrowed by the scholars during the past year, showing a gratifying interest on their part in reading. The class list of the infant school numbers 75, and the average attendance is 55. In the girl's school the average attendance is 36, and 56 names are on the list.

The Managers remind their friends, that these schools for poor colored children depend on donations for their continuance, and although this is not a time of great abundance, it is hoped that the importance of contributing to this interesting concern will still be felt. The officers of the association are:—*Clerk*, Edward Richie;

*Treasurer*, Richard Richardson; *Managers*, Joel Cadbury, Israel H. Johnson, Thomas Lippincott, R. Richardson, Mark Balderston, Chas. J. Allen, Benj. H. Pitfield, Joseph S. Elkinton, Edward Sharpless, Jabez Jenkins, Jr., Caleb Wood and J. Wistar Evans.

**DEATH OF ABIGAIL H. WHITTIER.**—Among the deaths recorded this week is that of Abigail H. Whittier, mother of our friend John G. Whittier. We have been furnished with the following passage from a private letter addressed by him to a friend:—

“All that the sacred word MOTHER means in its broadest, fullest significance, our dear Mother was to us. A friend, helper, counsellor, companion,—ever loving, gentle and unselfish. She was spared to us until in her 78th year, and passed away, after a sickness of about three weeks, in the full possession of her faculties, in exceeding peace, and with an unshaken trust in the boundless mercy of our Lord. It was a beautiful and holy death bed. Perfect love had cast out all fear.”

DIED, In Amesbury, Mass., on the 28th of the 12th mo. last, ABIGAIL WHITTIER, in the 78th year of her age.

The deceased was a consistent and esteemed member of our religious Society, a constant attendant of its meetings when able to do so, and concerned to maintain its principles and testimonies. Although long an invalid, she was remarkable for her cheerfulness, patience and unselfish concern for the welfare of others. In her last illness she was mercifully favored with great peace and quietude of spirit, with a fixed unwavering trust in the Divine goodness, and a cheerful submission to the Divine will. In a notice of her decease, written by one in fellowship with another religious society, the writer says: “In her death her children have lost a devoted mother, and the community one of its brightest ornaments. The deceased was an honored member of the Society of Friends. Christ was her pattern, for, like Him, she ‘went about doing good.’ Her heart was ever open to the necessities of the poor, the afflicted, the down-cast and the oppressed.

‘She lived to die,

She died to live.’

‘Blessed are the dead that die in the Lord.’ C.”

—, In Grant Co., Ind., on the 10th inst., aged 56 years, of a protracted illness, NANCY, wife of Aaron Hill; an Elder of Back Creek Monthly Meeting. Her uprightness in life, and patient resignation under her long and sore affliction, have left us an example worthy of imitation, and her friends and relations feel the comfortable assurance that their loss is her eternal gain.

—, On the 31st of the 12th month, 1857, in Richmond, Ind., SUSAN W. BARNARD, only daughter of Paul and Martha Barnard, a member of White Water Monthly Meeting of Friends; in the 22nd year of her age.

In recording the decease of this dear young friend, we are reminded of the deep loss that her death has occasioned to be felt by a large circle of friends, to which she was endeared by the kindness and amiability of her manners and disposition.

During the forepart of her illness, she was deeply impressed with the conviction, that “there was nothing stable or certain in this life,” and she appeared, with little conflict of spirit, to be resigned to the dispensation her Heavenly Father saw meet for her.

Amid her sufferings, she evinced such patience as to utter no complaints, and with a smile on her countenance, reflecting her inward peace, she passed calmly and quietly into the embrace of death.

DIED, On the 30th of 7th month last, after a protracted illness, at their residence, near Clarksville, Clinton County, Ohio, RUTH H., wife of Benjamin Farquhar, and daughter of Abraham and Jane Hawkins, in the 21st year of her age, a member of Springfield Monthly Meeting.

A few days before her close, she became deeply concerned about a preparation of heart, and to such an extent was her mind occupied with the precious work, that she seemed every moment engaged; scarcely giving a thought to temporal things. When much worn and evidently suffering for rest, being desired to try to sleep, she replied, “My work is not done; I must not sleep till it is;” but the Lord in his own good time was pleased to speak peace to her troubled spirit, and to enable her to rejoice in a well-grounded hope that her name was written in the “Lamb’s Book of Life.” She at times addressed words of warning, encouragement and advice to the many afflicted friends who witnessed her sufferings, admonishing them not to put off a preparation for death, until brought upon a dying bed. In that sweet spirit in which she had patiently borne her sufferings, she gently and consciously passed away.

#### HAVERFORD COLLEGE.

The SUMMER TERM will open on Fourth day, the 10th of the Second month, at 9 o’clock, A. M. Students admitted at this term must be present on the morning of the previous day.

Applications, accompanied in all cases by certificates from the last Teacher, of moral standing, and a list of books studied, may be made to the undersigned, Secretary of the Board. CHARLES YARNALL,  
No. 126 South Twelfth Street.

#### WESTERN SOUP SOCIETY.

This Association, located at the corner of George and Seventeenth streets, is now in active operation, supplying the Poor residing within their district with Soup and Bread. During the past winter they distributed 42,368 quarts of Soup and 16,300 loaves of Bread to 562 families, embracing 854 adults and 1,509 children, at an expense of \$1,868 50, showing conclusively that this method of helping the Poor is one of the most effective, accomplishing more with the same means than any other way. And as the necessities of the Poor are likely to be greater, owing to the state of the times, we again call upon our friends to aid us in carrying on the object in which we are engaged. Donations may be sent to either of the following Managers:

MORDECAI L. DAWSON, N. E. corner of Seventh and Walnut streets.

WM. BIDDLE, Franklin Institute Building.

FREDERICK COLLINS, N. W. corner of Tenth and Filbert streets.

GEORGE VAUX, corner of Seventeenth and Cuthbert streets.

SAMUEL L. BAILY, No. 920 Chestnut street.

JAMES WHITALL, Race street, above Fourth.

A member of the Society of Friends, now in the third year of the Haverford College Course, wishes a position as Teacher at the close of the present Term on the 27th inst.

Applications addressed to the Editor will reach him.

#### DR. JOHN DALTON—THE ATOMIC THEORY.

[Concluded from page 318.]

The philosophers of ancient Greece and Rome were fond of arguing about philosophic beliefs—matters which they could neither prove nor disprove, because they were not experimental people. Amongst the chief topics of argumentation, the following was one: whether a thing having weight, and cognisable to the senses (matter,) could or could not be divided without end. Epicurus and Pythagoras imagined that matter could be thus divided *ad infinitum*, and Lucretius sets forth the views of these philosophers. Other ancients, too numerous for mention here, adopted the other side of the argument; and so they continued to argue away, proving nothing, until both sides got tired.

And what do *you* say about the argument, reader? Don't fear giving an opinion. You have common sense, and that goes a long way in philosophy. What do *you* think about it? Can a substance—*any* substance—a potato, for instance—can that potato, we ask, be indefinitely divided, or is such indefinite division impossible? Evidently the potato may be cut into two halves, and each of the two halves may be halved again and again and again, and so on, until our eyes are not sharp enough to see the little pieces. If instruments be now had recourse to—a microscope and a delicate knife—the division may be carried still further; and it thus seems proved that the subdivision of the potato *ad infinitum* is conceivable, if our instruments were delicate enough to effect the subdivisions, and our eyes to make them discernible. Thus argued Epicurus and his followers.

Let us now look at the other side of the argument, illustrating it by an assumption. Suppose that amongst the unknown things existing in parts of the earth yet unexplored, there should be a lump of new matter found (we may not say a particle)—a lump of some definite size—as big as a potato, for example. Suppose that lump of new matter should be so very hard that no human means could break, or cut, or otherwise divide it. What then? It would be indivisible, of course; “uncutable,” or, if we choose to adopt a Greek expression, it would be “atomic,” this word being a modification of *a* (not) and *τομή* (to cut)—not cuttable, or not divisible—in short, “atomic.”

So it appears, then, that our ordinary notion of an atom, as being something necessarily small, is only, after all, an indirect notion. That atoms *must* be small, if they really do exist, is demonstrable, since all matter can be divided to the furthest limits permitted by our means; and the

division might be carried further still if our means and our senses permitted. But, for anything one knows to the contrary, the potato *may* be composed of amazingly small indivisible parts; and the hard indivisible parts might each have been tangibly large—as large, say, as a potato, as we have assumed to be the case with the new mineral invoked by our hypothesis. Whether large or small, such palpable indivisible masses would have been to all intents and purposes *atoms*.

Mark, then! There lurked a fallacy in the argument of those who denied the possibility of atoms, because a substance (a potato, say) might, as they said, be conceived to be infinitely divisible. This line of illustration by no means proves that the potato could be infinitely divided, were it not for the imperfection of our senses and our tools; but merely (which is quite another thing) that the *space* occupied by that potato might be thus divided.

If atoms of matter be so inconceivably small, how then could people expect to see them? and if not seen, how could their existence be demonstrated? The ancients could get no proof, so they allowed the discussion to drop. Even in later times, our own illustrious Newton, though a believer in the existence of atoms, could not prove them to exist. He hoped they might hereafter be rendered visible by high microscopic power, but that hope has never been realized, and no one at this time believes that it ever will be realized. After Newton's time, the discussion dropped once more, and it may be said to have remained in abeyance until the celebrated labors of Dalton proved the existence of atoms by every testimony short of rendering them visible. We can never hope to see them, they are so very, very small.

But, reader, we must now find a tangible illustration, else you will not get your promised peep into the enchanted regions of the atomic theory.

You and I, we will assume, are schoolboys for the nonce. We have a bag before us, that bag containing leaden bullets. Dipping my hand into the bag, I withdraw a handful of leaden bullets, throw them into the scale pan, and weigh them; their weight we find to be (say) *three* ounces. We take another dip, and proceed exactly as before; but the weight is now (say) *five* ounces. Once more, *six* ounces. Once more, *four* ounces; and yet again, *two* ounces. That will do. Let us now see what comes of this.

We perceive that, although our dippings have been quite at random, we get no fractions of an ounce—no halves and quarters, and so forth. Moreover, the results of the five weighings seem to prove that each of the bullets weighs exactly one ounce; and if similar results accrued from any number of weighings, that which was at first a notion would grow into an irresistible conviction. Do you perceive what comes of this? There are sixty-three known kinds of matter, in respect of which Dalton perceived that, weigh

them, torture them, analyze them as he might, his weighings, torturings, and analyses disclosed no fractions. How can this fact be explained, except on the assumption that matter is composed of ultimate atoms?

If we now assume, in place of the existence of one set of bullets of one weight and one substance, the existence of sixty-three different kinds of bullets, differing from each other in weight; so that, calling the weight of the lightest 1, the weight of the heaviest would be 213, we arrive at a still nearer idea of the conditions of the atomic theory:

It so happens that each kind of matter has its own appointed work to do; and that one kind of matter can do the work, or fill the place of another kind: thus, to give an example in the language of chemistry, chlorine can unite with hydrogen, and so can oxygen; but whereas exactly eight parts by weight of oxygen are required by exactly one part by weight of hydrogen to generate water, it takes thirty-six parts, by weight, of chlorine, to be equivalent *for*, or take the place *of*, the aforesaid eight parts by weight of oxygen, and by combining with the one part by weight of hydrogen, to form muriatic acid. So 1, 8, and 36, are said to be the equivalents or atomic numbers of hydrogen, oxygen, and chlorine respectively. In like manner, each of the sixty-three kinds of matter has its own combining, or equivalent, or atomic number; for instance, the atomic number of the metal copper is 32, and that of silver is 108; by which we mean to say, that if one part of hydrogen can do a certain amount of work, it will require eight parts of oxygen, thirty-six of chlorine, one hundred and eight of silver, and thirty-two of copper, to do the same amount of work.

But what are these numbers the respective weights of? grains, ounces, pounds, or, in short, *what*? Just whatever you please. Atoms being inconceivably small, we are unable to weigh them absolutely: we can only ascertain the relation subsisting between their weights; the ratio according to which each is lighter or heavier than its neighbors.

*Cui bono?* What the advantage? Oh, it is universal. Everything truthful and reliable in analytical and operative chemistry depends upon an application of the facts above mentioned. Take an example. If silver be thrown into aquafortis, the metal dissolves and disappears, but it still exists in the aquafortis. The piece of silver, we will presume, weighed 108 grains. A chemist wishes to get this silver, but the aquafortis will not let him have it until it receives a *quid pro quo*. The greedy solvent will be content with copper, and so the chemist determines to give it copper; but he wishes to give it the exact quantity required, neither more nor less. Dalton's law teaches the chemist that 32 grains of copper will be the exact quantity. He adds that amount, and down goes the silver. It was a great

thing, even practically speaking, to have made this discovery, believe me, and if you ever become a chemist you will say so.—*Leisure Hour*.

#### SLAVERY AGITATION.

HOW MISSOURI IS TO BECOME A FREE STATE.

[From a speech delivered in the Hall of the House of Representatives at Jefferson City, Missouri, by JAMES B. GARDENIER, President of the Jefferson City Land Company.]

[Concluded from page 316.]

A denial of the power of Congress over the subject of slavery in the Territories, and in the District of Columbia, I have thought another error contributing largely to unnecessary agitation. I had occasion to look into this matter in 1849, and subsequent reflection and observation have but confirmed the opinion I then formed, and announced in more than forty speeches in the canvass of 1850. It is a matter I do not propose to discuss now, but a suggestion or two occurs to me, too pertinent to be dismissed.

The question of power in the Territories has been settled by the Supreme Court. That decision ought to be treated with respect, and submitted to by all good citizens. The tribunal that made it is above the individuals composing it. They may die, but the tribunal, it is hoped, will live forever. The reputation of the Judges is one thing, of the tribunal another. One is individual, the other collective. But it is no disrespect to say that if that decision is right, it is difficult to see how slavery can be kept out of any Territory, or *State* even, formed since the adoption of the Constitution. If Congress has no power, and the people of the Territories none, whence does it come? Not from a Territorial Convention. It represents a Territory, not a *State*. In constitutional parlance, it cannot be such until admitted into the Union. All Territories must, then, be admitted as slave States, and made otherwise, if at all, afterwards; and where the power to do it afterwards comes from, is a puzzle. The people did not have it to keep, and Congress did not have it to give, and yet in a sovereign State it exists. What particular process *creates* it I have never been able to settle.

I have connected the doctrine of the Supreme Court with the doctrine maintained here, that the people of the Territories have no power to exclude slavery. And, in this connection, it will not be out of place to mention the Jackson Resolutions of 1849. They are fully endorsed by our present Executive, in his late Inaugural, and announce this strange doctrine:

"The right to prohibit slavery in any Territory belongs exclusively to the people thereof, and can only be exercised by them in forming their Constitution for a State Government, or in their sovereign capacity as an independent State." [Laws of 1849, p. 667.]

This resolution denies the right of the people

of a Territory to exclude slavery by a *Territorial law*. It presents the confused idea that they have it, and do not have it; that it exists, but cannot be exercised; sleeps, but is waked by a *name*. Call the representatives of the people a *Legislature*, and the power does not exist; call the same assemblage a *Convention*, and it does. But the resolution admits the power exists, and may be exercised in forming a Constitution for a State Government. How does it happen that so vital a power exists just at this time, and not before? What clause of the Constitution does it come from? Or from what source outside of the Constitution? If members of the Legislature cannot exclude slavery, how can the same men, representing the same people, as members of a Convention, do it? It is plain that the torpid power thus insisted upon is purely arbitrary, and made so to let slavery into all the Territories, if a single individual chooses to carry it there, in spite of Congress, or the will of the local inhabitants.

I have a single remark to make in reference to the Fugitive Slave law. An error was committed in its passage, which, in my opinion, has largely contributed to the evils of slavery agitation. I speak of the clause commanding all good citizens to aid and assist in catching fugitive slaves, whenever their services may be required. It is an anomaly. There is no such obligation between the citizens of the slave States. We cannot here be made to help catch runaway slaves, and any attempt to pass a law making it our duty to do it would meet the most decided opposition. A law making it our duty to quit our own affairs and help our neighbors catch their stray horses would not be tolerated. That it is the constitutional right of slave-owners to follow their runaway slaves into free territory and recapture them, is beyond question; but as slavery exists *by force*, and not by law, they ought to be left to their own exertions, aided alone by those who are willing to do so. Catching slaves is one thing, keeping the peace is another. One is the business of slave owners and those willing to assist them; the other, of all good citizens.

Another error I shall notice is the position assumed the other night, that it is unconstitutional for emigrants to come here with a view to change our institutions. I am at a loss to know what clause of the Constitution is violated by such an emigration; what tribunal can take cognizance of it; how the grievance is to be ascertained; or how redressed. The right of emigration to this State is common to the citizens of our sister States, and all the privileges and immunities of citizens are guaranteed to them by the Constitution of the United States, when they get here. We have no inquisition to meet them at the border, and question them as to their motives. Their emigration here is one thing; the motives that bring them, another. With the

first no authority can interfere, and for the last they are answerable alone to their God. If they choose to come here, and become citizens with us, and seek to change our institutions, according to the forms of the Constitution, they have the right to do so, and the motives that brought them here, or prompt them afterward, are beyond the cognizance of human tribunals.

The same position was assumed by our State Executive, in his late inaugural, when he annexed to emigration the qualification of "*moral worth and political integrity*." The "*moral worth*" necessary to admission might possibly be determined, if we had a tribunal to take cognizance of the matter, but the "*political integrity*" would confound all attempts. Know-Nothing, Anti or Benton integrity would be required, as the one or the other of these parties might have possession of the tribunal taking cognizance of the case. But having no common tribunal, if each party organizes one of its own, I do not well see how any one is to get into the State at all.

This matter is well illustrated by the very occasion that has forced me to speak. Objections are made to emigrants from the free States, and to their building a University here, because, it is said, they are Abolitionists. The objectors make themselves the judges, bear no evidence, admit no defence, and exclude. Such a tribunal may well be compared to the Spanish Inquisition, and will certainly meet with the same determined resistance.

Mr. Douglass takes the same position in his report on Kansas affairs. A tribunal was organized to meet it. It acted independent of constituted authorities and was unknown to the Constitution and law. The history of Kansas tells a melancholy story of carnage and of blood, sadly illustrating the fallacy of the position. No good citizen—none who love the quiet of their hearthstones, and the majesty of the law that guards it—can wish to see such a doctrine put in practical operation here.

I have now finished my view of the errors from which, I think, much of the evil of slavery agitation has resulted. That much has resulted from improper Northern agitation, is doubtless true; but we ought not to allow such a consideration to lead us into similar errors. If ever there were a people who ought to be studiously careful to be right, it is the people of the South. If the terrible conflict, so often predicted, should come—I trust in God it may not—the civilized world will be against us; and, if Mr. Jefferson is to be believed, God has no attribute that could side with us in the conflict. The great masses of the free States have no interest but in being right, and they will be so, and sustain us in all our rights here, if we will keep right ourselves; but if, in the face of humanity, the united opinions of the founders of the Government, and of all experience, we assume that

slavery is a blessing, that all restrictions upon it ought to be removed, and political opinions sanctioned which would send it not only into all the Territories, but into all the free States, and result in the reopening of the slave-trade, everlasting and injurious agitation will be the inevitable result.

I come now to speak of slavery in Missouri, and what ought to be our policy in reference to it. That it is rapidly diminishing is a fact well authenticated, and that it will ultimately disappear from among us is a conviction deeply fixed in the public mind everywhere. Missouri is now the great central State of the Union, and is rapidly becoming the centre of its wealth and population. Midway between the two oceans, directly on the great railway route that must ultimately connect them, with a mild climate and unsurpassed agricultural and mineral resources, it is attracting an immense immigration. It is coming, and will continue to come, chiefly from the free States. Slaveholders not only will not come here, but those that are here are, every now and then, going off to Texas. Our policy is manifest. It is to impose no qualification, no restriction by our conduct, upon immigration; but, on the contrary, to encourage it, by the exhibition of generous, fraternal feelings. \* \*

The tendencies of the times will free us of slavery, without injury to the slaveholder; without a tax upon anybody; without leaving free negroes among us, and without agitation, unless it is wantonly thrust upon us by those who, losing sight of the great landed and property interests of the State, make the political ascendancy of the ultra pro-slavery party the chief labor of their lives, by exciting the fears of the slaveholders, misrepresenting "*the opinions and aims of other districts*," swelling the dangerous element of sectional agitation, and imperiling the Union.

But it has been urged upon us that we must not permit slavery thus quietly to find its way to the cotton and sugar fields of the South; that there must be a slave border somewhere; that we ought to furnish it; and if we do not, the Union will be dissolved. This is a monstrous assumption, and a short answer will dispose of it. It is that we must keep slavery here, regardless of our own interest, or submit to the horrors of dissolution. It is not pretended that Congress, the representative of all the States, can prevent us from abolishing slavery, if we choose; yet, if we simply *let it go*, when it is going, we are *threatened* with a power coming from the Southern States, not possessed by all the States, not possessed by Congress, and made formidable by all the horrors of civil war. What becomes of State rights, sometimes so ardently advocated, if our Southern neighbors can thus force us to continue the outpost, the picket guard of slavery, and to furnish them an everlasting slave-barrier? Let those who, in opposition to the founders of

our government, think slavery a blessing, furnish it a barrier, and have all its fruits, both good and bad.

#### THE NEW SUGAR EXPERIMENT.

We have received from Mr. Joseph S. Lovering a pamphlet account of his experiments with the "*Sorghum Saccharatum*," or Chinese sugarcane. This paper is minute in its descriptions of processes and results, not only in the making of the sugar, but the culture of the plant. Accompanying the pamphlet were specimens of the sugar and the syrup, the latter of fine quality, and the former ranging from imperfect samples to quite a superior article. The only question is one of economy. Mr. Lovering, in a note addressed to us, pronounces the result "highly encouraging." The pamphlet will be sought with great interest. We subjoin the conclusions at which the writer arrives; and we need hardly remark that he is most excellent authority in the premises:

1st. That it is obvious that there is a culminating point in the development of the sugar in the cane, which is the best time for sugar making. This point or season I consider to be, when most if not all the seeds are ripe, and after several frosts, say when the temperature falls to 25 deg. or 30 deg. F.

2d. That frost, or even hard freezing, does not injure the juice nor the sugar, but that warm Indian summer weather, after the frost and hard freezing, does injure them very materially, and reduces both quantity and quality.

3d. That if the cane is cut and housed, or shocked in the field when in its most favorable conditions, it will probably keep unchanged for a long time.

4th. That when the juice is obtained, the process should proceed continuously and without delay.

5th. That the clarification should be as perfect as possible by the time the density reaches 15 deg. Beaume, the syrup having the appearance of good brandy.

6th. That although eggs were used in these small experiments, on account of their convenience, bullock's blood, if to be had, is equally good, and the milk of lime alone will answer the purpose; in the latter case, however, more constant and prolonged skimming will be required to produce a perfect clarification, which is highly important.

7th. That the concentration, or boiling down, after clarification, should be as rapid as possible without scorching—shallow evaporators being the best.

With these conditions secured, it is about as easy to make good sugar from the Chinese cane, as to make a pot of good mush, and much easier than to make a kettle of good apple butter.—*N. American and U. S. Gazette.*

## CHRISTIAN FRIENDSHIP.

Is it of earth, that in thine eye there shineth  
 A trembling tear, when sorrow dimmeth mine?  
 Is it of earth, the power that intertwineth  
 The clasping tendrils of my heart with thine?  
 Is it of earth?

Is it of earth, that when in pain I languish,  
 Thou, with thy balm-cup brimming full of love,  
 Comest, thy buoyant spirit half my anguish  
 Bearing, with strength that must be from above?  
 Is it of earth?

Is it of earth, for thee this interceding  
 In my soul's closet, when I shut the door?  
 Is it of earth, thy humble, fervent pleading  
 For grace, that thou and I may sin no more?  
 Is this of earth? M.

Is it of earth, that now upon the altar,  
 I lay thy soul, devoted with my own,  
 Trusting in Christ we may no longer falter,  
 Till our rapt praise-notes echo round His throne.  
 Is *this* of earth? M.

For Friends' Review.

E. K. K.

"A noble life is in thy care,  
 A sacred trust to thee is given;  
 Bright Island! let thy healing air  
 Be to him as the breath of heaven."  
*Dr. Kane in Cuba.*

Too late—too late! The lovely clime,  
 In vain its spells of healing wrought,  
 And breathed around him tenderly,  
 Soft airs with rarest odors fraught.

In vain for him, the queenly isle  
 Her robes of summer broidery wore,  
 And soothed him with glad songs of birds,  
 And bright waves whispering on the shore.

In vain for him, the southern sky  
 Filled its broad arch with fervent light;  
 Not tropic sunshine could dispel  
 The Arctic winter's fearful blight.

Too late!—Alone remaineth now  
 A memory, beautiful and rare:  
 A noble nature, wise to plan,  
 As prompt to do, and bold to dare.

Full of all generous impulses,  
 All sympathies of brotherhood,  
 Steadfast of purpose, strong of will,  
 Nerved with unflinching fortitude.

A fearless spirit, calm and sweet,  
 Serene in reverent faith and trust,  
 Holding its brave hope undismayed,  
 Its even balance, fair and just.

Nor losing, through that long dread night  
 Of peril, hunger, dire disease,  
 Its patient cheer, its playful grace,  
 Its quick, elastic energies.

How in such presence stand rebuked,  
 Our coward hearts, of life afraid,  
 Our selfish love of ease and rest,  
 Our faltering faith so soon dismayed!

Let us be nobler! Surely hearts  
 That hold a martyr's memory dear,  
 Should thrill in every pulse, to break  
 The chains of indolence and fear.

Our way lies not where his hath been,  
 In paths of daring, known to fame;—  
 A people's pride, a people's tears,  
 Nor life nor death of ours may claim.

Yet faith, like his, that starlike shone  
 Through those dark months of frozen gloom—  
 Endurance, courage, earnest work,  
 For these the humblest life has room.

And having these, the humblest life,  
 Heroic, beautiful, may be,  
 Unmarked of men, but known to God,  
 And crowned with truest royalty.

Let us, then, living witness bear,  
 In better deed, and purer thought,  
 In higher courage, firmer faith,  
 To what one noble life has taught.

H. H.

## SUMMARY OF NEWS.

FOREIGN INTELLIGENCE.—Liverpool advices to the 9th inst. have been received. The Bank of England had reduced its discount rate to 6 per cent., and there was a prospect of a further reduction, as money could be obtained at a lower rate from the discount houses and joint stock banks. The stock of gold in the Bank was large, and still increasing, and the general aspect of financial affairs was more encouraging.

Accounts are received of the death, by dysentery, of Gen. Havelock, the leader of the British troops in the first relief of Lucknow; of Redschid Pacha, the Turkish prime minister, and the ablest and most liberal statesman of that Empire; and of Marshal Radetzky, the famous Austrian commander in Italy, the last named in his 92d year.

PRUSSIA.—A royal decree, dated the 6th inst., prolonged the regency of the Prince of Prussia for three months.

DENMARK.—The government has replied provisionally to the representatives of England and Russia, that Denmark's answer to the Germanic Diet, relative to the Duchies, will be of a nature to lead to a pacific solution. Russia has instructed its ministers at London and Paris to request the co-operation of England and France in making such representations to the Danish government, as shall induce it to satisfy the claims of Germany.

RUSSIA.—The Circassians are reported to have attacked and massacred 1200 of the Russian garrison of Adekow. The Russians had been victors in a battle with the Tcherkeses in Stettavia.

TURKEY.—A letter from Vienna states that some of the provinces on the Adriatic Sea, in which two-thirds of the population are nominally Christian, were in open revolt against the authority of the Sultan; the Christians, especially those of the Greek Church, having taken up arms, which are said to have been furnished them from the Danubian Principalities. They drove from their residences the Turkish functionaries, both civil and military, a number of whom were killed by bands of armed peasants. It is thought similar events are likely to occur in other provinces where the Slavonian element is in the majority.

INDIA.—An action took place near Cawnpore, on the 27th of 11th month, between a body of 2000 British troops under Gen. Wyadham, and the Gwalior mutineers, in which the former were forced to retreat, losing about 300 tents, which were burnt by the rebels. The number of men lost is not stated. A few days later, Gen. Campbell attacked the victors near the same place, and totally defeated them, capturing a quantity of ammunition, stores and baggage, with trifling loss on the part of the British. The Gwalior force is represented as the last well organized and

disciplined body of the insurgents, unless other mutinies should take place among those portions of the natives who have hitherto remained quiet. The women, children, and sick from Lucknow had arrived safely at Allahabad.

**AUSTRALIA.**—The question of land monopoly has been producing considerable agitation, particularly in the colony of Victoria. A great portion of the public land is possessed by those called "squatters," who hold large tracts under government leases at a nominal rent. Most of these leases being about to expire, many of the people demanded the establishment of a land system similar to that of the United States, with the right of pre-emption and a low fixed price for the land. The government, however, being favorable to the squatters, introduced a bill into the local legislature promotive of their interests. This led to the formation of a National Convention of delegates, which adopted the American land system as the basis of its plan, and sent a deputation to the Colonial Premier, demanding the withdrawal of the government bill. The demand was refused, and at the last accounts, the bill, with some amendments, had been carried to a third reading. Should it pass both houses and receive the Governor's assent, some apprehension was felt that serious difficulties might ensue. A considerable party in the colony are in favor of republican institutions, though they probably are not yet prepared to make any earnest efforts for obtaining them.

**YUCATAN.**—A change of government has taken place, a new Governor having been elected. Negotiations for peace between the two contending parties are in progress.

**DOMESTIC.**—The steamer *Ariel*, which left Southampton, England, on the 30th ult., had not arrived at New York up to the 27th inst., and much anxiety was felt respecting it.

The statement of the official returns of the elections held in Kansas on the 21st ult., and 4th inst., published with the signatures of Gov. Denver and the presiding officers of the territorial legislature, whom Calhoun had invited to be present at the counting of the returns, gives the vote on the slave clause of the Leecompton constitution as follows: with slavery 6143; without slavery 559; but says that not more than 2000 of these were legal votes. The vote against that constitution, at the election of the 4th, was 10,226; for it, with slavery, 138, without slavery, 24. All the Free State candidates for State officers are elected, by an average majority of 415. The Senate will have 13 Free State and 6 Democratic members, and the House 29 Free State to 15 Democratic. Subsequent telegraphic despatches state that Calhoun has rejected some of the returns, on the ground that they were addressed to Gov. Denver instead of to him; and that the effect of this is to elect all the Democratic candidates for State officers, and give the same party a majority in the legislature. Parrott, the Free State candidate for Congress, is undoubtedly elected. The territorial legislature is proceeding with its business. A resolution has passed both branches, providing for the repealing of the present code, and the passage of a new one. A bill has been introduced, prohibiting slavery, and providing that all persons now held as slaves in Kansas shall be free after the 1st of 3d month next. It is reported to have passed the lower house.

Notwithstanding the persecution to which the Chinese have been subjected in California, and the large numbers who have returned to their own country, it appears that the emigration is increasing, and according to present indications, in a few years the Chinese immigration to our Pacific States will be larger than from all Europe. During the 7th, 8th and 9th months last, 1068 passengers left California for China, which during the same period 5,552 arrived

from that country. The emigration to California from the Atlantic States at present is quite limited.

Walker, the filibuster, was arrested at Mobile on the 25th, on an order from New Orleans, but was discharged the same day on a *habeas corpus*, Judge Gale quashing the proceedings.

The British Post-Office Department having made complaint that many newspapers containing writing are found in the mails received there from this country, the Post-master General has called the attention of postmasters to the necessity of enforcing the laws upon that subject, and exercising increased vigilance. The British Postal Department has been requested to return to this country all newspapers &c., thus illegally forwarded, that the senders may be prosecuted.

A public school house in Brooklyn, N. Y., containing about 500 children, took fire on the 19th inst., probably from a defective flue. Many of the children were passed out safely by the teachers, but a number of the little boys, in their fright and haste to escape, fell on the stairs, others still falling upon them, and completely blockading the way; and six of them were suffocated before they could be extricated from the mass. None were burned, and but few others seriously injured, though the building was entirely destroyed. Two days afterwards, a fire was discovered in a similar building in Boston, occupied by about as many pupils, but by the presence of mind of the teachers, nearly all were dismissed before an alarm was given, and no accident occurred. The fire was extinguished without serious damage.

**CONGRESS.**—Senator Hale, of N. H., on the 18th and 20th, ably reviewed Kansas affairs and the Dred Scott decision. On the 21st, the Committee on Public Lands reported back the "Homestead bill," and recommended its passage. The consideration was deferred to the 8th prox. The Committee on Military affairs reported a bill to increase the military establishment. A joint resolution to present a medal to Com. Paulding, for his capture of Walker, gave rise to an earnest debate, in which Senator Doolittle, of Wis., justified the course of Paulding. Brown, of Miss., moved a substitute, disavowing and condemning the act, as a violation of the territorial sovereignty of Nicaragua, which he supported by a speech to the same effect. On the 25th, the Committee on Foreign Relations presented an elaborate report on Central American affairs, taking nearly the same ground as that of the President in his special message. Resolutions were appended, declaring that no further provisions are necessary to enforce the neutrality laws; but a bill was also reported, making it the duty of naval officers who may arrest offenders against those laws on the high seas, to send them back to the port whence they sailed, to be dealt with according to law; and requiring the proper legal officers then to institute proceedings against them. On the 26th, the Committee on Territories reported a bill for the admission of the State of Minnesota into the Union. It provides that the State shall have one representative in Congress, and as many additional as the population shall entitle it to.

In the House, on the 20th, a bill to provide for the better security of passengers on ocean steamers was introduced, and referred to the Committee on Commerce. A bill was also introduced granting lands to California for railroad purposes. The part of the President's Message relating to the Pacific Railroad was referred to a select committee of fifteen, to report by bill or otherwise. The other portions of the Message were referred to the proper committees. On the 21st, the Committee of Ways and Means reported some of the ordinary appropriation bills, and one appropriating \$790,000 to supply the deficiency in the appropriations for paper, printing, binding and engraving, ordered by the two preceding Congresses.

SAMUEL TUKE.

[Concluded from page 323.]

This full surrender of himself to the service of God could not fail to render his position in the church one of deepening interest and importance; and, though he never travelled much as a minister of Christ, he was for many years extensively known in that character in his own Quarterly Meeting, and the Society at large; his varied services, and close connection with the "care of the churches," frequently brought him into wide-spread intercourse with his friends, both at home and abroad, and afforded him ample opportunity to make full proof of the ministry which he had received of the Lord Jesus, to testify the Gospel of the grace of God. While his services in this respect were highly appreciated by his friends, it was deeply instructive to mark how humbly he walked with his God—and what reverence clothed his spirit in the services of the sanctuary.

For a number of years, and on some of the most interesting and critical occasions in its later history, he filled the important post of Clerk to the Yearly Meeting; and many will remember the Christian dignity and strict impartiality with which he sustained the duties of that position, and secured for himself, in no common degree, the confidence and esteem, as well as the love of the brethren. A highly valued friend, who had known him well for nearly forty years, writing after his decease, thus graphically recalls some of the features of his natural and spiritual character:—"Those which particularly recur to me were his originality, richness, and power, combined with great accuracy of reasoning, and at times an almost fastidious, yet singularly happy selection of the very best possible word or phrase to convey not the color only, but the exact shade

of the idea which he wished to impart. The earliest instance of his argumentative skill which struck my boyish mind was when, on the 'the floor' of the Yearly Meeting, and his grandfather seated near the right hand of the Clerk, he, as a young man, successfully opposed the views of that venerable patriarch, and defeated the proposition from his own Quarterly Meeting, for the adoption of a National Stock for the relief of the Poor.

"How vividly do I recur to the growing spirituality and tenderness of his ministry, not at all to the lessening of its real *intellectuality*, (if I may use this term in a qualified sense, in connection with so sacred a gift.) And then the impressive addresses on the state of the Society, which occasionally burst forth from his lips, not perhaps at the time specially allotted for such a theme, at the close of the Answers to the Queries, but at a later stage of the Yearly Meeting's proceedings. It were impossible to give an adequate idea of them, and impossible to forget them. But I think that sweetest of all to me is the remembrance of the spiritual greenness, brotherly tenderness to myself, and the humility which accompanied the earlier part of his decline of bodily power. Truly this last memory is like the odor of the myrtle, all the more fragrant because the leaf has been crushed."

The simplest record of the facts of such a life cannot easily avoid the appearance of eulogy; but that is not the object of this brief sketch; and both as a matter of taste and judgment, and of Christian principle, no one could have a greater dislike to it than the subject of it himself.

In the winter of 1848, an attack of paralysis compelled Samuel Tuke to withdraw from the active engagements of life. To one who had so long been devoting his energies and time to the service of the Church and of his fellow creatures, the transition to the quiet invalid life, which was prescribed, could not but prove peculiarly irksome, and required no ordinary exercise of faith and patience. These were mercifully granted in the time of need, and his sense of the many blessings he was still permitted to enjoy, and sympathy with those who had not similar privileges, often caused him to break forth in thankful acknowledgments to the "Giver of every good and perfect gift."

Thus, in a letter, written in the summer of 1849, after referring in terms of sympathy to those who are solitary pilgrims in this busy world, he adds, "It is sometimes very humbling to me to think of Watts' lines—

'Not more than others I deserve,  
But Thou hast given me more.'

"Yet no doubt their Lord is able to, and, I cannot doubt, often *does* make up abundantly all the wants of his poor children, who, walking solitarily through the wilderness, can say, 'Whom have I in heaven but Thee, or in the earth that I desire in comparison of Thee?' And if we allow our multiplied earthly comforts in any way to interrupt the intercourse with Him who can alone supply our spiritual needs, alas! what losers shall we be by what we so much prize."

Although Samuel Tuke took a very humble and often discouraging view of his own condition in the sight of God, and longed at times for more sense of his own sinfulness, he was not permitted, even when most cast down, entirely to lose hold of the Anchor which is both sure and steadfast, and which entereth within the veil. Thus, on one of these occasions, he remarked: "It is the sense of the *sinfulness* of sin, a *hatred* of sin, that I feel I want; this is the truly evangelical groundwork; for there is no disparity between the 7th and 8th Chapters of Romans—the full sense of sin, and of a struggle against it, *as well as of the means of deliverance from it.*"

Writing in 1850, he says, "Truly we have no continuing city. I do often remember that my days are numbered, but to *feel* that they are so, and that they will be few, so as to act upon the conviction, is quite another thing. Really to be a pilgrim—evidently by my actions saying like the Patriarch, that I am seeking another country, even a heavenly one—is what I want; and to possess it, I must have more of that living *faith* which takes hold of things which are not seen, as if they were seen."

During the greater portion of his illness he was able to hear and enjoy the reading of religious and other books. He had always been fond of poetry, and seemed to dwell upon some of his favorite hymns with peculiar pleasure. Addison's well known hymn, beginning,

"When all thy mercies, O my God,"

was one of these; and on one occasion he particularly noticed the lines,

"And when in sin and sorrow sunk,  
Revived my soul with grace;"

adding, "That is very beautiful, *exquisitely* beautiful." Montgomery's hymn on Prayer was another which he much liked.

In the reading of the Bible, the portions which he seemed more particularly to delight in hearing were such Psalms as the 84th, "My soul longeth, yea, even fainteth for the courts of the Lord;" or the 116th, "What shall I render unto the Lord for all his benefits unto me?"—"I will take the cup of salvation, and call upon

the name of the Lord;" or such chapters as the 53d of Isaiah; and he was always much affected by those passages in the New Testament which speak of the great mercy of God, and of the wonderful condescension and compassion of our Saviour to poor fallen man.

In the Seventh month, 1851, he writes to a dear friend: "I do feel now rather more power, and think I am about restored to my better point before the last attack. Yet I consider it is a gentle step in my downward course. Indeed, I am dealt with in a gentle way altogether, having hardly any pain, a fair appetite, and sleeping comfortably. For these and for other unnumbered blessings I am far from being sufficiently grateful. All my dear absent children have visited me this winter, which, though not without the thought that it would probably be our last interview, I have much enjoyed. Yet I sometimes think that, if an allotment less easy to nature might be the means of effectually quickening me in the great spiritual work which I much need, I could give thanks for pain and trouble. What a large and deep work is that of real repentance, including a true sense of sorrow for sin, and also a hearty turning away from and loathing of *all sins*, or of whatever is not in conformity with the mind of Christ. I assure thee, my dear friend, I feel that I need much deeper schooling in that lesson, and, I think, more and more see that it is the *only* sure basis of all religious experience, and of true hope; for it is surely those who feel the greatness of their sickness, and know that there is but one Physician who can heal them, who do come to Him in living faith."

In the autumn of 1852 he paid his last visits to several of his sons and daughters residing at a distance; and during the whole of 1853 he was able to walk short distances, to take his daily drives, and to receive visits from a few of his most intimate friends.

In the spring of 1854 a seizure of a very alarming character, which for some time threatened his life, left him in a greatly enfeebled state, and he was not afterwards able to go beyond the adjoining room.

Although, during this latter period of Samuel Tuke's illness, there was but little power of expression, his humble submission, and gentle, un-murmuring patience, were very striking and teaching to all around him. No word of complaint ever passed his lips, but to any expression of thankfulness, he was, when able, always ready to assent. When worn by weariness and pain, portions of the Psalms and hymns were frequently found to be soothing to him, and the night before the fatal attack came on, as the verse was read—

"In thee, my hiding place divine,  
Be rest throughout life's journeyings given;  
Then sweeter, holier rest be mine,  
With Thee in heaven."

he took up the last line, repeating again with difficulty,

“With Thee in heaven!”

How appropriate to the glorious change so soon to be his, when his soul would awake and be satisfied in his Redeemer's likeness!

On the following morning, the 12th of Tenth month, 1857, he was suddenly seized with an attack very similar to previous ones. Unconsciousness followed, from which he never wholly rallied; and two days afterwards, without any indication of suffering, the spirit was released from its earthly tabernacle, to occupy, as we reverently believe, the mansion in the heavens, prepared for him by his Lord and Saviour—another fulfilment of His blessed word when on earth: “Father, I will that those whom thou hast given me be with me where I am, that they may behold my glory.”—*Annual Monitor*.

For Friends' Review.

STEPHEN CRISP ON THE DISCIPLINE.

Having, at various times, been much interested in perusing the following deeply instructive remarks, from the pen of that ancient and worthy friend Stephen Crisp, I have copied them for publication in *Friends' Review*. I think they may be read to comfort and edification by many who peruse its interesting columns, and who may not have access to the writings of the Author.

Ohio, 1st mo., 1858.

J. B.

“All you dear friends, upon whom the Lord hath laid a care for his honor, and for the prosperity of the truth, and gathered you into the good order of the gospel to meet together to manage the affairs thereof, take heed that ye have a single eye to the Lord, to do the Lord's business in the leadings of his spirit, which is but one, and brings all that are given up to be governed by it to be of one mind and heart, at least in the general purpose and service of those meetings. Although through the diversity of exercises, and the several degrees of growth among the brethren, every one may not see or understand alike in every matter, at the first propounding of it, yet this makes no breach of the unity, nor hinders brotherly kindness, but puts you often upon an exercise and an inward travailing, to feel the pure, peaceable wisdom that is from above among you, and every one's ear is open to it in whomsoever it speaks; and thereby a sense of life is given in the meeting, to which all that are of a simple and tender mind join and agree. But if any among you should be contrary-minded in the management of some outward affair, relating to the truth, this doth not break the unity that ye have in Christ, nor should it weaken brotherly love.

So long as he keeps waiting for an understanding from God, to be gathered into the same sense with you, and walks with you according to

the law of charity, such an one ought to be borne with and cherished, and the supplication of your souls will go up to God for him, that God may reveal it to him, if it be his will, that so no difference may be in understanding, so far as is necessary for the good of the Church, no more than there is in matters of faith and obedience to God.

For, my friends, it is not of absolute necessity that every member of the Church should have the same measure of understanding in all things; for then where were the duty of the strong bearing with the weak? Where were the brother of low degree? Where would be any submitting to them that are set over others in the Lord? which all tend to preserving unity in the Church, notwithstanding the different measures and different growths of the members thereof. For as the spirits of the Prophets are subject to the Prophets, so are the spirits of all that are kept in a true subjection to the spirit of life in themselves, kept in the same subjection to the sense of life given by the same spirit in the Church. By this means we come to know one Master, even Christ, and have no room for other masters, in the matter of our obedience to God.

While every one keeps in this true subjection, the sweet concord is known, and the oil is not only upon Aaron's head, but it reacheth the skirts of his garments also; and things are kept sweet and savory and ye love one another, from the greatest to the least, in sincerity and without dissimulation. This love excludes all whispering of evil things, all back-biting, tale-bearing, grudging and murmuring, and keeps Friends' minds clean one towards another, waiting for every opportunity to do each other good, and to preserve each other's reputation, and their hearts are comforted at the sight of one another. In all their affairs, both relating to the church and to the world, they will be watchful over their own spirits, and keep in the Lord's power over that nature in themselves that would be apt to take offense, or construe any word or action to a worse sense than the simplicity thereof, or the intention of the other concerned, will allow of.

And whereas, it may often fall out that among a great many, some may have a different apprehension of a matter from the rest of their brethren, especially in outward or temporal things, there ought to be a Christian liberty maintained for such to express their sense with freedom of mind, or else they will go away burdened. If they speak their minds freely, and a friendly and Christian conference be admitted thereupon, they may be eased; and oftentimes the different apprehension of such an one comes to be wholly removed and his understanding opened to see as the rest see. For the danger in society doth not lie so much in this, that some few may have a differing apprehension in some things from the general sense, as it doth in this, namely, when such that so differ suffer themselves to be led out

of the bond of charity, and labor to impose their private sense upon the rest of their brethren, and are offended and angry if it be not received: this is the seed of sedition and strife that hath grown up in too many, to their own hurt.

And therefore, my dear friends, beware of it, and seek not to drive a matter on in fierceness or in anger, nor to take offense into your minds at any time, because what seems to be clear to you is not presently received; but let all things in the Church be propounded with an awful reverence of Him that is the head and life of it; who hath said, 'When two or three are met in my name, I will be in the midst of them,' and so he is, and may be felt by all who keep in his spirit. But he that follows his own spirit sees nothing as he ought to see it.

Let all beware of their own spirits and, natural tempers, and keep in a gracious temper then ye are fit for the service of the house of God; whose house ye are, as ye keep upon the foundation that God hath laid; and he will build you up, and teach you how to build up one another in him. As every member must feel life in themselves, and all from one head, this life will not hurt itself in any, but be tender of the life in all; for by this one life of the Word ye were begotten, and by it ye are nourished, and made to grow into your several services in the church of God. It is no man's learning, or artificial acquirements; it is no man's riches, or greatness in this world; it is no man's eloquence and natural wisdom that makes him fit for government in the Church of Christ: all his endowments must be seasoned with the heavenly salt, and his spirit subjected, and his gifts pass through the fire of God's altar, a sacrifice to his praise and honor, that so self may be crucified and baptized into death, and the gifts made use of in the power of the resurrection of the life of Jesus in him. When this great work is wrought in a man, then all his gifts and qualifications are sanctified, and made use of for the good of the body which is the Church, and are as ornaments and jewels, which serve for the joy and comfort of all who are partakers of the same divine fellowship of life, in Christ Jesus our Lord. Thus many come to be fitted and furnished to good works, which are brought forth in their due seasons, for edification and building up the weak, and for repairing the decayed places, and also for defence of them that are feeble, that hurtful things may not come near them.

In the next place, my dear friends, when ye are called upon in point of justice to give a sentence of right between friend and friend, take heed that neither party get possession of your spirits beforehand, by any way or means whatsoever, or obtain any word or sentence from you in the absence of the other party, he not being yet heard. There is nothing more comely among men than impartial judgment. Judgment is a seat where neither interest nor affection,

kindnesses may come. We may make no difference of the worthiness or unworthiness of persons in judgment, as we may in charity; but in judgment, if a good man being mistaken, hath a bad case, or a bad man a good case, according to his case must he have sentence. It was a good saying, 'he that judgeth among men, judgeth for the Lord, and he will repay it.' Therefore let all be done as unto the Lord, and as ye are willing to answer it in his presence; and although some may for a time be discontented thereat, yet in time, God shall clear up your innocence as the sun at noonday. They that kick at sound judgment will find hard work of it; they do but kick against that which will prick them, and however such, through their wilfulness and their abounding in their own sense, may hurt themselves, yet you will be preserved and enjoy your peace and satisfaction in the discharge of your consciences in the sight of God."

\* \* \* \* \*

"And when ye have to do with perverse, forward or disorderly persons whom ye have occasion to reprove and to rebuke for the Truth's sake, and you find them stout and high, and reflecting upon you, then is a time for the Lamb's meekness to shine forth, and for you to feel your authority in the name of Christ to deal with such an one; and to wait for the pure and peaceable wisdom from above, to bring down and confound the earthly wisdom. In this frame of mind labor together, to pull the entangled sheep out of the thicket, and to restore that which is gone astray to the fold again, if you can; but if you cannot, yet ye save yourselves from the guilt of his blood; and if such do perish, his blood will be on his own head.

But, on the other hand, if ye suffer their perverse spirits to enter, and their provocations to have a place in you, so as to kindle your spirits into a heat and passion, then you get a hurt, and are incapable to do them any good; but words will break out that will need repentance, and the wicked will be stiffened and strengthened thereby, and you miss the service that you did really intend.

Therefore, dearly beloved, keep upon your watch, keep on your spiritual armor, keep your feet shod with the preparation of the Gospel of peace, and the God of peace will be with you, and crown your endeavors with good success, to your joy and comfort. He will bring his power over your adversaries and opposers, more and more, to which many shall bow and bend in your sight; and will bring shame and confusion upon the rebellious who harden their hearts and stiffen their necks against the Lord, and his Christ and kingdom, which he will exalt in the earth, notwithstanding all that Satan and his evil instruments can do to hinder the growth and progress of his blessed Truth; for of the increase of the government and of the peace of the kingdom of Christ there shall be no end."

From the North British Review.

THE SYRIAC VERSION OF THE BIBLE.

Among the Oriental Churches, those of Syria should always hold a first place in the affections of Christendom. The New Testament, it is true, in wise adaptation to the wants of coming ages, was given to the world in Greek. But our Lord and his disciples spoke in the dialect of Syria,\* and although the sacred penmen wrote in Greek, it was in Syriac they heard their Master's utterances, and first preached the coming of "the kingdom of heaven." The excellencies of the Syriac version, though generally acknowledged, are far too little understood. The fact that Syriac is so closely allied to Hebrew, would, *prima facie*, confer importance on a version of the Old Testament, into the cognate tongues, apart from the acknowledged fidelity of the Pechito translation. How much more does the fact, that our Lord and his Apostles spoke in Syriac, confer value on the translation of the New Testament, made at a time when the language was vernacular to those who executed it! It is not improbable, that, in this version, we have, in many cases, the *very words* employed in their public ministrations. And yet this precious monument of ancient piety and learning was not known in Europe until the middle of the sixteenth century, when Ignatius, the patriarch of Antioch, sent Mosos of Mordin to obtain the aid of the Roman Pontiff in printing it. We may describe briefly a Syriac manuscript, which we had lately an opportunity of inspecting in the British Museum. It is from the collection of Rich, that successful explorer of Oriental treasures. To preserve it from injury, it is enclosed in a case, which, when opened, presents a compact volume of royal octavo size, and about two inches and a half thick. It is bound in Russia, its contents lettered on the back. This is a copy of the version already mentioned. It is described in the catalogue as exceedingly old, the inscription of its transcriber fixing its completion in the year of the Greeks, 1079, or A. D. 768, making its present age nearly eleven centuries. A man may well feel awed, when opening a production written by hands so long since shrouded in the tomb, in regions so far away, and relating to topics so sublime. The material is the finest vellum, more or less discolored by age; indeed, much more so than some of the Nitrian manuscripts a century or two earlier. The writing is in double columns, and, like most ancient documents, exceedingly correct. The ink is very

\* From various causes, especially their captivity in Babylon, the Hebrews lost their dialect, and adopted the Aramean or Syriac, thus becoming more assimilated with the surrounding peoples. The language of Syria, therefore, and not a corruption of Hebrew, was the vernacular of our Lord and his Apostles. The Hebrew was still the sacred tongue; but the language of ordinary life was that used at Damascus, Antioch, and Edessa.

thick, more like a pigment, making the letters stand out in relief; and except where damp has injured it, the writing is quite intelligible, as though written but yesterday. The titles of the separate books, and the headings of the ecclesiastical divisions, are written in red and green ink, of so good a color, that they give the page a gay appearance. A note informs us that the work was finished more than a thousand years ago, by one Sabar Jesu, in the monastery of Beth Cocensi.

THE "NEW ORPHAN ASYLUM"—FOUNDED ON FAITH.

In the neighborhood of Bristol, England, exists an institution but little known to the general public, yet of such a singular nature that it may be fairly classed amongst the wonders of the age. It is situated at Ashley Down, one of the most beautiful suburbs of the city, and is simply and unobtrusively named "The New Orphan Asylum." Within its walls, 300 fatherless children, aged from a few months upwards, are fed, clothed, and taught. The elder girls are instructed in sewing and all domestic arts, and at a proper age are each provided with an outfit and a suitable situation; the boys are similarly fitted out, and apprenticed; and all this is done without any regular funds or subscribers, by a man who neither does now, nor ever did, possess any property, or pecuniary means. Nor has a single shilling ever been solicited for its support, for the New Orphan Asylum is *founded on faith*.

This statement will probably raise a smile of incredulity; but it is, nevertheless, a fact which cannot be gainsaid. There is the extensive range of buildings, in substantial stones and mortar; there, too, are 300 living witnesses, the recipients of its bounty and protection. On every Wednesday, the doors are thrown open to all who choose to inspect for themselves this monument of love and charity. Enter: in this stern, practical, matter-of-fact nineteenth century, it is refreshing to halt for a moment on such a verdant oasis. There is no charge for admission; neither are the attendants permitted to receive any fees; but in the entrance-hall is a small box labelled, "For the Use of the Orphans;" and if you think fit to drop a coin therein, you may do so. Visitors are shewn the dormitories, each little bed with its snowy coverlet; the wardrobes, fitted up with presses, wherein every child deposits his or her Sunday clothing with admirable precision of folding and arrangement; the nursery, and its tiny inmates, their basins and toys; and the dining room, so large and lofty, and well ventilated, that it must be a pleasure to eat therein. Then there are the schools, three in number—the girls', the boys', and the infants'—all of whom go through their exercises and sing their simple melodies, wearing, withal, a healthy, hearty, and happy expression, which

speaks volumes for the system under which they are trained. Passing on, we visit the "cutting out" and "making-up" rooms, the bakery, the dairy, the kitchens, the laundry, the bath-rooms—all well arranged, and indeed perfect in their appointments. Another range of offices is devoted to various store-rooms. There are stores of flour, of bread, of meat, of rice, of oatmeal—good Scotch meal, which forms the staple of the children's breakfast. There are stores of shoes, of clothing, of soap, of linen, of crockery, and even of toys for the delectation of the younger ones. The staff of teachers, nurses, and servants is large and efficient; the mental and physical wants of the children are amply provided for, and their comfort most sedulously studied; and all this, as many well know, has been brought into existence literally out of nothing. Doubt it not. Were you as incredulous as Thomas of Didymus, yet must the evidence of your senses convince you of the reality of this extraordinary fact. Seek not to explain it away, for the truth of the history attached to that asylum is incontrovertibly established.

That history is to be read in a little book, entitled *A Narrative of some of the Lord's Dealings with George Muller*—a quaint, strange title, which of itself, seems to remove us far from the world of steam, and gas, and electric telegraphs. It is written in a simple style, wherein is no seeking after effect or ornament, and consists principally of extracts from the author's diary. I much fear, that in giving the substance of this narrative, I shall be unable to render it due justice; but my limited space forbids expansion. Here it is:

George Muller's creed is so unsectarian, that I have never yet been able to ascertain its precise nature; he, indeed, distinctly states that he does not belong to any sect, and his writings, no less than his deeds, confirm the assertion. He is a Prussian by birth, and emigrated, in 1829, to England, where, to quote from the narrative, he "began the service of caring for children who are bereaved of both parents by death, born in wedlock, and are in destitute circumstances, on December 9, 1835." For ten years he carried on his work of love in Wilson Street, first renting a single house for the use of his protégés. As their number increased, other premises became necessary; till in 1845, four contiguous houses were occupied by about 130 children.

The expense of supporting these establishments was entirely defrayed by unsolicited contributions. Upon this principle they were started, and even when sorely pressed, it was rigidly adhered to. A perusal of the author's journal shows that he was often reduced to great extremities, from which he was always relieved in what will no doubt be deemed an unaccountable manner. Thus, under date August 10, 1844, is the following passage:

"In the greatest need, when not one penny

was in hand, I received £5 from a brother at Hackney."

And again:

"Aug. 16, 1845. Our poverty is extremely great. The trial of faith as sharp as ever, or sharper. It is ten o'clock, and there are no means yet for a dinner. I thought now of some articles which I should be able to do without, to dispose of them for the benefit of the orphans, when one of the laborers (teachers) gave me 17. There were also taken out of the boxes in the orphan houses 1s. 6d., and by knitting came in 2s. 3d., and from A. A., 2s."

Such passages as these are of continual recurrence. Frequently, the last crust of bread, and sip of milk, was consumed, and Muller never contracted debts. Over and over again, the daily record commences with, "Not a penny in hand!" and ends with, "Only a few pence left;" and there was no treasure to draw upon, save the inexhaustible fund of faith—a fund which indeed appears to have fully answered every demand upon it, for the wants of the day were always fully supplied.

But the great work was yet to come. In 1845, Muller first began to conceive the idea of building an asylum for the accommodation of 300 orphans, and having fully considered the undertaking, "I judged," he says, "that the cost would be 10,000*l.*; and on November 4, I began asking the Lord for means." Strangely enough, on the following 10th December, 1000*l.* came to hand. This was the largest donation which, up to that time, had ever been received; "but when this money came," he writes, "I was as calm, as quiet as if I had only received one shilling; for my heart was looking out for answers. Therefore, having faith concerning the matter, this donation did not the least surprise me." Other donations followed, including a second sum of 1000*l.* on the 30th of December; and then he relates how he, "having asked the Lord to go before him, went out to look for a piece of ground" whereon to build.

Here is a picture of startling sublimity! Imagine a gaunt, grave man, attired in a suit of rusty black, walking forth into the bustling city, like the pilgrims in Vanity Fair, and in all simplicity of heart, and earnestness of faith, seeking to be so directed to a suitable site. One almost expects to read on the next page, how that "one of shining countenance appeared unto him, and bade him be of good cheer."

It is not my intention to follow George Muller throughout the gradual process by which he effected his purpose; suffice it to say that, by little and little, the necessary funds flowed in. The building, which, with the land, cost eventually upwards of 15,000*l.* was commenced in July 1847; and in June, 1849, the children were removed from Wilson Street to the healthier locality of Ashley Down. No flourish of trumpets ushered in the event; quietly and unosten-

tationally the children and their more than father walked from the one house to the other; and save that the old school-rooms were closed, whilst merry voices awoke the unwonted echoes of the Down, no change was perceptible.

Little more than twelve months elapsed ere Muller began to contemplate an extension of his work; and undeterred by the absence of visible means, the frequency of pecuniary difficulties, or the magnitude of the undertaking, he determined to build another wing, capable of receiving other 400 orphans, with a view to the ultimate extension of this additional number to 700, or 1000 in the whole. The first donation received for this purpose was ten shillings! But, nothing discouraged, he persevered; and in May 1852, the building fund amounted to 3530*l.* 9*s.* 0*d.* The next year this amount had increased to 12,531*l.* In 1854, upwards of 5000*l.* was added to the fund; and in 1855, the sum in hand being 23,059*l.* 12*s.* 0*d.*—always the odd farthing—the new building was commenced, and is, at this present writing, on the point of being opened for the reception of the forlorn little beings for whose benefit it is designed. Whether the benevolent founder will be enabled to complete his self-imposed task, by the construction of the intended third building, time alone can determine. Let us hope so.

Muller seems to have been incited to his efforts by the success of a similar institution at Halle, in Prussia, founded in 1696 by A. H. Francke, professor of divinity. This is the largest charitable establishment for poor children in the world, containing 2000 inmates, and is in a flourishing condition. We will here let our author speak for himself:

"Francke is long since gone to his rest, but he spoke to my soul in 1826, and he is speaking to my soul now; and to his example I am greatly indebted in having been stirred up to care about poor children in general, and about poor orphans in particular.

"At the last census in 1851, there were, in England and Wales, thirty-nine orphan establishments, and the total number of orphans provided for through them amounted only to 3764; but at the time the New Orphan House was being built, there were about 6000 young orphans in the prisons of England. Does not this fact call aloud for an extension of orphan institutions? By God's help, I will do what I can to keep poor orphans from prison."

The utter abnegation of self which pervades the work is remarkable and characteristic. "What have I done," he cries out in one place, "that men should praise me? I have only sought to be used as the honored instrument of saving young children, who have neither father nor mother, from sin and vice." Truly, such men are *in* the world, but not *of* it.

Contributions appear to arrive from all parts of the globe, and from all kinds and conditions

of men. Here are a few entries, for example: "From negro brethren in Demerara, 12 dollars;" "From an archdeacon, and one of the Queen's chaplains, 12 guineas;" "From one of the orphans formerly under our care, a sovereign;" "From Mount Lebanon, 2*l.*, and from Orleans, five francs;" "From an Israelitish gentleman, an entire stranger, 5*l.*;" "From a shepherd in Australia, who had read my narrative while tending his flock, 12*s.*" The amounts vary from a single farthing to thousands of pounds; and the receipt of a copper coin, or the presentation of a check for 5000*l.* is recorded in an uniformly grateful strain.

Nor is it to money alone that assistance is confined. One gentleman offers his services gratuitously as an architect, and another as a surgeon. Another gives glass for the three hundred windows of the new building, and others send jewelry and ornaments, silver spoons and teapots, watches, gold and silver, old coins and needlework—to be sold for the benefit of the institution. On one day, "three autographs of William IV., two of Sir Robert Peel, and one of Lord Melbourne," were received; and on another, "a Coverdale Bible of 1535, perfected almost sheet by sheet." Perhaps the most singular gift of this kind was, "A silver medal, given to the donor for being engaged in the taking of Java; but, laying down his honor, he desires to have this medal used to lay a stone in the new building." Then there are donations of books, of coals, of provisions, and of clothes—old and new; donations, indeed, in almost every conceivable form. And in this manner, to sum up all in his own words, "without any one having been personally applied to for anything, the sum of 84,411*l.* 6*s.* 3*d.* has been given to me for the orphans since the commencement of the work." And greatly has it been needed, for, in addition to the expense of purchasing land, and building and furnishing the asylum, the present average expense for each of the orphans is stated at 12*l.* 6*s.* 8*d.* per annum.

Not the least peculiar feature in the subscription-list is the absence of all personal publicity. Those who give to the New Orphan Asylum must do so from a pure and unmixed feeling of charity, for their names are carefully withheld; even their initials are rarely given; nor would any offer induce a departure from this rule.

No sectarian doctrines are taught in the schools, neither is any interest necessary to obtain admission for orphans. If they be deprived of father and mother, and in distress, that is sufficient passport to the large warm heart and helping-hand of George Muller. Long may his life be spared, and his labors blest!—*Chambers' Journal.*

The summer showers of mere sensibility soon dry up; while the living spring of Christian charity flows alike in all seasons.

For Friends' Review.  
SAMUEL BOWNAS.

In the account of this excellent man published in Friends' Library, Vol. 3, it is remarked that "in the religious Society to which he was joined, he conducted himself as a man of peace and prudence, choosing to walk in the plain and middle path, without declining to any extreme; so that he neither idolized forms, nor contemned good order."

O that all who have been active in our religious Society for many years past, had walked in the same spirit and way; how much sorrow and evil would have been prevented, and how much more inviting and effectual would Christianity have appeared through us as a people!

B.

## FRIENDS' REVIEW.

PHILADELPHIA, SECOND MONTH 6, 1858.

MEMOIR OF WM. FORSTER.—Henry Longstreth, Bookseller, No. 915 Market Street, will issue in a few days, in pamphlet form, the tribute to the memory of the late Wm. Forster, which appeared recently in Friends' Review. Single copies sent *postpaid*, 10 cents; five dollars per 100 copies; and to Tract Associations a deduction will be made on larger quantities.

### CAPTURE OF SLAVERS ON THE AFRICAN COAST.

ISLAND OF ST. HELENA, NOV. 24, 1857.

In my last I spoke of the revival of the slave trade on the coast of Africa. By occasional arrivals since, we have heard of more captures, of cargoes waiting shipment, and large sums of money offered for vessels for their conveyance; and now we have actual demonstration of the awful traffic in the arrival at this port a few days since of H. M. steamer *Alecto*, with a prize schooner, having on board about six hundred poor Africans in all their nakedness, it being the seventh capture by that steamer within two months. She is an American built vessel, of about 170 tons, a fast sailer, name unknown, it having been painted out on the stern, though it shows faintly through as the "Windward, of New London." She arrived under the name of "Lucia." She was captured on the 4th instant, about five degrees off the coast, (so that she was well off,) after a hard chase of ten or twelve hours, and was only taken by the fear, and consequent refusal of the crew to work her, after having been fired on some seven or eight times. She had one or two passengers from captured vessels, and a crew, all told, of fourteen persons, of mixed nationalities, but no Americans among them. When seized, she showed no flag, had no papers, acknowledged no captain, and of course her cargo declared itself and her own condemnation. She had been out several days when captured, and had lost, by death, a great many; and the poor fellows continued dying by the dozen daily, even after arrival here, twelve dying on the day of arrival, and out of about six hundred, only something over four hundred have outlived the miseries and sufferings of the "middle passage" of only fourteen days.

I visited the vessel in a few hours after her arrival,

to give you this sketch of a scene we vain had hoped belonged to days gone by, but which was before my eyes in all its horror. I found a small schooner, whose deck and hold swarmed with the poor creatures as thick as they could sit, most of them young men, very many boys, and about eighty girls and young women. They had been stowed in sitting postures in the hold, and then over their heads a slave-deck laid, whereon were crowded the women and the boys in a space barely high enough to admit of sitting upright. I could not have believed it possible that so many human beings could have been stowed in such a space. When I visited them, they of course were not in irons nor confined in their original positions, for the deck was alive with them.—*Correspondence of Journal of Commerce.*

Very frequent has become the record in our newspapers, of such cases as the above, indicating, in connexion with the many cargoes of slaves known to have been landed on the coast of Cuba of latter time, an alarming increase of the African slave trade. Our sensibilities are, of course, shocked by the recital of the cruelties and sufferings inflicted upon the unoffending sons and daughters of Africa, and we readily denounce the wickedness of those who are engaged in what we term an abominable commerce. But may not the question be pertinently asked,—*why* are men found pursuing a trade which is abhorred by Christians generally, as an outrage upon humanity, and is proscribed as piracy by the laws of several nations? It cannot be that they are merely actuated by the love of adventure or crime; nor that, without a motive, they inflict unutterable misery and suffering upon their fellow creatures who have done them no wrong. For an effect so horrible in its character, so fraught with risk and wickedness and woe, there *must* be a cause, corresponding in its power and influence. Can any reader fail to perceive this cause in the demand for slave-labor? And how easily do we trace the root and origin of this demand! If the six hundred slaves, crowded into the "Lucia," had reached their probable destination in Cuba, how soon would the fruits of their labor—the result, and the grand object of enslaving them—have been found upon a thousand tables in our very midst! As the waste of human life on the sugar, rice and cotton plantations of our Southern States is replenished by the internal slave trade, so the supply of slaves from Africa fills the constantly occurring deficiency of slave labor in Cuba, and meets the ever-increasing demand for sugar.

Leaving to the judgment and conscience of our readers, individually, the application of the principle we have suggested, we may add a few

remarks, written some years since by a Friend, on the character and effects of abstinence from the products of slavery.

"Its foundation upon the rock of conscience and self-sacrifice is sure. They who embrace it, should their best devised schemes [of emancipation] fail, have something more than mere expediency to fall back upon. They have a predetermined, impregnable defence behind which to rally their forces, and from which, with renewed confidence and power, to press on to victory. The call to that rally is so clear that it needs no might of intellect—but only a pure heart that will heed—to hear it. The very child that plays around its mother's knee, will acknowledge its power, and shun with noble heroism continual temptations to violate it. It is so free from passion in its nature that its opposers can have no plea for passionately contending against it. The slave-master can find no false position or inconsistency to carp at in its advocacy. He cannot even raise the common cry of interference against those whose first object is to keep pure their own souls. The principle and deed are perfect in their nature. They cover him who bears them with an armor that the finest Damascus steel of the adversary cannot penetrate, and give him a weapon which pride and love of power cannot long resist. His acts plead when his words are unheeded. They are a silent, yet ever stern rebuker of him who, knowing what slavery is, palliates or upholds it. They call in trumpet tones to those who know little of it, to examine it thoroughly. Abstinence guarantees and ensures the sincerity of him who abstains and confirms his endurance in the faith. It constantly reminds him that, above his money-making, are claims of suffering humanity that cannot lightly be put aside. It elevates his love to higher pleasures than those of the body. Not for strife, nor for division, does the self-sacrificing man plead for the Truth, but that the Truth may be over all. It holds up to the planter no bribe by which Northerners are wont to seduce Southerners to buy, and whip, and make naked, and starve, and insult, and degrade, and imbrute *men*. It is two-edged, cutting off the inducement to hold slaves, and laying bare to the quickening Truth the conscience of him who holds them."

DIED, in Morris, N. Y., on the 4th of 12th month last, CALEB BRALEY, a beloved Minister of Butternuts Monthly Meeting, in the 74th year of his age. He joined our Society in early life, by conviction, and became well established in the principles of Friends. His labors in the ministry, characterized by simplicity, were mostly within the limits of his own Quarterly Meeting, but, at different times, he visited some neighboring meetings to the satisfaction of his friends. During his last sickness, which was attended with much bodily suffering, he was preserved in great patience, not a murmur escaping his lips, and at the close he passed quietly away.

DIED, in North Collins, Erie Co., N. Y., on the 1st of 1st mo., 1858, ABRAM GIFFORD, in the 82d year of his age, an Elder of Collins Monthly Meeting. He suffered long and severely from bodily afflictions, which he bore with a degree of Christian resignation. Although his mental faculties were somewhat impaired, his faith in Christ, his redeemer, was strong, and his desire that Friends should maintain the purity of their ancient principles was unabated.

—, In Plattekill, Ulster County, N. Y., on the 18th ult., ADNA HEATON, a valued elder of Marlborough Monthly Meeting, in the 73d year of his age.

In the removal of this beloved Friend, the Church is deprived of the services of a firm and consistent supporter of its principles and testimonies, his family of a kind companion and tender father, and the community in which he lived, of a benevolent and liberal minded citizen.

Unassuming in his manners, and diffident of his own abilities, he sought not the applause of men; yet by faithful continuance in well doing through life, he had secured the friendship and affection of an extended circle of acquaintances; and he has left the most satisfactory assurance that his end was peace, his hope a glorious eternity, by his consistent example before men, his humble walk with God, his patient endurance of affliction in the sickness and decease of several of his beloved children, whose sufferings for many years, seemed almost too much for his sympathizing nature to endure, his continued assiduity to relieve their afflictions, at any cost of means within his control; and finally by the calm resignation manifested throughout the sickness that terminated his life, and the oft repeated expression of confidence in the mercy of our Heavenly Father through our Saviour Jesus Christ.

#### HAVERFORD COLLEGE.

The SUMMER TERM will open on Fourth day, the 10th of the Second month, at 9 o'clock, A. M. Students admitted at this term must be present on the morning of the previous day.

Applications, accompanied in all cases by certificates from the last Teacher, of moral standing, and a list of books studied, may be made to the undersigned, Secretary of the Board. CHARLES YARNALL,  
No. 126 South Twelfth Street.

#### THE TANGLED YARN.

A woman had put a hank of yarn upon a reel, intending to wind it into a ball; but as the thread would not run as she wished, she lost patience, and pulled it to and fro. This, however, only made the evil worse, for it multiplied the ends until she no longer knew which to draw. Gotthold looked on in silence, but thought with himself: I now see how it happens that the interference of third parties only complicates quarrels. The reason is, because they bring to them more of needless anger and zeal than of judicious moderation and skill. Many a matter might easily be settled if we only knew the right end by which to take hold of whimsical and wilful minds. Worldly disputes are almost all like this yarn; whosoever ventures to meddle with them, except with a meek and sober heart, will do no good. It is folly for any man to expect that all things shall or can be made square with his views. He acts a wiser part who tries to accommodate himself to seasons

and circumstances, so far as he can with a safe conscience. Many a one complains of the tangled yarns and whimsical characters with which he has to do, without being conscious that his own hat covers as much oddity, and that that gives other people no less occasion to complain of him.

In my vocation I must daily expect to meet with tangled yarns. Give me, my God, a meek and prudent heart, that I may always find the right end to draw!—*Gotthold's Emblems.*

-----  
THE PHYSICIAN OF FREDERICK WILLIAM OF PRUSSIA.

No profession, perhaps, offers greater opportunities for active benevolence than that of a physician, and few men have made better use of those opportunities than Dr. Christopher Louis Heim, one of the physicians to the household of Frederick William III, king of Prussia. Called by his high appointment to frequent intercourse with the great of the earth, he still devoted himself with equal interest to the amelioration of the maladies of the poorest, to whom he frequently extended that substantial pecuniary help which is often of more value than medicine. His colleague, Dr. Hufeland—also eminent as a physician and a Christian, and of whom the queen Louisa said, "Hufeland is at one and the same time physician for body and soul"—gives the following particulars and anecdotes of his excellent friend.

Heim was a physician by nature, and his correct judgment and remarkably quick perception were the means of saving many lives. His activity was unwearied, and the number of visits he made daily seems almost incredible. He was seen as often in the dwellings of the poor as in the palaces of the rich, and everywhere he showed the same careful, willing attention. He thus very naturally became the favorite of the people. Once, when on horseback at an illumination, the expressions of indignation at the bold rider who was forcing his way through the crowd were changed to acclamation as soon as it was known that the rider was none other than Father Heim. His manner was somewhat laconic and free; but, living as he did, for and with the people, it cannot excite surprise, and from the great originality and straightforwardness of his character, he did not throw it off in the presence of royalty itself. He was physician in ordinary to the Princess Amelia, the Queen of the Netherlands, as well as to one of the Prussian princesses. This last-named lady possessed an excellent character, but both she and her court retained much of the etiquette of the time of Frederick the Great, who addressed every one in the third person. The following scene once occurred between the princess and Dr. Heim, which strikingly illustrates the characteristic qualities of both.

The princess was one day sitting in a splendid

saloon on a sofa, and as the doctor entered she surveyed him from top to toe.

"Approach," said she, and then continued: "I hear much of his dexterity and of his extended and successful practice. I have therefore determined to appoint him my physician in ordinary, and this I would announce to him."

"I thank your royal highness for the confidence you have in me, but only under certain conditions can I accept the honor of becoming your physician in ordinary."

Dr. Heim said this in a pleasant genial tone. The princess, laughing, exclaimed: "Conditions! No one in the course of my life has ventured to bind me by conditions."

"Indeed?" answered Heim; "then it is high time you should be taught what conditions are."

"Well," said she, "I am curious to make the acquaintance of these conditions; he may make them."

"The first is, that your royal highness should not call me 'he;' it is not suitable for the present times; the king does so no longer, and my own man-servant I do not address as 'he.' The second condition is, that you do not make me wait so long in the ante-chamber. I have no time to lose; the longest day is always too short for me. The third is, that your royal highness should not look at my feet so much; I cannot come in drawing-room shoes, but in boots and in a comfortable overcoat. The fourth is, that you should not demand that I come to you first of all; I come according to the description of illness, and according to the situation of the streets and houses. The fifth is, that you should not keep me too long, and that you will not expect from me that I should gossip about politics and town news; for such things I have no time. And lastly, that, as you are royal, you should pay me royally."

They both laughed heartily, and on these conditions he was gladly seen at the court of the princess, where he was much esteemed and beloved.

But this is not the most valuable feature of his character. We must see how he is enabled to bear misfortune, which is the real touchstone of Christian temper and of vital religion. Liberal to the poor, benevolent to all who were in need, his large income could not, however, render him insensible to a loss which he sustained through the bankruptcy of a large house of trade. In reply to Dr. Hufeland, who some days after expressed his sympathy, he said: "I would rather not be reminded of it; God be praised, I have trampled it under my feet."

"How did you manage it!"

"As I generally do when I cannot help myself; and I could not help myself in this case. I could not forget the disagreeable affair; I thought of it day and night. That valuable money that I had earned with so much trouble, now lost all at once! Alas! even my poor patients suffered

from it, for I was always absent. At home, too, I had no more pleasure. My good wife, at other times so cheerful, hung down her head; even at dinner, when people ought to be the most cheerful, we sat dumb and out of humor opposite each other, and our merry children looked at us timidly. The money was gone, and with it was gone the first blessing of life—contentment. I, poor worm of the dust, unable to help myself in this necessity, took refuge in the Almighty. I hastened to my bedroom, locked the door, and prayed right earnestly that strength, courage, cheerfulness, and peace might again be given me. It was to me as if God himself appeared and said to me: 'Thou art a poor clergyman's son, and I have blessed thee in thy vocation, so that thy position is now secure. For a number of years I have let thee play with the money thou hast lost. Now, Heim, be no longer foolish, and stop these lamentations, otherwise I shall show myself very strange to thee. I have the keys to all money-coffers, and I can make good the loss to thee in course of time. Therefore, be now of good courage, and give me thy hand upon it, that thou wilt from this time forth cheerfully follow thy vocation.' I have promised this; my wife and my children are again cheerful; I have forgotten it; it is under my feet, and I am again happy in my God. This is what prayer can do, if it is earnest, believing prayer. And now let us talk of something else."

This excellent, pious, and genial physician had no time to become ill himself, and was actively useful to a great age. His jubilee was commemorated by the whole city, from the highest to the lowest, and continued during three days. In constant excitement, he was at last thoroughly exhausted, and ordered that the house should be kept perfectly quiet. Late in the evening a poor citizen's wife came to ask him to go to her sick child. She was refused; but, knowing the house, she found her way to the physician's bedroom, where she was somewhat impatiently dismissed. Everything again became still, but at last his wife exclaimed: "But, my dear husband, what is the matter with you? You do nothing but throw yourself about!"

"I cannot sleep," said he; "it is a singular thing with the conscience. I must go."

He rang the bell, and, forgetting all fatigue, hastened to the sick child, which happily recovered.

This slight sketch gives us an insight into the character of this excellent physician, who lived and died treading in the footsteps of his Divine Master, who went about doing good.—*London Letsure Hour.*

The generalities are the worse for their plenty. The voluptuous consumes it, the miser hides it; it is the good man that uses it, and to good purposes. But such are hardly found among the prosperous.—*Penn.*

## AFRICAN PRODUCTIONS AND DISCOVERIES.

Two arrivals at our port last week, from the western coast of Africa, brought nearly seven thousand bushels of pea or ground nuts. It is said that from fifty to sixty thousand tons a year are shipped from Africa to this country, and to Great Britain and France. The export of peanuts and palm oil only to America and Europe, represents the annual value of at least thirteen millions of dollars. So much for merely two articles of African produce.

Barth's travels cover Central Africa as far as to within eight degrees north of the Equator. Livingstone's researches come to within the same distance south. So that there is still a belt of sixteen degrees, with the equator as a centre, which no white man has yet visited. Lieutenant Burton, celebrated for his successful visits to Mecca and Medina, is now travelling in that portion. He hopes to cross the entire continent, midway between the routes of Barth and Livingstone.

Meanwhile, we now know enough to be sure that we have, heretofore, known but little of Africa, or its inhabitants. Both Barth and Livingstone, the latter especially, prove that the whole immense tract from the Sahara on the North, to the Kalabari desert on the South—with a breadth of from five hundred to two thousand miles—is a wonderfully fertile and well watered country, probably not inferior in natural productiveness to the valley of the Mississippi and the Rio Grande, capable of yielding all tropical productions, and inhabited by a most interesting people, or rather by a group of races, all of whom differ materially in character from the natives of the Slave Coast, who have, hitherto, stood as the types of the population of Africa. These revelations are the great significant facts of modern discovery, and point the way to results exceeded by nothing since the discovery of America.—*Philadelphia Inquirer.*

## A JUST DECISION.

Some time ago a Missouri slave holder brought a suit against the Illinois Central Rail Road, for carrying a runaway negro on his journey northward. The lower courts decided the question against the slave owner, but the suit was carried up, and has just been pronounced upon by the Supreme Court. We learn from the *Chicago Journal* that the opinion of the Court is in effect, that the constitution and laws of Illinois recognize all men within the State as free men; that slavery is an institution of mere local law in the States where it exists, which local law extends to no other State; that the law of Missouri, under which the alleged slave is claimed by the plaintiff, has no force whatever in the State of Illinois, but is "repugnant to our laws;" and that, therefore, the plaintiff, "under the law of Illinois,

has no property in the fugitive, and can here, under State authority, assert no property in or authority over him."—*Toledo Blade*.

#### CANDLES.

A very simple matter was it in the days of our grandfathers, nay, perhaps in our own days too, if we are not quite juveniles, to make a candle. A wick of cotton dipped in a pot of melted tallow, removed, and dipped again, and the process repeated until a sufficient amount of tallow had accumulated round the wick, and there was a candle. A primitive, simple candle, indeed, is one of this kind—a dip; but dip candles still hold their own in presence of all the modern mysteries of sperm and stearine. When our grandmothers wanted a candle better than a mere tallow dip, but less expensive than spermaceti or wax, they used ordinary tallow mould candles; composition candles, as they are now called, did not exist then. Few of us, I believe, know how much science is involved in the making of a composition candle.

Tallow candles have their uses, and they have also their defects. Their flame is never very brilliant, and their substance is liable to gutter; then what a plague it is to be obliged to snuff them so frequently! but tallow candles may be carried about with less damage to themselves than either candles of wax, spermaceti, stearine, or composition: this at least is an advantage. Suppose, however, tallow were a desirable thing of which to make candles universally, see what a position we should be in. Tallow, as most people know, I presume, is only a sort of hard fat which accumulates in the bodies of certain animals. However good a fat may be, considered in relation to the materials of fuel and illumination, it must be hard—it must be *tallow*, if we are to make candles of it without the aid of chemistry; and even tallow of the best kind has great defects. Its color is disagreeable, it is too soft, and it contains shreds of animal membrane, which makes the candle spit and throw off sparks.

If, on some very cold day, you squeeze a piece of tallow between two pieces of blotting paper, taking care you do not melt it, and if the two pieces of paper be examined, they will be found soiled with oily matter; hence it appears that the tallow, hard though it be, really contains something which is not hard—a mere bland oil. This discovery was an important fact in the history of the candle manufacture. Follow me now to the oil cruet. The weather is still piercingly cold, and the salad oil looks different from what it did before the cold set in. Perhaps you will tell me the oil is frozen; and if you do, I do not know that one has much cause to quarrel with the expression. Experience proves, however, that cold though the day may be, the whole of any portion of salad oil never freezes, but a part remains fluid to the last. What is the natural

inference to be deduced from this? Why, evidently, that olive oil is composed of two different fatty bodies, one capable of solidifying by cold, the other remaining fluid. In like manner, the inference is deduced that tallow is a compound of two fats, one a liquid oil, the other a fatty body, having a tendency to become solid when sufficiently cooled. This, I say, is the inference in either case—an inference proved to be correct by a celebrated French chemist, M. Chevreul, who worked at the subject of oils and fats for a period of more than twelve years.

Oils and fats are really not the simple bodies we often take them to be. As the hardest tallow contains something which is soft, and the blandest olive oil something which is hard, so, in like manner, are all fixed oils and fats made up of two or more fatty bodies. If we can remove the softest of those, and leave the hardest, we ought to be able materially to improve the manufacture of candles. This is what in reality has been done. By means of a chemical process, it is easy to extract the hard or most infusible part out of oils and fats, and turn the hard portions into candles.

Chemists are strange people. They tell us that each of the simple fatty bodies into which a compound fatty body may be separated is a salt—a compound of an acid with a base; a sweet substance called glycerine being the base, and the acid differing according to circumstances. In the case of ordinary animal tallow, the hard congealable part is a combination of stearic acid with glycerine, and the soft liquid uncongealable part a combination of oleic acid with glycerine. But to come to the point at which I am aiming: whereas formerly candlemakers were obliged to use such fats as came naturally to their hands, discarding all that might be too soft, they are now far less restricted. Since M. Chevreul, with his chemistry, has taught them to separate hard from soft fats, and to make hard fats still harder and more combustible by taking from them the incombustible portion called glycerine, the art of candle-making has become not only more refined and philosophic, but also more easy. Those vexatious long wicks, so continually requiring snuffing, have had their *coup de grace*. If people now submit to be troubled by them, it is their own fault, for stearine or composition candles are manufactured cheap enough to be within the reach of all. Perhaps a tallow dip may be useful now and then for carrying about; but as for tallow rushlights, I would banish them altogether in favor of Childs' Night Lights, as they are called, made of stearine, by Price's Candle Company.

The discovery of Chevreul, to which allusion has been made, may hardly suggest to the non-scientific reader a true idea of its importance. It is considered by scientific men to be one of the master discoveries of this century, however; and when I say that it has done more to give the

death-blow to the African slave-trade than any one single discovery beside, perhaps, the reader may have the curiosity to demand an explanation. That explanation is simply this. The reason why native Africans are kidnapped and sold is, because of the money realized by their sale: if they would realize more money by being kept at home, depend upon it they would never find their way across the Atlantic. From the extraordinary and growing demand which is now made for oils, this is likely to become increasingly the case; for in Africa, and especially on its western coasts, there grow incalculable quantities of oil producing trees, amongst which the oil-palm is pre-eminent.

Now palm oil is yellow and odorous, and it is not well adapted in its natural state for the manufacture of candles; but if there be any truth in the doctrines of M. Chevreul, what should prevent the chemical manufacturer from extracting from yellow and not very hard palm oil, the hard and inodorous portion of it best adapted for the manufacture of candles? Nothing prevents him; accordingly, this is now done by one of many processes, each obvious enough to the chemist, but somewhat too elaborate for description here. Though, in deference to the presumed wishes of the reader, the beautiful principles of chemistry involved in the new candle-making operation have been rather indicated than entered into, I did nevertheless venture so far on the forbidden chemical ground as to intimate that every fat is of the nature of a salt, that is to say, a compound of an acid and glycerine. Concerning this glycerine, let me now write a few words. It has become somewhat plentiful of late; it may be obtained at any druggist's shop, and almost at the shop of every oilman. It is called glycerine because of its remarkable sweetness, and is altogether a very curious substance. Firstly, it is incombustible: therefore no one will question the propriety of removing it from all fatty bodies intended for combustion, even did it not possess utilities of its own. Before the discovery of M. Chevreul, glycerine could not thus be taken out of oils and fats; hence, useful or not useful, there it must remain. The manufacturer now extracts it, and turns it to account in many ways. The physician administers it instead of cod-liver oil, which latter is very disagreeable to most palates, though glycerine is delicious. The soap maker uses it to mingle with his soap; the artist to grind his moist water colors with. It is good for chapped hands and sore lips. Meat and fruits immersed in it remain fresh and unchanged for an indefinite time. This photographer uses it, and many other classes of people, I have no doubt, whom I cannot just now remember.

Though palm oil may be considered the grand staple of stearine or composition candles, it is by no means the only one. Cocoa nut oil is also used extensively, and indeed the beauty of the discovery made by M. Chevreul, is its applicability

to all fatty bodies. There are some curious points yet to be adverted to, in connection with stearine or composition candles. It was in the year 1847, if I mistake not, that Englishmen were all on the *qui vive* about poisoned candles. The fact was this. So thoroughly effectual was the treatment devised by M. Chevreul for separating the hard matter of fats and oils, that it threatened to be almost too hard: it crystallized around the wicks, and fell off in flakes. It would have been provoking indeed had the new candles been worthless in consequence of their exceeding excellence; but, at any rate, they must not be allowed to crystallize; that would never do.

Next in the order of discovery, the fact was made out that a certain proportion of wax melted with the stearine prevented crystallization. Ay, but wax is dear. Well, terrible to relate, the fact was also discovered that a certain portion of white arsenic melted with the stearine also prevented crystallization. The application of this arsenical discovery had fortunately but a short existence. Arsenic is never so dangerous as when absorbed through the lungs, and had arsenic candles maintained their sway, there is no foreseeing the amount of terrible consequences. They soon went out of vogue, conquered by another discovery most provokingly simple. Inasmuch as crystals can only form whilst particles are free to move in all directions, some person bethought himself of the expedient of pouring the stearine into the candle moulds, not at the point of highest fusion as hitherto, but after it had become somewhat pasty by cooling. This simple expedient was tried with complete success, and it is now always adopted.

The discovery of Chevreul being properly applied to a fatty body, no matter how colored it may be, is competent to give an absolutely white result. Nevertheless, the fact will perhaps have been remarked, that the best English stearine candles will have a shade of yellow. Oh, prejudice! to what absurdities dost thou bring us! Wax candles are yellow or straw-colored; they cannot be made white; but sperm candles, which are white, occupy a lower rank than those of wax. Well, forsooth, in order that stearine candles may not be mistaken for sperm candles, and may wear the aspect of wax ones, they must needs be tinged (to their own detriment be it known) with gamboge. Apropos of wax candles, I may now state that they are neither made by dipping nor by moulding, but by dipping combined with rolling, the latter operation being performed on a slab of marble.

Some years ago there was considerable talk about candles manufactured, or, rather, to be manufactured, out of peat bog. There was no doubt as to the fact. I have not only seen such candles, but I have burned them, and excellent candles they are. They are composed of a chemical principle termed paraffine, which can be

got out of peat bog, but all attempts to get it economically have failed.
